## 15.285.1 Detailed Description

Set of inhibitor locks, which inhibit specific actions when held.

This interface provides access to a set of inhibitor locks, each determined by an ID that is specific to the [Inhibitor](#) object. Each individual lock shall prevent, a specific (implementation defined) action to be executed, as long as the lock is held.

For example there can be an inhibitor lock to prevent a transition to suspend-to-RAM state and a different one to prevent shutdown.

A client shall take an inhibitor lock if it needs to execute code before the action is taken. For example a lock-screen application shall grab an inhibitor lock for the suspend action to be able to lock the screen before the system goes to sleep.

[Inhibitor](#) locks are usually closely related to specific events. Usually a server automatically subscribes a client holding a lock to the corresponding event. The server shall send the event to inform the client that an action is pending. Upon reception of the event, the client is supposed to release the corresponding inhibitor lock.

Definition at line 40 of file [inhibitor](#).

## 15.285.2 Member Enumeration Documentation

### 15.285.2.1 anonymous enum

anonymous enum

## Enumerator

Name_max	The maximum length of a lock's name.
----------	--------------------------------------

Definition at line 44 of file [inhibitor](#).

## 15.285.3 Member Function Documentation

### 15.285.3.1 acquire()

```
long L4Re::Inhibitor::acquire (
    l4_umword_t id,
    L4::Ipc::String<> reason )
```

Acquire a specific inhibitor lock.

## Parameters

<i>id</i>	ID of the inhibitor lock that the client intends to acquire
<i>reason</i>	The reason why you need the lock. Used for informing the user or debugging.

## Return values

0	Success
-L4_ENODEV	The specified <i>id</i> does not exist.

### 15.285.3.2 next\_lock\_info()

```
long L4Re::Inhibitor::next_lock_info (
    char * name,
    unsigned len,
    l4_mword_t current_id = -1,
    l4_utcb_t * utcb = l4_utcb() ) [inline]
```

Get information for the next available inhibitor lock.

## Parameters

<i>name</i>	A pointer to a buffer for the name of the lock.
<i>len</i>	The length of the available buffer (usually <a href="#">Name_max</a> is used).
<i>current_id</i>	The ID of the last available lock, use -1 to get the first lock.
<i>utcb</i>	The UTCB to use for the message.

## Return values

>0	The ID of the next available lock if there is one (in this case <i>name</i> shall contain the name of the inhibitor lock).
----	--

## Return values

<code>-L4_ENODEV</code>	There are no more locks.
-------------------------	--------------------------

Definition at line 86 of file [inhibitor](#).

References [L4::Kobject\\_t< Inhibitor, L4::Kobject, L4RE\\_PROTO\\_INHIBITOR >::c\(\)](#).

Here is the call graph for this function:

### 15.285.3.3 release()

```
long L4Re::Inhibitor::release (
    l4_umword_t id )
```

Release a specific inhibitor lock.

## Parameters

<i>id</i>	The ID of the inhibitor lock to release.
-----------	--

## Return values

<code>0</code>	Success
<code>-L4_ENODEV</code>	Lock with the given <code>id</code> does not exist.

**15.287.1 Detailed Description**

Memory allocation interface.

The memory-allocator API is the basic API to allocate memory from the [L4Re](#) subsystem. The memory is allocated in terms of dataspace (see [L4Re::Dataspace](#)). The provided dataspace have at least the property that data written to such a dataspace is available as long as the dataspace is not freed or the data is not overwritten. In particular, the memory backing a dataspace from an allocator need not be allocated instantly, but may be allocated lazily on demand.

A memory allocator can provide dataspace with additional properties, such as physically contiguous memory, pre-allocated memory, or pinned memory. To request memory with an additional property the [L4Re::Mem\\_alloc::alloc\(\)](#) method provides a flags parameter. If the concrete implementation of a memory allocator does not support or allow allocation of memory with a certain property, the allocation may be refused.

Definition at line 61 of file [mem\\_alloc](#).

**15.287.2 Member Enumeration Documentation****15.287.2.1 Mem\_alloc\_flags**

```
enum L4Re::Mem_alloc::Mem_alloc_flags
```

Flags for the allocator.

They describe requested properties of the allocated memory. Support of these properties by the dataspace provider is optional.

## Enumerator

Continuous	Allocate physically contiguous memory.
Pinned	Deprecated, use <a href="#">L4Re::Dma_space</a> instead.
Super_pages	Allocate super pages.
Fixed_paddr	Allocate at fixed physical address. Only honored on no-MMU systems. Will fail on MMU systems.

Definition at line 71 of file [mem\\_alloc](#).

### 15.287.3 Member Function Documentation

#### 15.287.3.1 alloc()

```
long L4Re::Mem_alloc::alloc (
    long size,
    L4::Cap< Dataspace > mem,
    unsigned long flags = 0,
    unsigned long align = 0,
    l4_addr_t paddr = 0 ) const [noexcept]
```

Allocate anonymous memory.

## Parameters

	<i>size</i>	Size in bytes to be requested. Allocation granularity is (super)pages, however, the allocator will store the byte-granular given size as the size of the dataspace and consecutively will use this byte-granular size for servicing the dataspace. Allocators may optionally also implement a maximum allocation strategy: if <i>size</i> is a negative value and <i>flags</i> set the <a href="#">Mem_alloc_flags::Continuous</a> bit, the allocator tries to allocate as much memory as possible leaving an amount of at least <i>-size</i> bytes within the associated quota.
out	<i>mem</i>	Capability slot where the capability to the dataspace is received.
	<i>flags</i>	Special dataspace properties, see <a href="#">Mem_alloc_flags</a>
	<i>align</i>	Log2 alignment of dataspace if supported by allocator, will be at least L4_PAGESHIFT, with Super_pages flag set at least L4_SUPERPAGESHIFT
	<i>paddr</i>	The physical address where the dataspace should be allocated if <a href="#">Mem_alloc_flags::Fixed</a> flag is set.

## Return values

0	Success
-L4_ERANGE	Given size not supported.
-L4_ENOMEM	Not enough memory available.
<0	IPC error

## 15.288.1 Detailed Description

Interface for memory-like address space accessible via IPC.

This interface defines methods for indirect access to MMIO regions.

Memory mapped IO (MMIO) is used by device drivers to control hardware devices. Access to MMIO regions is assigned to user-level device drivers via mappings of memory pages.

However, there are hardware platforms where MMIO regions for different devices share the same memory page. With respect to security and safety, it is often not allowed to map a memory page to multiple device drivers because the driver of one device could then influence operation of another device, which violates security boundaries.

A solution to that problem is to implement a third (trusted) component that gets exclusive access to the shared memory page, and that drivers can access via IPC with the [Mmio\\_space](#) protocol. This proxy-component can then enforce an access policy.

## 15.288.2 Member Enumeration Documentation

### 15.288.2.1 Access\_width

```
enum L4Re::Mmio\_space::Access\_width
```

Actual size of the value to read or write.

## Enumerator

Wd_8bit	Value is a byte.
Wd_16bit	Value is a 2-byte word.
Wd_32bit	Value is a 4-byte word.
Wd_64bit	Value is a 8-byte word.

Definition at line 50 of file [mmio\\_space](#).

## 15.288.3 Member Function Documentation

### 15.288.3.1 mmio\_read()

```
long L4Re::Mmio_space::mmio_read (
    Addr addr,
    char width,
    l4_uint64_t * value )
```

Read a value from the given address.

## Parameters

	<i>addr</i>	Device virtual address to read from. The address must be aligned relative to the access width.
	<i>width</i>	Access width of value to be read, see <a href="#">Access_width</a> .
out	<i>value</i>	Return value. If width is smaller than 64 bit,the upper bits are guaranteed to be 0.

## Return values

<a href="#">L4_EOK</a>	Success.
<a href="#">-L4_EPERM</a>	Insufficient read rights.
<a href="#">-L4_EINVAL</a>	Address does not exist or cannot be accessed with the given width.

### 15.288.3.2 mmio\_write()

```
long L4Re::Mmio_space::mmio_write (
    Addr addr,
    char width,
    l4_uint64_t value )
```

Write a value to the given address.

## Parameters

<i>addr</i>	Device virtual address to write to. The address must be aligned relative to the access width.
<i>width</i>	Access width of value to write, see <a href="#">Access_width</a> .
<i>value</i>	Value to write. If width is smaller than 64 bit, the upper bits are ignored.

## Return values

<a href="#">L4_EOK</a>	Success.
<a href="#">-L4_EPERM</a>	Insufficient write rights.
<a href="#">-L4_EINVAL</a>	Address does not exist or cannot be accessed with the given width.

## 15.289.1 Detailed Description

Name-space interface.

All name space objects must provide this interface. However, it is not mandatory that a name space object allows to register new capabilities.

The name lookup is done iteratively, this means the hierarchical names are resolved component wise by the client itself.

Definition at line 60 of file [namespace](#).

## 15.289.2 Member Enumeration Documentation

### 15.289.2.1 Query\_result\_flags

```
enum L4Re::Namespace::Query_result_flags
```

Flags returned by query IPC, only used internally.

Enumerator

Partly_resolved	Name was only partly resolved.
-----------------	--------------------------------

Definition at line 88 of file [namespace](#).

### 15.289.2.2 Query\_timeout

```
enum L4Re::Namespace::Query_timeout
```

Timeout values for query operation.

Enumerator

To_default	Default timeout.
To_non_blocking	Expect callee to answer immediately.

Definition at line 94 of file [namespace](#).

### 15.289.2.3 Register\_flags

```
enum L4Re::Namespace::Register_flags
```

Flags for registering name spaces.

Enumerator

Ro	Read-only.
----	------------

## Enumerator

Rw	Read-write.
Rs	Read-only + strong.
Rws	Read-write + strong.
Strong	Strong.
Trusted	Obsolete, do not use.
Link	Obsolete, do not use.
Overwrite	If entry already exists, overwrite it.

Definition at line 68 of file [namespace](#).

### 15.289.3 Member Function Documentation

#### 15.289.3.1 query() [1/2]

```
long L4Re::Namespace::query (
    char const * name,
    L4::Cap< void > const & cap,
    int timeout = To_default,
    l4_umword_t * local_id = 0,
    bool iterate = true ) const [noexcept]
```

Query the name space for a named object.

## Parameters

in	<i>name</i>	String to query (without any leading slashes).
out	<i>cap</i>	Capability slot where the received capability will be put.
in	<i>timeout</i>	Timeout of query in milliseconds. The client will only wait if a name has already been registered with the server but no object has yet been attached.
out	<i>local_id</i>	If given, <a href="#">L4_RCV_ITEM_LOCAL_ID</a> will be set for the IPC from the name space, so that if the capability that was received is a local item, the capability ID will be returned with this parameter.
in	<i>iterate</i>	If true, the client will try to resolve names by iteratively calling the name spaces until the name is fully resolved.

## Return values

0	Name could be fully resolved.
>0	Name could only be partly resolved. The number of remaining characters is returned.
-L4_ENOENT	Entry could not be found.
-L4_EAGAIN	Entry exists but no object is yet attached. Try again later.
<0	IPC errors, see <a href="#">l4_error_code_t</a> .

Definition at line 125 of file [namespace\\_impl.h](#).

**15.289.3.2 query()** [2/2]

```
long L4Re::Namespace::query (
    char const * name,
    unsigned len,
    L4::Cap< void > const & cap,
    int timeout = To_default,
    l4_umword_t * local_id = 0,
    bool iterate = true ) const [noexcept]
```

Query the name space for a named object.

The query string does not necessarily need to be null-terminated.

**Parameters**

in	<i>len</i>	Length of the string to query without any terminating null characters.
in	<i>name</i>	String to query (without any leading slashes).
out	<i>cap</i>	Capability slot where the received capability will be put.
in	<i>timeout</i>	Timeout of query in milliseconds. The client will only wait if a name has already been registered with the server but no object has yet been attached.
out	<i>local_id</i>	If given, <a href="#">L4_RCV_ITEM_LOCAL_ID</a> will be set for the IPC from the name space, so that if the capability that was received is a local item, the capability ID will be returned with this parameter.
in	<i>iterate</i>	If true, the client will try to resolve names by iteratively calling the name spaces until the name is fully resolved.

**Return values**

0	Name could be fully resolved.
>0	Name could only be partly resolved. The number of remaining characters is returned.
-L4_ENOENT	Entry could not be found.
-L4_EAGAIN	Entry exists but no object is yet attached. Try again later.
<0	IPC errors, see <a href="#">l4_error_code_t</a> .

Definition at line 77 of file [namespace\\_impl.h](#).

Here is the call graph for this function:

### 15.289.3.3 register\_obj()

```
long L4Re::Namespace::register_obj (
    char const * name,
    L4::Ipc::Cap< void > obj,
    unsigned flags = Rw ) const [inline], [noexcept]
```

Register an object with a name.

#### Parameters

<i>name</i>	Name under which the object should be registered.
<i>obj</i>	Capability to object to register. An invalid capability may be given to only reserve the name for later use.
<i>flags</i>	Flags to assign to the entry, see <a href="#">L4Re::Namespace::Register_flags</a> . Note that the rights that are assigned to a capability are not only determined by the rights given in these flags but also by the rights with which the <code>obj</code> capability was mapped to the name space.

#### Return values

0	Object was successfully registered with <i>name</i> .
-L4_EEXIST	Name already registered.
-L4_EPERM	Caller does not have <a href="#">L4_CAP_FPAGE_W</a> right on the invoked capability.
-L4_ENOMEM	Server has insufficient resources.
-L4_EINVAL	Invalid parameter.
<0	IPC errors, see <a href="#">l4_error_code_t</a> .

#### Precondition

requires capability rights: {RW}

Definition at line 176 of file [namespace](#).

### 15.289.3.4 unlink()

```
long L4Re::Namespace::unlink (
    char const * name ) [inline]
```

Remove an entry from the name space.

#### Parameters

<i>name</i>	Name of the entry to remove.
-------------	------------------------------

#### Return values

0	Entry successfully removed.
-L4_ENOENT	Given name does not exist.
-L4_EPERM	Caller does not have <a href="#">L4_CAP_FPAGE_W</a> right on the invoked capability.
-L4_EACCESS	Name cannot be removed.

## Return values

<code>&lt; 0</code>	IPC errors, see <a href="#">l4_error_code_t</a> .
---------------------	---

## Precondition

requires capability rights: {RW}

Definition at line 203 of file [namespace](#).

## 15.290 L4Re::Ned::Cmd\_control Class Reference

Direct control interface for Ned.

```
#include <cmd_control>
```

Inherits L4::Kobject\_0t< Derived, PROTO, S\_DEMAND >.

Collaboration diagram for L4Re::Ned::Cmd\_control:

### Public Member Functions

- long [execute](#) (L4::lpc::String<> cmd) noexcept  
*Execute the given Lua code.*
- long [execute](#) (L4::lpc::String<> cmd, L4::lpc::String< char > \*result) noexcept  
*Execute the given Lua code.*

### 15.290.1 Detailed Description

Direct control interface for Ned.

Definition at line 20 of file [cmd\\_control](#).

## 15.290.2 Member Function Documentation

### 15.290.2.1 execute() [1/2]

```
long L4Re::Ned::Cmd_control::execute (  
    L4::Ipc::String<> cmd ) [inline], [noexcept]
```

Execute the given Lua code.

**Parameters**

in	<i>cmd</i>	String with Lua code to execute.
----	------------	----------------------------------

**Return values**

<i>L4_EOK</i>	Code was successfully executed.
<i>-L4_EINVAL</i>	Code could not be parsed.
<i>-L4_EIO</i>	Error during code execution.

The code is executed using the global Lua state of ned which is retained between successive calls to execute. Thus you may define data in one call to execute and use it in a subsequent call.

This function does not return any results from the execution of the Lua code itself.

Definition at line 43 of file [cmd\\_control](#).

**15.290.2.2 execute() [2/2]**

```
long L4Re::Ned::Cmd_control::execute (
    L4::Ipc::String<> cmd,
    L4::Ipc::String< char > * result ) [inline], [noexcept]
```

Execute the given Lua code.

**Parameters**

in	<i>cmd</i>	String with Lua code to execute.
out	<i>result</i>	The first return value of the Lua code block as string.

**Return values**

<i>L4_EOK</i>	Code was successfully executed.
<i>-L4_EINVAL</i>	Code could not be parsed.
<i>-L4_EIO</i>	Error during code execution.

The code is executed using the global Lua state of ned which is retained between successive calls to execute. Thus you may define data in one call to execute and use it in a subsequent call.

Definition at line 65 of file [cmd\\_control](#).

### 15.291.1 Detailed Description

[Parent](#) interface.

See also

[Parent API](#) for more details about the purpose.

Definition at line 53 of file [parent](#).

### 15.291.2 Member Function Documentation

#### 15.291.2.1 [signal\(\)](#)

```
long L4Re::Parent::signal (
    unsigned long sig,
    unsigned long val )
```

Send a signal to the parent.

#### Parameters

<i>sig</i>	Signal to send
<i>val</i>	Value of the signal

#### Return values

0	Success
<0	IPC error

**Note**

The implementations of this interface in Moe and Ned only recognize the signal 0, in which case they will terminate the application from which the interface was invoked and not return. In this case, `val` is treated as the application's return code. For any other value of `sig`, the method just returns successfully.

## 15.292.1 Detailed Description

Low-bandwidth interface for random number generators.

The interface offers an ICU interface where a client can register an interrupt to get notified when entropy is available. Support for notifications is optional. If a service does not implement notification, it must return 0 for the number of interrupts in the [info\(\)](#) call. The notification interrupt must have index 0.

#### Include File

```
#include <l4/re/random>
```

Definition at line 33 of file [random](#).

## 15.292.2 Member Function Documentation

### 15.292.2.1 [get\\_random\(\)](#)

```
long L4Re::Random::get_random (
    l4_size_t size,
    L4::Ipc::Array< char, unsigned long > * buffer )
```

Get a random number.

#### Parameters

	<i>size</i>	Number of bytes of entropy requested.
out	<i>buffer</i>	Buffer containing the random number. Each byte in the buffer contains 8 bits of randomness.

## Return values

$\geq 0$	Actual size of the returned random number in bytes. This may be less than the requested size. The return value may also be 0 if temporarily no entropy is available.
<code>-L4_EIO</code>	Source of randomness permanently unavailable.
$< 0$	IPC error.

This function should never block. It should immediately return as much entropy as is available. If the call returns less than the requested bytes and a notification interrupt was installed, then the service triggers an interrupt as soon as the remaining entropy is available. That means that when an interrupt is triggered, the service must guarantee that the next call to [get\\_random\(\)](#) returns at least the number of missing bytes for the call that initially triggered the notification.

If [get\\_random\(\)](#) is called while a notification is pending, then the behaviour is implementation-defined.

The documentation for this struct was generated from the following file:

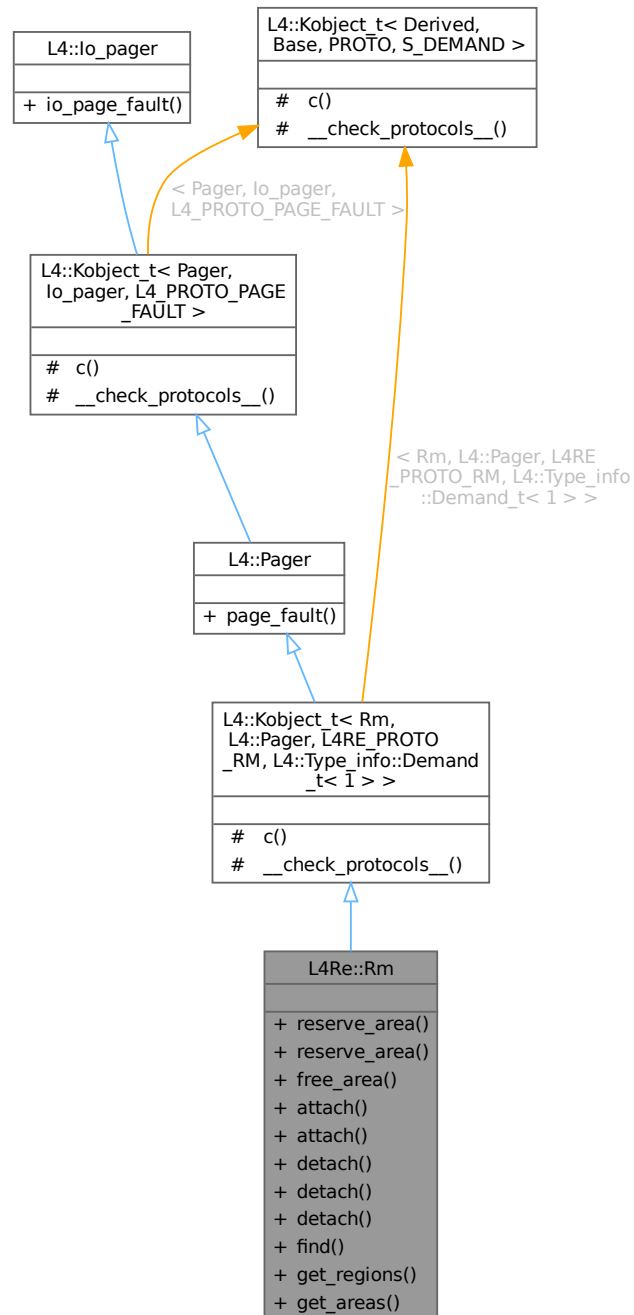

- [l4/re/random](#)

## 15.293 L4Re::Rm Class Reference

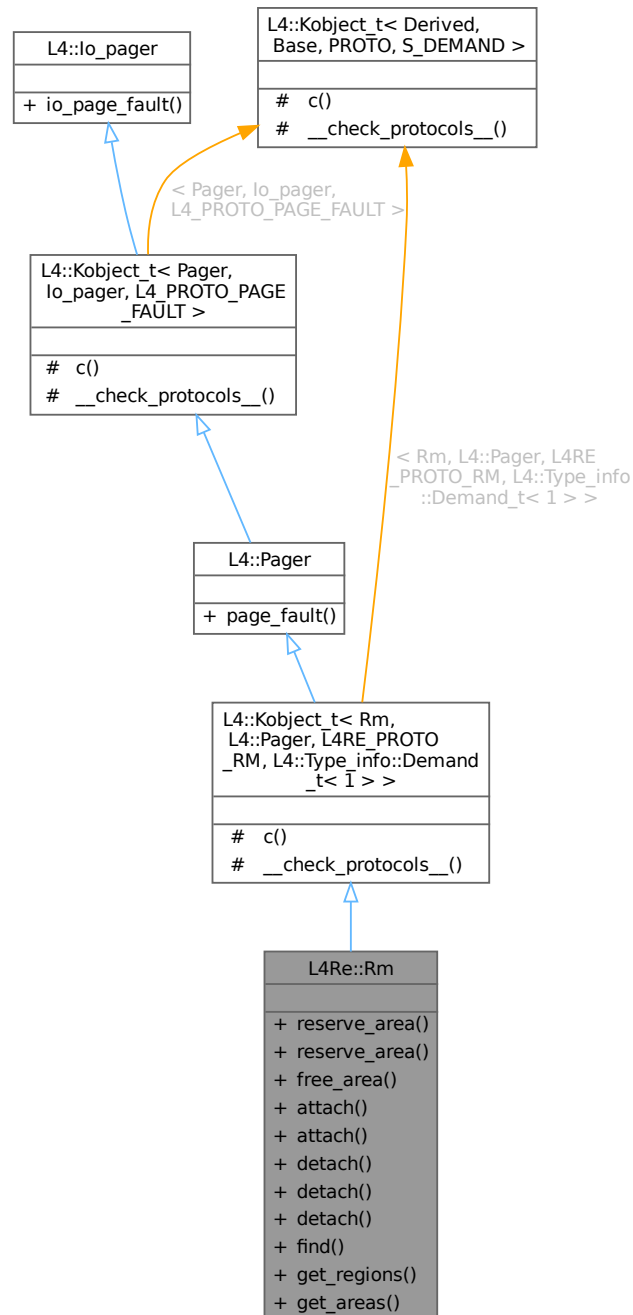

Region map.

```
#include <l4/re/rm>

## 15.293.4 Member Function Documentation

## 15.293.4.1 attach() [1/2]

```
long L4Re::Rm::attach (
    l4\_addr\_t * start,
    unsigned long size,
    Rm::Flags flags,
    L4::Ipc::Cap< Dataspace > mem,
    Rm::Offset offs = 0,
    unsigned char align = L4\_PAGESHIFT,
    L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid ) const [noexcept]
```

Attach a data space to a region.

## Parameters

<i>in, out</i>	<i>start</i>	Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If <a href="#">L4Re::Rm::F::Search_addr</a> is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If <a href="#">L4Re::Rm::F::In_area</a> is given the value is used as a selector for the area (see <a href="#">L4Re::Rm::reserve_area</a> ) to attach the data space to.
	<i>size</i>	Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.
	<i>flags</i>	The flags control how and with which rights the dataspace is attached to the region. See <a href="#">L4Re::Rm::F::Attach_flags</a> and <a href="#">L4Re::Rm::F::Region_flags</a> . The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the <a href="#">F::Eager_map</a> flag is set this function may also return <a href="#">L4Re::Dataspace::map</a> error codes if the mapping fails.
	<i>mem</i>	Data space.
	<i>offs</i>	Offset into the data space to use.
	<i>align</i>	Alignment of the virtual region, log2-size, default: a page ( <a href="#">L4_PAGESHIFT</a> ). This is only meaningful if the <a href="#">L4Re::Rm::F::Search_addr</a> flag is used.
	<i>task</i>	Optional destination task of mapping if <a href="#">F::Eager_map</a> flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.

## Return values

<i>0</i>	Success
<i>-L4_ENOENT</i>	No area could be found (see <a href="#">L4Re::Rm::F::In_area</a> )
<i>-L4_EPERM</i>	Operation not allowed.
<i>-L4_EINVAL</i>	
<i>-L4_EADDRNOTAVAIL</i>	The given address is not available.
<i>&lt;0</i>	IPC errors

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

## Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see [L4Re::Rm::find](#)).

Definition at line 44 of file [rm\\_impl.h](#).

## 15.293.4.2 attach() [2/2]

```
template<typename T>
long L4Re::Rm::attach (
    T ** start,
    unsigned long size,
    Flags flags,
    L4::Ipc::Cap< Dataspace > mem,
```

```

    Offset offs = 0,
    unsigned char align = L4_PAGESHIFT,
    L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid ) const [inline],
[noexcept]

```

Attach a data space to a region.

#### Parameters

<i>in, out</i>	<i>start</i>	Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If <a href="#">L4Re::Rm::F::Search_addr</a> is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If <a href="#">L4Re::Rm::F::In_area</a> is given the value is used as a selector for the area (see <a href="#">L4Re::Rm::reserve_area</a> ) to attach the data space to.
	<i>size</i>	Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.
	<i>flags</i>	The flags control how and with which rights the dataspace is attached to the region. See <a href="#">L4Re::Rm::F::Attach_flags</a> and <a href="#">L4Re::Rm::F::Region_flags</a> . The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the <a href="#">F::Eager_map</a> flag is set this function may also return <a href="#">L4Re::Dataspace::map</a> error codes if the mapping fails.
	<i>mem</i>	Data space.
	<i>offs</i>	Offset into the data space to use.
	<i>align</i>	Alignment of the virtual region, log2-size, default: a page ( <a href="#">L4_PAGESHIFT</a> ). This is only meaningful if the <a href="#">L4Re::Rm::F::Search_addr</a> flag is used.
	<i>task</i>	Optional destination task of mapping if <a href="#">F::Eager_map</a> flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.

#### Return values

<i>0</i>	Success
<i>-L4_ENOENT</i>	No area could be found (see <a href="#">L4Re::Rm::F::In_area</a> )
<i>-L4_EPERM</i>	Operation not allowed.
<i>-L4_EINVAL</i>	
<i>-L4_EADDRNOTAVAIL</i>	The given address is not available.
<i>&lt;0</i>	IPC errors

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

#### Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see [L4Re::Rm::find](#)).

Definition at line 411 of file [rm](#).

**15.293.4.3 detach()** [1/3]

```
int L4Re::Rm::detach (
    l4_addr_t addr,
    L4::Cap< Dataspace > * mem,
    L4::Cap< L4::Task > const & task = This_task ) const [inline], [noexcept]
```

Detach and unmap a region from the address space.

**Parameters**

	<i>addr</i>	Virtual address of region, any address within the region is valid.
out	<i>mem</i>	<a href="#">Dataspace</a> that is affected. Give 0 if not interested.
	<i>task</i>	This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task.

**Return values**

<a href="#">L4Re::Rm::Detach_result</a>	On success.
<a href="#">-L4_ENOENT</a>	No region found.
<a href="#">&lt;0</a>	IPC errors

Frees a region in the virtual address space given by *addr* (address type). The corresponding part of the address space is now available again.

Definition at line 746 of file [rm](#).

**15.293.4.4 detach()** [2/3]

```
int L4Re::Rm::detach (
    l4_addr_t start,
    unsigned long size,
    L4::Cap< Dataspace > * mem,
    L4::Cap< L4::Task > const & task ) const [inline], [noexcept]
```

Detach and unmap all parts of the regions within the specified interval.

**Parameters**

	<i>start</i>	Start of area to detach, must be within region.
	<i>size</i>	Size of of area to detach (in bytes).
out	<i>mem</i>	<a href="#">Dataspace</a> that is affected. Give 0 if not interested.
	<i>task</i>	This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task.

**Return values**

<a href="#">L4Re::Rm::Detach_result</a>	On success.
<a href="#">-L4_ENOENT</a>	No region found.
<a href="#">&lt;0</a>	IPC errors

Frees all regions within the interval given by start and size. If a region overlaps the start or the end of the interval this region is only detached partly. If the interval is within one region the original region is split up into two separate regions.

Definition at line 759 of file [rm](#).

#### 15.293.4.5 detach() [3/3]

```
int L4Re::Rm::detach (
    void * addr,
    L4::Cap< Dataspace > * mem,
    L4::Cap< L4::Task > const & task = This_task ) const [inline], [noexcept]
```

Detach and unmap a region from the address space.

##### Parameters

	<i>addr</i>	Virtual address of region, any address within the region is valid.
out	<i>mem</i>	<a href="#">Dataspace</a> that is affected. Give 0 if not interested.
	<i>task</i>	This argument specifies the task where the pages are unmapped. Provide <a href="#">L4::Cap&lt;L4::Task&gt;::Invalid</a> for none. The default is the current task.

##### Return values

<a href="#">L4Re::Rm::Detach_result</a>	On success.
<a href="#">-L4_ENOENT</a>	No region found.
<0	IPC errors

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 751 of file [rm](#).

#### 15.293.4.6 find()

```
long L4Re::Rm::find (
    l4_addr_t * addr,
    unsigned long * size,
    Offset * offset,
    L4Re::Rm::Flags * flags,
    L4::Cap< Dataspace > * m ) [inline], [noexcept]
```

Find a region given an address and size.

##### Parameters

in, out	<i>addr</i>	Address to look for. Returns the start address of the found region.
in, out	<i>size</i>	Size of the area to look for (in bytes). Returns the size of the found region (in bytes).
out	<i>offset</i>	Offset at the beginning of the region within the associated dataspace.
out	<i>flags</i>	Region flags, see <a href="#">F::Region_flags</a> (and <a href="#">F::In_area</a> ).
out	<i>m</i>	Associated dataspace or paging service.

## Return values

0	Success
-L4_EPERM	Operation not allowed.
-L4_ENOENT	No region found.
<0	IPC errors

This function returns the properties of the region that contains the area described by the `addr` and `size` parameter. If no such region is found but a reserved area, the area is returned and `F::ln_area` is set in `flags`. Note, in the case of an area the `offset` and `m` return values are invalid.

## Note

The value of the size input parameter should be 1 to assure that a region can be determined unambiguously.

Definition at line 668 of file `rm`.

## 15.293.4.7 free\_area()

```
long L4Re::Rm::free_area (
    l4_addr_t addr )
```

Free an area from the region map.

## Parameters

<i>addr</i>	An address within the area to free.
-------------	-------------------------------------

## Return values

0	Success
-L4_ENOENT	No area found.
<0	IPC errors

## Note

The data spaces that are attached to that area are not detached by this operation.

See also

[reserve\\_area\(\)](#) for more information about areas.

#### 15.293.4.8 get\_areas()

```
long L4Re::Rm::get_areas (
    l4_addr_t start,
    L4::Ipc::Ret_array< Range > areas )
```

Return the list of areas whose starting addresses are higher or equal to `start` in the address space managed by this region map.

##### Parameters

	<i>start</i>	Virtual address from where to start searching.
out	<i>areas</i>	List of areas found in this region map.

##### Return values

<code>&gt;=0</code>	Number of returned areas in the <code>areas</code> array.
<code>&lt;0</code>	IPC errors

##### Note

The returned list of areas might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last area from the previous call.

#### 15.293.4.9 get\_regions()

```
long L4Re::Rm::get_regions (
    l4_addr_t start,
    L4::Ipc::Ret_array< Range > regions )
```

Return the list of regions whose starting addresses are higher or equal to `start` in the address space managed by this region map.

##### Parameters

	<i>start</i>	Virtual address from where to start searching.
out	<i>regions</i>	List of regions found in this region map.

##### Return values

<code>&gt;=0</code>	Number of returned regions in the <code>regions</code> array.
<code>&lt;0</code>	IPC errors

**Note**

The returned list of regions might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last region from the previous call.

**15.293.4.10 reserve\_area() [1/2]**

```
long L4Re::Rm::reserve_area (
    l4_addr_t * start,
    unsigned long size,
    Flags flags = Flags(0),
    unsigned char align = L4_PAGESHIFT ) const [inline], [noexcept]
```

Reserve the given area in the region map.

**Parameters**

<i>in, out</i>	<i>start</i>	The virtual start address of the area to reserve. Returns the start address of the area.
	<i>size</i>	The size of the area to reserve (in bytes).
	<i>flags</i>	Flags for the reserved area (see <a href="#">L4Re::Rm::F::Region_flags</a> and <a href="#">L4Re::Rm::F::Attach_flags</a> ).
	<i>align</i>	Alignment of area if searched as bits (log2 value).

**Return values**

0	Success
-L4_EADDRNOTAVAIL	The given area cannot be reserved.
<0	IPC errors

This function reserves an area within the virtual address space managed by the region map. There are two kinds of areas available:

- Reserved areas (*flags* = [L4Re::Rm::F::Reserved](#)), where no data spaces can be attached
- Special purpose areas (*flags* = 0), where data spaces can be attached to the area via the [L4Re::Rm::F::In\\_area](#) flag and a start address within the area itself.

**Note**

When searching for a free place in the virtual address space (with *flags* = [L4Re::Rm::F::Search\\_addr](#)), the space between *start* and the end of the virtual address space is searched.

Definition at line [288](#) of file [rm](#).

**15.293.4.11 reserve\_area() [2/2]**

```
template<typename T >
long L4Re::Rm::reserve_area (
    T ** start,
    unsigned long size,
    Flags flags = Flags(0),
    unsigned char align = L4_PAGESHIFT ) const [inline], [noexcept]
```

Reserve the given area in the region map.

## Parameters

<i>in, out</i>	<i>start</i>	The virtual start address of the area to reserve. Returns the start address of the area.
	<i>size</i>	The size of the area to reserve (in bytes).
	<i>flags</i>	Flags for the reserved area (see <a href="#">F::Region_flags</a> and <a href="#">F::Attach_flags</a> ).
	<i>align</i>	Alignment of area if searched as bits (log2 value).

## Return values

<i>0</i>	Success
<i>-L4_EADDRNOTAVAIL</i>	The given area cannot be reserved.
<i>&lt;0</i>	IPC errors

For more information, please refer to the analogous function

### 15.296.1 Detailed Description

```
template<typename T>
class L4Re::Rm::Unique_region< T >
```

Unique region.

Capture a single region with automatic detach on destruction and unique ownership. Stores the start address and the region-mapper capability internally. A unique region is valid precisely if the internal region-mapper capability is valid. The features for unique ownership and automatic detach are only active for valid unique regions.

Definition at line [434](#) of file [rm](#).

### 15.296.2 Constructor & Destructor Documentation

#### 15.296.2.1 Unique\_region() [1/3]

```
template<typename T >
L4Re::Rm::Unique_region< T >::Unique_region (
    T addr ) [inline], [explicit], [noexcept]
```

Construct a [Unique\\_region](#) from an address.

No region manager is set.

Parameters

<i>addr</i>	The new address
-------------	-----------------

Definition at line [455](#) of file [rm](#).

#### 15.296.2.2 Unique\_region() [2/3]

```
template<typename T >
L4Re::Rm::Unique_region< T >::Unique_region (
    T addr,
    L4::Cap< Rm > const & rm ) [inline], [noexcept]
```

Construct a valid [Unique\\_region](#) from an address and a region manager.

Parameters

<i>addr</i>	The address
<i>rm</i>	The region manager

Definition at line 464 of file [rm](#).

### 15.296.2.3 Unique\_region() [3/3]

```
template<typename T >
L4Re::Rm::Unique_region< T >::Unique_region (
    Unique_region< T > && o ) [inline], [noexcept]
```

Move-Construct a [Unique\\_region](#)

#### Parameters

<i>o</i>	L-value reference to other region.
----------	------------------------------------

Definition at line 472 of file [rm](#).

### 15.296.2.4 ~Unique\_region()

```
template<typename T >
L4Re::Rm::Unique_region< T >::~~Unique_region ( ) [inline], [noexcept]
```

Destructor.

If the region is valid, call `detach`.

Definition at line 497 of file [rm](#).

References [L4::Cap\\_base::is\\_valid\(\)](#).

## 15.296.3 Member Function Documentation

### 15.296.3.1 get()

```
template<typename T >
T L4Re::Rm::Unique_region< T >::get ( ) const [inline], [noexcept]
```

Return the address.

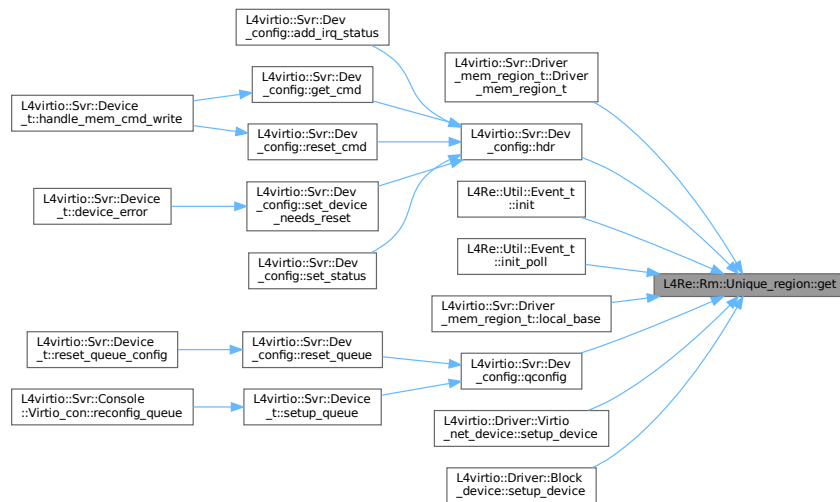

**Returns**

the address

Definition at line 508 of file [rm](#).

Referenced by [L4virtio::Svr::Driver\\_mem\\_region\\_t< DATA >::Driver\\_mem\\_region\\_t\(\)](#), [L4virtio::Svr::Dev\\_config::hdr\(\)](#), [L4Re::Util::Event\\_t< PAYLOAD >::init\(\)](#), [L4Re::Util::Event\\_t< PAYLOAD >::init\\_poll\(\)](#), [L4virtio::Svr::Driver\\_mem\\_region\\_t< DATA >::L4virtio::Svr::Dev\\_config::qconfig\(\)](#), [L4virtio::Driver::Virtio\\_net\\_device::setup\\_device\(\)](#), and [L4virtio::Driver::Block\\_device::setup\\_device\(\)](#).

Here is the caller graph for this function:

**15.296.3.2 is\_valid()**

```

template<typename T >
bool L4Re::Rm::Unique_region< T >::is_valid ( ) const [inline], [noexcept]

```

Check if the [Unique\\_region](#) is valid.

**Returns**

true iff the [Unique\\_region](#) is valid

Definition at line 548 of file [rm](#).

References [L4::Cap\\_base::is\\_valid\(\)](#).

Here is the call graph for this function:

### 15.296.3.3 operator=()

```
template<typename T >
Unique_region & L4Re::Rm::Unique_region< T >::operator= (
    Unique_region< T > && o ) [inline], [noexcept]
```

Move-assign a [Unique\\_region](#)

#### Parameters

<i>o</i>	L-value reference to region to assign from
----------	--

Definition at line [480](#) of file [rm](#).

References [L4::Cap\\_base::is\\_valid\(\)](#).

Here is the call graph for this function:

### 15.296.3.4 release()

```
template<typename T >
T L4Re::Rm::Unique_region< T >::release ( ) [inline], [noexcept]
```

Return the address and invalidate the [Unique\\_region](#)

#### Returns

the address

Definition at line [516](#) of file [rm](#).

### 15.296.3.5 reset()

```
template<typename T >
void L4Re::Rm::Unique_region< T >::reset (
    T addr,
    L4::Cap< Rm > const & rm ) [inline], [noexcept]
```

Set new address and region manager.

## Parameters

<i>addr</i>	The new address
<i>rm</i>	The new region manager

Definition at line 528 of file [rm](#).

References [L4::Cap\\_base::is\\_valid\(\)](#).

Here is the call graph for this function:

*Data type expressing server-side demand for receive buffers.*

### 15.299.1 Detailed Description

Buffer-register (BR) manager for [L4::Server](#).

Implementation of the [L4::lpc\\_svr::Server\\_iface](#) API for managing the server-side receive buffers needed for a set of server objects running within a server.

Definition at line 36 of file [br\\_manager](#).

### 15.299.2 Member Function Documentation

#### 15.299.2.1 [alloc\\_buffer\\_demand\(\)](#)

```
int L4Re::Util::Br_manager::alloc_buffer_demand (
    Demand const & demand ) [inline], [override], [virtual]
```

Tells the server to allocate buffers for the given demand.

## Parameters

<i>demand</i>	The total server-side demand of receive buffers needed for a given interface, see Demand.
---------------	---

This function is not called by user applications directly. Usually the server implementation or the registry implementation calls this function whenever a new object is registered at the server.

Implements [L4::lpc\\_svr::Server\\_iface](#).

Definition at line 65 of file [br\\_manager](#).

References [L4::Cap\\_base::cap\(\)](#), [L4Re::Util::cap\\_alloc](#), [L4::Type\\_info::Demand::caps](#), [L4\\_EINVAL](#), [L4\\_ENOMEM](#), [L4\\_EOK](#), [L4\\_ERANGE](#), [L4::Type\\_info::Demand::mem](#), and [L4::Type\\_info::Demand::ports](#).

Here is the call graph for this function:

### 15.299.2.2 get\_rcv\_cap()

```
L4::Cap< void > L4Re::Util::Br_manager::get_rcv_cap (
    int index ) const [inline], [override], [virtual]
```

Get capability slot allocated to the given receive buffer.

## Parameters

<i>index</i>	The receive buffer index of the expected capability argument ( $0 \leq \text{index} < \text{caps}$ registered with <a href="#">alloc_buffer_demand()</a> ).
--------------	---

## Precondition

$0 \leq \text{index} < \text{caps}$  registered with [alloc\\_buffer\\_demand\(\)](#)

## Returns

Capability slot currently allocated to the given receive buffer.

Implements [L4::lpc\\_svr::Server\\_iface](#).

Definition at line 97 of file [br\\_manager](#).

References [L4\\_CAP\\_MASK](#).

**15.299.2.3 realloc\_rcv\_cap()**

```
int L4Re::Util::Br_manager::realloc_rcv_cap (
    int index ) [inline], [override], [virtual]
```

Allocate a new capability for the given receive buffer.

**Parameters**

<i>index</i>	The receive buffer index of the expected capability argument ( $0 \leq \text{index} < \text{caps}$ registered with <a href="#">alloc_buffer_demand()</a> ).
--------------	---

**Precondition**

$0 \leq \text{index} < \text{caps}$  registered with [alloc\\_buffer\\_demand\(\)](#)

**Returns**

0 on success, < 0 on error.

Implements [L4::lpc\\_svr::Server\\_iface](#).

Definition at line 105 of file [br\\_manager](#).

References [L4::Cap\\_base::cap\(\)](#), [L4Re::Util::cap\\_alloc](#), [L4\\_EINVAL](#), [L4\\_ENOMEM](#), and [L4\\_EOK](#).

Here is the call graph for this function:

**15.299.2.4 set\_rcv\_cap\_flags()**

```
void L4Re::Util::Br_manager::set_rcv_cap_flags (
    unsigned long flags ) [inline]
```

Set the receive flags for the buffers.

**Precondition**

Must be called before any handlers are registered.

## Parameters

<i>flags</i>	New receive capability flags, see <a href="#">l4_msg_item_consts_t</a> .
--------------	--

Definition at line 129 of file [br\\_manager](#).

References [l4\\_assert](#).

The documentation for this class was generated from the following file:

flags=[L4\\_FP\\_ALL\\_SPACES](#)) noexcept  
*Free a capability slot.*

### 15.302.1 Detailed Description

Capability allocator.

Definition at line 39 of file [bitmap\\_cap\\_alloc](#).

The documentation for this class was generated from the following file:

- [l4/re/util/bitmap\\_cap\\_alloc](#)

## 15.303 L4Re::Util::Counter< COUNTER > Struct Template Reference

Counter for [Counting\\_cap\\_alloc](#) with variable data width.

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counter< COUNTER >:

### Public Member Functions

- bool [inc](#) ()  
*Increment counter if not yet saturated.*
- Type [dec](#) ()  
*Decrement counter if not saturated.*

### 15.303.1 Detailed Description

```
template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter< COUNTER >
```

Counter for [Counting\\_cap\\_alloc](#) with variable data width.

This version is not thread safe.

Definition at line 38 of file [counting\\_cap\\_alloc](#).

### 15.303.2 Member Function Documentation

#### 15.303.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter< COUNTER >::dec ( ) [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 78 of file [counting\\_cap\\_alloc](#).

**15.303.2.2 inc()**

```
template<typename COUNTER = unsigned char>  
bool L4Re::Util::Counter< COUNTER >::inc ( ) [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

## Return values

<i>false</i>	The counter just went saturated after it was increased.
<i>true</i>	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 61 of file [counting\\_cap\\_alloc](#).

The documentation for this struct was generated from the following file:

- [l4/re/util/counting\\_cap\\_alloc](#)

## 15.304 L4Re::Util::Counter\_atomic< COUNTER > Struct Template Reference

Thread safe version of counter for [Counting\\_cap\\_alloc](#).

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counter\_atomic< COUNTER >:

### Public Member Functions

- bool [inc](#) ()  
*Increment counter if not yet saturated.*
- Type [dec](#) ()  
*Decrement counter if not saturated.*

### 15.304.1 Detailed Description

```
template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter_atomic< COUNTER >
```

Thread safe version of counter for [Counting\\_cap\\_alloc](#).

Despite using atomic instructions, this version has to make sure that capability slots are not reused too early. If the last reference is gone, the capability slot has to be unmapped. The slot must only be allocated again when the unmap has completed. This is accomplished by starting with an initial count of 2. The last reference will decrease the counter to 1. Only then, after the slot was unmapped, will the counter be set to 0. This will allow other threads to reallocate the slot.

Definition at line 109 of file [counting\\_cap\\_alloc](#).

## 15.304.2 Member Function Documentation

### 15.304.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter_atomic< COUNTER >::dec ( ) [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 153 of file [counting\\_cap\\_alloc](#).

### 15.304.2.2 inc()

```
template<typename COUNTER = unsigned char>
bool L4Re::Util::Counter_atomic< COUNTER >::inc ( ) [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

#### Return values

<i>false</i>	The counter just went saturated after it was increased.
<i>true</i>	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 132 of file [counting\\_cap\\_alloc](#).

The documentation for this struct was generated from the following file:

*Create a new, empty allocator.*
- `void setup (void *m, long capacity, long bias, Dbg *dbg) noexcept`  
*Set up the backing memory for the allocator and the area of managed capability slots.*

### 15.305.1 Detailed Description

```
template<typename COUNTERTYPE, typename Dbg>
class L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >
```

Internal reference-counting cap allocator.

This is intended for internal use only. [L4Re](#) applications should use [L4Re::Util::cap\\_alloc\(\)](#).

Allocator for capability slots that automatically frees the slot and optionally unmaps the capability when the reference count goes down to zero. Reference counting must be done manually via [take\(\)](#) and [release\(\)](#). The backing store for the reference counters must be provided in the [setup\(\)](#) method. The allocator can recognize capability slots that are not managed by itself and does nothing on such slots.

#### Note

The user must ensure that the backing store is zero-initialized.

The user must ensure that the capability slots managed by this allocator are not used by a different allocator, see [setup\(\)](#).

The operations in this class are not thread-safe.

Definition at line 202 of file [counting\\_cap\\_alloc](#).

### 15.305.2 Constructor & Destructor Documentation

#### 15.305.2.1 Counting\_cap\_alloc()

```
template<typename COUNTERTYPE , typename Dbg >
L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::Counting_cap_alloc ( ) [inline], [protected],
[noexcept]
```

Create a new, empty allocator.

Needs to be initialized with [setup\(\)](#) before it can be used.

Definition at line 231 of file [counting\\_cap\\_alloc](#).

### 15.305.3 Member Function Documentation

#### 15.305.3.1 alloc() [1/2]

```
template<typename COUNTERTYPE , typename Dbg >
L4::Cap< void > L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::alloc ( ) [inline],
[noexcept]
```

Allocate a new capability slot.

**Returns**

The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 269 of file [counting\\_cap\\_alloc](#).

References [L4\\_CAP\\_SHIFT](#).

Referenced by [L4Re::Util::Counting\\_cap\\_alloc< COUNTERTYPE, Dbg >::alloc\(\)](#).

Here is the caller graph for this function:

**15.305.3.2 alloc() [2/2]**

```

template<typename COUNTERTYPE , typename Dbg >
template<typename T >
L4::Cap< T > L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::alloc ( ) [inline], [noexcept]
  
```

Allocate a new capability slot.

**Returns**

The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 294 of file [counting\\_cap\\_alloc](#).

References [L4Re::Util::Counting\\_cap\\_alloc< COUNTERTYPE, Dbg >::alloc\(\)](#).

Here is the call graph for this function:

**15.305.3.3 free()**

```

template<typename COUNTERTYPE , typename Dbg >
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::free (
    L4::Cap< void > cap,
    l4_cap_idx_t task = L4_INVALID_CAP,
    unsigned unmap_flags = L4_FP_ALL_SPACES ) [inline], [noexcept]
  
```

Free the capability.

**Parameters**

<i>cap</i>	Capability to free.
<i>task</i>	If set, task to unmap the capability from.
<i>unmap_flags</i>	Flags for unmap, see <code>l4_unmap_flags_t</code> .

**Precondition**

The capability has been allocated. Calling free twice on a capability managed by this allocator results in undefined behaviour.

**Returns**

True, if the capability was managed by this allocator.

Definition at line 333 of file `counting_cap_alloc`.

References `l4_assert`, `l4_is_valid_cap()`, and `l4_task_unmap()`.

Here is the call graph for this function:

**15.305.3.4 release()**

```

template<typename COUNTERTYPE , typename Dbg >
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::release (
    L4::Cap< void > cap,
    l4_cap_idx_t task = L4_INVALID_CAP,
    unsigned unmap_flags = L4_FP_ALL_SPACES ) [inline], [noexcept]
  
```

Decrease the reference counter for a capability.

**Parameters**

<i>cap</i>	Capability to release.
<i>task</i>	If set, task to unmap the capability from.
<i>unmap_flags</i>	Flags for unmap, see <code>l4_unmap_flags_t</code> .

**Precondition**

The capability has been allocated. Calling release on a free capability results in undefined behaviour.

**Returns**

True, if the capability was freed as a result of this operation. If false is returned the capability is either still in use or is not managed by this allocator.

Does nothing apart from returning false if the capability is not managed by this allocator.

Definition at line 371 of file [counting\\_cap\\_alloc](#).

References [l4\\_assert](#), [L4\\_INVALID\\_CAP](#), and [l4\\_task\\_unmap\(\)](#).

Here is the call graph for this function:

**15.305.3.5 setup()**

```

template<typename COUNTERTYPE , typename Dbg >
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::setup (
    void * m,
    long capacity,
    long bias,
    Dbg * dbg ) [inline], [protected], [noexcept]
  
```

Set up the backing memory for the allocator and the area of managed capability slots.

**Parameters**

<i>m</i>	Pointer to backing memory.
<i>capacity</i>	Number of capabilities that can be stored.
<i>bias</i>	First capability id to use by this allocator.
<i>dbg</i>	Logger for warnings if counter got saturated.

The allocator will manage the capability slots between `bias` and `bias + capacity - 1` (inclusive). It is the responsibility of the user to ensure that these slots are not used otherwise.

Definition at line 254 of file [counting\\_cap\\_alloc](#).

**15.305.3.6 take()**

```

template<typename COUNTERTYPE , typename Dbg >
  
```

```
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::take (
    L4::Cap< void > cap ) [inline], [noexcept]
```

Increase the reference counter for the capability.

#### Parameters

<i>cap</i>	Capability, whose reference counter should be increased.
------------	--

If the capability was still free, it will be automatically allocated. Silently does nothing if the capability is not managed by this allocator.

Definition at line 308 of file [counting\\_cap\\_alloc](#).

References [L4\\_CAP\\_SHIFT](#), and [L4\\_UNLIKELY](#).

### 15.306.1 Detailed Description

`Dataspace` server class.

The default implementation of the interface provides a continuous dataspace with contiguous pages.

Definition at line 40 of file `dataspace_svr`.

### 15.306.2 Member Function Documentation

#### 15.306.2.1 `allocate()`

```
virtual long L4Re::Util::Dataspace_svr::allocate (
    l4_addr_t offset,
    l4_size_t size,
    unsigned access ) [inline], [virtual], [noexcept]
```

Allocate a region within a dataspace.

#### Parameters

<i>offset</i>	Offset in the dataspace, in bytes.
<i>size</i>	Size of the range, in bytes.
<i>access</i>	Access mode with which the memory backing the dataspace region should be allocated.

**Return values**

0	Success
<0	Error

Definition at line 235 of file [dataspace\\_svr](#).

References [L4\\_ENODEV](#).

**15.306.2.2 clear()**

```
virtual long L4Re::Util::Dataspace_svr::clear (
    unsigned long offs,
    unsigned long size ) const [inline], [virtual], [noexcept]
```

Clear a region in the dataspace.

**Parameters**

<i>offs</i>	Start of the region
<i>size</i>	Size of the region

**Return values**

0	Success
<0	Error

Definition at line 203 of file [dataspace\\_svr](#).

References [L4\\_ERANGE](#).

**15.306.2.3 copy()**

```
virtual long L4Re::Util::Dataspace_svr::copy (
    l4_addr_t dst_offs,
    l4_umword_t src_id,
    l4_addr_t src_offs,
    unsigned long size ) [inline], [virtual], [noexcept]
```

Copy from src dataspace to this destination dataspace.

**Parameters**

<i>dst_offs</i>	Offset into the destination dataspace
<i>src_id</i>	Local id of the source dataspace
<i>src_offs</i>	Offset into the source dataspace
<i>size</i>	Number of bytes to copy

## Return values

$\geq 0$	Number of bytes copied
$< 0$	An error occurred. The error code may depend on the implementation.

Definition at line 186 of file [dataspace\\_svr](#).

References [L4\\_ENODEV](#).

## 15.306.2.4 is\_static()

```
virtual bool L4Re::Util::Dataspace_svr::is_static ( ) const [inline], [virtual], [noexcept]
```

Return whether the dataspace is static.

## Returns

True if dataspace is static

Definition at line 255 of file [dataspace\\_svr](#).

## 15.306.2.5 map()

```
int L4Re::Util::Dataspace_svr::map (
    Dataspace::Offset offset,
    Dataspace::Map_addr local_addr,
    Dataspace::Flags flags,
    Dataspace::Map_addr min_addr,
    Dataspace::Map_addr max_addr,
    L4::Ipc::Snd_fpage & memory ) [inline]
```

Map a region of the dataspace.

## Parameters

	<i>offset</i>	Offset to start within data space
	<i>local_addr</i>	Local address to map to.
	<i>flags</i>	<a href="#">Dataspace</a> flags, see <a href="#">L4Re::Dataspace::F::Flags</a> .
	<i>min_addr</i>	Defines start of receive window.
	<i>max_addr</i>	Defines end of receive window.
out	<i>memory</i>	Send fpage to map

## Return values

0	Success
$< 0$	Error

Definition at line 68 of file [dataspace\\_svr](#).

References [L4\\_EOK](#), [L4\\_ERANGE](#), [l4\\_fpage\(\)](#), [L4\\_PAGESHIFT](#), [l4\\_round\\_page\(\)](#), [l4\\_trunc\\_page\(\)](#), [l4\\_trunc\\_size\(\)](#), and [map\\_hook\(\)](#).

Here is the call graph for this function:

### 15.306.2.6 map\_hook()

```

virtual int L4Re::Util::Dataspace_svr::map_hook (
    Dataspace::Offset offs,
    unsigned order,
    Dataspace::Flags flags,
    Dataspace::Map_addr * base,
    unsigned * send_order ) [inline], [virtual]
  
```

A hook that is called for acquiring the data to be mapped.

#### Parameters

<i>offs</i>	Offset in dataspace to supply
<i>order</i>	Log2-size of data to supply
<i>flags</i>	Flags for the mapping
<i>base</i>	Start address of the flexpage to be mapped
<i>send_order</i>	Order (log2 of size) of the flexpage to be mapped

#### Return values

$< 0$	Error and the map request will be aborted with that error.
$\geq 0$	Success

See also

[map](#)

Definition at line 147 of file [dataspace\\_svr](#).

Referenced by [map\(\)](#).

Here is the caller graph for this function:

### 15.306.2.7 map\_info()

```
virtual long L4Re::Util::Dataspace_svr::map_info (
    l4_addr_t & start_addr,
    l4_addr_t & end_addr ) [inline], [virtual], [noexcept]
```

Return mapping information for no-MMU systems.

The method is only called on no-MMU systems. It should return the address of the underlying backing buffer so that the caller might map the dataspace.

The default implementation always returns an error because the derived class must provide the required information.

See also

[L4Re::Dataspace::map\\_info\(\)](#)

Definition at line 270 of file [dataspace\\_svr](#).

### 15.306.2.8 page\_shift()

```
virtual unsigned long L4Re::Util::Dataspace_svr::page_shift ( ) const [inline], [virtual],
[noexcept]
```

Define the size of the flexpage to map.

Returns

flexpage size

Definition at line 247 of file [dataspace\\_svr](#).

References [L4\\_LOG2\\_PAGESIZE](#).

#### 15.306.2.9 `release()`

```
virtual unsigned long L4Re::Util::Dataspace_svr::release ( ) [inline], [virtual], [noexcept]
```

Release a reference to this dataspace.

##### Returns

Number of references to the dataspace

Default does nothing and returns always zero.

Definition at line 171 of file [dataspace\\_svr](#).

#### 15.306.2.10 `take()`

```
virtual void L4Re::Util::Dataspace_svr::take ( ) [inline], [virtual], [noexcept]
```

Take a reference to this dataspace.

Default does nothing.

Definition at line 161 of file [dataspace\\_svr](#).

The documentation for this class was generated from the following file:

- `l4/re/util/dataspace_svr`

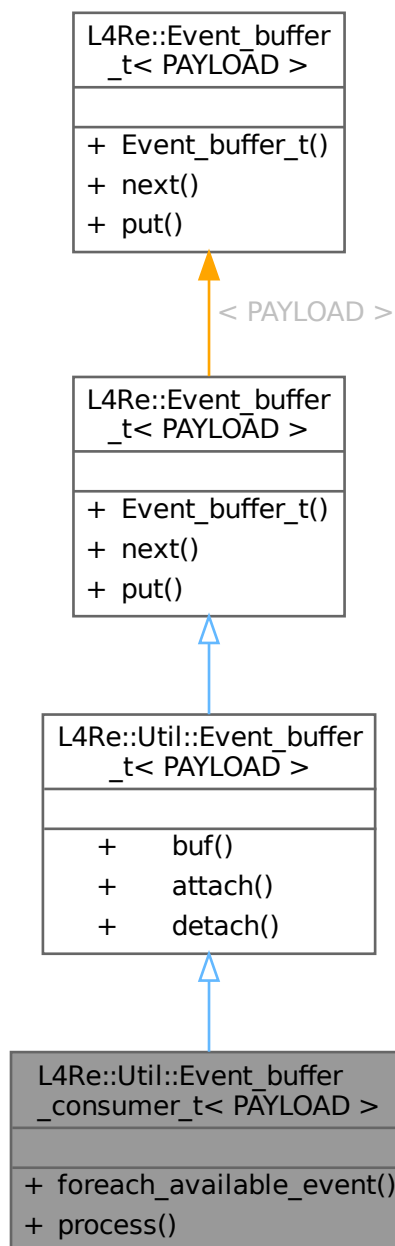

### 15.307 `L4Re::Util::Event_buffer_consumer_t< PAYLOAD >` Class Template Reference

An event buffer consumer.

template<typename PAYLOAD>
class L4Re::Util::Event_buffer_t< PAYLOAD >
```

Event\_buffer utility class.

Definition at line 36 of file [event\\_buffer](#).

### 15.308.2 Member Function Documentation

#### 15.308.2.1 attach()

```
template<typename PAYLOAD >
long L4Re::Util::Event_buffer_t< PAYLOAD >::attach (
    L4::Cap< L4Re::Dataspace > ds,
    L4::Cap< L4Re::Rm > rm ) [inline], [noexcept]
```

Attach event buffer from address space.

##### Parameters

<i>ds</i>	<a href="#">Dataspace</a> of the event buffer.
<i>rm</i>	Region manager to attach buffer to.

##### Returns

0 on success, negative error code otherwise.

Definition at line 56 of file [event\\_buffer](#).

*Get event IRQ.*

### 15.310.1 Detailed Description

```
template<typename PAYLOAD>
class L4Re::Util::Event_t< PAYLOAD >
```

Convenience wrapper for getting access to an event object.

After calling `init()` the class supplies the event-buffer and the associated IRQ object.

Definition at line 43 of file `event`.

### 15.310.2 Member Enumeration Documentation

#### 15.310.2.1 Mode

```
template<typename PAYLOAD >
enum L4Re::Util::Event_t::Mode
```

Modes of operation.

Enumerator

Mode_irq	Create an IRQ and attach, to get notifications.
Mode_polling	Do not use an IRQ.

Definition at line 49 of file `event`.

### 15.310.3 Member Function Documentation

#### 15.310.3.1 buffer()

```
template<typename PAYLOAD >
L4Re::Event_buffer_t< PAYLOAD > & L4Re::Util::Event_t< PAYLOAD >::buffer ( ) [inline]
```

Get event buffer.

## Returns

[Event](#) buffer object.

Definition at line 159 of file [event](#).

## 15.310.3.2 init()

```
template<typename PAYLOAD >
template<typename IRQ_TYPE >
int L4Re::Util::Event_t< PAYLOAD >::init (
    L4::Cap< L4Re::Event > event,
    L4Re::Env const * env = L4Re::Env::env(),
    L4Re::Cap_alloc * ca = L4Re::Cap_alloc::get_cap_alloc(L4Re::Util::cap_alloc) )
[inline]
```

Initialise an event object.

## Template Parameters

<i>IRQ_TYPE</i>	Type used for handling notifications from the event provider. This must be derived from <a href="#">L4::Triggerable</a> .
-----------------	---

## Parameters

<i>event</i>	Capability to event.
<i>env</i>	Pointer to L4Re-Environment
<i>ca</i>	Pointer to capability allocator.

## Return values

0	Success
-L4_ENOMEM	No memory to allocate required capabilities.
<0	Other IPC errors.

Definition at line 70 of file [event](#).

References [L4Re::Rm::Unique\\_region< T >::get\(\)](#), [L4\\_ENOMEM](#), [l4\\_error\(\)](#), [L4::lpc::make\\_cap\\_rw\(\)](#), [L4Re::Rm::F::RW](#), and [L4Re::Rm::F::Search\\_addr](#).

Here is the call graph for this function:

### 15.310.3.3 `init_poll()`

```
template<typename PAYLOAD >
int L4Re::Util::Event_t< PAYLOAD >::init_poll (
    L4::Cap< L4Re::Event > event,
    L4Re::Env const * env = L4Re::Env::env(),
    L4Re::Cap_alloc * ca = L4Re::Cap_alloc::get_cap_alloc(L4Re::Util::cap_alloc) )
[inline]
```

Initialise an event object in polling mode.

#### Parameters

<i>event</i>	Capability to event.
<i>env</i>	Pointer to L4Re-Environment
<i>ca</i>	Pointer to capability allocator.

#### Return values

0	Success
-L4_ENOMEM	No memory to allocate required capabilities.
<0	Other IPC errors.

Definition at line 123 of file [event](#).

References [L4Re::Rm::Unique\\_region< T >::get\(\)](#), [L4\\_ENOMEM](#), [L4::lpc::make\\_cap\\_rw\(\)](#), [L4Re::Rm::F::RW](#), and [L4Re::Rm::F::Search\\_addr](#).

Here is the call graph for this function:

### 15.310.3.4 `irq()`

```
template<typename PAYLOAD >
L4::Cap< L4::Triggerable > L4Re::Util::Event_t< PAYLOAD >::irq ( ) const [inline]
```

Get event IRQ.

#### Returns

[Event](#) IRQ.

Definition at line 166 of file [event](#).

The documentation for this class was generated from the following file:

- [l4/re/util/event](#)

## 15.311 L4Re::Util::Item\_alloc\_base Class Reference

Item allocator.

```
#include <item_alloc>
```

Inherited by L4Re::Util::Item\_alloc< Bits >.

## 15.313 L4Re::Util::Names::Name\_space Class Reference

Abstract server-side implementation of the L4::Namespace interface.

```
#include <name_space_svr>
```

Collaboration diagram for L4Re::Util::Names::Name\_space:

### Public Member Functions

- virtual `~Name_space()`  
*The destructor of the derived class is responsible for freeing resources.*

### Protected Member Functions

- virtual `Entry * alloc_dynamic_entry (Name const &n, unsigned flags)=0`  
*Allocate a new entry for the given name.*
- virtual `void free_dynamic_entry (Entry *e)=0`  
*Free an entry previously allocated with [alloc\\_dynamic\\_entry\(\)](#).*
- virtual `int get_epiface (l4_umword_t data, bool is_local, L4::Epiface **lo)=0`  
*Return a pointer to the epiface assigned to a given label.*
- virtual `int copy_receive_cap (L4::Cap< void > *cap)=0`  
*Return the receive capability for permanent use.*
- virtual `void free_capability (L4::Cap< void > cap)=0`  
*Free a capability previously acquired with [copy\\_receive\\_cap\(\)](#).*
- virtual `void free_epiface (L4::Epiface *epiface)=0`  
*Free epiface previously acquired with [get\\_epiface\(\)](#).*

### 15.313.1 Detailed Description

Abstract server-side implementation of the L4::Namespace interface.

#### Note

The derived class is responsible for resource management through the provided interfaces. This includes freeing all resources on destruction!

Definition at line 191 of file [name\\_space\\_svr](#).

### 15.313.2 Member Function Documentation

#### 15.313.2.1 alloc\_dynamic\_entry()

```
virtual Entry * L4Re::Util::Names::Name_space::alloc_dynamic_entry (
    Name const & n,
    unsigned flags ) [protected], [pure virtual]
```

Allocate a new entry for the given name.

#### Parameters

<i>n</i>	<a href="#">Name</a> of the entry, must be copied.
<i>flags</i>	Entry flags, see <a href="#">Obj::Flags</a> .

#### Returns

A pointer to the newly allocated entry or NULL on error.

This method is called when a new entry was received. It must allocate memory, copy *n* out of the receive buffer and wrap everything in an Entry.

Referenced by [free\\_epiface\(\)](#).

Here is the caller graph for this function:

#### 15.313.2.2 copy\_receive\_cap()

```
virtual int L4Re::Util::Names::Name_space::copy_receive_cap (
    L4::Cap< void > * cap ) [protected], [pure virtual]
```

Return the receive capability for permanent use.

## Parameters

out	cap	Capability slot with the received capability. Must be permanently available until <a href="#">free_capability()</a> is called.
-----	-----	--

This method is called when a new entry is registered together with a capability mapping. It must decide whether and where to store the capability and return the final capability slot. Typical implementations return the capability slot in the receive window and allocate a new receive window.

**15.313.2.3 free\_capability()**

```
virtual void L4Re::Util::Names::Name_space::free_capability (
    L4::Cap< void > cap ) [protected], [pure virtual]
```

Free a capability previously acquired with [copy\\_receive\\_cap\(\)](#).

## Parameters

in	cap	Capability to free.
----	-----	---------------------

Counterpart of [copy\\_receive\\_cap](#). Free the capability slot when the entry is deleted or changed.

Referenced by [free\\_epiface\(\)](#).

Here is the caller graph for this function:

**15.313.2.4 free\_dynamic\_entry()**

```
virtual void L4Re::Util::Names::Name_space::free_dynamic_entry (
    Entry * e ) [protected], [pure virtual]
```

Free an entry previously allocated with [alloc\\_dynamic\\_entry\(\)](#).

## Parameters

e	Entry to free.
---	----------------

Referenced by [free\\_epiface\(\)](#).

Here is the caller graph for this function:

### 15.313.2.5 free\_epiface()

```
virtual void L4Re::Util::Names::Name_space::free_epiface (
    L4::Epiface * epiface ) [protected], [pure virtual]
```

Free epiface previously acquired with [get\\_epiface\(\)](#).

#### Parameters

in	<i>epiface</i>	Epiface to free.
----	----------------	------------------

Called when an entry that points to an epiface is deleted allowing implementations that hold resources to free them.

References [alloc\\_dynamic\\_entry\(\)](#), [free\\_capability\(\)](#), [free\\_dynamic\\_entry\(\)](#), [free\\_epiface\(\)](#), [L4\\_BASE\\_TASK\\_CAP](#), [L4\\_EEXIST](#), [L4\\_ENOMEM](#), and [L4Re::Namespace::Overwrite](#).

Referenced by [free\\_epiface\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.313.2.6 get\_epiface()

```
virtual int L4Re::Util::Names::Name_space::get_epiface (
    l4_umword_t data,
    bool is_local,
    L4::Epiface ** lo ) [protected], [pure virtual]
```

Return a pointer to the epiface assigned to a given label.

#### Parameters

in	<i>data</i>	Label or in the local case the capability slot of the receiving capability.
in	<i>is_local</i>	If true, a local capability slot was supplied, if false the label of a locally bound IPC gate.
out	<i>lo</i>	Pointer to epiface responsible for the capability.

#### Returns

[L4\\_EOK](#) if a valid interface could be found or an error message otherwise.

This method is called when a new entry is registered and some local ID was received for the capability. In this case, the generic implementation needs to get the epiface in order to get the capability.

The callee must make sure that the epiface remains valid until `free_epiface` is called. In particular, the capability slot must not be reallocated as long as the namespace server holds a reference to the epiface.

The documentation for this class was generated from the following file:

- `l4/re/util/name_space_svr`

## 15.314 L4Re::Util::Object\_registry Class Reference

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

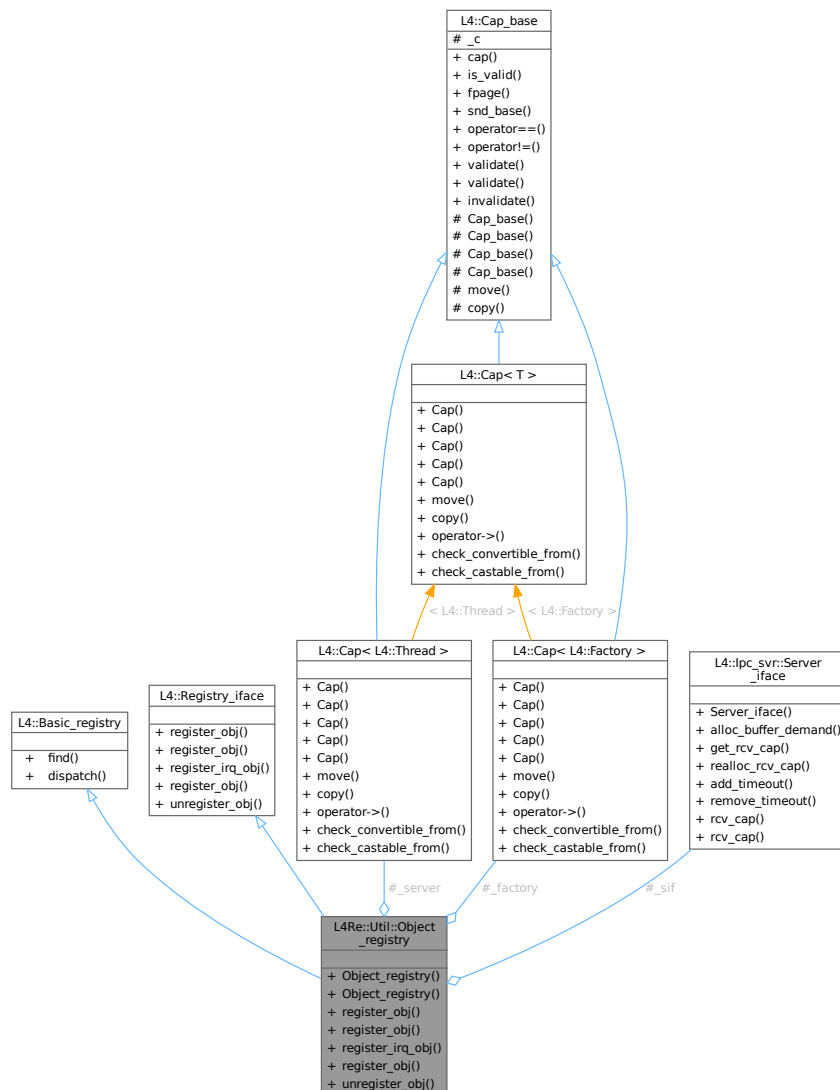

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Object\_registry:

Collaboration diagram for L4Re::Util::Object\_registry:

## Public Member Functions

- [Object\\_registry](#) ([L4::lpc\\_svr::Server\\_iface](#) \*sif)  
Create a registry for the main thread of the task using the default factory.

*Register a handler for an already existing interrupt.*

- void `unregister_obj` (`L4::Epiface *o`, bool `unmap=true`) override

*Remove a server object from the handler list.*

## Additional Inherited Members

## Static Public Member Functions inherited from `L4::Basic_registry`

- static `Value * find` (`l4_umword_t label`)

*Get the server object for an `lpc_gate` label.*

- static `l4_msgtag_t dispatch` (`l4_msgtag_t tag`, `l4_umword_t label`, `l4_utcb_t *utcb`)

*The dispatch function called by the server loop.*

### 15.314.1 Detailed Description

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

This class manages most of the setup of a server object. If necessary, an IPC gate is created, the specified thread is bound to the IPC gate. Incoming IPC is dispatched to the server object based on the label of the IPC gate.

The object registry is also able to manage IRQ endpoints. They require a different method for the object creation. Otherwise they are handled in the same way as IPC gates: a server object is responsible to process the incoming interrupts.

Definition at line 52 of file `object_registry`.

### 15.314.2 Constructor & Destructor Documentation

#### 15.314.2.1 `Object_registry()` [1/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc_svr::Server_iface * sif ) [inline], [explicit]
```

Create a registry for the main thread of the task using the default factory.

#### Parameters

<i>sif</i>	Server loop interface.
------------	------------------------

Definition at line 78 of file `object_registry`.

#### 15.314.2.2 `Object_registry()` [2/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc_svr::Server_iface * sif,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a registry for arbitrary threads.

## Parameters

<i>sif</i>	Server loop interface.
<i>server</i>	Capability to the thread that executes the server objects.
<i>factory</i>	Capability to a factory object capable of creating new IPC gates.

Definition at line 92 of file [object\\_registry](#).

### 15.314.3 Member Function Documentation

#### 15.314.3.1 register\_irq\_obj()

```
L4::Cap< L4::Irq > L4Re::Util::Object_registry::register_irq_obj (
    L4::Epiface * o ) [inline], [override], [virtual]
```

Register a handler for an interrupt.

## Parameters

<i>o</i>	Server object that handles IRQs.
----------	----------------------------------

## Return values

<i>L4::Cap&lt;L4::Irq&gt;</i>	Capability to a new IRQ object on success.
<i>L4::Cap&lt;L4::Irq&gt;::Invalid</i>	The allocation of the IRQ has failed.

The IRQ will be newly allocated using the registry's factory object. The caller must call [unregister\\_obj\(\)](#) to free all resources.

Implements [L4::Registry\\_iface](#).

Definition at line 238 of file [object\\_registry](#).

#### 15.314.3.2 register\_obj() [1/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o ) [inline], [override], [virtual]
```

Register a new server object on a newly allocated capability.

## Parameters

<i>o</i>	Server object that handles IPC requests.
----------	--

## Return values

<i>L4::Cap&lt;void&gt;</i>	A valid capability to a new IPC gate.
<i>L4::Cap&lt;void&gt;::Invalid</i>	The allocation of the IPC gate has failed.

The IPC gate will be allocated using the registry's factory. The caller must call [unregister\\_obj\(\)](#) to free all resources.

Implements [L4::Registry\\_iface](#).

Definition at line 222 of file [object\\_registry](#).

### 15.314.3.3 register\_obj() [2/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    char const * service ) [inline], [override], [virtual]
```

Register a new server object to a pre-allocated receive endpoint.

#### Parameters

<i>o</i>	Server object that handles IPC requests.
<i>service</i>	Name of a pre-allocated receive endpoint.

#### Return values

<i>L4::Cap&lt;void&gt;</i>	The capability known as <i>service</i> on success.
<i>L4::Cap&lt;void&gt;::Invalid</i>	No capability with the given name found.

The interface must be freed with [unregister\\_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry\\_iface](#).

#### Examples

[examples/clntsrv/server.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 205 of file [object\\_registry](#).

### 15.314.3.4 register\_obj() [3/3]

```
L4::Cap< L4::Rcv_endpoint > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    L4::Cap< L4::Rcv_endpoint > ep ) [inline], [override], [virtual]
```

Register a handler for an already existing interrupt.

#### Parameters

<i>o</i>	Server object that handles the IPC.
<i>ep</i>	Capability to a receive endpoint, may be a hardware or software interrupt or an IPC gate.

## Return values

<i>L4::Cap&lt;L4::Rcv_endpoint&gt;</i>	Capability ep on success.
<i>L4::Cap&lt;L4::Rcv_endpoint&gt;::Invalid</i>	The IRQ attach operation has failed.

The interface must be freed with [unregister\\_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry\\_iface](#).

Definition at line 260 of file [object\\_registry](#).

## 15.314.3.5 unregister\_obj()

```
void L4Re::Util::Object_registry::unregister_obj (
    L4::Epiface * o,
    bool unmap = true ) [inline], [override], [virtual]
```

Remove a server object from the handler list.

## Parameters

<i>o</i>	Server object to unbind.
<i>unmap</i>	Specifies if the object capability shall be unmapped (true) or not. The default (true) is to unmap the capability.

The capability used by the server object will be unmapped if `unmap` is true.

Implements [L4::Registry\\_iface](#).

Definition at line 276 of file [object\\_registry](#).

References [L4::Thread::Modify\\_senders::add\(\)](#), [L4Re::Util::cap\\_alloc](#), [L4\\_FP\\_ALL\\_SPACES](#), [L4::Epiface::obj\\_cap\(\)](#), and [L4::Epiface::set\\_server\(\)](#).

The documentation for this class was generated from the following file:

- `l4/re/util/object_registry`

## 15.315 L4Re::Util::Ref\_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap of the capability selector.

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Ref\_cap< T >:

### 15.315.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_cap< T >
```

Automatic capability that implements automatic free and unmap of the capability selector.

#### Template Parameters

<i>T</i>	Type of the object that is referred by the capability.
----------	--

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero.

#### Usage:

```
L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap
    ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
    L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

    global_ds_cap = ds_cap;
    // reference count is now 2
    ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
```

Definition at line 153 of file [cap\\_alloc](#).

The documentation for this struct was generated from the following file:

- [l4/re/util/cap\\_alloc](#)

## 15.316 L4Re::Util::Ref\_del\_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap+delete of the capability selector.

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Ref\_del\_cap< T >:

### 15.316.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_del_cap< T >
```

Automatic capability that implements automatic free and unmap+delete of the capability selector.

#### Template Parameters

<i>T</i>	Type of the object that is referred by the capability.
----------	--

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero. The main difference to [Ref\\_cap](#) is that the unmap is done with the deletion flag enabled and this leads to the deletion of the object if the current task holds appropriate deletion rights.

#### Usage:

```

L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap
    ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
    L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

    global_ds_cap = ds_cap;
    // reference count is now 2
    ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
...
global_ds_cap = L4_INVALID_CAP;
// reference count dropped to 0 (data space shall be deleted).
```

Definition at line 194 of file [cap\\_alloc](#).

The documentation for this struct was generated from the following file:

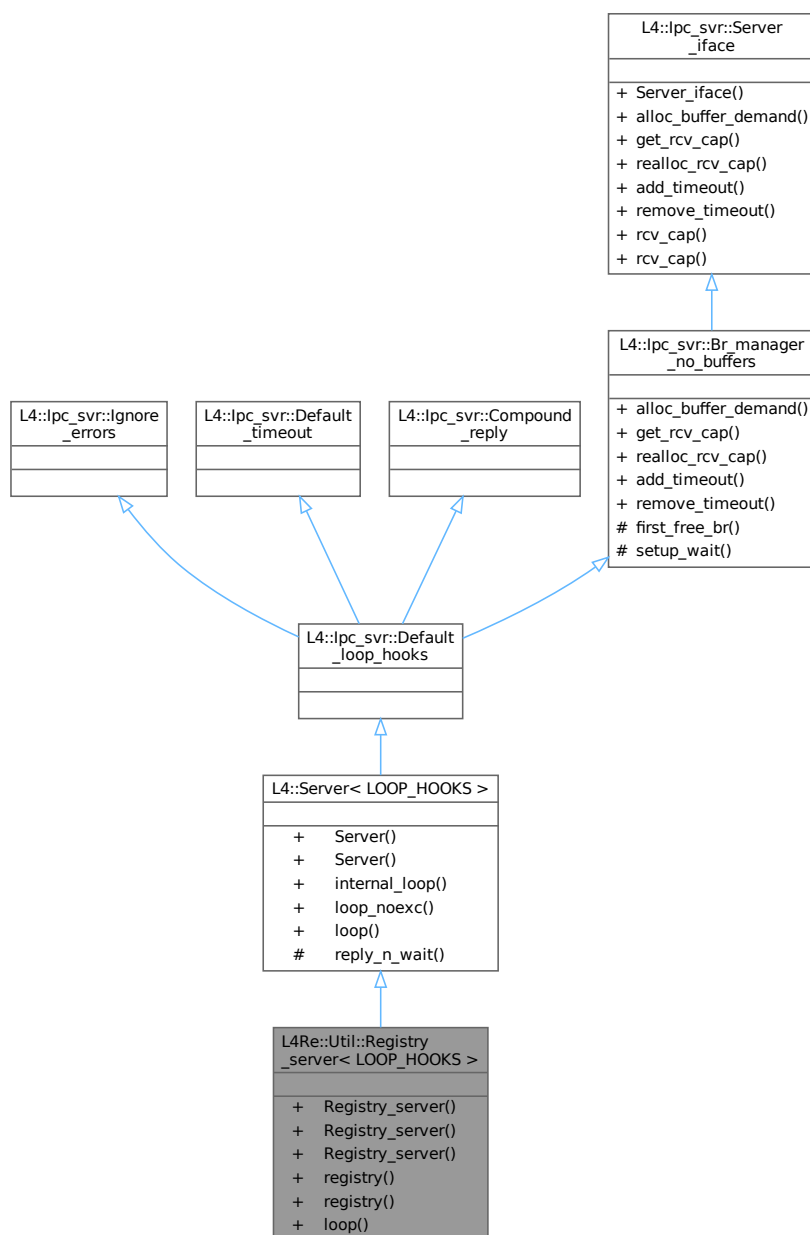

- [l4/re/util/cap\\_alloc](#)

## 15.317 L4Re::Util::Registry\_server< LOOP\_HOOKS > Class Template Reference

### 15.317.1 Detailed Description

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
class L4Re::Util::Registry_server< LOOP_HOOKS >
```

A server loop object which has a [Object\\_registry](#) included.

#### Examples

[examples/clntsrv/server.cc](#), [examples/libs/l4re/c++/shared\\_ds/ds\\_srv.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 307 of file [object\\_registry](#).

### 15.317.2 Constructor & Destructor Documentation

#### 15.317.2.1 Registry\_server() [1/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry\_server< LOOP_HOOKS >::Registry_server ( ) [inline]
```

Create a new server loop object for the main thread of the task.

#### Precondition

Must be called from the main thread or behaviour is undefined.

Definition at line 319 of file [object\\_registry](#).

#### 15.317.2.2 Registry\_server() [2/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry\_server< LOOP_HOOKS >::Registry_server (
    l4\_utcb\_t * ,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

## Parameters

<i>server</i>	Capability to thread running the server loop.
<i>factory</i>	Capability to factory object used to create new IPC gates.

**Deprecated** Note that this variant of the constructor is deprecated, please do not supply the UTCB pointer, it's not used.

Definition at line 331 of file [object\\_registry](#).

### 15.317.2.3 Registry\_server() [3/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

## Parameters

<i>server</i>	Capability to thread running the server loop.
<i>factory</i>	Capability to factory object used to create new IPC gates.

Definition at line 342 of file [object\\_registry](#).

## 15.317.3 Member Function Documentation

### 15.317.3.1 loop()

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
void L4_NORETURN L4Re::Util::Registry_server< LOOP_HOOKS >::loop (
    l4_utcb_t * utcb = l4_utcb() ) [inline]
```

Start the server loop.

## Parameters

<i>utcb</i>	The UTCB of the thread running the server loop, defaults to <a href="#">l4_utcb()</a> .
-------------	---

## Examples

[examples/clntsrv/server.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 358 of file [object\\_registry](#).

- static [L4::Cap\\_base](#) **copy** ([L4::Cap\\_base](#) const &src)  
*Copy operation for [L4::Smart\\_cap](#) (increment ref count).*

### 15.319.1 Detailed Description

```
template<unsigned long Unmap_flags = L4_FP_ALL_SPACES>
class L4Re::Util::Smart_count_cap< Unmap_flags >
```

Helper for [Ref\\_cap](#) and [Ref\\_del\\_cap](#).

Definition at line 87 of file [cap\\_alloc](#).

The documentation for this class was generated from the following file:

- [l4/re/util/cap\\_alloc](#)

## 15.320 L4Re::Util::Vcon\_svr< SVR > Class Template Reference

[Console](#) server template class.

```
#include <vcon_svr>
```

Collaboration diagram for L4Re::Util::Vcon\_svr< SVR >:

### 15.320.1 Detailed Description

```
template<typename SVR>
class L4Re::Util::Vcon_svr< SVR >
```

[Console](#) server template class.

This template uses `vcon_write()` and `vcon_read()` to get and deliver data from the implementor.

`vcon_read()` needs to update the status argument with the `L4_vcon_read_stat` flags, especially the `L4_VCON_READ_STAT_DONE` flag to indicate that there's nothing more to read for the other end.

`vcon_write()` gets the live data from the UTCB. Make sure to copy out the data before using the UTCB again.

The size parameter of both functions is given in bytes.

Definition at line 47 of file [vcon\\_svr](#).

The documentation for this class was generated from the following file:

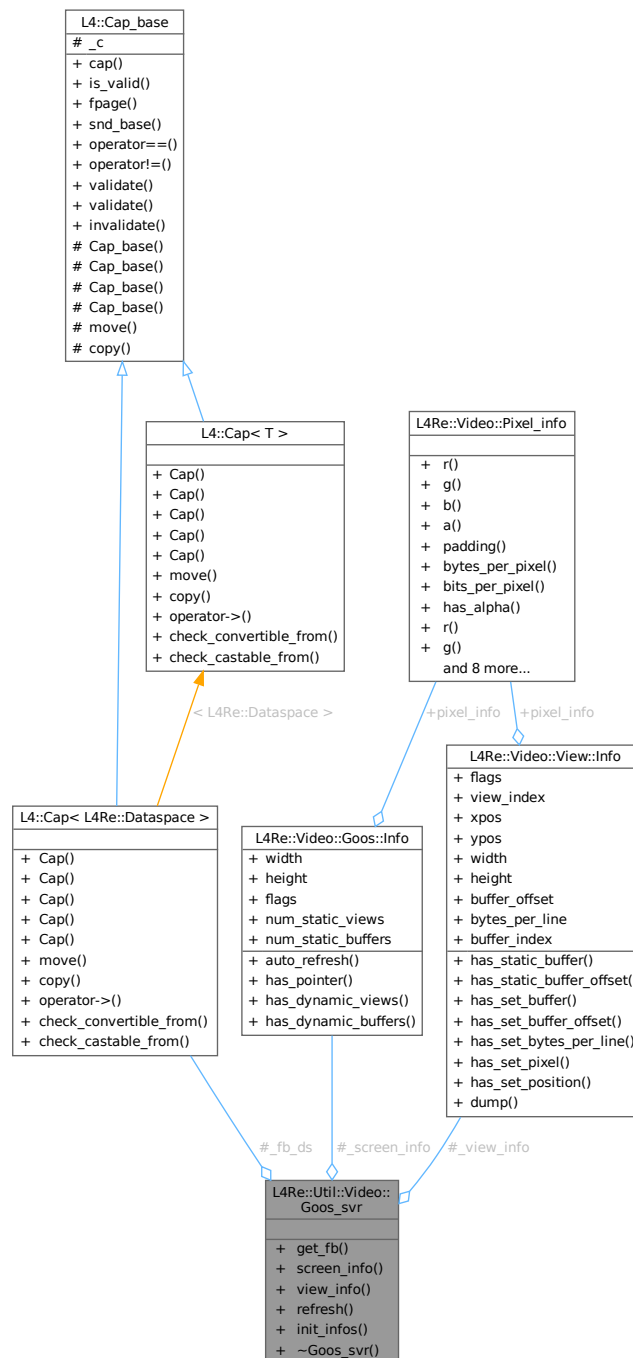

- `l4/re/util/vcon_svr`

## 15.321 L4Re::Util::Video::Goos\_svr Class Reference

Goos server class.

```
#include <goos_svr>
```

Collaboration diagram for L4Re::Util::Video::Goos\_svr:

## 15.321.1 Detailed Description

Goos server class.

Definition at line 36 of file [goos\\_svr](#).

## 15.321.2 Member Function Documentation

### 15.321.2.1 [get\\_fb\(\)](#)

```
L4::Cap< L4Re::Dataspace > L4Re::Util::Video::Goos\_svr::get\_fb ( ) const [inline]
```

Return framebuffer memory dataspace.

#### Returns

Goos memory dataspace

Definition at line 53 of file [goos\\_svr](#).

References [\\_fb\\_ds](#).

### 15.321.2.2 init\_infos()

```
void L4Re::Util::Video::Goos_svr::init_infos ( ) [inline]
```

Initialize the view information structure of this object.

This function initializes the view info structure of this goos object based on the information in the goos information, i.e. the width, height and pixel\_info of the goos information has to contain valid values before calling init\_info().

Definition at line 89 of file [goos\\_svr](#).

References [\\_screen\\_info](#), [\\_view\\_info](#), [L4Re::Video::View::Info::buffer\\_index](#), [L4Re::Video::View::Info::flags](#), [L4Re::Video::View::Info::height](#), [L4Re::Video::Goos::Info::height](#), [L4Re::Video::View::Info::pixel\\_info](#), [L4Re::Video::Goos::Info::pixel\\_info](#), [L4Re::Video::View::Info::view\\_index](#), [L4Re::Video::View::Info::width](#), [L4Re::Video::Goos::Info::width](#), [L4Re::Video::View::Info::xpos](#), and [L4Re::Video::View::Info::ypos](#).

### 15.321.2.3 refresh()

```
virtual int L4Re::Util::Video::Goos_svr::refresh (
    int x,
    int y,
    int w,
    int h ) [inline], [virtual]
```

Refresh area of the framebuffer.

#### Parameters

<i>x</i>	X coordinate (pixels)
<i>y</i>	Y coordinate (pixels)
<i>w</i>	Width of area in pixels
<i>h</i>	Height of area in pixels

#### Returns

0 on success, negative error code otherwise

Definition at line 77 of file [goos\\_svr](#).

References [L4\\_ENOSYS](#).

### 15.321.2.4 screen\_info()

```
L4Re::Video::Goos::Info const * L4Re::Util::Video::Goos_svr::screen_info ( ) const [inline]
```

Goos information structure.

#### Returns

Return goos information structure.

Definition at line 59 of file [goos\\_svr](#).

References [\\_screen\\_info](#).

## 15.321.2.5 view\_info()

```
L4Re::Video::View::Info const * L4Re::Util::Video::Goos_svr::view_info ( ) const [inline]
```

View information structure.

## Returns

Return view information structure.

Definition at line 65 of file `goos_svr`.

References `_view_info`.

The documentation for this class was generated from the following file:

- `l4/re/util/video/goos_svr`

## 15.322 L4Re::Vfs::Be\_file Class Reference

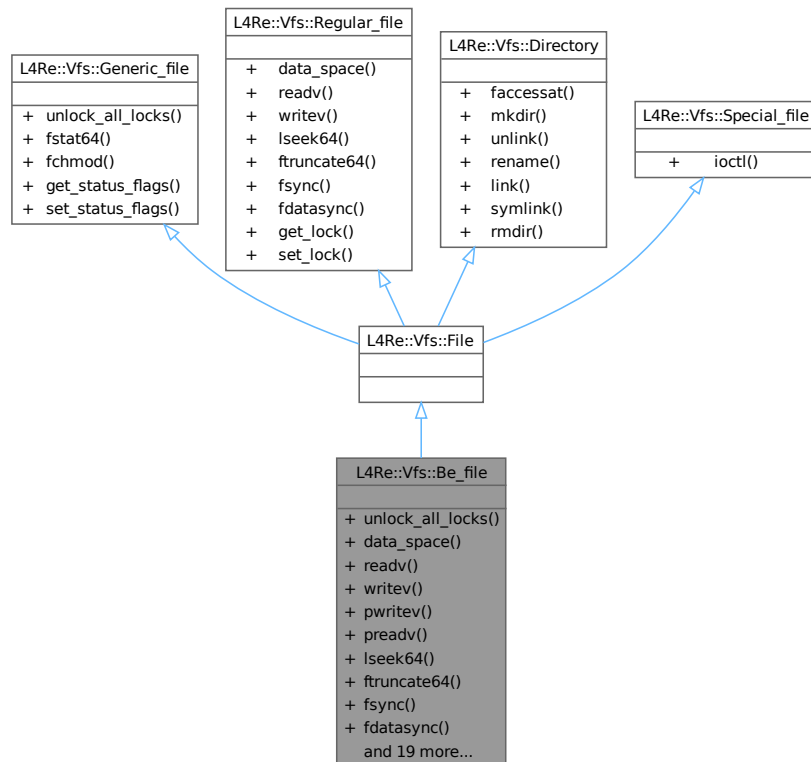

Boiler plate class for implementing an open file for `L4Re::Vfs`.

```
#include <backend>
```

Inheritance diagram for `L4Re::Vfs::Be_file`:

- ssize\_t **readlink** (char \*, size\_t) override  
*Default backend for POSIX readlink, readlinkat.*

### 15.322.1 Detailed Description

Boiler plate class for implementing an open file for [L4Re::Vfs](#).

This class may be used as a base class for everything that a POSIX file descriptor may point to. This are things such as regular files, directories, special device files, streams, pipes, and so on.

#### Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 39 of file [backend](#).

## 15.322.2 Member Function Documentation

### 15.322.2.1 data\_space()

```
L4Re::Cap< L4Re::Dataspace > L4Re::Vfs::Be_file::data_space ( ) [inline], [override], [virtual], [noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

#### Note

mmap is not possible if the function returns an invalid capability.

#### Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implements [L4Re::Vfs::Regular\\_file](#).

Definition at line 56 of file [backend](#).

### 15.322.2.2 fstat64()

```
int L4Re::Vfs::Be_file::fstat64 (
    struct stat64 * buf ) const [inline], [override], [virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

#### Parameters

out	buf	This buffer is filled with the status information.
-----	-----	--

#### Returns

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic\\_file](#).

Definition at line 95 of file [backend](#).

### 15.322.2.3 unlock\_all\_locks()

```
int L4Re::Vfs::Be_file::unlock_all_locks ( ) [inline], [override], [virtual], [noexcept]
```

Unlock all locks on the file.

**Note**

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

**Returns**

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic\\_file](#).

Definition at line 52 of file [backend](#).

The documentation for this class was generated from the following file:

- l4/l4re\_vfs/backend

## 15.323 L4Re::Vfs::Be\_file\_system Class Reference

Boilerplate class for implementing a [L4Re::Vfs::File\\_system](#).

```
#include <backend>
```

Inheritance diagram for L4Re::Vfs::Be\_file\_system:

Collaboration diagram for L4Re::Vfs::Be\_file\_system:

### Public Member Functions

- [Be\\_file\\_system](#) (char const \*fstype) noexcept  
*Create a file-system object for the given fstype.*
- [~Be\\_file\\_system](#) () noexcept  
*Destroy a file-system object.*
- char const \* [type](#) () const noexcept override  
*Return the file-system type.*

### Public Member Functions inherited from [L4Re::Vfs::File\\_system](#)

- virtual int [mount](#) (char const \*source, unsigned long mountflags, void const \*data, [cxx::Ref\\_ptr](#)< [File](#) > \*dir) noexcept=0  
*Create a directory object dir representing source mounted with this file system.*

#### 15.323.1 Detailed Description

Boilerplate class for implementing a [L4Re::Vfs::File\\_system](#).

This class already takes care of registering and unregistering the file system in the global registry and implements the [type\(\)](#) method.

#### Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 311 of file [backend](#).

## 15.323.2 Constructor & Destructor Documentation

### 15.323.2.1 Be\_file\_system()

```
L4Re::Vfs::Be_file_system::Be_file_system (
    char const * fstype ) [inline], [explicit], [noexcept]
```

Create a file-system object for the given *fstype*.

#### Parameters

<i>fstype</i>	The type that <a href="#">type()</a> shall return.
---------------	--

This constructor takes care of registering the file system in the registry of L4Re::Vfs::vfs\_ops.

Definition at line 325 of file [backend](#).

### 15.323.2.2 ~Be\_file\_system()

```
L4Re::Vfs::Be_file_system::~~Be_file_system ( ) [inline], [noexcept]
```

Destroy a file-system object.

This destructor takes care of removing this file system from the registry of L4Re::Vfs::vfs\_ops.

Definition at line 337 of file [backend](#).

## 15.323.3 Member Function Documentation

### 15.323.3.1 type()

```
char const * L4Re::Vfs::Be_file_system::type ( ) const [inline], [override], [virtual], [noexcept]
```

Return the file-system type.

Returns the file-system type given as *fstype* in the constructor.

Implements [L4Re::Vfs::File\\_system](#).

Definition at line 347 of file [backend](#).

The documentation for this class was generated from the following file:

- l4/l4re\_vfs/backend

## 15.324 L4Re::Vfs::Directory Class Reference

Interface for a POSIX file that is a directory.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Directory:

Collaboration diagram for L4Re::Vfs::Directory:

L4Re::Vfs::Directory	
+	faccessat()
+	mkdir()
+	unlink()
+	rename()
+	link()
+	symlink()
+	rmdir()

### Public Member Functions

- virtual int [faccessat](#) (const char \*path, int mode, int flags) noexcept=0  
*Check access permissions on the given file.*
- virtual int [mkdir](#) (const char \*path, mode\_t mode) noexcept=0  
*Create a new subdirectory.*
- virtual int [unlink](#) (const char \*path) noexcept=0  
*Unlink the given file from that directory.*
- virtual int [rename](#) (const char \*src\_path, const char \*dst\_path) noexcept=0  
*Rename the given file.*
- virtual int [link](#) (const char \*src\_path, const char \*dst\_path) noexcept=0  
*Create a hard link (second name) for the given file.*
- virtual int [symlink](#) (const char \*src\_path, const char \*dst\_path) noexcept=0  
*Create a symbolic link for the given file.*
- virtual int [rmdir](#) (const char \*path) noexcept=0  
*Delete an empty directory.*

### 15.324.1 Detailed Description

Interface for a POSIX file that is a directory.

This interface provides functionality for directory files in the [L4Re::Vfs](#). However, real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line 140 of file [vfs.h](#).

## 15.324.2 Member Function Documentation

### 15.324.2.1 faccessat()

```
virtual int L4Re::Vfs::Directory::faccessat (
    const char * path,
    int mode,
    int flags ) [pure virtual], [noexcept]
```

Check access permissions on the given file.

Backend function for POSIX access and faccessat functions.

#### Parameters

<i>path</i>	The path relative to this directory. Note: <i>path</i> is relative to this directory and may contain subdirectories.
<i>mode</i>	The access mode to check.
<i>flags</i>	The flags as in POSIX faccessat (AT_EACCESS, AT_SYMLINK_NOFOLLOW).

#### Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.324.2.2 link()

```
virtual int L4Re::Vfs::Directory::link (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Create a hard link (second name) for the given file.

Backend for the POSIX link and linkat functions.

#### Parameters

<i>src_path</i>	The old name of the file. Note: <i>src_path</i> is relative to this directory and may contain subdirectories.
<i>dst_path</i>	The new (second) name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

#### Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.324.2.3 mkdir()

```
virtual int L4Re::Vfs::Directory::mkdir (
    const char * path,
    mode_t mode ) [pure virtual], [noexcept]
```

Create a new subdirectory.

Backend for POSIX mkdir and mkdirat function calls.

#### Parameters

<i>path</i>	The name of the subdirectory to create. Note: <i>path</i> is relative to this directory and may contain subdirectories.
<i>mode</i>	The file mode to use for the new directory.

#### Returns

0 on success, or <0 on error. -ENOTDIR if this or some component in path is not a directory.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.324.2.4 rename()

```
virtual int L4Re::Vfs::Directory::rename (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Rename the given file.

Backend for the POSIX rename, renameat functions.

#### Parameters

<i>src_path</i>	The old name of the file to rename. Note: <i>src_path</i> is relative to this directory and may contain subdirectories.
<i>dst_path</i>	The new name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

#### Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.324.2.5 rmdir()

```
virtual int L4Re::Vfs::Directory::rmdir (
    const char * path ) [pure virtual], [noexcept]
```

Delete an empty directory.

Backend for POSIX rmdir, rmdirat functions.

**Parameters**

<i>path</i>	The name of the directory to remove. Note: <i>path</i> is relative to this directory and may contain subdirectories.
-------------	--

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.324.2.6 symlink()**

```
virtual int L4Re::Vfs::Directory::symlink (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Create a symbolic link for the given file.

Backend for the POSIX symlink and symlinkat functions.

**Parameters**

<i>src_path</i>	The old name of the file. Note: <i>src_path</i> shall be an absolute path.
<i>dst_path</i>	The name for symlink. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories.

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.324.2.7 unlink()**

```
virtual int L4Re::Vfs::Directory::unlink (
    const char * path ) [pure virtual], [noexcept]
```

Unlink the given file from that directory.

Backend for the POSIX unlink and unlinkat functions.

**Parameters**

<i>path</i>	The name of the file to unlink. Note: <i>path</i> is relative to this directory and may contain subdirectories.
-------------	---

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

The documentation for this class was generated from the following file:

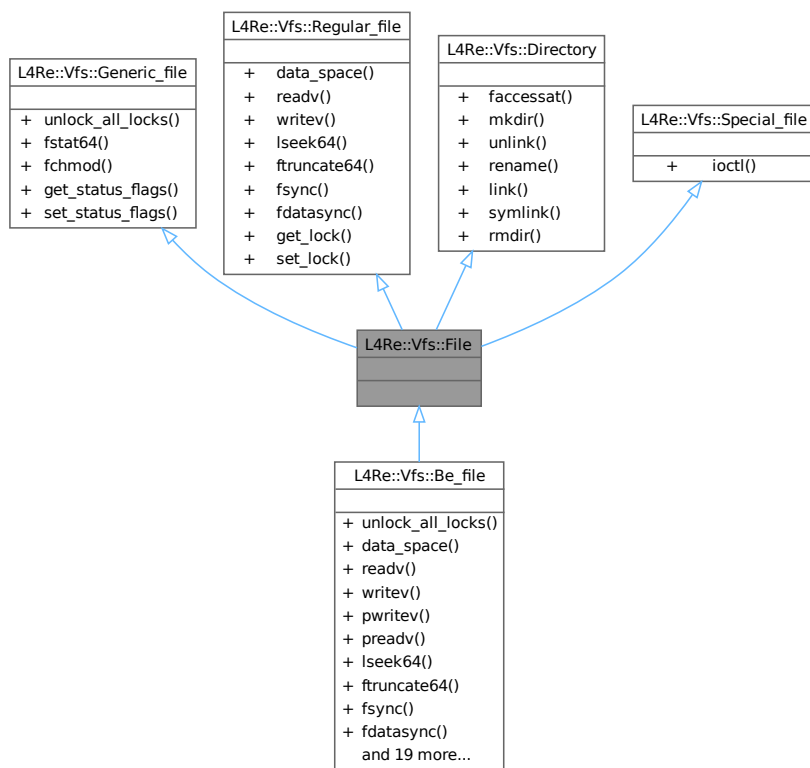

- l4/l4re\_vfs/vfs.h

## 15.325 L4Re::Vfs::File Class Reference

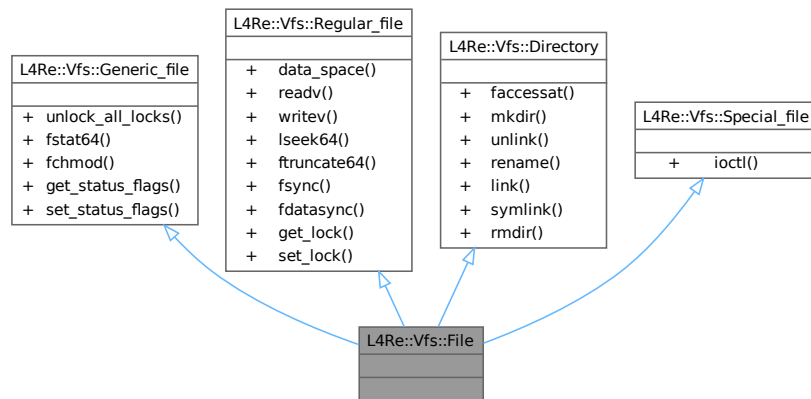

The basic interface for an open POSIX file.

```
#include <vfs.h>
```

### 15.325.1 Detailed Description

The basic interface for an open POSIX file.

An open POSIX file can be anything that hides behind a POSIX file descriptor. This means that even directories are files. An open file can be anything from a directory to a special device file so see [Generic\\_file](#), [Regular\\_file](#), [Directory](#), and [Special\\_file](#) for more information.

#### Note

For implementing a backend for the [L4Re::Vfs](#) [L4Re::Vfs::Be\\_file](#) may be used as a base class.

Definition at line 435 of file [vfs.h](#).

The documentation for this class was generated from the following file:

- [l4/l4re\\_vfs/vfs.h](#)

## 15.326 L4Re::Vfs::File\_system Class Reference

Basic interface for an [L4Re::Vfs](#) file system.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::File\_system:

Collaboration diagram for L4Re::Vfs::File\_system:

### Public Member Functions

- virtual char const \* [type](#) () const noexcept=0  
*Returns the type of the file system used in mount as fstype argument.*
- virtual int [mount](#) (char const \*source, unsigned long mountflags, void const \*data, [cxx::Ref\\_ptr](#)< [File](#) > \*dir) noexcept=0  
*Create a directory object dir representing source mounted with this file system.*

## 15.326.1 Detailed Description

Basic interface for an [L4Re::Vfs](#) file system.

### Note

For implementing a special file system [L4Re::Vfs::Be\\_file\\_system](#) may be used as a base class.

The main purpose of this interface is to have a single object for each supported file-system type (e.g., ext2, vfat) that exists in the application and is registered at the [L4Re::Vfs::Fs](#) singleton available via [L4Re::Vfs::vfs\\_ops](#). Ultimately, the POSIX mount function calls the [File\\_system::mount](#) method matching the file-system type given in mount.

Definition at line 831 of file [vfs.h](#).

## 15.326.2 Member Function Documentation

### 15.326.2.1 mount()

```
virtual int L4Re::Vfs::File_system::mount (
    char const * source,
    unsigned long mountflags,
    void const * data,
    cxx::Ref\_ptr< File > * dir ) [pure virtual], [noexcept]
```

Create a directory object *dir* representing *source* mounted with this file system.

#### Parameters

	<i>source</i>	The path to the source device to mount. This may also be some URL or anything file-system specific.
	<i>mountflags</i>	The mount flags as specified in the POSIX mount call.
	<i>data</i>	The data as specified in the POSIX mount call. The contents are file-system specific.
out	<i>dir</i>	A new directory object representing the file-system root directory.

#### Returns

0 on success, and <0 on error (e.g. -EINVAL).

### 15.326.2.2 type()

```
virtual char const * L4Re::Vfs::File_system::type ( ) const [pure virtual], [noexcept]
```

Returns the type of the file system used in mount as fstype argument.

### Note

This method is already provided by [Be\\_file\\_system](#).

Implemented in [L4Re::Vfs::Be\\_file\\_system](#).

The documentation for this class was generated from the following file:

- [l4/l4re\\_vfs/vfs.h](#)

## 15.327 L4Re::Vfs::Fs Class Reference

POSIX File-system related functionality.

*Backend for the POSIX mount call.*

### 15.327.1 Detailed Description

POSIX File-system related functionality.

**Note**

This class usually exists as a singleton and as a superclass of [L4Re::Vfs::Ops](#) (

**See also**

[L4Re::Vfs::vfs\\_ops](#)).

Definition at line 920 of file [vfs.h](#).

## 15.327.2 Member Function Documentation

### 15.327.2.1 `alloc_fd()`

```
virtual int L4Re::Vfs::Fs::alloc_fd (
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil ) [pure virtual], [noexcept]
```

Allocate the next free file descriptor.

**Parameters**

<i>f</i>	The file to assign to that file descriptor.
----------	---

**Returns**

The allocated file descriptor, or -EMFILE on error.

### 15.327.2.2 `free_fd()`

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::free_fd (
    int fd ) [pure virtual], [noexcept]
```

Free the file descriptor *fd*.

**Parameters**

<i>fd</i>	The file descriptor to free.
-----------	------------------------------

**Returns**

A pointer to the file object that was assigned to the *fd*.

### 15.327.2.3 `get_file()`

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::get_file (
    int fd ) [pure virtual], [noexcept]
```

Get the [L4Re::Vfs::File](#) for the file descriptor *fd*.

## Parameters

<i>fd</i>	The POSIX file descriptor number.
-----------	-----------------------------------

## Returns

A pointer to the [File](#) object, or 0 if *fd* is not open.

## 15.327.2.4 mount()

```
virtual int L4Re::Vfs::Fs::mount (
    char const * path,
    cxx::Ref_ptr< File > const & dir ) [pure virtual], [noexcept]
```

Mount a given file object at the given global path in the VFS.

## Parameters

<i>path</i>	The global path to mount <i>dir</i> at.
<i>dir</i>	A pointer to the file/directory object that shall be mounted at <i>path</i> .

## Returns

0 on success, or <0 on error.

## 15.327.2.5 set\_fd()

```
virtual cxx::Pair< cxx::Ref_ptr< File >, int > L4Re::Vfs::Fs::set_fd (
    int fd,
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil ) [pure virtual], [noexcept]
```

Set the file object referenced by the file descriptor *fd*.

## Parameters

<i>fd</i>	The file descriptor to set to <i>f</i> .
<i>f</i>	The file object to assign.

## Returns

A pair of a pointer to the file object that was previously assigned to *fd* (*first*) and a return value (*second*). *second* contains `-#EBADF` if the passed file descriptor is outside the valid range. *first* contains a Nil pointer in that case. On success, *second* contains 0.

The documentation for this class was generated from the following files:

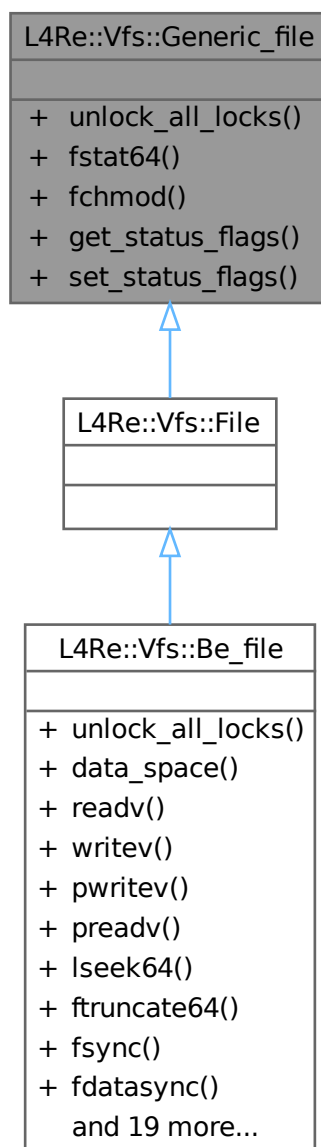

- l4/l4re\_vfs/vfs.h
- l4/l4re\_vfs/impl/vfs\_impl.h

## 15.328 L4Re::Vfs::Generic\_file Class Reference

The common interface for an open POSIX file.

- virtual int [set\\_status\\_flags](#) (long flags) noexcept=0  
*Set file status flags (fcntl F\_SETFL).*

## 15.328.1 Detailed Description

The common interface for an open POSIX file.

This interface is common to all kinds of open files, independent of the file type (e.g., directory, regular file etc.). However, in the [L4Re::Vfs](#) the interface [File](#) is used for every real object.

See also

[L4Re::Vfs::File](#) for more information.

Definition at line 62 of file [vfs.h](#).

## 15.328.2 Member Function Documentation

### 15.328.2.1 fchmod()

```
virtual int L4Re::Vfs::Generic_file::fchmod (
    mode_t ) [pure virtual], [noexcept]
```

Change POSIX access rights on the file.

Backend for POSIX chmod and fchmod.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.328.2.2 fstat64()**

```
virtual int L4Re::Vfs::Generic_file::fstat64 (
    struct stat64 * buf ) const [pure virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

**Parameters**

out	buf	This buffer is filled with the status information.
-----	-----	--

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.328.2.3 get\_status\_flags()**

```
virtual int L4Re::Vfs::Generic_file::get_status_flags ( ) const [pure virtual], [noexcept]
```

Get file status flags (fcntl F\_GETFL).

This function is used by the fcntl implementation for the F\_GETFL command.

**Returns**

flags such as O\_RDONLY, O\_WRONLY, O\_RDWR, O\_DIRECT, O\_ASYNC, O\_NOATIME, O\_NONBLOCK, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.328.2.4 set\_status\_flags()**

```
virtual int L4Re::Vfs::Generic_file::set_status_flags (
    long flags ) [pure virtual], [noexcept]
```

Set file status flags (fcntl F\_SETFL).

This function is used by the fcntl implementation for the F\_SETFL command.

**Parameters**

flags	The file status flags to set. This must be a combination of O_RDONLY, O_WRONLY, O_RDWR, O_APPEND, O_ASYNC, O_DIRECT, O_NOATIME, O_NONBLOCK.
-------	---

**Note**

Creation flags such as `O_CREAT`, `O_EXCL`, `O_NOCTTY`, `O_TRUNC` are ignored.

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.328.2.5 unlock\_all\_locks()**

```
virtual int L4Re::Vfs::Generic_file::unlock_all_locks ( ) [pure virtual], [noexcept]
```

Unlock all locks on the file.

**Note**

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

The documentation for this class was generated from the following file:

- `l4/l4re_vfs/vfs.h`

## 15.329 L4Re::Vfs::Mman Class Reference

Interface for POSIX memory management.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Mman:

Collaboration diagram for L4Re::Vfs::Mman:

## Public Member Functions

- virtual int **mmap2** (void \*start, size\_t len, int prot, int flags, int fd, off\_t offset, void \*\*ptr) noexcept=0  
*Backend for the mmap2 system call.*
- virtual int **munmap** (void \*start, size\_t len) noexcept=0  
*Backend for the munmap system call.*

- virtual int **mremap** (void \*old, size\_t old\_sz, size\_t new\_sz, int flags, void \*\*new\_addr) noexcept=0  
*Backend for the mremap system call.*
- virtual int **mprotect** (const void \*a, size\_t sz, int prot) noexcept=0  
*Backend for the mprotect system call.*
- virtual int **msync** (void \*addr, size\_t len, int flags) noexcept=0  
*Backend for the msync system call.*
- virtual int **madvice** (void \*addr, size\_t len, int advice) noexcept=0  
*Backend for the madvice system call.*

### 15.329.1 Detailed Description

Interface for POSIX memory management.

#### Note

This interface usually exists as a singleton and as a superclass of [L4Re::Vfs::Ops](#).

An implementation for this interface is in [l4/l4re\\_vfs/impl/vfs\\_impl.h](#) and used by the l4re\_vfs library or by the VFS implementation in ldso.

Definition at line 747 of file [vfs.h](#).

The documentation for this class was generated from the following file:

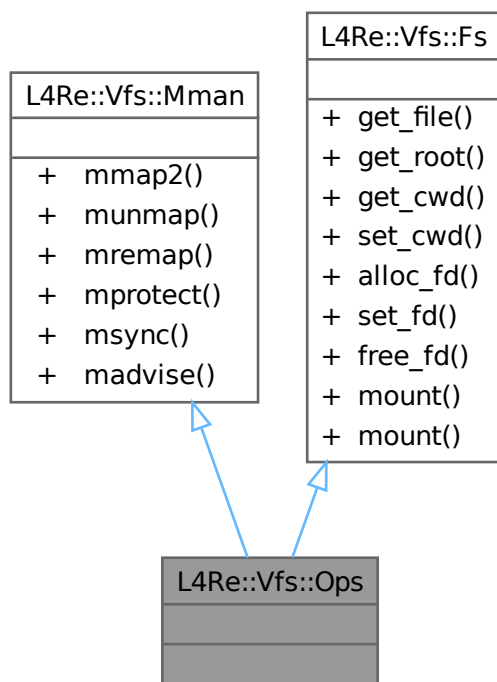

- l4/l4re\_vfs/vfs.h

## 15.330 L4Re::Vfs::Ops Class Reference

Interface for the POSIX backends of an application.

```
#include <vfs.h>
```

*Acquire or release the given lock on the file.*

### 15.331.1 Detailed Description

Interface for a POSIX file that provides regular file semantics.

Real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line 267 of file [vfs.h](#).

## 15.331.2 Member Function Documentation

### 15.331.2.1 data\_space()

```
virtual L4::Cap< L4Re::Dataspace > L4Re::Vfs::Regular_file::data_space ( ) [pure virtual],  
[noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

#### Note

mmap is not possible if the function returns an invalid capability.

#### Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.2 fdatsync()

```
virtual int L4Re::Vfs::Regular_file::fdatsync ( ) const [pure virtual], [noexcept]
```

Sync the data to persistent storage.

This is the backend for POSIX fdatsync.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.3 fsync()

```
virtual int L4Re::Vfs::Regular_file::fsync ( ) const [pure virtual], [noexcept]
```

Sync the data and meta data to persistent storage.

This is the backend for POSIX fsync.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.4 ftruncate64()

```
virtual int L4Re::Vfs::Regular_file::ftruncate64 (  
    off64_t pos ) [pure virtual], [noexcept]
```

Truncate the file at the given position.

This function is the backend for truncate and friends.

**Parameters**

<i>pos</i>	The offset at which the file shall be truncated.
------------	--

**Returns**

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.331.2.5 get\_lock()**

```
virtual int L4Re::Vfs::Regular_file::get_lock (
    struct flock64 * lock ) [pure virtual], [noexcept]
```

Test if the given lock can be placed in the file.

This function is used as backend for fcntl F\_GETLK commands.

**Parameters**

<i>lock</i>	The lock that shall be placed on the file. The <i>l_type</i> member will contain F_UNLCK if the lock could be placed.
-------------	---

**Returns**

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

**15.331.2.6 lseek64()**

```
virtual off64_t L4Re::Vfs::Regular_file::lseek64 (
    off64_t ,
    int ) [pure virtual], [noexcept]
```

Change the file pointer.

This is the backend for POSIX seek, lseek and friends.

**Returns**

The new file position, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.7 readv()

```
virtual ssize_t L4Re::Vfs::Regular_file::readv (
    const struct iovec * ,
    int iovcnt ) [pure virtual], [noexcept]
```

Read one or more blocks of data from the file.

This function acts as backend for POSIX read and readv calls and reads data starting from the `f_pos` pointer of that open file. The file pointer is advanced according to the number of bytes read.

#### Returns

The number of bytes read from the file, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.8 set\_lock()

```
virtual int L4Re::Vfs::Regular_file::set_lock (
    struct flock64 * lock,
    bool wait ) [pure virtual], [noexcept]
```

Acquire or release the given lock on the file.

This function is used as backend for `fcntl F_SETLK` and `F_SETLKW` commands.

#### Parameters

<i>lock</i>	The lock that shall be placed on the file.
<i>wait</i>	If true, then block if there is a conflicting lock on the file.

#### Returns

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

### 15.331.2.9 writev()

```
virtual ssize_t L4Re::Vfs::Regular_file::writev (
    const struct iovec * ,
    int iovcnt ) [pure virtual], [noexcept]
```

Write one or more blocks of data to the file.

This function acts as backend for POSIX write and writev calls. The data is written starting at the current file pointer and the file pointer must be advanced according to the number of written bytes.

**Returns**

The number of bytes written to the file, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

The documentation for this class was generated from the following file:

- l4/l4re\_vfs/vfs.h

## 15.332 L4Re::Vfs::Special\_file Class Reference

Interface for a POSIX file that provides special file semantics.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Special\_file:

Collaboration diagram for L4Re::Vfs::Special\_file:

### Public Member Functions

- virtual int [ioctl](#) (unsigned long cmd, va\_list args) noexcept=0  
*The famous IO control.*

## 15.332.1 Detailed Description

Interface for a POSIX file that provides special file semantics.

Real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line [400](#) of file [vfs.h](#).

## 15.332.2 Member Function Documentation

### 15.332.2.1 ioctl()

```
virtual int L4Re::Vfs::Special_file::ioctl (
    unsigned long cmd,
    va_list args ) [pure virtual], [noexcept]
```

The famous IO control.

Backend for POSIX generic object invocation ioctl.

#### Parameters

<i>cmd</i>	The ioctl command.
<i>args</i>	The arguments for the ioctl, usually some kind of pointer.

#### Returns

>=0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be\\_file](#).

The documentation for this class was generated from the following file:

- l4/l4re\_vfs/vfs.h

### 15.333 L4Re::Video::Color\_component Class Reference

A color component.

```
#include <colors>
```

Collaboration diagram for L4Re::Video::Color\_component:

L4Re::Video::Color_component
<ul style="list-style-type: none"> <li>+ Color_component()</li> <li>+ Color_component()</li> <li>+ size()</li> <li>+ shift()</li> <li>+ operator==( )</li> <li>+ get()</li> <li>+ set()</li> <li>+ dump()</li> </ul>

- template<typename OUT >  
void **dump** (OUT &s) const  
*Dump information on the view information to a stream.*

### 15.333.1 Detailed Description

A color component.

Definition at line 32 of file [colors](#).

### 15.333.2 Constructor & Destructor Documentation

#### 15.333.2.1 Color\_component()

```
L4Re::Video::Color_component::Color_component (
    unsigned char bits,
    unsigned char shift ) [inline]
```

Constructor.

##### Parameters

<i>bits</i>	Number of bits used by the component
<i>shift</i>	Position in bits of the component in the pixel

Definition at line 47 of file [colors](#).

### 15.333.3 Member Function Documentation

#### 15.333.3.1 dump()

```
template<typename OUT >
void L4Re::Video::Color_component::dump (
    OUT & s ) const [inline]
```

Dump information on the view information to a stream.

##### Parameters

<i>s</i>	Stream
----------	--------

Definition at line 92 of file [colors](#).

#### 15.333.3.2 get()

```
int L4Re::Video::Color_component::get (
    unsigned long v ) const [inline]
```

Get component from value (normalized to 16bits).

**Parameters**

<i>v</i>	Value
----------	-------

**Returns**

Converted value

Definition at line 74 of file [colors](#).

**15.333.3.3 operator==()**

```
bool L4Re::Video::Color_component::operator== (
    Color_component const & o ) const [inline]
```

Compare for equality.

**Returns**

True if the same components are described, false if not.

Definition at line 66 of file [colors](#).

**15.333.3.4 set()**

```
long unsigned L4Re::Video::Color_component::set (
    int v ) const [inline]
```

Transform 16bit normalized value to the component in the color space.

**Parameters**

<i>v</i>	Value return Converted value.
----------	-------------------------------

Definition at line 84 of file [colors](#).

**15.333.3.5 shift()**

```
unsigned char L4Re::Video::Color_component::shift ( ) const [inline]
```

Return the position of the component in the pixel.

**Returns**

Position in bits of the component in the pixel

Definition at line 60 of file [colors](#).

Referenced by [L4Re::Video::Pixel\\_info::padding\(\)](#).

### 15.334.1 Detailed Description

Class that abstracts framebuffers.

A framebuffer is the pixel data that is displayed on a screen and a [Goos](#) object lets the user manipulate that data. A [Goos](#) makes use of two kinds of objects:

- Buffers in the form of [L4Re::Dataspace](#) objects. These hold the bytes for the pixel data.
- [L4Re::Video::View](#) objects.

Both can either be static, that is their number and configuration is fixed and determined by the framebuffer, or they can be dynamic, with the user allocating them.

Definition at line 226 of file [goos](#).

### 15.334.2 Member Enumeration Documentation

#### 15.334.2.1 Flags

```
enum L4Re::Video::Goos::Flags
```

Flags for a [Goos](#).

Enumerator

<code>F_auto_refresh</code>	The graphics display is automatically refreshed.
<code>F_pointer</code>	We have a mouse pointer.
<code>F_dynamic_views</code>	Supports dynamically allocated views.
<code>F_dynamic_buffers</code>	Supports dynamically allocated buffers.

Definition at line 231 of file [goos](#).

### 15.334.3 Member Function Documentation

#### 15.334.3.1 `create_buffer()`

```
long L4Re::Video::Goos::create\_buffer (
    unsigned long size,
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf )
```

Create a buffer.

**Parameters**

<i>size</i>	Size of buffer in bytes.
<i>rbuf</i>	Capability slot to point the buffer dataspace to.

**Return values**

$\geq 0$	Success, the value returned is the buffer index.
$< 0$	Error

**15.334.3.2 create\_view()**

```
int L4Re::Video::Goos::create_view (
    View * view,
    l4_utcb_t * utcb = l4_utcb() ) const [inline], [noexcept]
```

Create a view.

**Parameters**

out	<i>view</i>	A view object.
	<i>utcb</i>	UTCB of the caller. This is a default parameter.

**Return values**

$\geq 0$	Success, the value returned is the view index.
$< 0$	Error

Definition at line 315 of file [goos](#).

**15.334.3.3 delete\_buffer()**

```
long L4Re::Video::Goos::delete_buffer (
    unsigned idx )
```

Delete a buffer.

**Parameters**

<i>idx</i>	Buffer to delete.
------------	-------------------

**Return values**

0	Success
$< 0$	Error

#### 15.334.3.4 delete\_view()

```
int L4Re::Video::Goos::delete_view (
    View const & v,
    l4_utcb_t * utcb = l4_utcb() ) const [inline], [noexcept]
```

Delete a view.

##### Parameters

<i>v</i>	The view object to delete.
<i>utcb</i>	UTCB of the caller. This is a default parameter.

##### Return values

0	Success
<0	Error

Definition at line 335 of file [goos](#).

#### 15.334.3.5 get\_static\_buffer()

```
long L4Re::Video::Goos::get_static_buffer (
    unsigned idx,
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf )
```

Return a static buffer of a [Goos](#).

##### Parameters

<i>idx</i>	Index of the static buffer.
<i>rbuf</i>	Capability slot to point the buffer dataspace to.

##### Return values

0	Success
<0	Error

#### 15.334.3.6 info()

```
long L4Re::Video::Goos::info (
    Info * info )
```

Return the [Goos](#) information of the [Goos](#).

##### Parameters

out	<i>info</i>	<a href="#">Goos</a> information structure pointer.
-----	-------------	---

## Return values

0	Success
<0	Error

**15.334.3.7 view()**

```
View L4Re::Video::Goos::view (  
    unsigned index ) const [inline], [noexcept]
```

Return a view.

## Parameters

<i>index</i>	Index of the view to return.
--------------	------------------------------

## Returns

The view.

Definition at line 366 of file [goos](#).

The documentation for this class was generated from the following file:

### 15.336.1 Detailed Description

Pixel information.

This class wraps the information on a pixel, such as the size and position of each color component in the pixel.

Definition at line 105 of file [colors](#).

## 15.336.2 Constructor & Destructor Documentation

### 15.336.2.1 Pixel\_info() [1/2]

```
L4Re::Video::Pixel_info::Pixel_info (
    unsigned char bpp,
    char r,
    char rs,
    char g,
    char gs,
    char b,
    char bs,
    char a = 0,
    char as = 0 ) [inline]
```

Constructor.

#### Parameters

<i>bpp</i>	Size of pixel in bytes.
<i>r</i>	Red component size.
<i>rs</i>	Red component shift.
<i>g</i>	Green component size.
<i>gs</i>	Green component shift.
<i>b</i>	Blue component size.
<i>bs</i>	Blue component shift.
<i>a</i>	Alpha component size, defaults to 0.
<i>as</i>	Alpha component shift, defaults to 0.

Definition at line [223](#) of file [colors](#).

### 15.336.2.2 Pixel\_info() [2/2]

```
template<typename VBI >
L4Re::Video::Pixel_info::Pixel_info (
    VBI const * vbi ) [inline], [explicit]
```

Convenience constructor.

#### Parameters

<i>vbi</i>	Suitable information structure. Convenience constructor to create the pixel info from a VESA Framebuffer Info.
------------	--

Definition at line [235](#) of file [colors](#).

## 15.336.3 Member Function Documentation

### 15.336.3.1 a() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::a ( ) const [inline]
```

Return the alpha color component of the pixel.

#### Returns

Alpha color component.

Definition at line 134 of file [colors](#).

### 15.336.3.2 a() [2/2]

```
void L4Re::Video::Pixel_info::a (  
    Color_component const & c ) [inline]
```

Set the alpha color component of the pixel.

#### Parameters

c	Alpha color component.
---	------------------------

Definition at line 198 of file [colors](#).

### 15.336.3.3 b() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::b ( ) const [inline]
```

Return the blue color component of the pixel.

#### Returns

Blue color component.

Definition at line 128 of file [colors](#).

### 15.336.3.4 b() [2/2]

```
void L4Re::Video::Pixel_info::b (  
    Color_component const & c ) [inline]
```

Set the blue color component of the pixel.

#### Parameters

c	Blue color component.
---	-----------------------

Definition at line 192 of file [colors](#).

**15.336.3.5 bits\_per\_pixel()**

```
unsigned char L4Re::Video::Pixel_info::bits_per_pixel ( ) const [inline]
```

Number of bits of the pixel.

**Returns**

Number of bits used by the pixel.

Definition at line 167 of file [colors](#).

References [L4Re::Video::Color\\_component::size\(\)](#).

Here is the call graph for this function:

**15.336.3.6 bytes\_per\_pixel() [1/2]**

```
unsigned char L4Re::Video::Pixel_info::bytes_per_pixel ( ) const [inline]
```

Query size of pixel in bytes.

**Returns**

Size of pixel in bytes.

Definition at line 161 of file [colors](#).

**15.336.3.7 bytes\_per\_pixel() [2/2]**

```
void L4Re::Video::Pixel_info::bytes_per_pixel (
    unsigned char bpp ) [inline]
```

Set the size of the pixel in bytes.

**Parameters**

<i>bpp</i>	Size of pixel in bytes.
------------	-------------------------

Definition at line 204 of file [colors](#).

### 15.336.3.8 dump()

```
template<typename OUT >
void L4Re::Video::Pixel_info::dump (
    OUT & s ) const [inline]
```

Dump information on the pixel to a stream.

#### Parameters

<b>s</b>	Stream
----------	--------

Definition at line 257 of file [colors](#).

Referenced by [L4Re::Video::View::Info::dump\(\)](#).

Here is the caller graph for this function:

### 15.336.3.9 g() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::g ( ) const [inline]
```

Return the green color component of the pixel.

#### Returns

Green color component.

Definition at line 122 of file [colors](#).

### 15.336.3.10 g() [2/2]

```
void L4Re::Video::Pixel_info::g (
    Color_component const & c ) [inline]
```

Set the green color component of the pixel.

## Parameters

<code>c</code>	Green color component.
----------------	------------------------

Definition at line 186 of file [colors](#).

**15.336.3.11 has\_alpha()**

```
bool L4Re::Video::Pixel_info::has_alpha ( ) const [inline]
```

Return whether the pixel has an alpha channel.

## Returns

True if the pixel has an alpha channel, false if not.

Definition at line 174 of file [colors](#).

References [L4Re::Video::Color\\_component::size\(\)](#).

Here is the call graph for this function:

**15.336.3.12 operator==()**

```
bool L4Re::Video::Pixel_info::operator== (
    Pixel_info const & o ) const [inline]
```

Compare for complete equality of the color space.

## Parameters

<code>o</code>	A <a href="#">Pixel_info</a> to compare to.
----------------	---

## Returns

true if the both [Pixel\\_info](#)'s are equal, false if not.

Definition at line 247 of file [colors](#).

**15.336.3.13 padding()**

```
Color_component const L4Re::Video::Pixel_info::padding ( ) const [inline]
```

Compute the padding pseudo component.

The padding pseudo component represents the tailing bits that are reserved in RGB32 and similar pixel formats.

**Returns**

Padding pseudo component.

Definition at line 142 of file [colors](#).

References [L4Re::Video::Color\\_component::shift\(\)](#), and [L4Re::Video::Color\\_component::size\(\)](#).

Here is the call graph for this function:

**15.336.3.14 r() [1/2]**

```
Color_component const & L4Re::Video::Pixel_info::r ( ) const [inline]
```

Return the red color component of the pixel.

**Returns**

Red color component.

Definition at line 116 of file [colors](#).

**15.336.3.15 r() [2/2]**

```
void L4Re::Video::Pixel_info::r (
    Color_component const & c ) [inline]
```

Set the red color component of the pixel.

## Parameters

c	Red color component.
---	----------------------

Definition at line 180 of file [colors](#).

The documentation for this class was generated from the following file:

- [l4/re/video/colors](#)

## 15.337 L4Re::Video::View Class Reference

*Refresh/Redraw the view.*
- bool [valid](#) () const  
*Return whether this view is valid.*

## 15.337.1 Detailed Description

[View](#) of a framebuffer.

A view is a rectangular subset of a framebuffer managed by a [Goos](#) object. The [Goos](#) orders multiple views in a stack which determines which view is on top in case they overlap. The view's pixel data is provided by a backing buffer, which must belong to the [Goos](#). It can be static or dynamically allocated, depending on the framebuffer.

See also

[L4Re::Video::Goos](#)

Definition at line 42 of file [goos](#).

## 15.337.2 Member Enumeration Documentation

### 15.337.2.1 Flags

```
enum L4Re::Video::View::Flags
```

Flags on a view.

Enumerator

F_none	everything for this view is static (the VESA-FB case)
F_set_buffer	buffer object for this view can be changed
F_set_buffer_offset	buffer offset can be set
F_set_bytes_per_line	bytes per line can be set
F_set_pixel	pixel type can be set
F_set_position	position on screen can be set
F_dyn_allocated	<a href="#">View</a> is dynamically allocated.
F_set_background	Set view as background for session.
F_set_flags	Set view flags (.  See also

Definition at line 62 of file [goos](#).

### 15.337.2.2 V\_flags

```
enum L4Re::Video::View::V_flags
```

Property flags of a view.

Such flags can be set or deleted with the [F\\_set\\_flags](#) operation using the [set\\_info\(\)](#) method.

#### Enumerator

F_above	Flag the view as stay on top.
F_flags_mask	Mask containing all possible property flags.

Definition at line 85 of file [goos](#).

## 15.337.3 Member Function Documentation

### 15.337.3.1 info()

```
int L4Re::Video::View::info (  
    Info * info ) const [inline], [noexcept]
```

Return the view information of the view.

#### Parameters

out	<i>info</i>	Information structure pointer.
-----	-------------	--------------------------------

#### Return values

0	Success
<0	Error

Definition at line 370 of file [goos](#).

### 15.337.3.2 refresh()

```
int L4Re::Video::View::refresh (  
    int x,  
    int y,  
    int w,  
    int h ) const [inline], [noexcept]
```

Refresh/Redraw the view.

## Parameters

<i>x</i>	X position.
<i>y</i>	Y position.
<i>w</i>	Width.
<i>h</i>	Height.

## Return values

0	Success
<0	Error

Definition at line 382 of file [goos](#).

**15.337.3.3 set\_info()**

```
int L4Re::Video::View::set_info (
    Info const & info ) const [inline], [noexcept]
```

Set the information structure for this view.

## Parameters

<i>info</i>	Information structure.
-------------	------------------------

## Return values

0	Success
<0	Error

The function will also set the view port according to the values given in the information structure.

Definition at line 374 of file [goos](#).

**15.337.3.4 set\_viewport()**

```
int L4Re::Video::View::set_viewport (
    int scr_x,
    int scr_y,
    int w,
    int h,
    unsigned long buf_offset ) const [inline], [noexcept]
```

Set the position of the view in the [Goos](#).

## Parameters

<i>scr_x</i>	X position
<i>scr_y</i>	Y position
<i>w</i>	Width
<i>h</i>	Height
<i>buf_offset</i>	Offset in the buffer in bytes

## Return values

0	Success
<0	Error

Definition at line 386 of file [goos](#).

References [L4Re::Video::View::Info::buffer\\_index](#), [L4Re::Video::View::Info::buffer\\_offset](#), [L4Re::Video::View::Info::bytes\\_per\\_line](#), [L4Re::Video::View::Info::flags](#), [L4Re::Video::View::Info::height](#), [L4Re::Video::View::Info::pixel\\_info](#), [L4Re::Video::View::Info::view\\_index](#), [L4Re::Video::View::Info::width](#), [L4Re::Video::View::Info::xpos](#), and [L4Re::Video::View::Info::ypos](#).

**15.337.3.5 stack()**

```
int L4Re::Video::View::stack (
    View const & pivot,
    bool behind = true ) const [inline], [noexcept]
```

Move this view in the view stack.

## Parameters

<i>pivot</i>	<a href="#">View</a> to move relative to
<i>behind</i>	When true move the view behind the pivot view, if false move the view before the pivot view.

## Return values

0	Success
<0	Error

Definition at line 378 of file [goos](#).

      - Return whether the given pixel information is valid.*
        - bool **has\_set\_position** () const
        - Return whether the position information given is valid.*
          - template<typename OUT >
          - void **dump** (OUT &s) const
          - Dump information on the view information to a stream.*

## Data Fields

- unsigned **flags** = 0
- Flags, see [Flags](#) and [V\\_flags](#).*
- unsigned **view\_index** = 0
- Index of the view.*
- unsigned long **xpos** = 0
- X position in pixels of the view in the [Goos](#).*
- unsigned long **ypos** = 0
- Y position in pixels of the view in the [Goos](#).*
- unsigned long **width** = 0
- Width of the view in pixels.*
- unsigned long **height** = 0
- Height of the view in pixels.*
- unsigned long **buffer\_offset** = 0
- Offset in the memory buffer in bytes.*
- unsigned long **bytes\_per\_line** = 0
- Bytes per line.*
- [Pixel\\_info](#) **pixel\_info**
- Pixel information.*
- unsigned **buffer\_index** = 0
- Number of the buffer used for this view.*

### 15.338.1 Detailed Description

Information structure of a view.

Definition at line 94 of file [goos](#).

The documentation for this struct was generated from the following file:

- l4/re/video/goos

## 15.339 l4re\_aux\_t Struct Reference

Auxiliary descriptor.

```
#include <l4aux.h>
```

Collaboration diagram for l4re\_aux\_t:

l4re_aux_t
+ binary
+ kip_ds
+ dbg_lvl
+ ldr_flags
+ ldr_base

### Data Fields

- char const \* **binary**  
*Binary name.*
- [l4\\_cap\\_idx\\_t](#) **kip\_ds**  
*Data space of the KIP.*
- [l4\\_umword\\_t](#) **dbg\_lvl**  
*Debug levels for l4re.*
- [l4\\_umword\\_t](#) **ldr\_flags**  
*Flags for l4re, see l4re\_aux\_ldr\_flags\_t.*
- [l4\\_addr\\_t](#) **ldr\_base**  
*Load offset of executable.*

### 15.339.1 Detailed Description

Auxiliary descriptor.

Definition at line 51 of file [l4aux.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/l4aux.h](#)

## 15.340 l4re\_ds\_stats\_t Struct Reference

Information about the data space.

```
#include <dataspace.h>
```

Collaboration diagram for l4re\_ds\_stats\_t:

l4re_ds_stats_t	
+	size
+	flags

### Data Fields

- l4re\_ds\_size\_t **size**  
*size*
- l4re\_ds\_flags\_t **flags**  
*flags*

### 15.340.1 Detailed Description

Information about the data space.

Definition at line 49 of file [dataspace.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/dataspace.h](#)

## 15.341 l4re\_elf\_aux\_mword\_t Struct Reference

Auxiliary vector element for a single unsigned data word.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re\_elf\_aux\_mword\_t:

l4re_elf_aux_mword_t	

### 15.341.1 Detailed Description

Auxiliary vector element for a single unsigned data word.

Definition at line 129 of file [elf\\_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4re/elf\\_aux.h](#)

## 15.342 l4re\_elf\_aux\_t Struct Reference

Generic header for each auxiliary vector element.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re\_elf\_aux\_t:

### 15.342.1 Detailed Description

Generic header for each auxiliary vector element.

Definition at line 109 of file [elf\\_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4re/elf\\_aux.h](#)

## 15.343 l4re\_elf\_aux\_vma\_t Struct Reference

Auxiliary vector element for a reserved virtual memory area.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re\_elf\_aux\_vma\_t:

### 15.343.1 Detailed Description

Auxiliary vector element for a reserved virtual memory area.

Definition at line 118 of file [elf\\_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/elf\\_aux.h](#)

## 15.344 l4re\_env\_cap\_entry\_t Struct Reference

Entry in the [L4Re](#) environment array for the named initial objects.

```
#include <env.h>
```

Collaboration diagram for `l4re_env_cap_entry_t`:

<code>l4re_env_cap_entry_t</code>
+ <code>cap</code>
+ <code>flags</code>
+ <code>name</code>
+ <code>l4re_env_cap_entry_t()</code>
+ <code>l4re_env_cap_entry_t()</code>

### Public Member Functions

- `l4re_env_cap_entry_t()` [L4\\_NOTHROW](#)  
*Create an invalid entry.*
- `l4re_env_cap_entry_t(char const *n, l4_cap_idx_t c, l4_umword_t f=0)` [L4\\_NOTHROW](#)  
*Create an entry with the name *n*, capability *c*, and flags *f*.*

### Data Fields

- `l4_cap_idx_t cap`  
*The capability selector for the object.*
- `l4_umword_t flags`  
*Some flags for the object.*
- `char name[16]`  
*The name of the object.*

### 15.344.1 Detailed Description

Entry in the [L4Re](#) environment array for the named initial objects.

Definition at line [50](#) of file [env.h](#).

### 15.344.2 Constructor & Destructor Documentation

#### 15.344.2.1 l4re\_env\_cap\_entry\_t()

```
l4re_env_cap_entry_t::l4re_env_cap_entry_t (
    char const * n,
    l4_cap_idx_t c,
    l4_umword_t f = 0 ) [inline]
```

Create an entry with the name *n*, capability *c*, and flags *f*.

##### Parameters

<i>n</i>	is the name of the initial object.
<i>c</i>	is the capability selector that refers the initial object.
<i>f</i>	are the additional flags for the object.

Definition at line [81](#) of file [env.h](#).

References [name](#).

### 15.344.3 Field Documentation

#### 15.344.3.1 flags

```
l4_umword_t l4re_env_cap_entry_t::flags
```

Some flags for the object.

##### Note

Currently unused.

Definition at line [61](#) of file [env.h](#).

Referenced by [l4re\\_env\\_get\\_cap\\_l\(\)](#).

The documentation for this struct was generated from the following file:

- [l4/re/env.h](#)

## 15.345 l4re\_env\_t Struct Reference

Initial environment data structure.

```
#include <env.h>
```

Collaboration diagram for l4re\_env\_t:

### Data Fields

- [l4\\_cap\\_idx\\_t](#) **parent**  
*Parent object-capability.*
- [l4\\_cap\\_idx\\_t](#) **rm**  
*Region map object-capability.*
- [l4\\_cap\\_idx\\_t](#) **mem\_alloc**  
*Memory allocator object-capability.*
- [l4\\_cap\\_idx\\_t](#) **log**  
*Logging object-capability.*
- [l4\\_cap\\_idx\\_t](#) **main\_thread**  
*Object-capability of the first user thread.*

- [l4\\_cap\\_idx\\_t factory](#)  
*Object-capability of the factory available to the task.*
- [l4\\_cap\\_idx\\_t scheduler](#)  
*Object capability for the scheduler set to use.*
- [l4\\_cap\\_idx\\_t first\\_free\\_cap](#)  
*First capability index available to the application.*
- [l4\\_fpage\\_t utcb\\_area](#)  
*UTCB area of the task.*
- [l4\\_addr\\_t first\\_free\\_utcb](#)  
*First UTCB within the UTCB area available to the application.*
- [l4re\\_env\\_cap\\_entry\\_t \\* caps](#)  
*Pointer to the first entry in the initial objects array which contains [l4re\\_env\\_cap\\_entry\\_t](#) elements.*

## 15.345.1 Detailed Description

Initial environment data structure.

See also

[Initial environment](#)

Definition at line 109 of file [env.h](#).

## 15.345.2 Field Documentation

### 15.345.2.1 caps

```
l4re\_env\_cap\_entry\_t\* l4re\_env\_t::caps
```

Pointer to the first entry in the initial objects array which contains [l4re\\_env\\_cap\\_entry\\_t](#) elements.

The array is terminated by an invalid entry with a `flags` value of `~0`.

Definition at line 126 of file [env.h](#).

Referenced by [L4Re::Env::initial\\_caps\(\)](#), and [L4Re::Env::initial\\_caps\(\)](#).

The documentation for this struct was generated from the following file:

- [l4/re/env.h](#)

## 15.346 l4re\_event\_t Struct Reference

Event structure used in buffer.

```
#include <event.h>
```

Collaboration diagram for l4re\_event\_t:

### Data Fields

- long long **time**  
*Time stamp of the event.*
- unsigned short **type**  
*Type of the event.*
- unsigned short **code**  
*Code of the event.*
- int **value**  
*Value of the event.*
- [l4\\_umword\\_t](#) **stream\_id**  
*Stream ID.*

### 15.346.1 Detailed Description

Event structure used in buffer.

Definition at line 40 of file [event.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/event.h](#)

## 15.347 l4re\_video\_color\_component\_t Struct Reference

Color component structure.

```
#include <colors.h>
```

Collaboration diagram for l4re\_video\_color\_component\_t:

l4re_video_color_component_t	
+	size
+	shift

### Data Fields

- unsigned char **size**  
*Size in bits.*
- unsigned char **shift**  
*offset in pixel*

### 15.347.1 Detailed Description

Color component structure.

Definition at line 31 of file [colors.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/c/video/colors.h](#)

## 15.348 l4re\_video\_goos\_info\_t Struct Reference

Goos information structure.

```
#include <goos.h>
```

Collaboration diagram for `l4re_video_goos_info_t`:

## Data Fields

- unsigned long **width**  
*Width of the goos.*
- unsigned long **height**  
*Height of the goos.*
- unsigned **flags**  
*Flags of the framebuffer, see [l4re\\_video\\_goos\\_info\\_flags\\_t](#).*
- unsigned **num\_static\_views**  
*Number of static views.*
- unsigned **num\_static\_buffers**  
*Number of static buffers.*
- [l4re\\_video\\_pixel\\_info\\_t](#) **pixel\_info**  
*Pixel layout of the goos.*

### 15.348.1 Detailed Description

Goos information structure.

Definition at line 51 of file [goos.h](#).

The documentation for this struct was generated from the following file:

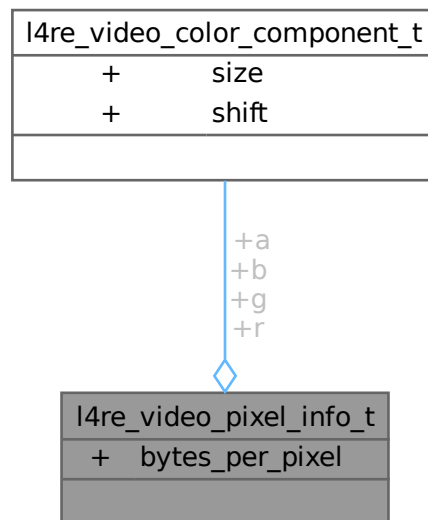

- [l4re/c/video/goos.h](#)

## 15.349 l4re\_video\_pixel\_info\_t Struct Reference

Pixel\_info structure.

```
#include <colors.h>
```

Collaboration diagram for l4re\_video\_pixel\_info\_t:

### Data Fields

- [l4re\\_video\\_color\\_component\\_t](#) **a**  
*Colors.*
- unsigned char **bytes\_per\_pixel**  
*Bytes per pixel.*

### 15.349.1 Detailed Description

Pixel\_info structure.

Definition at line 41 of file [colors.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/colors.h](#)

## 15.350 l4re\_video\_view\_info\_t Struct Reference

View information structure.

```
#include <view.h>
```

Collaboration diagram for l4re\_video\_view\_info\_t:

## Data Fields

- unsigned **flags**  
*Flags.*
- unsigned **view\_index**  
*Number of view in the goos.*
- unsigned long **height**  
*Position in goos and size of view.*
- unsigned long **buffer\_offset**  
*Memory offset in goos buffer.*
- unsigned long **bytes\_per\_line**  
*Size of line in view.*
- [l4re\\_video\\_pixel\\_info\\_t](#) **pixel\_info**  
*Pixel info.*
- unsigned **buffer\_index**  
*Number of buffer of goos.*

### 15.350.1 Detailed Description

View information structure.

Definition at line 59 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/view.h](#)

## 15.351 l4re\_video\_view\_t Struct Reference

C representation of a goos view.

```
#include <view.h>
```

Collaboration diagram for l4re\_video\_view\_t:

### 15.351.1 Detailed Description

C representation of a goos view.

A view is a visible rectangle that provides a view to the contents of a buffer (frame buffer) memory object and is placed on a real screen.

Definition at line 78 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/c/video/view.h](#)

## 15.352 l4shmc\_ringbuf\_head\_t Struct Reference

Head field of a ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc\_ringbuf\_head\_t:

l4shmc_ringbuf_head_t	
+	next_read
+	next_write
+	bytes_filled
+	sender_waits
+	data

### Data Fields

- unsigned **next\_read**  
*offset to next read packet*
- unsigned **next\_write**  
*offset to next write packet*
- unsigned **bytes\_filled**  
*bytes filled in buffer*
- unsigned **sender\_waits**  
*sender waiting?*
- char **data** []  
*tail pointer -> data*

### 15.352.1 Detailed Description

Head field of a ring buffer.

Definition at line 58 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

- [l4shmc/ringbuf.h](#)

## 15.353 l4shmc\_ringbuf\_t Struct Reference

Ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc\_ringbuf\_t:

## Data Fields

- `l4shmc_area_t * _area`  
*L4SHM area this buffer is located in.*
- `l4_cap_idx_t _owner`  
*owner (attached to send/recv signal)*
- `l4shmc_chunk_t _chunk`  
*chunk descriptor*
- `unsigned _size`  
*chunk size // XXX do we need this?*
- `char * _chunkname`  
*name of the ring buffer chunk*
- `char * _signame`  
*base name of the ring buffer signals*
- `l4shmc_ringbuf_head_t * _addr`  
*pointer to ring buffer head*
- `l4shmc_signal_t _signal_full`  
*"full" signal - triggered when data is produced*
- `l4shmc_signal_t _signal_empty`  
*"empty" signal - triggered when data is consumed*

### 15.353.1 Detailed Description

Ring buffer.

Definition at line 84 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

- [l4/shmc/ringbuf.h](#)

## 15.354 l4util\_idt\_desc\_t Struct Reference

IDT entry.

```
#include <idt.h>
```

Collaboration diagram for `l4util_idt_desc_t`:

l4util_idt_desc_t	
+	b
+	b

## Data Fields

- [l4\\_uint64\\_t](#) **b**  
*see Intel doc*
- [l4\\_uint32\\_t](#) **b**  
*see Intel doc*

### 15.354.1 Detailed Description

IDT entry.

Definition at line 33 of file [idt.h](#).

The documentation for this struct was generated from the following files:

- [amd64/l4/util/idt.h](#)
- [x86/l4/util/idt.h](#)

## 15.355 l4util\_idt\_header\_t Struct Reference

Header of an IDT table.

```
#include <idt.h>
```

Collaboration diagram for l4util\_idt\_header\_t:

## Data Fields

- [l4\\_uint16\\_t](#) **limit**  
*limit field (see Intel doc)*
- void \* **base**  
*idt base (see Intel doc)*

### 15.355.1 Detailed Description

Header of an IDT table.

Definition at line 40 of file [idt.h](#).

The documentation for this struct was generated from the following files:

- amd64/l4/util/[idt.h](#)
- x86/l4/util/[idt.h](#)

## 15.356 l4util\_l4mod\_info Struct Reference

Base module structure.

```
#include <l4mod.h>
```

Collaboration diagram for l4util\_l4mod\_info:

l4util_l4mod_info
+ flags
+ cmdline
+ mods_addr
+ mods_count
+ vbe_ctrl_info
+ vbe_mode_info

**Data Fields**

- [l4\\_uint64\\_t](#) **flags**  
*Flags.*
- [l4\\_uint64\\_t](#) **cmdline**  
*Pointer to kernel command line.*
- [l4\\_uint64\\_t](#) **mods\_addr**  
*Module list.*
- [l4\\_uint32\\_t](#) **mods\_count**  
*Number of modules.*
- [l4\\_uint64\\_t](#) **vbe\_ctrl\_info**  
*VESA video info, valid if one of vbe\_ctrl\_info or vbe\_mode\_info is not zero.*
- [l4\\_uint64\\_t](#) **vbe\_mode\_info**  
*VESA video mode info.*

**15.356.1 Detailed Description**

Base module structure.

Definition at line 35 of file [l4mod.h](#).

**15.356.2 Field Documentation****15.356.2.1 vbe\_ctrl\_info**

```
l4\_uint64\_t l4util_l4mod_info::vbe_ctrl_info
```

VESA video info, valid if one of vbe\_ctrl\_info or vbe\_mode\_info is not zero.

VESA video controller info

Definition at line 47 of file [l4mod.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/l4mod.h](#)

**15.357 l4util\_l4mod\_mod Struct Reference**

A single module.

```
#include <l4mod.h>
```

Collaboration diagram for l4util\_l4mod\_mod:

l4util_l4mod_mod
+ flags
+ mod_start
+ mod_end
+ cmdline

## Data Fields

- [l4\\_uint64\\_t](#) **flags**  
*Module flags ([l4util\\_l4mod\\_mod\\_info\\_flag](#))*
- [l4\\_uint64\\_t](#) **mod\_start**  
*Starting address of module in memory.*
- [l4\\_uint64\\_t](#) **mod\_end**  
*End address of module in memory.*
- [l4\\_uint64\\_t](#) **cmdline**  
*Module command line.*

### 15.357.1 Detailed Description

A single module.

Definition at line 26 of file [l4mod.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/l4mod.h](#)

### 15.358 l4util\_mb\_addr\_range\_t Struct Reference

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

```
#include <mb_info.h>
```

Collaboration diagram for `l4util_mb_addr_range_t`:

l4util_mb_addr_range_t	
+	struct_size
+	addr
+	size
+	type

**Data Fields**

- [l4\\_uint32\\_t struct\\_size](#)  
*Size of structure.*
- [l4\\_uint64\\_t addr](#)  
*Start address.*
- [l4\\_uint64\\_t size](#)  
*Size of memory range.*
- [l4\\_uint32\\_t type](#)  
*type of memory range*

**15.358.1 Detailed Description**

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

Definition at line 50 of file [mb\\_info.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/mb\\_info.h](#)

**15.359 l4util\_mb\_apm\_t Struct Reference**

APM BIOS info.

```
#include <mb_info.h>
```

Collaboration diagram for l4util\_mb\_apm\_t:

**15.359.1 Detailed Description**

APM BIOS info.

Definition at line 92 of file [mb\\_info.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/mb\\_info.h](#)

## 15.360 l4util\_mb\_drive\_t Struct Reference

Drive Info structure.

```
#include <mb_info.h>
```

Collaboration diagram for l4util\_mb\_drive\_t:

l4util_mb_drive_t
+ drive_number
+ drive_mode
+ drive_cylinders
+ drive_heads
+ drive_sectors
+ drive_ports

### Data Fields

### 15.364.1 Detailed Description

VBE mode information.

Definition at line 127 of file [mb\\_info.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/mb\\_info.h](#)

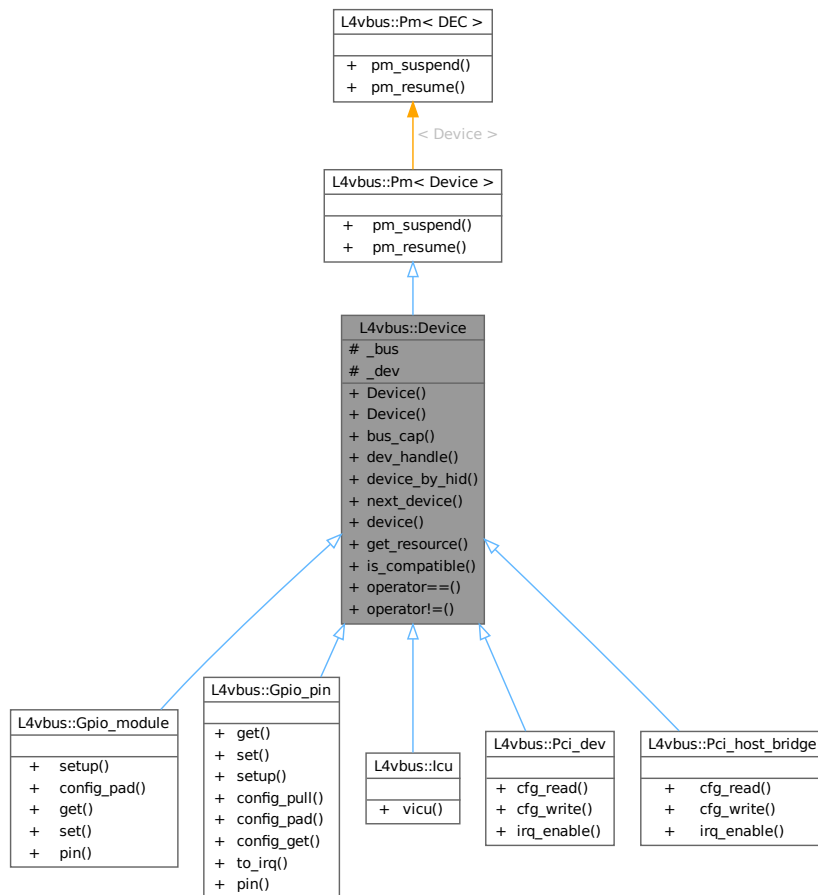

## 15.365 L4vbus::Device Class Reference

Device on a [L4vbus::Vbus](#).

```
#include <vbus>
```

Inheritance diagram for L4vbus::Device:

Collaboration diagram for L4vbus::Device:

## Public Member Functions

- **Device ( )**  
Construct a new vbus device using the NULL device `L4VBUS_NULL`.
- **Device (L4::Cap< Vbus > bus, l4vbus\_device\_handle\_t dev)**  
Construct a new vbus device using a device handle.
- **L4::Cap< Vbus > bus\_cap ( ) const**

- Access the *Vbus* capability of the underlying virtual bus.

  - `l4vbus_device_handle_t dev_handle` () const

Access the device handle of this device.
- int `device_by_hid` (*Device* \*child, char const \*hid, int depth=L4VBUS\_MAX\_DEPTH, *l4vbus\_device\_t* \*devinfo=0) const

Find a device by the hardware interface identifier (HID).
- int `next_device` (*Device* \*child, int depth=L4VBUS\_MAX\_DEPTH, *l4vbus\_device\_t* \*devinfo=0) const

Find next child following *child*.
- int `device` (*l4vbus\_device\_t* \*devinfo) const

Obtain detailed information about a *Vbus* device.
- int `get_resource` (unsigned res\_idx, *l4vbus\_resource\_t* \*res) const

Obtain the resource description of an individual device resource.
- int `is_compatible` (char const \*cid) const

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.
- bool `operator==` (*Device* const &o) const

Test if two devices are the same *Vbus* device.
- bool `operator!=` (*Device* const &o) const

Test if two *Vbus* devices are not the same.

## Public Member Functions inherited from `L4vbus::Pm< Device >`

- int `pm_suspend` () const

Suspend the device.
- int `pm_resume` () const

Resume the device.

## Protected Attributes

- `L4::Cap< Vbus > _bus`

The *Vbus* capability where this device is located on.
- `l4vbus_device_handle_t _dev`

The device handle for this device.

## 15.365.1 Detailed Description

`Device` on a `L4vbus::Vbus`.

Definition at line 85 of file `vbus`.

## 15.365.2 Constructor & Destructor Documentation

### 15.365.2.1 Device()

```
L4vbus::Device::Device (
    L4::Cap< Vbus > bus,
    l4vbus_device_handle_t dev ) [inline]
```

Construct a new vbus device using a device handle.

Specifying the special root bus device handle `L4VBUS_ROOT_BUS` forms the root device of the corresponding vbus, see `Vbus::root`.

## Parameters

<i>bus</i>	The vbus capability where this device is assigned.
<i>dev</i>	The device handle of the device.

Definition at line 102 of file [vbus](#).

### 15.365.3 Member Function Documentation

#### 15.365.3.1 bus\_cap()

```
L4::Cap< Vbus > L4vbus::Device::bus_cap ( ) const [inline]
```

Access the [Vbus](#) capability of the underlying virtual bus.

## Returns

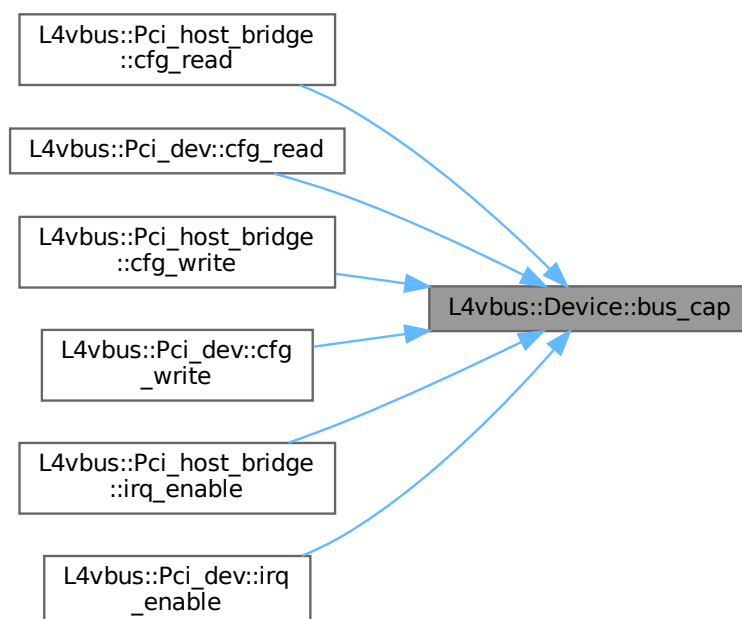

the capability to the underlying [Vbus](#).

Definition at line 109 of file [vbus](#).

References [\\_bus](#).

Referenced by [L4vbus::Pci\\_host\\_bridge::cfg\\_read\(\)](#), [L4vbus::Pci\\_dev::cfg\\_read\(\)](#), [L4vbus::Pci\\_host\\_bridge::cfg\\_write\(\)](#), [L4vbus::Pci\\_dev::cfg\\_write\(\)](#), [L4vbus::Pci\\_host\\_bridge::irq\\_enable\(\)](#), and [L4vbus::Pci\\_dev::irq\\_enable\(\)](#).

Here is the caller graph for this function:

### 15.365.3.2 dev\_handle()

```
l4vbus_device_handle_t L4vbus::Device::dev_handle ( ) const [inline]
```

Access the device handle of this device.

#### Returns

the device handle for this device.

The device handle is used to directly address the device on its virtual bus.

Definition at line 118 of file [vbus](#).

References [\\_dev](#).

### 15.365.3.3 device()

```
int L4vbus::Device::device (
    l4vbus_device_t * devinfo ) const [inline]
```

Obtain detailed information about a [Vbus](#) device.

#### Parameters

out	<i>devinfo</i>	Information structure which contains details about the device. The pointer might be NULL.
-----	----------------	---

#### Return values

0	Success.
-L4_ENODEV	No device with the given device handle <i>dev</i> could be found.

Definition at line 191 of file [vbus](#).

References [\\_bus](#), [\\_dev](#), and [l4vbus\\_get\\_device\(\)](#).

Here is the call graph for this function:

### 15.365.3.4 device\_by\_hid()

```
int L4vbus::Device::device_by_hid (
    Device * child,
    char const * hid,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0 ) const [inline]
```

Find a device by the hardware interface identifier (HID).

This function searches the vbus for a device with the given HID and returns a handle to the first matching device. The HID usually conforms to an ACPI HID or a Linux device tree compatible identifier.

It is possible to have multiple devices with the same HID on a vbus. In order to find all matching devices this function has to be called repeatedly with `child` pointing to the device found in the previous iteration. The iteration starts at `child` that might be any device node in the tree.

#### Parameters

in, out	<i>child</i>	Handle of the device from where in the device tree the search should start. To start searching from the beginning <i>child</i> must be initialized using the default ( <a href="#">L4VBUS_NULL</a> ). If a matching device is found, its handle is returned through this parameter.
	<i>hid</i>	HID of the device
	<i>depth</i>	Maximum depth for the recursive lookup
out	<i>devinfo</i>	<a href="#">Device</a> information structure (might be NULL)

#### Return values

$\geq 0$	A device with the given HID was found.
<code>-L4_ENOENT</code>	No device with the given HID could be found on the vbus.
<code>-L4_EINVAL</code>	Invalid or no HID provided.
<code>-L4_ENODEV</code>	Function called on a non-existing device.

Definition at line [150](#) of file [vbus](#).

References [\\_bus](#), [\\_dev](#), and [l4vbus\\_get\\_device\\_by\\_hid\(\)](#).

Here is the call graph for this function:

### 15.365.3.5 get\_resource()

```
int L4vbus::Device::get_resource (
    unsigned res_idx,
    l4vbus_resource_t * res ) const [inline]
```

Obtain the resource description of an individual device resource.

#### Parameters

	<i>res_idx</i>	Index of the resource for which the resource description should be returned. The total number of resources for a device is available in the <a href="#">l4vbus_device_t</a> structure that is returned by <a href="#">L4vbus::Device::device_by_hid()</a> and <a href="#">L4vbus::Device::next_device()</a> .
out	<i>res</i>	Descriptor of the resource.

This function returns the resource descriptor of an individual device resource selected by the *res\_idx* parameter.

#### Return values

<i>0</i>	Success.
<i>-L4_ENOENT</i>	Invalid resource index <i>res_idx</i> .

Definition at line 211 of file [vbus](#).

References [\\_bus](#), [\\_dev](#), and [l4vbus\\_get\\_resource\(\)](#).

Here is the call graph for this function:

### 15.365.3.6 is\_compatible()

```
int L4vbus::Device::is_compatible (
    char const * cid ) const [inline]
```

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.

#### Parameters

<i>cid</i>	the compatibility ID to test
------------	------------------------------

**Returns**

1 when the given ID (*cid*) matches this device, 0 when the given ID does not match, <0 on error.

Definition at line 225 of file [vbus](#).

References [\\_bus](#), [\\_dev](#), and [l4vbus\\_is\\_compatible\(\)](#).

Here is the call graph for this function:

**15.365.3.7 next\_device()**

```

int L4vbus::Device::next_device (
    Device * child,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0 ) const [inline]
  
```

Find next child following *child*.

**Parameters**

in, out	<i>child</i>	Handle of the device that precedes the device that shall be returned. To start from the beginning, <i>child</i> must be initialized with <a href="#">L4VBUS_NULL</a> ( <a href="#">Device::Device</a> ). If a device is found, its handle is returned through this parameter.
	<i>depth</i>	Depth to look for
out	<i>devinfo</i>	<a href="#">Device</a> information (might be NULL)

**Returns**

0 on success, else failure

Definition at line 173 of file [vbus](#).

References [\\_bus](#), [\\_dev](#), and [l4vbus\\_get\\_next\\_device\(\)](#).

Here is the call graph for this function:

### 15.365.3.8 `operator!=()`

```
bool L4vbus::Device::operator!= (
    Device const & o ) const [inline]
```

Test if two [Vbus](#) devices are not the same.

#### Returns

true if the two devices are different, false else.

Definition at line [241](#) of file [vbus](#).

References [\\_bus](#), and [\\_dev](#).

### 15.365.3.9 `operator==()`

```
bool L4vbus::Device::operator== (
    Device const & o ) const [inline]
```

Test if two devices are the same [Vbus](#) device.

#### Returns

true if the two devices are the same, false else.

Definition at line [232](#) of file [vbus](#).

References [\\_bus](#), and [\\_dev](#).

The documentation for this class was generated from the following file:

### 15.366.1 Detailed Description

A [Gpio\\_module](#) groups multiple GPIO pins together.

Definition at line 135 of file [vbus\\_gpio](#).

### 15.366.2 Member Function Documentation

#### 15.366.2.1 config\_pad()

```
int L4vbus::Gpio_module::config_pad (
    Pin_slice const & mask,
    unsigned func,
    unsigned value ) const [inline]
```

Hardware specific configuration function for multiple GPIO pins.

##### Parameters

<i>mask</i>	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
<i>func</i>	Hardware specific configuration register, usually offset to the GPIO chip's base address.
<i>value</i>	Value which is written into the hardware specific configuration register for the specified pins

##### Returns

0 if OK, error code otherwise

Definition at line 187 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_multi\\_config\\_pad\(\)](#).

Here is the call graph for this function:

#### 15.366.2.2 get()

```
int L4vbus::Gpio_module::get (
    unsigned offset,
    unsigned * data ) const [inline]
```

Read values of multiple GPIO pins at once.

## Parameters

	<i>offset</i>	Pin corresponding to the LSB in <i>data</i> . Note: allowed may be hardware specific.
<i>out</i>	<i>data</i>	Each bit returns the value (0 or 1) for the corresponding GPIO pin. The value of pins that are not accessible is undefined.

## Returns

0 if OK, error code otherwise

Definition at line 203 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_multi\\_get\(\)](#).

Here is the call graph for this function:

### 15.366.2.3 pin()

```
Gpio_pin L4vbus::Gpio_module::pin (  
    unsigned pin ) const [inline]
```

Get [Gpio\\_pin](#) for a specific pin of this [Gpio\\_module](#).

## Parameters

<i>pin</i>	GPIO pin number to get <a href="#">Gpio_pin</a> for.
------------	--

## Returns

[Gpio\\_pin](#)

Definition at line 231 of file [vbus\\_gpio](#).

References [pin\(\)](#).

Referenced by [pin\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

#### 15.366.2.4 set()

```
int L4vbus::Gpio_module::set (
    Pin_slice const & mask,
    unsigned data ) [inline]
```

Set multiple GPIO output pins at once.

##### Parameters

<i>mask</i>	Mask of GPIO pins to set. A bit set to 1 selects this pin. A maximum of 32 pins can be set at once. The real number depends on the hardware and the driver implementation.
<i>data</i>	Each bit corresponds to the GPIO pin in <i>mask</i> . The value of each bit is written to the GPIO pin if its bit in <i>mask</i> is set.

##### Returns

0 if OK, error code otherwise

Definition at line 219 of file `vbus_gpio`.

References `L4vbus::Device::_bus`, `L4vbus::Device::_dev`, and `l4vbus_gpio_multi_set()`.

Here is the call graph for this function:

### 15.366.2.5 setup()

```

int L4vbus::Gpio_module::setup (
    Pin_slice const & mask,
    unsigned mode,
    unsigned value ) const [inline]
  
```

Configure function of multiple GPIO pins at once.

#### Parameters

<i>mask</i>	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
<i>mode</i>	GPIO function, see <a href="#">L4vbus_gpio_generic_func</a> for generic functions. Hardware specific functions must be provided in the lower 8 bits.
<i>value</i>	Optional value to set the GPIO pins to if they are configured as output pins

#### Returns

0 if OK, error code otherwise

Definition at line 168 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_multi\\_setup\(\)](#).

### 15.368.1 Detailed Description

A GPIO pin.

Definition at line 28 of file [vbus\\_gpio](#).

### 15.368.2 Member Function Documentation

#### 15.368.2.1 `config_get()`

```
int L4vbus::Gpio_pin::config_get (
    unsigned func,
    unsigned * value ) const [inline]
```

Read hardware specific configuration.

#### Parameters

	<i>func</i>	Hardware specific configuration register to read from. Usually this is an offset to the GPIO chip's base address.
<i>out</i>	<i>value</i>	The configuration value.

#### Returns

0 if OK, error code otherwise

Definition at line 104 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_config\\_get\(\)](#).

Here is the call graph for this function:

### 15.368.2.2 config\_pad()

```
int L4vbus::Gpio_pin::config_pad (
    unsigned func,
    unsigned value ) const [inline]
```

Hardware specific configuration function.

#### Parameters

<i>func</i>	Hardware specific configuration register, usually offset to the GPIO chip's base address
<i>value</i>	Value which is written into the hardware specific configuration register for the specified pin

#### Returns

0 if OK, error code otherwise

Definition at line 91 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_config\\_pad\(\)](#).

Here is the call graph for this function:

### 15.368.2.3 config\_pull()

```
int L4vbus::Gpio_pin::config_pull (
    unsigned mode ) const [inline]
```

Generic function to set pull up/down mode.

#### Parameters

<i>mode</i>	mode for pull up/down resistors, see <a href="#">L4vbus_gpio_pull_modes</a>
-------------	---

#### Returns

0 if OK, error code otherwise

Definition at line 77 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_config\\_pull\(\)](#).

Here is the call graph for this function:

#### 15.368.2.4 `get()`

```
int L4vbus::Gpio_pin::get ( ) const [inline]
```

Read value of GPIO input pin.

##### Returns

Value of GPIO pin (usually 0 or 1), negative error code otherwise.

Definition at line 40 of file `vbus_gpio`.

References `L4vbus::Device::_bus`, `L4vbus::Device::_dev`, and `l4vbus_gpio_get()`.

Here is the call graph for this function:

#### 15.368.2.5 `pin()`

```
unsigned L4vbus::Gpio_pin::pin ( ) const [inline]
```

Get pin number.

##### Returns

GPIO pin number

Definition at line 124 of file `vbus_gpio`.

#### 15.368.2.6 `set()`

```
int L4vbus::Gpio_pin::set (
    int value ) const [inline]
```

Set GPIO output pin.

**Parameters**

<i>value</i>	Value to write to the GPIO pin (usually 0 or 1)
--------------	---

**Returns**

0 if OK, error code otherwise

Definition at line 51 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_set\(\)](#).

Here is the call graph for this function:

**15.368.2.7 setup()**

```
int L4vbus::Gpio_pin::setup (
    unsigned mode,
    unsigned value ) const [inline]
```

Configure the function of a GPIO pin.

**Parameters**

<i>mode</i>	GPIO function, see <a href="#">L4vbus_gpio_generic_func</a> for generic functions. Hardware specific functions must be provided in the lower 8 bits.
<i>value</i>	Optional value to set the GPIO pin to if it is configured as an output pin

**Returns**

0 if OK, error code otherwise

Definition at line 66 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_setup\(\)](#).

Here is the call graph for this function:

### 15.368.2.8 to\_irq()

```
int L4vbus::Gpio_pin::to_irq ( ) const [inline]
```

Create IRQ for GPIO pin.

#### Returns

IRQ number if OK, negative error code otherwise

Definition at line 114 of file [vbus\\_gpio](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), and [l4vbus\\_gpio\\_to\\_irq\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

*The device handle for this device.*

## 15.369.1 Detailed Description

[Vbus](#) Interrupt controller API.

Every [Vbus](#) contains a virtual interrupt control unit that manages the IRQs of the devices on the bus. This class provides access to a capability to an [L4::Icu](#) object which can then be used to interface with the IRQs.

See also

[L4::Icu](#)

Definition at line 262 of file [vbus](#).

## 15.369.2 Member Enumeration Documentation

### 15.369.2.1 Src\_types

```
enum L4vbus::Icu::Src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

Src_dev_handle	Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in <a href="#">L4::Icu::msi_info()</a> to denote that the ICU should interpret the source ID as a device handle.
----------------	---

Definition at line 266 of file [vbus](#).

## 15.369.3 Member Function Documentation

### 15.369.3.1 vicu()

```
int L4vbus::Icu::vicu (
    L4::Cap< L4::Icu > icu ) const [inline]
```

Request an [L4::Icu](#) capability for this [Vbus](#)'s virtual ICU.

Parameters

out	icu	Capability slot where the <a href="#">L4::Icu</a> capability shall be stored.
-----	-----	---

Return values

0	Success.
otherwise	IPC error.

Definition at line 287 of file [vbus](#).

References [L4vbus::Device::\\_bus](#), [L4vbus::Device::\\_dev](#), [L4::Cap\\_base::cap\(\)](#), and [l4vbus\\_vicu\\_get\\_cap\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

### 15.370.1 Detailed Description

A PCI device.

Definition at line 95 of file `vbus_pci`.

## 15.370.2 Member Function Documentation

### 15.370.2.1 `cfg_read()`

```
int L4vbus::Pci_dev::cfg_read (
    14_uint32_t reg,
    14_uint32_t * value,
    14_uint32_t width ) const [inline]
```

Read from the device's vPCI configuration space.

#### Parameters

	<i>reg</i>	Register in configuration space to read
out	<i>value</i>	Value that has been read
	<i>width</i>	Width to read in bits (e.g. 8, 16, 32)

#### Returns

0 on success, else failure

Definition at line 107 of file `vbus_pci`.

References `L4vbus::Device::_dev`, `L4vbus::Device::bus_cap()`, and `l4vbus_pcidev_cfg_read()`.

Here is the call graph for this function:

### 15.370.2.2 `cfg_write()`

```
int L4vbus::Pci_dev::cfg_write (
    14_uint32_t reg,
    14_uint32_t value,
    14_uint32_t width ) const [inline]
```

Write to the device's vPCI configuration space.

#### Parameters

<i>reg</i>	Register in configuration space to write
<i>value</i>	Value to write
<i>width</i>	Width to write in bits (e.g. 8, 16, 32)

**Returns**

0 on success, else failure

Definition at line 123 of file [vbus\\_pci](#).

References [L4vbus::Device::\\_dev](#), [L4vbus::Device::bus\\_cap\(\)](#), and [l4vbus\\_pcidev\\_cfg\\_write\(\)](#).

Here is the call graph for this function:

**15.370.2.3 irq\_enable()**

```
int L4vbus::Pci_dev::irq_enable (
    unsigned char * trigger,
    unsigned char * polarity ) const [inline]
```

Enable the device's PCI interrupt.

**Parameters**

out	<i>trigger</i>	False if interrupt is level-triggered
out	<i>polarity</i>	True if interrupt is of low polarity

**Returns**

On success: Interrupt line to be used, else failure

Definition at line 139 of file [vbus\\_pci](#).

References [L4vbus::Device::\\_dev](#), [L4vbus::Device::bus\\_cap\(\)](#), and [l4vbus\\_pcidev\\_irq\\_enable\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

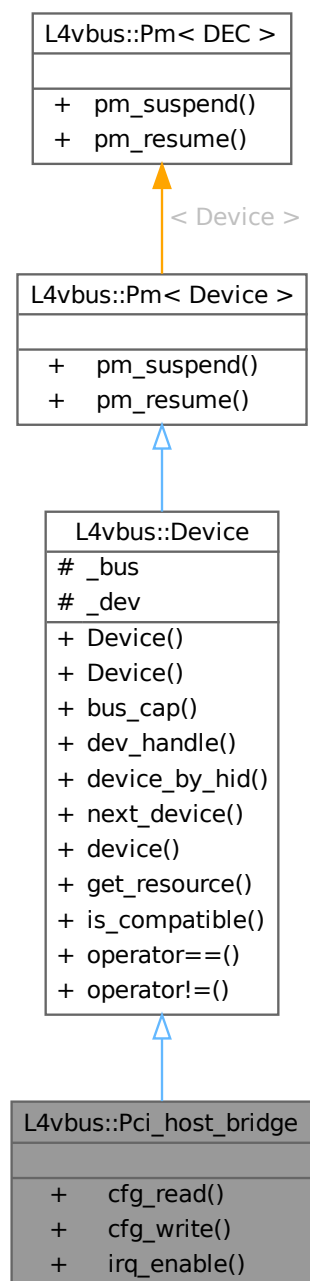

- `l4/vbus/vbus_pci`

## 15.371 L4vbus::Pci\_host\_bridge Class Reference

A Pci host bridge.

```
#include <vbus_pci>
```

Inheritance diagram for L4vbus::Pci\_host\_bridge:

Collaboration diagram for L4vbus::Pci\_host\_bridge:

## Public Member Functions

- `int cfg_read (l4_uint32_t bus, l4_uint32_t devfn, l4_uint32_t reg, l4_uint32_t *value, l4_uint32_t width) const`  
Read from the vPCI configuration space using the PCI root bridge.
- `int cfg_write (l4_uint32_t bus, l4_uint32_t devfn, l4_uint32_t reg, l4_uint32_t value, l4_uint32_t width) const`  
Write to the vPCI configuration space using the PCI root bridge.

- int `irq_enable` (`l4_uint32_t` bus, `l4_uint32_t` devfn, int pin, unsigned char \*trigger, unsigned char \*polarity) const

### 15.371.1 Detailed Description

A Pci host bridge.

Definition at line 27 of file [vbus\\_pci](#).

### 15.371.2 Member Function Documentation

#### 15.371.2.1 `cfg_read()`

```
int L4vbus::Pci_host_bridge::cfg_read (
    14_uint32_t bus,
    14_uint32_t devfn,
    14_uint32_t reg,
    14_uint32_t * value,
    14_uint32_t width ) const [inline]
```

Read from the vPCI configuration space using the PCI root bridge.

#### Parameters

	<i>bus</i>	Bus number
	<i>devfn</i>	<a href="#">Device</a> id (upper 16bit) and function (lower 16bit)
	<i>reg</i>	Register in configuration space to read
out	<i>value</i>	Value that has been read
	<i>width</i>	Width to read in bits (e.g. 8, 16, 32)

#### Returns

0 on success, else failure

Definition at line 41 of file [vbus\\_pci](#).

References [L4vbus::Device::\\_dev](#), [L4vbus::Device::bus\\_cap\(\)](#), and [l4vbus\\_pci\\_cfg\\_read\(\)](#).

Here is the call graph for this function:

### 15.371.2.2 `cfg_write()`

```
int L4vbus::Pci_host_bridge::cfg_write (
    14_uint32_t bus,
    14_uint32_t devfn,
    14_uint32_t reg,
    14_uint32_t value,
    14_uint32_t width ) const [inline]
```

Write to the vPCI configuration space using the PCI root bridge.

#### Parameters

<i>bus</i>	Bus number
<i>devfn</i>	<a href="#">Device</a> id (upper 16bit) and function (lower 16bit)
<i>reg</i>	Register in configuration space to write
<i>value</i>	Value to write
<i>width</i>	Width to write in bits (e.g. 8, 16, 32)

#### Returns

0 on success, else failure

Definition at line 60 of file [vbus\\_pci](#).

References [L4vbus::Device::\\_dev](#), [L4vbus::Device::bus\\_cap\(\)](#), and [l4vbus\\_pci\\_cfg\\_write\(\)](#).

Here is the call graph for this function:

### 15.371.2.3 `irq_enable()`

```
int L4vbus::Pci_host_bridge::irq_enable (
    14_uint32_t bus,
    14_uint32_t devfn,
    int pin,
    unsigned char * trigger,
    unsigned char * polarity ) const [inline]
```

Enable PCI interrupt for a specific device using the PCI root bridge.

## Parameters

	<i>bus</i>	Bus number
	<i>devfn</i>	<a href="#">Device</a> id (upper 16bit) and function (lower 16bit)
	<i>pin</i>	Interrupt pin (normally as reported in configuration register INTR)
out	<i>trigger</i>	False if interrupt is level-triggered
out	<i>polarity</i>	True if interrupt is of low polarity

## Returns

On success: Interrupt line to be used, else failure

Definition at line 81 of file [vbus\\_pci](#).

References [L4vbus::Device::\\_dev](#), [L4vbus::Device::bus\\_cap\(\)](#), and [l4vbus\\_pci\\_irq\\_enable\(\)](#).

int L4vbus::Pm< DEC >::pm_suspend ( ) const [inline]
```

Suspend the device.

Saves the state of the device and puts it into a low-power mode.

## Return values

0	Success.
---	----------

Definition at line 65 of file [vbus](#).

References [l4vbus\\_pm\\_suspend\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `l4/vbus/vbus`

## 15.373 L4vbus::Vbus Class Reference

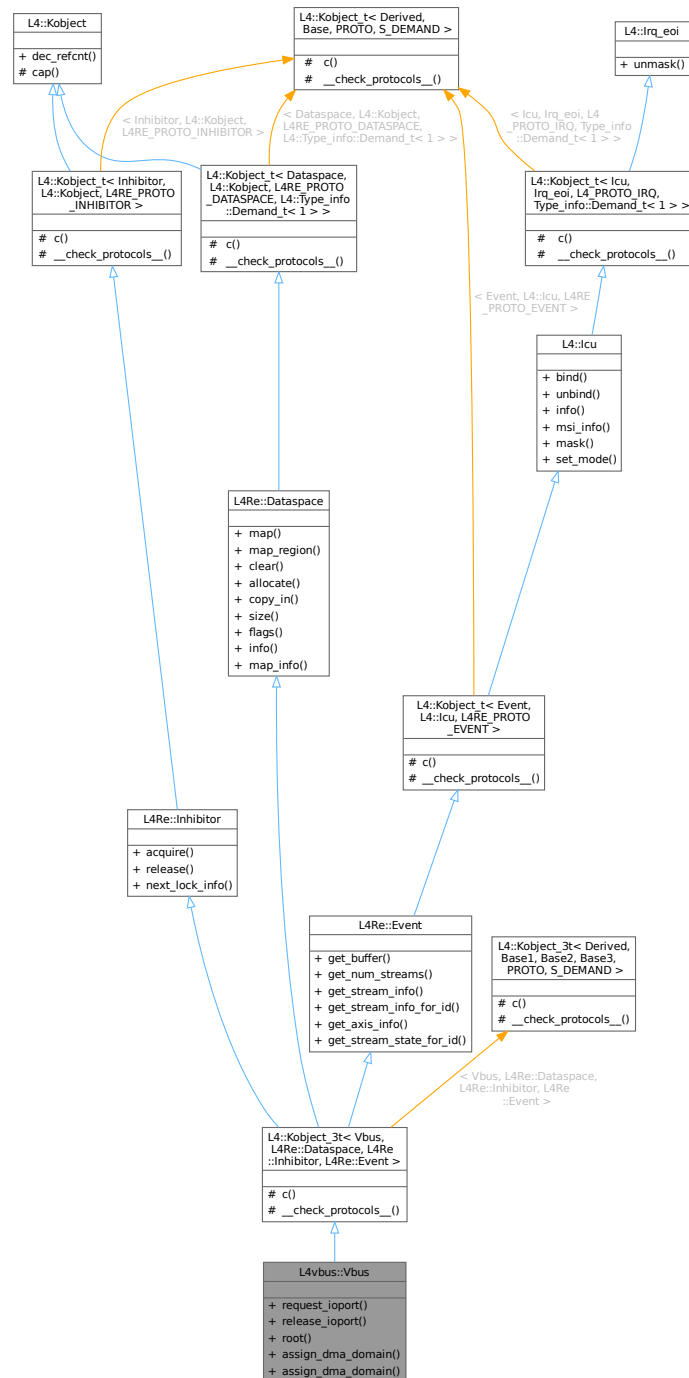

The virtual bus ([Vbus](#)) interface.

```
#include <vbus>
```

Inheritance diagram for L4vbus::Vbus:

Collaboration diagram for L4vbus::Vbus:

## Public Member Functions

- `int request_ioport (l4vbus_resource_t *res) const`  
Request the given IO port resource from the bus.
- `int release_ioport (l4vbus_resource_t *res) const`  
Release the given IO port resource from the bus.
- `Device root () const`

*Get the root device of the device tree of this bus.*

- int `assign_dma_domain` (unsigned domain\_id, unsigned flags, L4::Cap< L4Re::Dma\_space > dma\_space) const

*Bind or unbind an L4Re::Dma\_space to a DMA domain.*

- int `assign_dma_domain` (unsigned domain\_id, unsigned flags, L4::Cap< L4::Task > dma\_space) const

*Bind or unbind a kernel DMA space to a DMA domain.*

## Public Member Functions inherited from L4Re::Dataspace

- long `map` (Offset offset, Flags flags, Map\_addr local\_addr, Map\_addr min\_addr, Map\_addr max\_addr, L4::Cap< L4::Task > dst=L4::Cap< L4::Task >::Invalid) const noexcept

*Request a flex-page mapping from the dataspace.*

- long `map_region` (Offset offset, Flags flags, Map\_addr min\_addr, Map\_addr max\_addr, L4::Cap< L4::Task > dst=L4::Cap< L4::Task >::Invalid) const noexcept

*Map a part of a dataspace into a local memory area.*

- long `clear` (Offset offset, Size size)

*Clear parts of a dataspace.*

- long `allocate` (Offset offset, Size size)

*Allocate a range in the dataspace.*

- long `copy_in` (Offset dst\_offs, L4::lpc::Cap< Dataspace > src, Offset src\_offs, Size size)

*Copy contents from another dataspace.*

- Size `size` () const noexcept

*Get size of a dataspace.*

- Flags `flags` () const noexcept

*Get flags of the dataspace.*

- long `info` (Stats \*stats)

*Get information on the dataspace.*

- long `map_info` (l4\_addr\_t \*, l4\_addr\_t \*)

*Get mapping range of dataspace.*

## Public Member Functions inherited from L4::Kobject

- l4\_msgtag\_t `dec_refcnt` (l4\_mword\_t diff, l4\_utcb\_t \*utcb=l4\_utcb())

*Decrement the in kernel reference counter for the object.*

## Public Member Functions inherited from L4Re::Inhibitor

- long `acquire` (l4\_umword\_t id, L4::lpc::String<> reason)

*Acquire a specific inhibitor lock.*

- long `release` (l4\_umword\_t id)

*Release a specific inhibitor lock.*

- long `next_lock_info` (char \*name, unsigned len, l4\_mword\_t current\_id=-1, l4\_utcb\_t \*utcb=l4\_utcb())

*Get information for the next available inhibitor lock.*

## Public Member Functions inherited from L4Re::Event

- long `get_buffer` (L4::lpc::Out< L4::Cap< Dataspace > > ds)  
*Get event signal buffer.*
- long `get_num_streams` ()  
*Get number of event streams.*
- long `get_stream_info` (int idx, Event\_stream\_info \*info)  
*Get event stream infos.*
- long `get_stream_info_for_id` (l4\_umword\_t stream\_id, Event\_stream\_info \*info)  
*Get event stream infos.*
- long `get_axis_info` (l4\_umword\_t stream\_id, unsigned naxes, unsigned const \*axis, Event\_absinfo \*info) const noexcept  
*Get event stream axis infos.*
- long `get_stream_state_for_id` (l4\_umword\_t stream\_id, Event\_stream\_state \*state)  
*Get event stream state.*

## Public Member Functions inherited from L4::Icu

- `l4_msgtag_t bind` (unsigned irqnum, L4::Cap< Triggerable > irq, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Bind an interrupt line of an interrupt controller to an interrupt object.*
- `l4_msgtag_t unbind` (unsigned irqnum, L4::Cap< Triggerable > irq, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Remove binding of an interrupt line from the interrupt controller object.*
- `l4_msgtag_t info` (l4\_icu\_info\_t \*info, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Get information about the ICU features.*
- `l4_msgtag_t msi_info` (l4\_umword\_t irqnum, l4\_uint64\_t source, l4\_icu\_msi\_info\_t \*msi\_info)  
*Get MSI info about IRQ.*
- `l4_msgtag_t mask` (unsigned irqnum, l4\_umword\_t \*label=0, l4\_timeout\_t to=L4\_IPC\_NEVER, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Mask an IRQ line.*
- `l4_msgtag_t set_mode` (unsigned irqnum, l4\_umword\_t mode, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Set interrupt mode.*

## Public Member Functions inherited from L4::Irq\_eoi

- `l4_msgtag_t unmask` (unsigned irqnum, l4\_umword\_t \*label=0, l4\_timeout\_t to=L4\_IPC\_NEVER, l4\_utcb\_t \*utcb=l4\_utcb()) noexcept  
*Unmask the given interrupt line.*

## Additional Inherited Members

## 15.373.1 Detailed Description

The virtual bus ([Vbus](#)) interface.

See also

[L4Re Vbus API](#)

Definition at line [300](#) of file [vbus](#).

## 15.373.2 Member Function Documentation

### 15.373.2.1 `assign_dma_domain()` [1/2]

```
int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4::Task > dma_space ) const [inline]
```

Bind or unbind a kernel [DMA space](#) to a DMA domain.

#### Parameters

<i>domain_id</i>	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
<i>flags</i>	A combination of <a href="#">L4vbus_dma_domain_assign_flags</a> .
<i>dma_space</i>	The DMA space capability to bind or unbind, this must be a kernel <a href="#">DMA space</a> ( <a href="#">L4::Task</a> created with <code>L4_PROTO_DMA_SPACE</code> )

## Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

Definition at line 384 of file [vbus](#).

References [L4::Cap\\_base::cap\(\)](#), [L4Re::Dataspace::flags\(\)](#), [l4vbus\\_assign\\_dma\\_domain\(\)](#), and [L4VBUS\\_DMAD\\_KERNEL\\_DMA\\_SP](#)

Here is the call graph for this function:

## 15.373.2.2 assign\_dma\_domain() [2/2]

```

int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4Re::Dma_space > dma_space ) const [inline]

```

Bind or unbind an [L4Re::Dma\\_space](#) to a DMA domain.

## Parameters

<i>domain_id</i>	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
<i>flags</i>	A combination of <a href="#">L4vbus_dma_domain_assign_flags</a> .
<i>dma_space</i>	The DMA space capability to bind or unbind, this must be an <a href="#">L4Re::Dma_space</a>

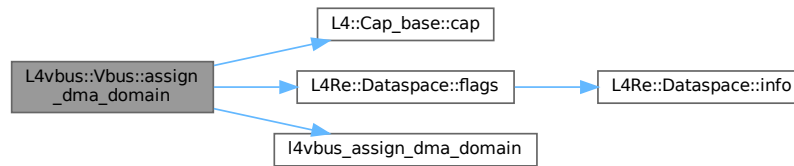

## Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

Definition at line 359 of file [vbus](#).

References [L4::Cap\\_base::cap\(\)](#), [L4Re::Dataspace::flags\(\)](#), [l4vbus\\_assign\\_dma\\_domain\(\)](#), and [L4VBUS\\_DMAD\\_L4RE\\_DMA\\_SPAC](#)

Here is the call graph for this function:

### 15.373.2.3 release\_ioport()

```
int L4vbus::Vbus::release_ioport (
    l4vbus_resource_t * res ) const [inline]
```

Release the given IO port resource from the bus.

#### Parameters

<code>in</code>	<code>res</code>	The IO port resource to be released from the bus.
-----------------	------------------	---

#### Returns

$\geq 0$  on success,  $< 0$  on error.

Definition at line 325 of file `vbus`.

References `l4vbus_release_ioport()`.

Here is the call graph for this function:

### 15.373.2.4 request\_ioport()

```
int L4vbus::Vbus::request_ioport (
    l4vbus_resource_t * res ) const [inline]
```

Request the given IO port resource from the bus.

## Parameters

<i>in</i>	<i>res</i>	The IO port resource to be requested from the bus.
-----------	------------	--

## Return values

<i>0</i>	Success.
<i>-L4_EINVAL</i>	Resource is not an IO port resource.
<i>-L4_ENOENT</i>	No matching IO port resource found.

Definition at line 313 of file [vbus](#).

References [l4vbus\\_request\\_ioport\(\)](#).

Here is the call graph for this function:

### 15.373.2.5 root()

```
Device L4vbus::Vbus::root ( ) const [inline]
```

Get the root device of the device tree of this bus.

The root device is usually the starting point for iterating the bus, see [Device::next\\_device](#).

## Returns

A [Vbus](#) device representing the root of the device tree.

Definition at line 338 of file [vbus](#).

References [L4VBUS\\_ROOT\\_BUS](#).

The documentation for this class was generated from the following file:

- `l4/vbus/vbus`

## 15.374 l4vbus\_device\_t Struct Reference

Detailed information about a vbus device.

```
#include <vbus_types.h>
```

Collaboration diagram for l4vbus\_device\_t:

### Data Fields

- [l4\\_uint32\\_t](#) **type**  
*Bitfield of supported sub-interfaces, see [l4vbus\\_iface\\_type\\_t](#).*
- char **name** [L4VBUS\_DEV\_NAME\_LEN]  
*Name.*
- unsigned **num\_resources**  
*Number of resources for this device.*
- unsigned **flags**  
*Flags, see [l4vbus\\_device\\_flags\\_t](#).*

### 15.374.1 Detailed Description

Detailed information about a vbus device.

Definition at line 70 of file [vbus\\_types.h](#).

The documentation for this struct was generated from the following file:

- [l4/vbus/vbus\\_types.h](#)

## 15.375 l4vbus\_resource\_t Struct Reference

Description of a single vbus resource.

```
#include <vbus_types.h>
```

Collaboration diagram for l4vbus\_resource\_t:

l4vbus_resource_t	
+	type
+	flags
+	start
+	end
+	provider
+	id

### Data Fields

- [l4\\_uint16\\_t type](#)  
*Resource type, see [l4vbus\\_resource\\_type\\_t](#).*
- [l4\\_uint16\\_t flags](#)  
*Flags.*
- [l4vbus\\_paddr\\_t start](#)  
*Start of resource range.*
- [l4vbus\\_paddr\\_t end](#)  
*End of resource range (inclusive)*
- [l4vbus\\_device\\_handle\\_t provider](#)  
*Device handle of the provider of the resource.*
- [l4\\_uint32\\_t id](#)  
*Resource ID (4 bytes), usually a 4 letter ASCII name is used.*

### 15.375.1 Detailed Description

Description of a single vbus resource.

Definition at line 25 of file [vbus\\_types.h](#).

The documentation for this struct was generated from the following file:

- [l4/vbus/vbus\\_types.h](#)

## 15.376 L4vcpu::State Class Reference

C++ implementation of state word in the vCPU area.

```
#include <vcpu>
```

Collaboration diagram for L4vcpu::State:

### Public Member Functions

- [State](#) (unsigned v)  
*Initialize state.*
- void [add](#) (unsigned bits) throw ()  
*Add flags.*
- void [clear](#) (unsigned bits) throw ()  
*Clear flags.*
- void [set](#) (unsigned v) throw ()  
*Set flags.*

### 15.376.1 Detailed Description

C++ implementation of state word in the vCPU area.

Definition at line [35](#) of file [vcpu](#).

### 15.376.2 Constructor & Destructor Documentation

#### 15.376.2.1 State()

```
L4vcpu::State::State (
    unsigned v ) [inline], [explicit]
```

Initialize state.

## Parameters

<i>v</i>	Initial state.
----------	----------------

Definition at line 45 of file [vcpu](#).

## 15.376.3 Member Function Documentation

### 15.376.3.1 add()

```
void L4vcpu::State::add (
    unsigned bits ) throw ( )    [inline]
```

Add flags.

## Parameters

<i>bits</i>	Bits to add to the word.
-------------	--------------------------

Definition at line 52 of file [vcpu](#).

### 15.376.3.2 clear()

```
void L4vcpu::State::clear (
    unsigned bits ) throw ( )    [inline]
```

Clear flags.

## Parameters

<i>bits</i>	Bits to clear in the word.
-------------	----------------------------

Definition at line 59 of file [vcpu](#).

### 15.376.3.3 set()

```
void L4vcpu::State::set (
    unsigned v ) throw ( )    [inline]
```

Set flags.

## Parameters

<i>v</i>	Set the word to the value of <i>v</i> .
----------	---

Definition at line 66 of file [vcpu](#).

The documentation for this class was generated from the following file:

- [l4/vcpu/vcpu](#)

## 15.377 L4vcpu::Vcpu Class Reference

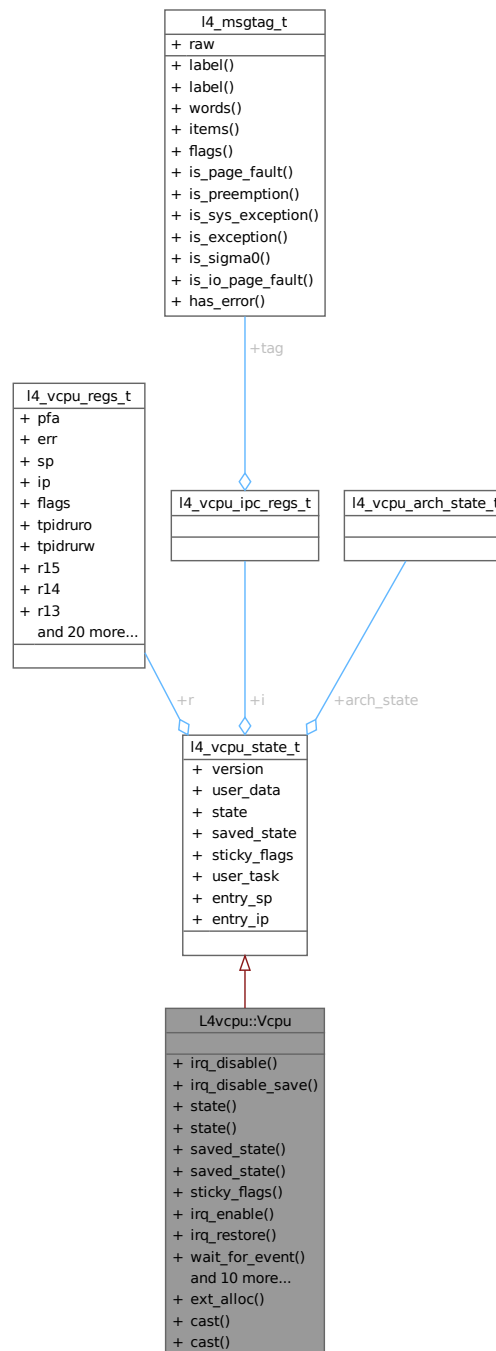

C++ implementation of the vCPU save state area.

```
#include <vcpu>
```

Inheritance diagram for L4vcpu::Vcpu:

Collaboration diagram for L4vcpu::Vcpu:

## Public Member Functions

- void **irq\_disable** () throw ()  
*Disable the vCPU for event delivery.*
- unsigned **irq\_disable\_save** () throw ()  
*Disable the vCPU for event delivery and return previous state.*
- **State** \* **state** () throw ()

- Get state word.*

  - `State state () const throw ()`
- Get state word.*

  - `State * saved_state () throw ()`
- Get saved\_state word.*

  - `State saved_state () const throw ()`
- Get saved\_state word.*

  - `l4_uint16_t sticky_flags () const throw ()`
- Get sticky flags.*

  - `void irq_enable (l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()`
- Enable the vCPU for event delivery.*

  - `void irq_restore (unsigned s, l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()`
- Restore a previously saved IRQ/event state.*

  - `void wait_for_event (l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()`
- Wait for event.*

  - `void task (L4::Cap< L4::Task > const task=L4::Cap< L4::Task >::Invalid) throw ()`
- Set the task of the vCPU.*

  - `int is_page_fault_entry () const`
- Return whether the entry reason was a page fault.*

  - `int is_irq_entry () const`
- Return whether the entry reason was an IRQ/IPC message.*

  - `l4_vcpu_regs_t * r () throw ()`
- Return pointer to register state.*

  - `l4_vcpu_regs_t const * r () const throw ()`
- Return pointer to register state.*

  - `l4_vcpu_ipc_regs_t * i () throw ()`
- Return pointer to IPC state.*

  - `l4_vcpu_ipc_regs_t const * i () const throw ()`
- Return pointer to IPC state.*

  - `void entry_sp (l4_umword_t sp)`
- Set vCPU entry stack pointer.*

  - `void entry_ip (l4_umword_t ip)`
- Set vCPU entry instruction pointer.*

  - `void print_state (const char *prefix="") const throw ()`
- Print the state of the vCPU.*

### Static Public Member Functions

- `static int ext_alloc (Vcpu **vcpu, l4_addr_t *ext_state, L4::Cap< L4::Task > task=L4Re::Env::env() ->task(), L4::Cap< L4Re::Rm > rm=L4Re::Env::env() ->rm()) throw ()`

*Allocate state area for an extended vCPU.*
- `static Vcpu * cast (void *x) throw ()`

*Cast a void pointer to a class pointer.*
- `static Vcpu * cast (l4_addr_t x) throw ()`

*Cast an address to a class pointer.*

## 15.377.1 Detailed Description

C++ implementation of the vCPU save state area.

Definition at line 76 of file [vcpu](#).

## 15.377.2 Member Function Documentation

### 15.377.2.1 `cast()` [1/2]

```
static Vcpu * L4vcpu::Vcpu::cast (
    l4\_addr\_t x ) throw ( )    [inline], [static]
```

Cast an address to a class pointer.

#### Parameters

<code>x</code>	Pointer.
----------------	----------

#### Returns

Pointer to [Vcpu](#) class.

Definition at line 280 of file [vcpu](#).

### 15.377.2.2 `cast()` [2/2]

```
static Vcpu * L4vcpu::Vcpu::cast (
    void * x ) throw ( )    [inline], [static]
```

Cast a void pointer to a class pointer.

#### Parameters

<code>x</code>	Pointer.
----------------	----------

#### Returns

Pointer to [Vcpu](#) class.

Definition at line 270 of file [vcpu](#).

### 15.377.2.3 `entry_ip()`

```
void L4vcpu::Vcpu::entry_ip (
    l4\_umword\_t ip )    [inline]
```

Set vCPU entry instruction pointer.

## Parameters

<i>ip</i>	Instruction pointer address to set.
-----------	-------------------------------------

Definition at line 243 of file [vcpu](#).

References [l4\\_vcpu\\_state\\_t::entry\\_ip](#).

**15.377.2.4 entry\_sp()**

```
void L4vcpu::Vcpu::entry_sp (
    l4_umword_t sp ) [inline]
```

Set vCPU entry stack pointer.

## Parameters

<i>sp</i>	Stack pointer address to set.
-----------	-------------------------------

## Note

The value is only used when entering from a user-task.

Definition at line 236 of file [vcpu](#).

References [l4\\_vcpu\\_state\\_t::entry\\_sp](#).

**15.377.2.5 ext\_alloc()**

```
static int L4vcpu::Vcpu::ext_alloc (
    Vcpu ** vcpu,
    l4_addr_t * ext_state,
    L4::Cap< L4::Task > task = L4Re::Env::env() ->task(),
    L4::Cap< L4Re::Rm > rm = L4Re::Env::env() ->rm() ) throw ( ) [static]
```

Allocate state area for an extended vCPU.

## Parameters

out	<i>vcpu</i>	Allocated vcpu-state area.
out	<i>ext_state</i>	Allocated extended vcpu-state area.
	<i>task</i>	Task to use for allocation, defaults to own task.
	<i>rm</i>	Region manager to use for allocation defaults to standard region manager.

## Returns

0 for success, error code otherwise

References [task\(\)](#).

Here is the call graph for this function:

#### 15.377.2.6 `i()` [1/2]

```
l4_vcpu_ipc_regs_t * L4vcpu::Vcpu::i ( ) throw ( ) [inline]
```

Return pointer to IPC state.

##### Returns

Pointer to IPC state.

Definition at line 220 of file `vcpu`.

References `l4_vcpu_state_t::i`.

#### 15.377.2.7 `i()` [2/2]

```
l4_vcpu_ipc_regs_t const * L4vcpu::Vcpu::i ( ) const throw ( ) [inline]
```

Return pointer to IPC state.

##### Returns

Pointer to IPC state.

Definition at line 227 of file `vcpu`.

References `l4_vcpu_state_t::i`.

#### 15.377.2.8 `irq_disable_save()`

```
unsigned L4vcpu::Vcpu::irq_disable_save ( ) throw ( ) [inline]
```

Disable the vCPU for event delivery and return previous state.

##### Returns

IRQ state before disabling IRQs.

Definition at line 89 of file `vcpu`.

References `l4vcpu_irq_disable_save()`.

Here is the call graph for this function:

### 15.377.2.9 irq\_enable()

```
void L4vcpu::Vcpu::irq_enable (
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
```

Enable the vCPU for event delivery.

#### Parameters

<i>utcb</i>	The UTCB to use.
<i>do_event_work_cb</i>	Call-back function that is called in case an event (such as an interrupt) is pending.
<i>setup_ipc</i>	Call-back function that is called before an IPC operation is called, and before event delivery is enabled.

Definition at line 146 of file [vcpu](#).

References [l4vcpu\\_irq\\_enable\(\)](#).

Here is the call graph for this function:

### 15.377.2.10 irq\_restore()

```
void L4vcpu::Vcpu::irq_restore (
    unsigned s,
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
```

Restore a previously saved IRQ/event state.

#### Parameters

<i>s</i>	IRQ state to be restored.
<i>utcb</i>	The UTCB to use.
<i>do_event_work_cb</i>	Call-back function that is called in case an event (such as an interrupt) is pending.
<i>setup_ipc</i>	Call-back function that is called before an IPC operation is called, and before event delivery is enabled.

Definition at line 161 of file [vcpu](#).

Here is the call graph for this function:

### 15.377.2.11 is\_irq\_entry()

```
int L4vcpu::Vcpu::is_irq_entry ( ) const [inline]
```

Return whether the entry reason was an IRQ/IPC message.

return 0 if not, !=0 otherwise.

Definition at line 199 of file [vcpu](#).

References [l4vcpu\\_is\\_irq\\_entry\(\)](#).

Here is the call graph for this function:

### 15.377.2.12 is\_page\_fault\_entry()

```
int L4vcpu::Vcpu::is_page_fault_entry ( ) const [inline]
```

Return whether the entry reason was a page fault.

return 0 if not, !=0 otherwise.

Definition at line 192 of file [vcpu](#).

References [l4vcpu\\_is\\_page\\_fault\\_entry\(\)](#).

Here is the call graph for this function:

**15.377.2.13 r()** [1/2]

```
l4_vcpu_regs_t * L4vcpu::Vcpu::r ( ) throw ( ) [inline]
```

Return pointer to register state.

**Returns**

Pointer to register state.

Definition at line 206 of file [vcpu](#).

References [l4\\_vcpu\\_state\\_t::r](#).

**15.377.2.14 r()** [2/2]

```
l4_vcpu_regs_t const * L4vcpu::Vcpu::r ( ) const throw ( ) [inline]
```

Return pointer to register state.

**Returns**

Pointer to register state.

### 15.377.2.20 wait\_for\_event()

```

void L4vcpu::Vcpu::wait_for_event (
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
  
```

Wait for event.

#### Parameters

<i>utcb</i>	The UTCB to use.
<i>do_event_work_cb</i>	Call-back function that is called in case an event (such as an interrupt) is pending.
<i>setup_ipc</i>	Call-back function that is called before an IPC operation is called.

Note that event delivery remains disabled after this function returns.

Definition at line 177 of file `vcpu`.

References `l4vcpu_wait_for_event()`.

**15.378.1 Detailed Description**

IPC interface for virtio over [L4 IPC](#).

The [L4virtio](#) protocol is an adaption of the mmio virtio transport 1.0(4). This interface allows to exchange the necessary resources: device configuration page, notification interrupts and dataspace for payload.

Notification interrupts can be configured independently for changes to the configuration space and each queue through special L4virtio-specific `notify_index` fields in the config page and queue configuration. The interface distinguishes between device-to-driver and driver-to-device notification interrupts.

Device-to-driver interrupts are configured via the ICU interface. The device announces the maximum number of supported interrupts via `lcu::info()`. The driver can then bind interrupts using `lcu::bind()`.

Driver-to-device interrupts must be requested from the device through [device\\_notification\\_irq\(\)](#).

Definition at line 39 of file [l4virtio](#).

**15.378.2 Member Function Documentation****15.378.2.1 config\_queue()**

```
long L4virtio::Device::config_queue (
    unsigned queue )
```

Trigger queue configuration of the given queue.

Usually all queues are configured when the status is written to running. However, in some cases queues shall be disabled or enabled dynamically, in this case this function triggers a reconfiguration from the shared memory register of the queue config.

## Parameters

<i>queue</i>	Queue index for the queue to be configured.
--------------	---

## Return values

<i>0</i>	on success.
<i>-L4_EIO</i>	The queue's status is invalid.
<i>-L4_ERANGE</i>	The queue index exceeds the number of queues.
<i>-L4_EINVAL</i>	Otherwise.

Referenced by [L4virtio::Driver::Device::config\\_queue\(\)](#).

Here is the caller graph for this function:

### 15.378.2.2 device\_config()

```

long L4virtio::Device::device_config (
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > config_ds,
    l4_addr_t * ds_offset )

```

Get the dataspace with the [L4virtio](#) configuration page.

## Parameters

<i>config_ds</i>	Capability for receiving the dataspace capability for the shared L4-VIRTIO config data space.
<i>ds_offset</i>	Offset into the dataspace where the device configuration structure starts.

Referenced by [L4virtio::Driver::Device::driver\\_connect\(\)](#).

Here is the caller graph for this function:

### 15.378.2.3 device\_notification\_irq()

```
long L4virtio::Device::device_notification_irq (
    unsigned index,
    L4::Ipc::Out< L4::Cap< L4::Triggerable > > irq )
```

Get the notification interrupt corresponding to the given index.

#### Parameters

	<i>index</i>	Index of the interrupt.
out	<i>irq</i>	Triggerable for the given index.

#### Return values

<i>L4_EOK</i>	Success.
<i>L4_ENOSYS</i>	IRQ notification not supported by device.
<i>&lt;0</i>	Other error.

An index is only guaranteed to return an IRQ object when the index is set in one of the device notify index fields. The device must return the same interrupt for a given index as long as the index is in use. If an index disappears as a result of a configuration change and then is reused later, the interrupt is not guaranteed to be the same.

Interrupts must always be rerequested after a device reset.

Referenced by [L4virtio::Driver::Device::driver\\_connect\(\)](#).

Here is the caller graph for this function:

### 15.378.2.4 register\_ds()

```
long L4virtio::Device::register_ds (
    L4::Ipc::Cap< L4Re::Dataspace > ds_cap,
    l4_uint64_t base,
    l4_umword_t offset,
    l4_umword_t size )
```

Register a shared data space with VIRTIO host.

## Parameters

<i>ds_cap</i>	Dataspace capability to register. The lower 8 bits determine the rights mask with which the guest's rights are masked during the registration of the dataspace at the VIRTIO host.
<i>base</i>	VIRTIO guest physical start address of shared memory region
<i>offset</i>	Offset within the data space that is attached to the given <i>base</i> in the guest physical memory.
<i>size</i>	Size of the memory region in the guest

## Return values

<i>L4_EOK</i>	Operation successful.
<i>-L4_EINVAL</i>	The <i>ds_cap</i> capability is invalid, does not refer to a valid dataspace, is not a trusted dataspace if trusted dataspace validation is enabled, or <i>size</i> and <i>offset</i> specify an invalid region.
<i>-L4_ENOMEM</i>	The limit of dataspaces that can be registered has been reached or no capability slot could be allocated.
<i>-L4_ERANGE</i>	<i>offset</i> is larger than the size of the dataspace.
<i>&lt;0</i>	Any error returned by the dataspace when queried for information during setup or any error returned by the region manager from attaching the dataspace.

Referenced by [L4virtio::Driver::Device::register\\_ds\(\)](#).

Here is the caller graph for this function:

15.378.2.5 `set_status()`

```
long L4virtio::Device::set_status (
    unsigned status )
```

Write the VIRTIO status register.

## Parameters

<i>status</i>	Status word to write to the VIRTIO status.
---------------	--

## Return values

<i>0</i>	on success.
----------	-------------

**Note**

All other registers are accessed via shared memory.

Referenced by [L4virtio::Driver::Device::driver\\_acknowledge\(\)](#), and [L4virtio::Driver::Device::driver\\_connect\(\)](#).

Here is the caller graph for this function:

### 15.379.1 Detailed Description

Simple class for accessing a virtio block device synchronously.

Definition at line 36 of file [virtio-block](#).

### 15.379.2 Member Function Documentation

#### 15.379.2.1 add\_block()

```
int L4virtio::Driver::Block_device::add_block (
    Handle handle,
    Ptr< void > addr,
    l4_uint32_t size ) [inline]
```

Add a data block to a request that has already been set up.

##### Parameters

<i>handle</i>	<a href="#">Handle</a> to request previously set up with <a href="#">start_request()</a> .
<i>addr</i>	Address of data block in device address space.
<i>size</i>	Size of data block.

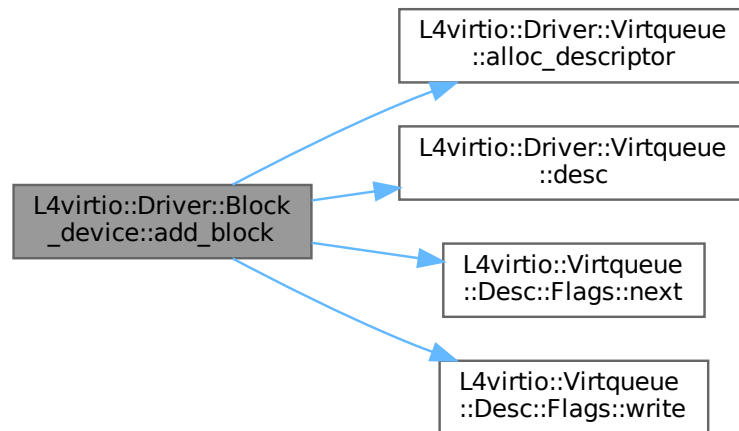

##### Return values

<i>L4_OK</i>	Block was successfully added.
<i>-L4_EAGAIN</i>	No descriptors available. Try again later.

Definition at line 229 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc\\_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4\\_EAGAIN](#), [L4\\_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [l4virtio\\_block\\_header\\_t::type](#), and [L4virtio::Virtqueue::Desc::Fla](#)

Here is the call graph for this function:

### 15.379.2.2 process\_request()

```
int L4virtio::Driver::Block_device::process_request (
    Handle handle ) [inline]
```

Process request synchronously.

#### Parameters

<i>handle</i>	<a href="#">Handle</a> to request to process.
---------------	---

#### Return values

<i>L4_EOK</i>	Request processed successfully.
<i>-L4_EAGAIN</i>	No descriptors available. Try again later.
<i>-L4_EIO</i>	IO error during request processing.
<i>-L4_ENOSYS</i>	Unsupported request.
<i>&lt;0</i>	Another unspecified error occurred.

Sends a request to the driver that was previously set up with [start\\_request\(\)](#) and [add\\_block\(\)](#) and wait for it to be executed.

Definition at line 306 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc\\_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4\\_EAGAIN](#), [L4\\_EINVAL](#), [L4\\_EIO](#), [L4\\_ENOSYS](#), [L4\\_EOK](#), [L4VIRTIO\\_BLOCK\\_S\\_IOERR](#), [L4VIRTIO\\_BLOCK\\_S\\_OK](#), [L4VIRTIO\\_BLOCK\\_S\\_UNSUPP](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [L4virtio::Driver::Device::send\\_and\\_wait\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

### 15.379.2.3 process\_used\_queue()

```
void L4virtio::Driver::Block_device::process_used_queue ( ) [inline]
```

Process and free all items in the used queue.

If the request has a callback registered it is called after the item has been removed from the queue.

Definition at line 357 of file [virtio-block](#).

References [L4Re::chksys\(\)](#), [L4virtio::Driver::Virtqueue::find\\_next\\_used\(\)](#), [L4\\_ENOSYS](#), and [L4virtio::Virtqueue::num\(\)](#).

Here is the call graph for this function:

### 15.379.2.4 send\_request()

```
int L4virtio::Driver::Block_device::send_request (
    Handle handle ) [inline]
```

Process request asynchronously.

Parameters

<i>handle</i>	<a href="#">Handle</a> to request to send to the device
---------------	---

## Return values

<code>L4_OK</code>	Request was successfully scheduled.
<code>-L4_EAGAIN</code>	No descriptors available. Try again later.

Sends a request to the driver that was previously set up with [start\\_request\(\)](#) and [add\\_block\(\)](#) and wait for it to be executed.

Definition at line 265 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc\\_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4\\_EAGAIN](#), [L4\\_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [L4virtio::Driver::Device::send\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

### 15.379.2.5 setup\_device()

```

void L4virtio::Driver::Block_device::setup_device (
    L4::Cap< L4virtio::Device > srvcap,
    l4_size_t usermem,
    void ** userdata,
    Ptr< void > & user_devaddr,
    L4::Cap< L4Re::Dataspace > qds = L4::Cap<L4Re::Dataspace>(),
    l4_uint32_t fmask0 = -1U,
    l4_uint32_t fmask1 = -1U ) [inline]

```

Establish a connection to the device and set up shared memory.

## Parameters

	<code>srvcap</code>	IPC capability of the channel to the server.
	<code>usermem</code>	Size of additional memory to share with device.
out	<code>userdata</code>	Pointer to the region of user-usable memory.
out	<code>user_devaddr</code>	Address of user-usable memory in device address space.

	<i>qds</i>	External queue dataspace. If this capability is invalid, the function will attempt to allocate a dataspace on its own. Note that the external queue dataspace must be large enough.
	<i>fmask0</i>	Feature bits 0..31 that the driver supports.
	<i>fmask1</i>	Feature bits 32..63 that the driver supports.

Definition at line 92 of file virtio-block.

Here is the call graph for this function:

### 15.379.2.6 start\_request()

```
Handle L4virtio::Driver::Block_device::start_request (
    l4_uint64_t sector,
    l4_uint32_t type,
    Callback callback ) [inline]
```

Start the setup of a new request.

#### Parameters

<i>sector</i>	First sector to write to/read from.
<i>type</i>	Request type.
<i>callback</i>	Function to call, when the request is finished. May be 0 for synchronous requests.

Definition at line 191 of file [virtio-block](#).

## 15.381.1 Detailed Description

Client-side implementation for a general virtio device.

Definition at line 31 of file `l4virtio`.

## 15.381.2 Member Function Documentation

### 15.381.2.1 bind\_notification\_irq()

```
int L4virtio::Driver::Device::bind_notification_irq (
    unsigned index,
    L4::Cap< L4::Triggerable > irq ) const [inline]
```

Register a triggerable to receive notifications from the device.

#### Parameters

	<i>index</i>	Index of the interrupt.
out	<i>irq</i>	Triggerable to register for notifications.

Definition at line 129 of file `l4virtio`.

References `L4::lcu::bind()`, and `l4_error()`.

Here is the call graph for this function:

### 15.381.2.2 config\_queue()

```

int L4virtio::Driver::Device::config_queue (
    int num,
    unsigned size,
    l4_uint64_t desc_addr,
    l4_uint64_t avail_addr,
    l4_uint64_t used_addr ) [inline]

```

Send the virtqueue configuration to the device.

#### Parameters

<i>num</i>	Number of queue to configure.
<i>size</i>	Size of rings in the queue, must be a power of 2)
<i>desc_addr</i>	Address of descriptor table (device address)
<i>avail_addr</i>	Address of available ring (device address)
<i>used_addr</i>	Address of used ring (device address)

Definition at line 212 of file [l4virtio](#).

References [L4virtio::Device::config\\_queue\(\)](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::setup\\_device\(\)](#), and [L4virtio::Driver::Block\\_device::setup\\_device\(\)](#).

Here is the caller graph for this function:

### 15.381.2.3 driver\_acknowledge()

```
int L4virtio::Driver::Device::driver_acknowledge ( ) [inline]
```

Finalize handshake with the device.

Must be called after all queues have been set up and before the first request is sent. It is still possible to add more shared dataspace after the handshake has been finished.

Definition at line 156 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4\\_EINVAL](#), [L4\\_EIO](#), [L4\\_ENODEV](#), [L4\\_EOK](#), [L4VIRTIO\\_FEATURE\\_VERSION\\_1](#), [l4virtio\\_get\\_feature\(\)](#), [L4VIRTIO\\_STATUS\\_DRIVER\\_OK](#), [L4VIRTIO\\_STATUS\\_FEATURES\\_OK](#), and [L4virtio::Device::set\\_status\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

#### 15.381.2.4 driver\_connect()

```
void L4virtio::Driver::Device::driver_connect (
    L4::Cap< L4virtio::Device > srvcap,
    bool manage_notify = true ) [inline]
```

Contacts the device and starts the initial handshake.

##### Parameters

<i>srvcap</i>	Capability for device communication.
<i>manage_notify</i>	Set up a semaphore for notifications from the device. See below.

##### Exceptions

<a href="#">L4::Runtime_error</a>	if the initialisation fails
-----------------------------------	-----------------------------

This function contacts the server, sets up the notification channels and the configuration dataspace. After this is done, the caller can set up any dataspace it needs. The initialisation then needs to be finished by calling [driver\\_acknowledge\(\)](#).

Per default this function creates and registers a semaphore for receiving notification from the device. This semaphore is used in the blocking functions [send\\_and\\_wait\(\)](#), [wait\(\)](#) and [next\\_used\(\)](#).

When `manage_notify` is false, then the caller may manually register and handle notification interrupts from the device. This is for example useful, when the client runs in an application with a server loop.

Definition at line 56 of file [l4virtio](#).

References [L4::lcu::bind\(\)](#), [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4virtio::Device::device\\_config\(\)](#), [L4virtio::Device::device\\_notification\\_irq\(\)](#), [L4Re::Env::env\(\)](#), [L4\\_EINVAL](#), [L4\\_EIO](#), [L4\\_ENODEV](#), [l4\\_error\(\)](#), [L4\\_PAGEMASK](#), [L4\\_PAGESHIFT](#), [L4\\_PAGESIZE](#), [L4\\_SUPERPAGESIZE](#), [L4VIRTIO\\_STATUS\\_ACKNOWLEDGE](#), [L4VIRTIO\\_STATUS\\_DRIVER](#), [L4::lpc::make\\_cap\\_rw\(\)](#), [L4Re::Rm::F::RW](#), [L4Re::Rm::F::Search\\_addr](#), and [L4virtio::Device::set\\_status\(\)](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::setup\\_device\(\)](#), and [L4virtio::Driver::Block\\_device::setup\\_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.381.2.5 feature\_negotiated()

```
bool L4virtio::Driver::Device::feature_negotiated (
    unsigned int feat ) const [inline]
```

Check if a particular feature bit was negotiated with the device.

The result is only valid after [driver\\_acknowledge\(\)](#) was called (when the handshake with the device was completed).

#### Parameters

<i>feat</i>	The feature bit.
-------------	------------------

#### Return values

<i>true</i>	The feature is supported by both driver and device.
-------------	---

## Return values

<i>false</i>	The feature is not supported by the driver and/or device.
--------------	---

Definition at line 145 of file [l4virtio](#).

References [l4virtio\\_get\\_feature\(\)](#).

Here is the call graph for this function:

## 15.381.2.6 max\_queue\_size()

```
int L4virtio::Driver::Device::max_queue_size (
    int num ) const [inline]
```

Maximum queue size allowed by the device.

## Parameters

<i>num</i>	Number of queue for which to determine the maximum size.
------------	--

Definition at line 230 of file [l4virtio](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::rx\\_queue\\_size\(\)](#), [L4virtio::Driver::Block\\_device::setup\\_device\(\)](#), and [L4virtio::Driver::Virtio\\_net\\_device::tx\\_queue\\_size\(\)](#).

Here is the caller graph for this function:

### 15.381.2.7 register\_ds()

```
int L4virtio::Driver::Device::register_ds (
    L4::Cap< L4Re::Dataspace > ds,
    l4_umword_t offset,
    l4_umword_t size,
    l4_uint64_t * devaddr ) [inline]
```

Share a dataspace with the device.

#### Parameters

<i>ds</i>	Dataspace to share with the device.
<i>offset</i>	Offset in dataspace where the shared part starts.
<i>size</i>	Total size in bytes of the shared space.
<i>devaddr</i>	Start of shared space in the device address space.

Although this function allows to share only a part of the given dataspace for convenience, the granularity of sharing is always the dataspace level. Thus, the remainder of the dataspace is not protected from the device.

When communicating with the device, addresses must be given with respect to the device address space. This is not the same as the virtual address space of the client in order to not leak information about the address space layout.

Definition at line 196 of file [l4virtio](#).

References [L4::lpc::make\\_cap\\_rw\(\)](#), and [L4virtio::Device::register\\_ds\(\)](#).

### 15.381.2.8 send()

```
void L4virtio::Driver::Device::send (
    Virtqueue & queue,
    l4_uint16_t descno ) [inline]
```

Send a request to the device.

#### Parameters

<i>queue</i>	Queue that contains the request in its descriptor table
<i>descno</i>	Index of first entry in descriptor table where

Definition at line 312 of file [l4virtio](#).

References [L4virtio::Driver::Virtqueue::enqueue\\_descriptor\(\)](#).

Referenced by [send\\_and\\_wait\(\)](#), [L4virtio::Driver::Block\\_device::send\\_request\(\)](#), and [L4virtio::Driver::Virtio\\_net\\_device::tx\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.381.2.9 send\_and\_wait()

```
int L4virtio::Driver::Device::send_and_wait (
    Virtqueue & queue,
    l4_uint16_t descno ) [inline]
```

Send a request to the device and wait for it to be processed.

## Parameters

<i>queue</i>	Queue that contains the request in its descriptor table
<i>descno</i>	Index of first entry in descriptor table where

This function provides a simple mechanism to send requests synchronously. It must not be used with other requests at the same time as it directly waits for a notification on the device irq cap.

## Precondition

[driver\\_connect\(\)](#) was called with `manage_notify`.

Definition at line 247 of file [l4virtio](#).

References [L4\\_EINVAL](#), [L4\\_EOK](#), [send\(\)](#), and [wait\\_for\\_next\\_used\(\)](#).

Referenced by [L4virtio::Driver::Block\\_device::process\\_request\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

## 15.381.2.10 wait()

```
int L4virtio::Driver::Device::wait (
    int index ) const [inline]
```

Wait for a notification from the device.

## Parameters

<i>index</i>	Notification slot to wait for.
--------------	--------------------------------

**Precondition**

`driver_connect()` was called with `manage_notify`.

Definition at line 268 of file `l4virtio`.

References `L4_EEXIST`, `l4_ipc_error()`, and `l4_utcb()`.

Referenced by `wait_for_next_used()`.

Here is the call graph for this function:

Here is the caller graph for this function:

**15.381.2.11 wait\_for\_next\_used()**

```

int L4virtio::Driver::Device::wait_for_next_used (
    Virtqueue & queue,
    l4_uint32_t * len = nullptr ) const [inline]
  
```

Wait for the next item to arrive in the used queue and return it.

**Parameters**

	<i>queue</i>	A queue.
out	<i>len</i>	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.

**Return values**

$\geq 0$	Descriptor number of item removed from used queue.
$< 0$	IPC error while waiting for notification.

The call blocks until the next item is available in the used queue.

#### Precondition

[driver\\_connect\(\)](#) was called with `manage_notify`.

### 15.382.1 Detailed Description

Simple class for accessing a virtio net device.

Definition at line 30 of file [virtio-net](#).

### 15.382.2 Member Function Documentation

#### 15.382.2.1 finish\_rx()

```
void L4virtio::Driver::Virtio_net_device::finish_rx (
    l4_uint16_t descno ) [inline]
```

Free an RX descriptor number to make it available for the RX queue again.

##### Parameters

<i>descno</i>	Descriptor number in the virtio queue.
---------------	--

Usually [queue\\_rx\(\)](#) should be called afterwards to queue the freed descriptor(s).

Definition at line 194 of file [virtio-net](#).

References [L4virtio::Driver::Virtqueue::free\\_descriptor\(\)](#).

Here is the call graph for this function:

#### 15.382.2.2 rx\_pkt()

```
Packet & L4virtio::Driver::Virtio_net_device::rx_pkt (
    l4_uint16_t descno ) [inline]
```

Return a reference to the RX packet buffer of the specified descriptor, e.g.

from [wait\\_rx\(\)](#).

##### Parameters

<i>descno</i>	Descriptor number in the virtio queue.
---------------	--

Definition at line 158 of file [virtio-net](#).

References [L4virtio::Virtqueue::num\(\)](#).

Here is the call graph for this function:

### 15.382.2.3 rx\_queue\_size()

```
int L4virtio::Driver::Virtio_net_device::rx_queue_size ( ) const [inline]
```

Return the maximum receive queue size allowed by the device.

[wait\\_rx\(\)](#) will return a descriptor number that is smaller than this size.

Definition at line 47 of file [virtio-net](#).

References [L4virtio::Driver::Device::max\\_queue\\_size\(\)](#).

Referenced by [setup\\_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.382.2.4 setup\_device()

```
void L4virtio::Driver::Virtio_net_device::setup_device (
    L4::Cap< L4virtio::Device > srvcap ) [inline]
```

Establish a connection to the device and set up shared memory.

## Parameters

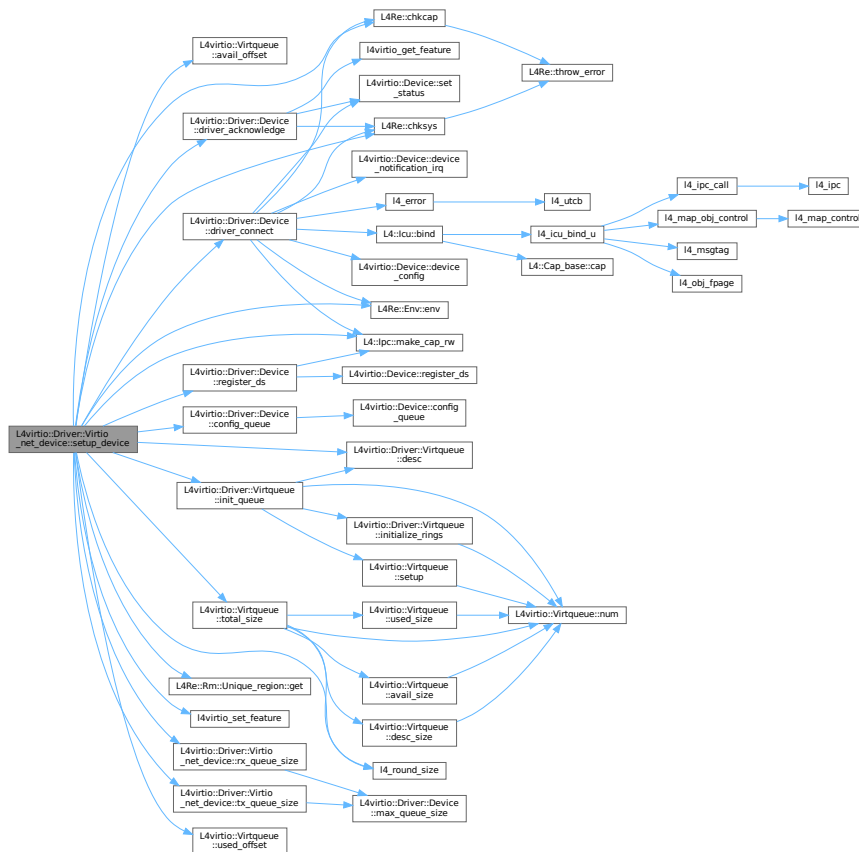

<code>srcvcap</code>	IPC capability of the channel to the server.
----------------------	--

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the network device.

Definition at line 66 of file [virtio-net](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Virtqueue::avail\\_offset\(\)](#), [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4virtio::Driver::Device::config\\_queue\(\)](#), [L4Re::Mem\\_alloc::Continuous](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Driver::Device::driver\\_acknowledge\(\)](#), [L4virtio::Driver::Device::driver\\_connect\(\)](#), [L4Re::Env::env\(\)](#), [L4Re::Rm::Unique\\_region< T >::get\(\)](#), [L4virtio::Driver::Virtqueue::init\\_queue\(\)](#), [L4\\_EINVAL](#), [L4\\_ENODEV](#), [L4\\_PAGESHIFT](#), [I4\\_round\\_size\(\)](#), [L4VIRTIO\\_FEATURE\\_VERSION\\_1](#), [L4VIRTIO\\_ID\\_NET](#), [l4virtio\\_set\\_feature\(\)](#), [L4::lpc::make\\_cap\\_rw\(\)](#), [L4Re::Mem\\_alloc::Pinned](#), [L4virtio::Driver::Device::register\\_ds\(\)](#), [L4Re::Rm::F::RW](#), [rx\\_queue\\_size\(\)](#), [L4Re::Rm::F::Search\\_addr](#), [L4virtio::Virtqueue::total\\_size\(\)](#), [tx\\_queue\\_size\(\)](#), and [L4virtio::Virtqueue::used\\_offset\(\)](#).

Here is the call graph for this function:

### 15.382.2.5 tx()

```
bool L4virtio::Driver::Virtio_net_device::tx (
    std::function< I4_uint32_t(Packet &)> prepare ) [inline]
```

Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

## Parameters

<i>prepare</i>	Function that fills the packet with data, should return the length of the data copied to the packet.
----------------	--

## Return values

<i>true</i>	The packet was queued.
<i>false</i>	TX queue is full.

The prepare callback should fill the packet with data and return the length of the packet data (without the size of the virtio-net packet header).

Definition at line 224 of file [virtio-net](#).

References [L4virtio::Driver::Virtqueue::alloc\\_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::len](#), and [L4virtio::Driver::Device::send\(\)](#).

Here is the call graph for this function:

## 15.382.2.6 tx\_queue\_size()

```
int L4virtio::Driver::Virtio_net_device::tx_queue_size ( ) const [inline]
```

Return the maximum transmit queue size allowed by the device.

[tx\(\)](#) will fail if the amount of queued packets exceeds this size.

Definition at line 54 of file [virtio-net](#).

References [L4virtio::Driver::Device::max\\_queue\\_size\(\)](#).

Referenced by [setup\\_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.382.2.7 wait\_rx()

```
l4_uint16_t L4virtio::Driver::Virtio_net_device::wait_rx (
    l4_uint32_t * len = nullptr ) [inline]
```

Block until a network packet has been received from the device and return the descriptor number.

#### Parameters

out	len	(optional) Length of valid data in RX packet.
-----	-----	---

#### Returns

Descriptor number of received packet.

The packet data can be obtained with [rx\\_pkt\(\)](#). [finish\\_rx\(\)](#) should be called after the packet buffer can be returned to the RX queue.

Definition at line 176 of file [virtio-net](#).

References [L4Re::chksys\(\)](#), and [L4virtio::Driver::Device::wait\\_for\\_next\\_used\(\)](#).

### 15.384.1 Detailed Description

Driver-side implementation of a [Virtqueue](#).

Adds function for managing the descriptor list, enqueueing new and dequeueing finished requests.

#### Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 476 of file [virtqueue](#).

## 15.384.2 Member Function Documentation

### 15.384.2.1 alloc\_descriptor()

```
l4_uint16_t L4virtio::Driver::Virtqueue::alloc_descriptor ( ) [inline]
```

Allocate and return an unused descriptor from the descriptor table.

The descriptor will be removed from the free list, the content should be considered undefined. After use, it needs to be freed using [free\\_descriptor\(\)](#).

#### Returns

The index of the reserved descriptor or Virtqueue::Eoq if no free descriptor is available.

Note: the implementation uses  $(2^{16} - 1)$  as the end of queue marker. That means that the final entry in the queue can not be allocated iff the queue size is  $2^{16}$ .

Definition at line 564 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_desc](#), and [L4virtio::Virtqueue::Desc::next](#).

Referenced by [L4virtio::Driver::Block\\_device::add\\_block\(\)](#), [L4virtio::Driver::Block\\_device::process\\_request\(\)](#), [L4virtio::Driver::Virtio\\_net\\_device::queue\\_rx\(\)](#), [L4virtio::Driver::Block\\_device::send\\_request\(\)](#), [L4virtio::Driver::Block\\_device::start\\_request\(\)](#) and [L4virtio::Driver::Virtio\\_net\\_device::tx\(\)](#).

Here is the caller graph for this function:

### 15.384.2.2 desc()

```
Desc & L4virtio::Driver::Virtqueue::desc (
    l4_uint16_t descno ) [inline]
```

Return a reference to a descriptor in the descriptor table.

## Parameters

<i>descno</i>	Index of the descriptor, expected to be in correct range.
---------------	---

Definition at line 596 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_desc](#), and [L4virtio::Virtqueue::\\_idx\\_mask](#).

Referenced by [L4virtio::Driver::Block\\_device::add\\_block\(\)](#), [init\\_queue\(\)](#), [L4virtio::Driver::Block\\_device::process\\_request\(\)](#), [L4virtio::Driver::Block\\_device::send\\_request\(\)](#), [L4virtio::Driver::Virtio\\_net\\_device::setup\\_device\(\)](#), [L4virtio::Driver::Block\\_device::start\\_request\(\)](#), and [L4virtio::Driver::Virtio\\_net\\_device::tx\(\)](#).

Here is the caller graph for this function:

### 15.384.2.3 enqueue\_descriptor()

```
void L4virtio::Driver::Virtqueue::enqueue_descriptor (
    14_uint16_t descno ) [inline]
```

Enqueue a descriptor in the available ring.

## Parameters

<i>descno</i>	Index of the head descriptor to enqueue.
---------------	--

Definition at line 580 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_avail](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), [L4virtio::Virtqueue::Avail::idx](#), and [L4virtio::Virtqueue::Avail::ring](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::queue\\_rx\(\)](#), and [L4virtio::Driver::Device::send\(\)](#).

Here is the caller graph for this function:

#### 15.384.2.4 find\_next\_used()

```

14_uint16_t L4virtio::Driver::Virtqueue::find_next_used (
    14_uint32_t * len = nullptr ) [inline]
  
```

Return the next finished block.

##### Parameters

out	len	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.
-----	-----	--

##### Returns

Index of the head or Virtqueue::Eoq if no used element is currently available.

Definition at line 615 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_current\\_avail](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Used::idx](#), [L4virtio::Virtqueue::Used::elem::len](#), and [L4virtio::Virtqueue::Used::ring](#).

Here is the caller graph for this function:

#### 15.384.2.5 free\_descriptor()

```

void L4virtio::Driver::Virtqueue::free_descriptor (
    14_uint16_t head,
    14_uint16_t tail ) [inline]
  
```

Free a chained list of descriptors in the descriptor queue.

## Parameters

<i>head</i>	Index of the first element in the descriptor chain.
<i>tail</i>	Index of the last element in the descriptor chain.

Simply takes the descriptor chain and prepends it to the beginning of the free list. Assumes that the list has been correctly chained.

Definition at line 637 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), and [L4virtio::Virtqueue::Desc::next](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::finish\\_rx\(\)](#).

Here is the caller graph for this function:

### 15.384.2.6 init\_queue() [1/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * base ) [inline]
```

Initialize this virtqueue.

## Parameters

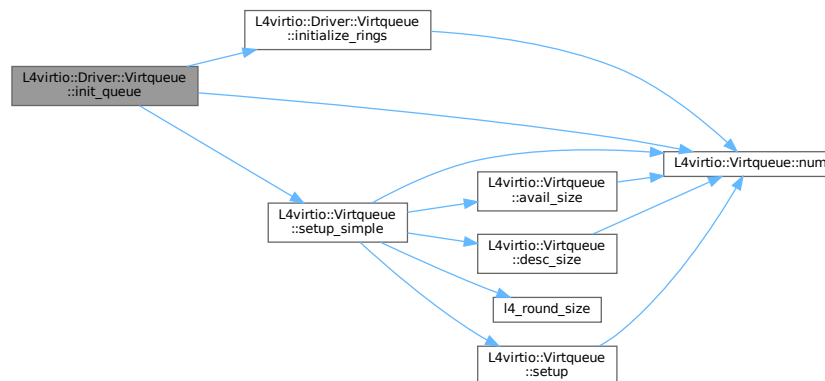

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>base</i>	The base address for the queue data structure.

This function sets up the memory and initializes the freelist.

Definition at line 543 of file [virtqueue](#).

References [initialize\\_rings\(\)](#), [L4virtio::Virtqueue::num\(\)](#), and [L4virtio::Virtqueue::setup\\_simple\(\)](#).

Here is the call graph for this function:

### 15.384.2.7 init\_queue() [2/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * desc,
    void * avail,
    void * used ) [inline]
```

Initialize this virtqueue.

#### Parameters

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>desc</i>	The address of the descriptor table. (Must be Desc_align aligned and at least desc_size(num) bytes in size.)
<i>avail</i>	The address of the available ring. (Must be Avail_align aligned and at least avail_size(num) bytes in size.)
<i>used</i>	The address of the used ring. (Must be Used_align aligned and at least used_size(num) bytes in size.)

This function sets up the memory and initializes the freelist.

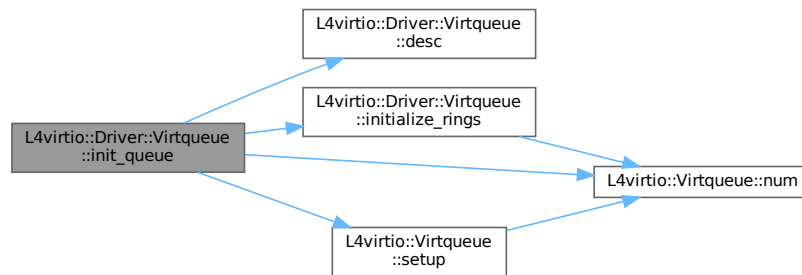

Definition at line 528 of file [virtqueue](#).

References [desc\(\)](#), [initialize\\_rings\(\)](#), [L4virtio::Virtqueue::num\(\)](#), and [L4virtio::Virtqueue::setup\(\)](#).

Referenced by [L4virtio::Driver::Virtio\\_net\\_device::setup\\_device\(\)](#), and [L4virtio::Driver::Block\\_device::setup\\_device\(\)](#).

Here is the caller graph for this function:

### 15.384.2.8 initialize\_rings()

```
void L4virtio::Driver::Virtqueue::initialize_rings (
    unsigned num ) [inline]
```

Initialize the descriptor table and the index structures of this queue.

#### Parameters

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
------------	--

#### Precondition

The queue must be set up correctly with [setup\(\)](#) or [setup\\_simple\(\)](#).

Definition at line 500 of file [virtqueue](#).

References [L4virtio::Virtqueue::\\_avail](#), [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Avail::idx](#), [L4virtio::Virtqueue::Used::idx](#), [L4virtio::Virtqueue::Desc::next](#), and [L4virtio::Virtqueue::num\(\)](#).

Referenced by [init\\_queue\(\)](#), and [init\\_queue\(\)](#).

- bool [is\\_valid](#) () const

### 15.385.1 Detailed Description

```
template<typename T>
class L4virtio::Ptr< T >
```

Pointer used in virtio descriptors.

As the descriptor contain guest addresses these pointers cannot be dereferenced directly.

Definition at line [54](#) of file [virtqueue](#).

### 15.385.2 Member Enumeration Documentation

#### 15.385.2.1 Invalid\_type

```
template<typename T >
enum L4virtio::Ptr::Invalid_type
```

Type for making an invalid (NULL) [Ptr](#).

Enumerator

Invalid	Use to set a <a href="#">Ptr</a> to invalid (NULL)
---------	--

Definition at line [58](#) of file [virtqueue](#).

### 15.385.3 Member Function Documentation

#### 15.385.3.1 get()

```
template<typename T >
l4_uint64_t L4virtio::Ptr< T >::get ( ) const [inline]
```

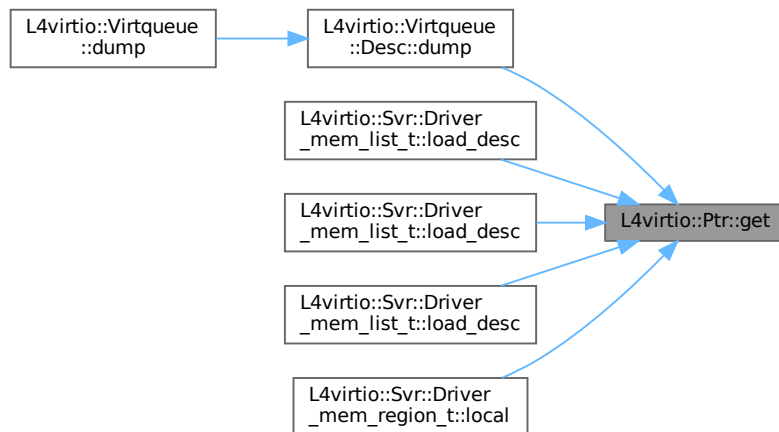

**Returns**

The raw 64bit address of the stored pointer.

Definition at line 69 of file [virtqueue](#).

Referenced by [L4virtio::Virtqueue::Desc::dump\(\)](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#), and [L4virtio::Svr::Driver\\_mem\\_region\\_t< DATA >::local\(\)](#).

Here is the caller graph for this function:

**15.385.3.2 is\_valid()**

```
template<typename T >
bool L4virtio::Ptr< T >::is_valid ( ) const [inline]
```

**Returns**

true if the stored pointer is valid (not NULL).

Definition at line 72 of file [virtqueue](#).

The documentation for this class was generated from the following file:

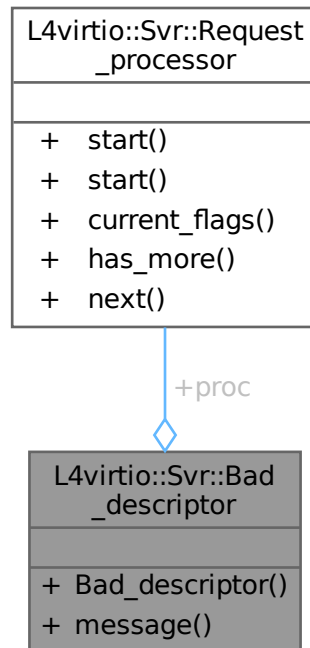

- `l4/l4virtio/virtqueue`

## 15.386 L4virtio::Svr::Bad\_descriptor Struct Reference

Exception used by Queue to indicate descriptor errors.

```
#include <virtio>
```

Collaboration diagram for L4virtio::Svr::Bad\_descriptor:

### Public Types

- enum [Error](#) {  
[Bad\\_address](#) , [Bad\\_rights](#) , [Bad\\_flags](#) , [Bad\\_next](#) ,  
[Bad\\_size](#) }

*The error code.*

### Public Member Functions

- [Bad\\_descriptor](#) ([Request\\_processor](#) const \*[proc](#), [Error](#) e)  
*Make a bad descriptor exception.*
- char const \* [message](#) () const  
*Get a human readable description of the error code.*

### Data Fields

- [Request\\_processor](#) const \* **proc**  
*The processor that triggered the exception.*

## 15.386.1 Detailed Description

Exception used by Queue to indicate descriptor errors.

Definition at line 378 of file [virtio](#).

## 15.386.2 Member Enumeration Documentation

### 15.386.2.1 Error

```
enum L4virtio::Svr::Bad_descriptor::Error
```

The error code.

Enumerator

Bad_address	Address cannot be translated.
Bad_rights	Missing access rights on memory.
Bad_flags	Invalid combination of descriptor flags.
Bad_next	Invalid next index.
Bad_size	Invalid size of memory block.

Definition at line 381 of file [virtio](#).

## 15.386.3 Constructor & Destructor Documentation

### 15.386.3.1 Bad\_descriptor()

```
L4virtio::Svr::Bad_descriptor::Bad_descriptor (
    Request_processor const * proc,
    Error e ) [inline]
```

Make a bad descriptor exception.

Parameters

<i>proc</i>	The request processor causing the exception
<i>e</i>	The error code.

Definition at line 402 of file [virtio](#).

## 15.386.4 Member Function Documentation

### 15.386.4.1 message()

```
char const * L4virtio::Svr::Bad_descriptor::message ( ) const [inline]
```

Get a human readable description of the error code.

**Returns**

Message describing the error.

Definition at line 411 of file [virtio](#).

References [Bad\\_address](#), [Bad\\_flags](#), [Bad\\_next](#), [Bad\\_rights](#), and [Bad\\_size](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/server/virtio

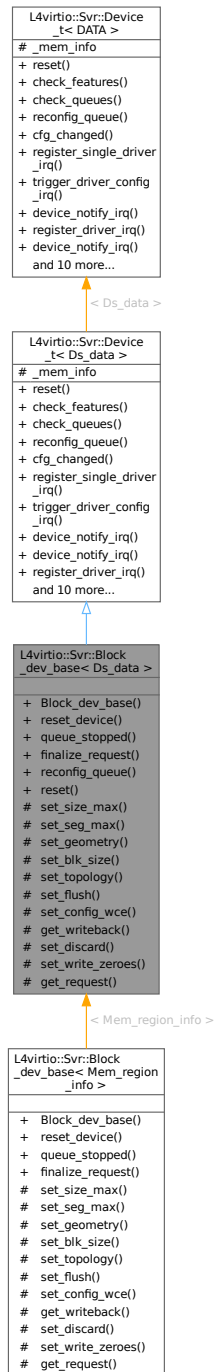

## 15.387 L4virtio::Svr::Block\_dev\_base< Ds\_data > Class Template Reference

Base class for virtio block devices.

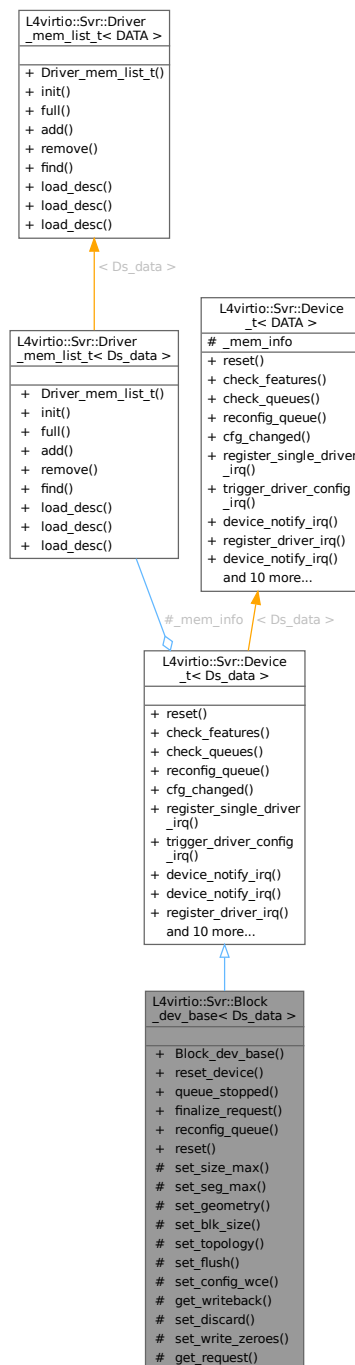

```
#include <virtio-block>
```

Inheritance diagram for L4virtio::Svr::Block\_dev\_base< Ds\_data >:

Collaboration diagram for L4virtio::Svr::Block\_dev\_base< Ds\_data >:

## Public Member Functions

## 15.387.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_dev_base< Ds_data >
```

Base class for virtio block devices.

Use this class as a base to implement your own specific block device.

Definition at line 257 of file [virtio-block](#).

## 15.387.2 Constructor & Destructor Documentation

### 15.387.2.1 `Block_dev_base()`

```
template<typename Ds_data >
L4virtio::Svr::Block_dev_base< Ds_data >::Block_dev_base (
    l4_uint32_t vendor,
    unsigned queue_size,
    l4_uint64_t capacity,
    bool read_only ) [inline]
```

Create a new virtio block device.

## Parameters

<i>vendor</i>	Vendor ID
<i>queue_size</i>	Number of entries to provide in avail and used queue.
<i>capacity</i>	Size of the device in 512-byte sectors.
<i>read_only</i>	True, if the device should not be writable.

Definition at line 442 of file [virtio-block](#).

References [L4VIRTIO\\_FEATURE\\_VERSION\\_1](#), and [L4virtio::Svr::Device\\_t< Ds\\_data >::reset\\_queue\\_config\(\)](#).

Here is the call graph for this function:

## 15.387.3 Member Function Documentation

### 15.387.3.1 finalize\_request()

```

template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::finalize_request (
    cxx::unique_ptr< Request > req,
    unsigned sz,
    l4_uint8_t status = L4VIRTIO_BLOCK_S_OK ) [inline]
  
```

Releases resources related to a request and notifies the client.

## Parameters

<i>req</i>	Pointer to request that has finished.
<i>sz</i>	Number of bytes consumed.
<i>status</i>	Status of request (see <a href="#">L4virtio_block_status</a> ).

This function must be called when an asynchronous request finishes, either successfully or with an error. The status byte in the request must have been set prior to calling it.

Definition at line 481 of file [virtio-block](#).

References [L4virtio::Svr::Device\\_t< Ds\\_data >::device\\_error\(\)](#), [L4VIRTIO\\_IRQ\\_STATUS\\_VRING](#), [L4virtio::Virtqueue::no\\_notify\\_queue](#) and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

### 15.387.3.2 get\_writeback()

```
template<typename Ds_data >
l4_uint8_t L4virtio::Svr::Block_dev_base< Ds_data >::get_writeback ( ) [inline], [protected]
```

Get the writeback field from the configuration space.

#### Returns

Value of the writeback field.

Definition at line 386 of file [virtio-block](#).

### 15.387.3.3 set\_blk\_size()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_blk_size (
    l4_uint32_t sz ) [inline], [protected]
```

Sets block disk size to be reported to the client.

Setting this does not change the logical sector size used for addressing the device.

Definition at line 330 of file [virtio-block](#).

### 15.387.3.4 set\_config\_wce()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_config_wce (
    l4_uint8_t writeback ) [inline], [protected]
```

Sets cache mode and enables the writeback toggle.

#### Parameters

<i>writeback</i>	Mode of the cache (0 for writethrough, 1 for writeback).
------------------	--

Definition at line 373 of file [virtio-block](#).

### 15.387.3.5 set\_discard()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_discard (
    14_uint32_t max_discard_sectors,
    14_uint32_t max_discard_seg,
    14_uint32_t discard_sector_alignment ) [inline], [protected]
```

Sets constraints for and enables the discard command.

#### Parameters

<i>max_discard_sectors</i>	Maximum discard sectors size.
<i>max_discard_seg</i>	Maximum discard segment number.
<i>discard_sector_alignment</i>	Can be used by the driver when splitting a request based on alignment.

Definition at line 400 of file [virtio-block](#).

### 15.387.3.6 set\_size\_max()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_size_max (
    14_uint32_t sz ) [inline], [protected]
```

Sets the maximum size of any single segment reported to client.

The limit is also applied to any incoming requests. Requests with larger segments result in an IO error being reported to the client. That means that `process_request()` can safely make the assumption that all segments in the received request are smaller.

Definition at line 288 of file [virtio-block](#).

### 15.387.3.7 set\_topology()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_topology (
    14_uint8_t physical_block_exp,
    14_uint8_t alignment_offset,
    14_uint32_t min_io_size,
    14_uint32_t opt_io_size ) [inline], [protected]
```

Sets the I/O alignment information reported back to the client.

#### Parameters

<i>physical_block_exp</i>	Number of logical blocks per physical block(log2)
<i>alignment_offset</i>	Offset of the first aligned logical block
<i>min_io_size</i>	Suggested minimum I/O size in blocks
<i>opt_io_size</i>	Optimal I/O size in blocks

Definition at line 346 of file [virtio-block](#).

### 15.387.3.8 set\_write\_zeroes()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_write_zeroes (
    14_uint32_t max_write_zeroes_sectors,
    14_uint32_t max_write_zeroes_seg,
    14_uint8_t write_zeroes_may_unmap ) [inline], [protected]
```

Sets constraints for and enables the write zeroes command.

#### Parameters

<i>max_write_zeroes_sectors</i>	Maximum write zeroes sectors size.
<i>max_write_zeroes_seg</i>	maximum write zeroes segment number.
<i>write_zeroes_may_unmap</i>	Set if a write zeroes request can result in deallocating one or more sectors.

*Compute the total size of the data in the request.*
- bool **has\_more** ()  
*Check if the request contains more data blocks.*
- Data\_block [next\\_block](#) ()  
*Return next block in scatter-gather list.*
- [l4virtio\\_block\\_header\\_t](#) const & **header** () const  
*Return the block request header.*

## 15.388.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_request< Ds_data >
```

A request to read or write data.

Definition at line 28 of file [virtio-block](#).

## 15.388.2 Member Function Documentation

### 15.388.2.1 data\_size()

```
template<typename Ds_data >
unsigned L4virtio::Svr::Block_request< Ds_data >::data_size ( ) const [inline]
```

Compute the total size of the data in the request.

#### Return values

<i>Size</i>	in bytes or 0 if there was an error.
-------------	--------------------------------------

#### Exceptions

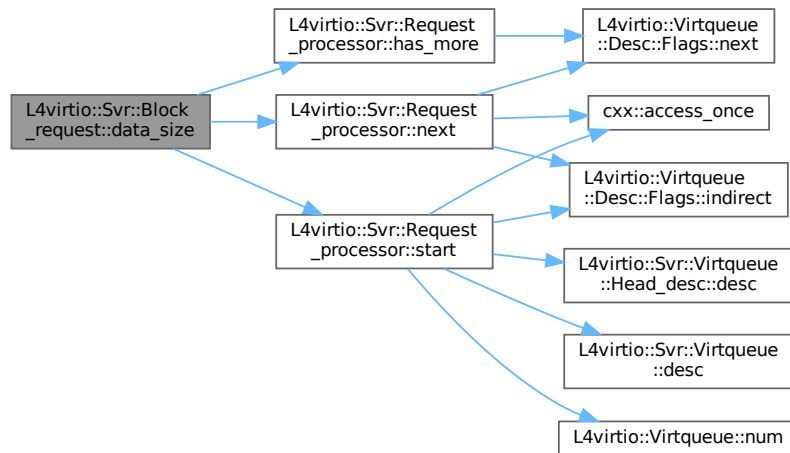

<a href="#">L4::Runtime_error(-L4_EIO)</a>	Request has a bad format.
--	---------------------------

Note that this operation is relatively expensive as it has to iterate over the complete list of blocks.

Definition at line 63 of file [virtio-block](#).

References [L4virtio::Svr::Request\\_processor::has\\_more\(\)](#), [L4\\_EIO](#), [L4virtio::Svr::Request\\_processor::next\(\)](#), and [L4virtio::Svr::Request\\_processor::start\(\)](#).

### 15.391.1 Detailed Description

Base class implementing a virtio console device with L4Re-based notification handling.

This console device is derived from [Virtio\\_con](#) and already includes functionality to handle interrupts and notify drivers. If an interrupt is received, all the necessary interaction with the virtqueues is performed and only the actual data processing has to be done by the derived class. By default all available ports are added and an "open"-request of a port by the driver is automatically acknowledged. The derived class can optionally change this behaviour by overriding [process\\_device\\_ready\(\)](#), [process\\_port\\_ready\(\)](#) and [process\\_port\\_open\(\)](#).

This class provides a stream-based interface to access the port data with edge-triggered notification callbacks. If a port receives data from the driver the derived class is notified with the [rx\\_data\\_available\(\)](#) callback. The actual data can be retrieved by [port\\_read\(\)](#). If there was not enough data to be read, the call will return the available partial data. Only then will the [rx\\_data\\_available\(\)](#) callback be triggered again.

Data on a port may be transmitted by [port\\_write\(\)](#). If there were not enough buffers available, only a part of the data will be transmitted. Once there are new buffers available, the [tx\\_space\\_available\(\)](#) callback will be invoked. This callback will be called again only after a previous [port\\_write\(\)](#) was not able to send all requested data.

Use this class as a base to provide your own high-level console device. You must derive from this class as well as `L4::Epiface_t<..., L4virtio::Device>`. For a working device the `irq_iface()` must be registered too. A typical implementation might look like the following:

```
class My_console
: public L4virtio::Svr::Console::Device,
  public L4::Epiface_t<My_console, L4virtio::Device>
{
public:
    My_console(L4Re::Util::Object_registry *r)
        : L4virtio::Svr::Console::Device(0x100)
    {
        init_mem_info(4);
        L4Re::chkcap(r->register_irq_obj(irq_iface()), "virtio notification IRQ");
    }

    void rx_data_available(unsigned port) override
    {
        // call port_read() to fetch available data
    }

    void tx_space_available(unsigned port) override
    {
        // can call port_write() to send (pending) data
    }
};

My_console console(registry);
registry->register_obj(&console, ...);
```

The maximum number of memory regions ([init\\_mem\\_info\(\)](#)) should correlate with the number of supported ports.

Definition at line 116 of file [virtio-console-device](#).

### 15.391.2 Constructor & Destructor Documentation

#### 15.391.2.1 Device() [1/3]

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max ) [inline], [explicit]
```

Create a new console device.

## Parameters

<i>vq_max</i>	Maximum number of buffers in data queues.
---------------	---

Create a console device with no multiport support, i.e. control queues are disabled.

Definition at line 143 of file [virtio-console-device](#).

**15.391.2.2 Device() [2/3]**

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max,
    unsigned ports ) [inline], [explicit]
```

Create a new console device.

## Parameters

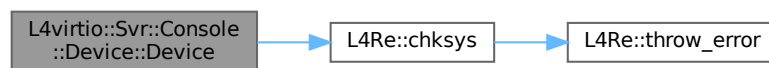

<i>vq_max</i>	Maximum number of buffers in data queues.
<i>ports</i>	Number of ports (maximum 32).

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 162 of file [virtio-console-device](#).

References [L4Re::chksys\(\)](#), and [L4\\_ENOMEM](#).

Here is the call graph for this function:

**15.391.2.3 Device() [3/3]**

```
L4virtio::Svr::Console::Device::Device (
    cxx::static_vector< unsigned > const & vq_max_nums ) [inline], [explicit]
```

Create a new console [Device](#).

## Parameters

<i>vq_max_nums</i>	Maximum number of buffers in data queues, given as a <a href="#">cxx::static_vector</a> with one entry per port.
--------------------	--

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 184 of file [virtio-console-device](#).

References [L4Re::chksys\(\)](#), and [L4\\_ENOMEM](#).

Here is the call graph for this function:

### 15.391.3 Member Function Documentation

#### 15.391.3.1 do\_control\_work()

```
int L4virtio::Svr::Console::Device::do_control_work ( ) [inline]
```

Receive new control messages and resend stalled ones.

Return values

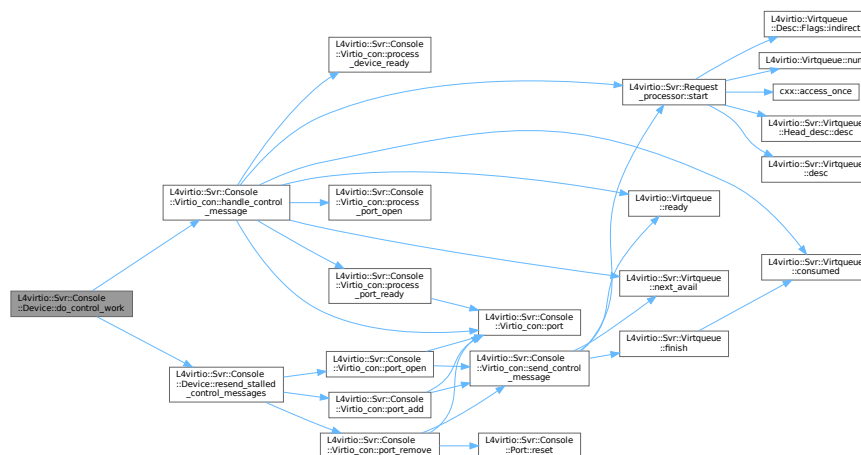

see	<a href="#">handle_control_message()</a>
-----	--

As it may happen that the driver is not able to receive a control message, there may be some stalled control message. This function checks if such messages exist and tries to resend them once more. Afterwards it checks for new messages from the driver, see [handle\\_control\\_message\(\)](#).

Definition at line 400 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio\\_con::handle\\_control\\_message\(\)](#), and [resend\\_stalled\\_control\\_messages\(\)](#).

Here is the call graph for this function:

### 15.391.3.2 notify\_queue()

```
void L4virtio::Svr::Console::Device::notify_queue (
    Virtqueue * queue ) [inline], [override], [virtual]
```

Notify queue of available data.

#### Parameters

<i>queue</i>	Virtqueue to notify.
--------------	----------------------

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implements [L4virtio::Svr::Console::Virtio\\_con](#).

Definition at line 208 of file [virtio-console-device](#).

References [L4VIRTIO\\_IRQ\\_STATUS\\_VRING](#), and [L4virtio::Virtqueue::no\\_notify\\_guest\(\)](#).

Here is the call graph for this function:

### 15.391.3.3 port()

```
Port * L4virtio::Svr::Console::Device::port (
    unsigned port ) [inline], [override], [protected], [virtual]
```

Return the specified port.

#### Parameters

<i>port</i>	Port number.
-------------	--------------

#### Precondition

`Port` number must be lower than the configured maximum number of ports.

Implements [L4virtio::Svr::Console::Virtio\\_con](#).

Definition at line 505 of file [virtio-console-device](#).

Referenced by [port\\_read\(\)](#), [port\\_write\(\)](#), and [process\\_port\\_ready\(\)](#).

Here is the caller graph for this function:

### 15.391.3.4 port\_read()

```

unsigned L4virtio::Svr::Console::Device::port_read (
    char * buf,
    unsigned len,
    unsigned port = 0 ) [inline]
  
```

Read data from port.

Will read up to *len* bytes from *port* into *buf*. Returns the number of bytes read, which may be less if not enough data was available. If all data was read, the [rx\\_data\\_available\(\)](#) callback will be invoked the next time the driver queues new data for the port. The callback won't be called again until all data was consumed again.

#### Parameters

<i>buf</i>	The destination buffer
<i>len</i>	Size of the buffer
<i>port</i>	<a href="#">Port</a> index to read data from

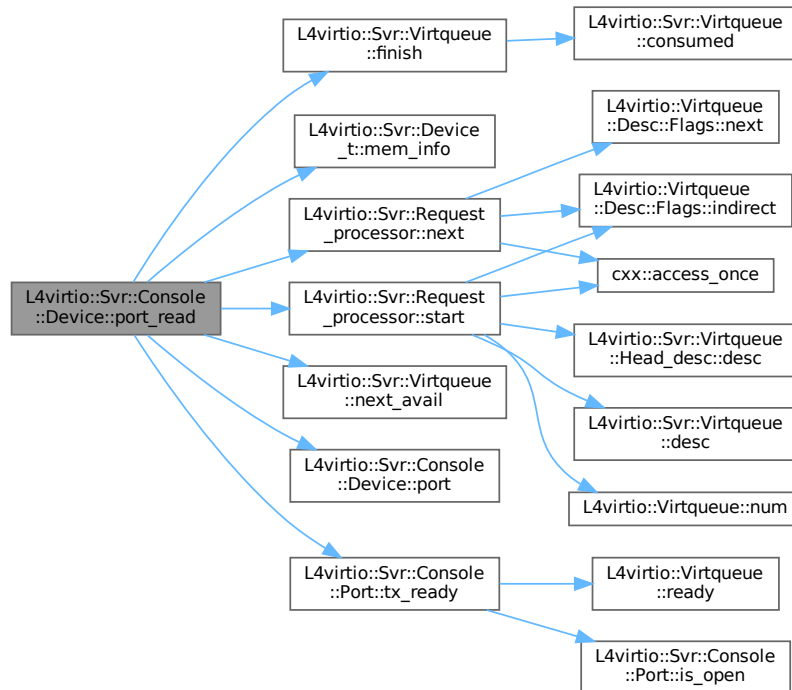

#### Returns

Number of bytes read

Definition at line 278 of file [virtio-console-device](#).

References [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Data\\_buffer::left](#), [L4virtio::Svr::Device\\_t< DATA >::mem\\_info\(\)](#), [L4virtio::Svr::Request\\_processor::next\(\)](#), [L4virtio::Svr::Virtqueue::next\\_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Data\\_buffer::pos](#), [L4virtio::Svr::Console::Device\\_port::request](#), [L4virtio::Svr::Console::Device\\_port::rp](#), [L4virtio::Svr::Console::Device\\_port::src](#), [L4virtio::Svr::Request\\_processor::start\(\)](#), [L4virtio::Svr::Console::Port::tx](#), and [L4virtio::Svr::Console::Port::tx\\_ready\(\)](#).

Here is the call graph for this function:

### 15.391.3.5 port\_write()

```

unsigned L4virtio::Svr::Console::Device::port_write (
    char const * buf,
    unsigned len,
    unsigned port = 0 ) [inline]

```

Write data to port.

Will write up to *len* bytes to *port* from *buf*. Returns the number of bytes written, which may be less if not enough virtio buffers were available. If not all data could be written, the [tx\\_space\\_available\(\)](#) callback will be invoked the next time the driver queues new receive buffers for the port. The callback won't be called again until all receive buffers were filled again.

#### Parameters

<i>buf</i>	The source buffer
<i>len</i>	Size of the buffer
<i>port</i>	<a href="#">Port</a> index to write data to

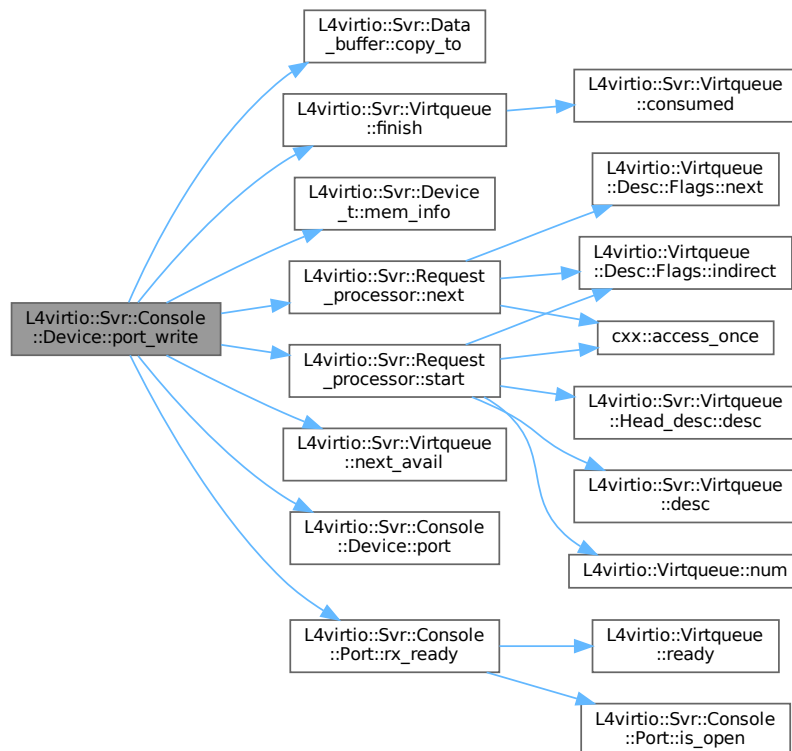

#### Returns

Number of bytes written

Definition at line 345 of file [virtio-console-device](#).

References [L4virtio::Svr::Data\\_buffer::copy\\_to\(\)](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Data\\_buffer::left](#), [L4virtio::Svr::Device\\_t< DATA >::mem\\_info\(\)](#), [L4virtio::Svr::Request\\_processor::next\(\)](#), [L4virtio::Svr::Virtqueue::next\\_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Data\\_buffer::pos](#), [L4virtio::Svr::Console::Port::rx](#), [L4virtio::Svr::Console::Port::rx\\_ready\(\)](#), and [L4virtio::Svr::Request\\_processor::start\(\)](#).

Here is the call graph for this function:

### 15.391.3.6 process\_device\_ready()

```
void L4virtio::Svr::Console::Device::process_device_ready (
    14_uint16_t value ) [inline], [override], [virtual]
```

Callback called on DEVICE\_READY event.

#### Parameters

<i>value</i>	The value field of the control message, indicating if the initialization was successful.
--------------	--

By default, this function adds all ports if the driver indicates successful initialization. Override this function to perform custom actions for a DEVICE\_READY event, *after* the generic management of the base class. It is then your responsibility to inform the driver about usable ports, see [port\\_add\(\)](#).

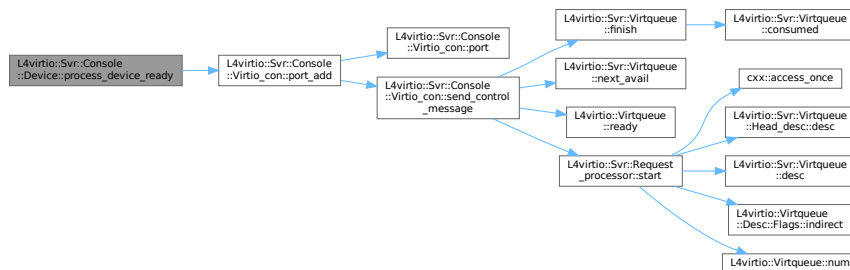

Implements [L4virtio::Svr::Console::Virtio\\_con](#).

Definition at line 426 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio\\_con::port\\_add\(\)](#).

Here is the call graph for this function:

### 15.391.3.7 process\_port\_open()

```
void L4virtio::Svr::Console::Device::process_port_open (
    14_uint32_t id,
    14_uint16_t value ) [inline], [override], [virtual]
```

Callback called on PORT\_OPEN event.

#### Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the port was opened or closed.

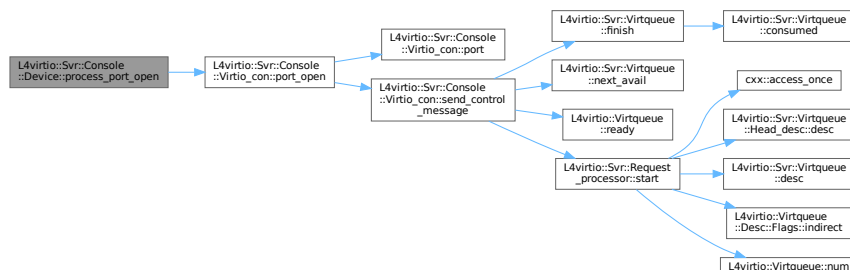

By default, this function acknowledges the message from the driver by sending back the same message. Override this function to perform custom actions for a PORT\_OPEN event, *after* the generic management of the base class. It is then your responsibility to update the internal port state and answer the driver's messages, see [port\\_open\(\)](#).

Implements [L4virtio::Svr::Console::Virtio\\_con](#).

Definition at line 470 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio\\_con::port\\_open\(\)](#).

Here is the call graph for this function:

### 15.391.3.8 process\_port\_ready()

```
void L4virtio::Svr::Console::Device::process_port_ready (
    14_uint32_t id,
    14_uint16_t value ) [inline], [override], [virtual]
```

Callback called on PORT\_READY event.

#### Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the initialization was successful.

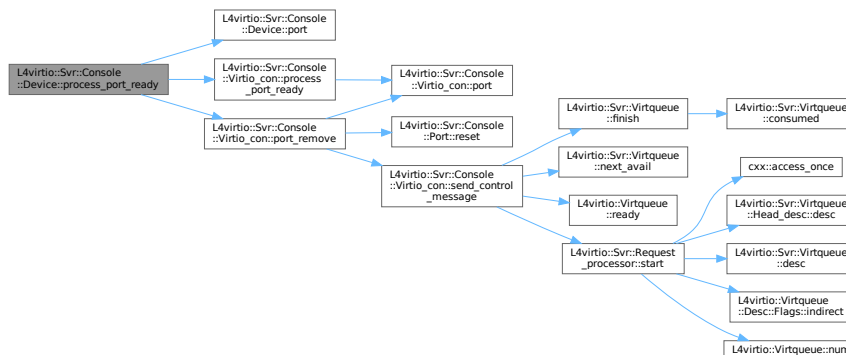

By default, this function removes the port, if the driver failed to set it up correctly. Override this function to perform custom actions for a PORT\_READY event, *after* the generic management of the base class. It is then your responsibility to inform the driver about unusable ports, see [port\\_remove\(\)](#).

Reimplemented from [L4virtio::Svr::Console::Virtio\\_con](#).

Definition at line 448 of file [virtio-console-device](#).

References [port\(\)](#), [L4virtio::Svr::Console::Port::Port\\_failed](#), [L4virtio::Svr::Console::Virtio\\_con::port\\_remove\(\)](#), [L4virtio::Svr::Console::Virtio\\_con::process\\_port\\_ready\(\)](#), and [L4virtio::Svr::Console::Port::status](#).

### 15.393.1 Detailed Description

Virtio console specific feature bits.

Definition at line 18 of file [virtio-console](#).

### 15.393.2 Member Typedef Documentation

#### 15.393.2.1 console\_multiport\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 1, 1> L4virtio::Svr::Console::Features::console_multiport_bfm_t
```

[Device](#) has support for multiple ports.

Type to access the `console_multiport` bits ( 1 to 1 ) of `raw`.

Definition at line 25 of file [virtio-console](#).

#### 15.393.2.2 console\_size\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 0, 0> L4virtio::Svr::Console::Features::console_size_bfm_t
```

Configuration `cols` and `rows` are valid.

Type to access the `console_size` bits ( 0 to 0 ) of `raw`.

Definition at line 23 of file [virtio-console](#).

#### 15.393.2.3 emerg\_write\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 2, 2> L4virtio::Svr::Console::Features::emerg_write_bfm_t
```

[Device](#) has support for emergency write.

Type to access the `emerg_write` bits ( 2 to 2 ) of `raw`.

Definition at line 27 of file [virtio-console](#).

*Memory region list.*

## 15.395.1 Detailed Description

Base class implementing a virtio console functionality.

It is possible to activate the MULTIPORT feature, in which case incoming control messages need to be dispatched by calling [handle\\_control\\_message\(\)](#). The derived class must additionally override [process\\_device\\_ready\(\)](#), [process\\_port\\_ready\(\)](#) and [process\\_port\\_open\(\)](#) to implement the actual behaviour. The derived class has the following responsibilities:

- inform the driver about usable ports once the device is ready as signaled in [process\\_device\\_ready\(\)](#), see the wrapper [port\\_add\(\)](#).
- inform the driver about unusable ports, see the wrapper [port\\_remove\(\)](#).
- react to open/close events, see the wrapper [port\\_open\(\)](#).

This implementation provides no means to handle interrupts or notify guests, therefore derived classes have to provide this functionality, see [notify\\_queue\(\)](#) and [handle\\_control\\_message\(\)](#). Similarly, all interaction with data queues has to be implemented. Memory for port structures must be managed by the implementor as well.

Use this class as a base to implement your own specific console device.

Definition at line 185 of file [virtio-console](#).

## 15.395.2 Constructor & Destructor Documentation

### 15.395.2.1 Virtio\_con()

```
L4virtio::Svr::Console::Virtio_con::Virtio_con (
    unsigned max_ports,
    bool enable_multiport ) [inline], [explicit]
```

Create a new multiport console device.

## Parameters

<i>max_ports</i>	Maximum number of ports the device should be able to handle (ignored when <code>enable_multiport</code> is false).
<i>enable_multiport</i>	Enable the control queue for dynamic handling of ports.

Definition at line 211 of file [virtio-console](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Console::Features::console\\_multiport\(\)](#), [L4\\_EINVAL](#), and [L4virtio::Svr::Dev\\_features::raw](#).

Here is the call graph for this function:

## 15.395.3 Member Function Documentation

### 15.395.3.1 handle\_control\_message()

```
int L4virtio::Svr::Console::Virtio_con::handle_control_message ( ) [inline]
```

Handle control message received from the driver.

## Return values

<i>L4_EOK</i>	Message has been handled.
<i>-L4_ENODEV</i>	Control queue is not ready.
<i>-L4_EBUSY</i>	Currently no descriptor available in the control queue.
<i>-L4_EINVAL</i>	Received an unexpected control event.

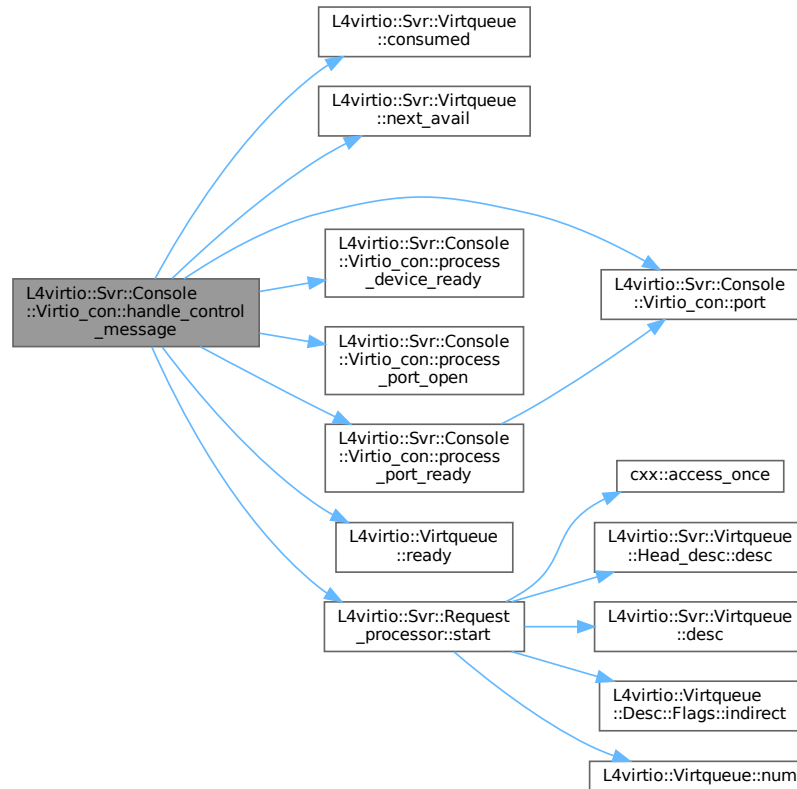

This function performs the basic handling of control messages from the driver. It does all necessary work with the control queues and performs some sanity checks. All other work is deferred to the derived class, see [process\\_device\\_ready\(\)](#), [process\\_port\\_ready\(\)](#) and [process\\_port\\_open\(\)](#).

Definition at line 443 of file [virtio-console](#).

References [L4virtio::Svr::Virtqueue::consumed\(\)](#), [L4virtio::Svr::Console::Control\\_message::Device\\_ready](#), [L4virtio::Svr::Console::Control\\_message::event](#), [L4virtio::Svr::Console::Control\\_message::id](#), [L4\\_EINVAL](#), [L4\\_ENODEV](#), [L4\\_EOK](#), [L4virtio::Svr::Console::Control\\_request::len](#), [L4virtio::Svr::Console::Control\\_request::msg](#), [L4virtio::Svr::Virtqueue::next\\_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port\\_added](#), [L4virtio::Svr::Console::Port::Port\\_disabled](#), [L4virtio::Svr::Console::Control\\_message::Port\\_open](#), [L4virtio::Svr::Console::Port::Port\\_open](#), [L4virtio::Svr::Console::Control\\_message::Port\\_ready](#), [process\\_device\\_ready\(\)](#), [process\\_port\\_open\(\)](#), [process\\_port\\_ready\(\)](#), [L4virtio::Virtqueue::ready\(\)](#), [L4virtio::Svr::Request\\_processor::start\(\)](#), [L4virtio::Svr::Console::Port::status](#), [L4virtio::Svr::Console::Port::value](#), and [L4virtio::Svr::Console::Control\\_message::value](#).

Referenced by [L4virtio::Svr::Console::Device::do\\_control\\_work\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.395.3.2 notify\_queue()

```
virtual void L4virtio::Svr::Console::Virtio_con::notify_queue (
    Virtqueue * queue ) [pure virtual]
```

Notify queue of available data.

## Parameters

<i>queue</i>	Virtqueue to notify.
--------------	----------------------

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implemented in `L4virtio::Svr::Console::Device`.

### 15.395.3.3 port()

```
virtual Port * L4virtio::Svr::Console::Virtio_con::port (
    unsigned port ) [pure virtual]
```

Return the specified port.

## Parameters

<i>port</i>	Port number.
-------------	--------------

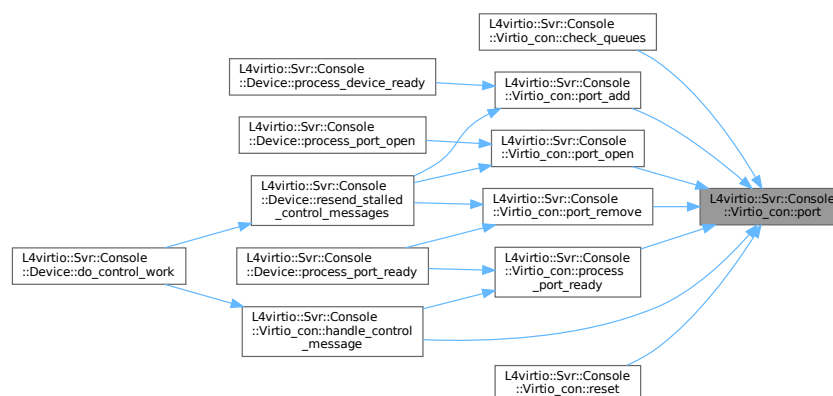

### Precondition

Port number must be lower than the configured maximum number of ports.

Implemented in `L4virtio::Svr::Console::Device`.

Referenced by [check\\_queues\(\)](#), [handle\\_control\\_message\(\)](#), [port\\_add\(\)](#), [port\\_open\(\)](#), [port\\_remove\(\)](#), [process\\_port\\_ready\(\)](#), and [reset\(\)](#).

Here is the caller graph for this function:

#### 15.395.3.4 port\_add()

```
int L4virtio::Svr::Console::Virtio_con::port_add (
    unsigned idx ) [inline]
```

Send a `DEVICE_ADD` message and update the internal state.

## Parameters

<i>idx</i>	Port that should be added.
------------	----------------------------

## Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Control message is not allowed in the current state.

## Returns

Errors from [send\\_control\\_message\(\)](#)

## Precondition

`port` must be smaller than the configured number of ports.

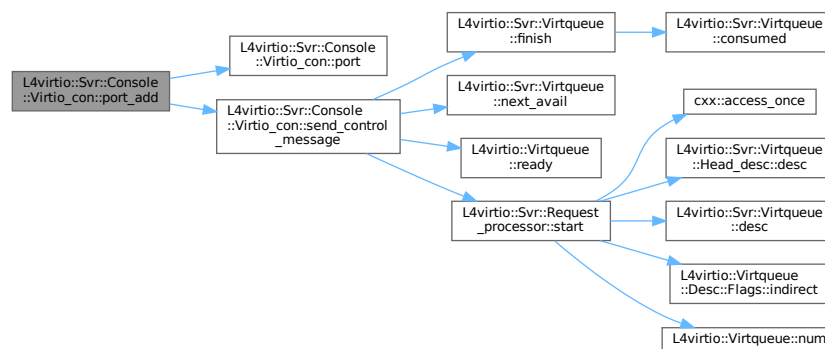

Port must not already exist.

Definition at line 298 of file [virtio-console](#).

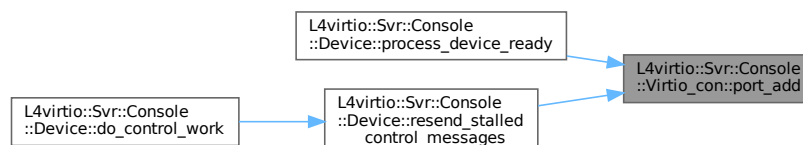

References [L4virtio::Svr::Console::Control\\_message::Device\\_add](#), [L4\\_EOK](#), [L4\\_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port\\_add](#), [L4virtio::Svr::Console::Port::Port\\_disabled](#), [send\\_control\\_message\(\)](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [L4virtio::Svr::Console::Device::process\\_device\\_ready\(\)](#), and [L4virtio::Svr::Console::Device::resend\\_stalled\\_control\\_m](#)

Here is the call graph for this function:

Here is the caller graph for this function:

## 15.395.3.5 port\_open()

```
int L4virtio::Svr::Console::Virtio_con::port_open (
    unsigned idx,
    bool open ) [inline]
```

Send a PORT\_OPEN message and update the internal state.

## Parameters

<i>idx</i>	Port that should be opened or closed.
<i>open</i>	Open or close port.

## Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Control message is not allowed in the current state.

## Returns

Errors from [send\\_control\\_message\(\)](#)

## Precondition

`port` must be smaller than the configured number of ports.

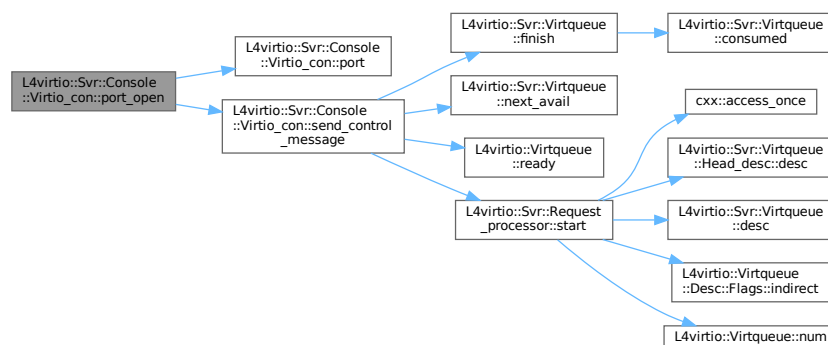

Port must already exist.

Definition at line 355 of file [virtio-console](#).

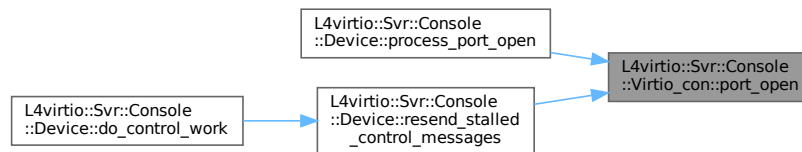

References [L4\\_EOK](#), [L4\\_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Control\\_message::Port\\_open](#), [L4virtio::Svr::Console::Port::Port\\_open](#), [L4virtio::Svr::Console::Port::Port\\_ready](#), [send\\_control\\_message\(\)](#), and [L4virtio::Svr::Console::Port::status](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.395.3.6 port\_remove()

```
int L4virtio::Svr::Console::Virtio_con::port_remove (
    unsigned idx ) [inline]
```

Send a DEVICE\_REMOVE message and update the internal state.

#### Parameters

<i>idx</i>	Port that should be removed.
------------	------------------------------

#### Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_EPERM</i>	Control message is not allowed in the current state.

#### Returns

Errors from [send\\_control\\_message\(\)](#)

#### Precondition

`port` must be smaller than the configured number of ports.

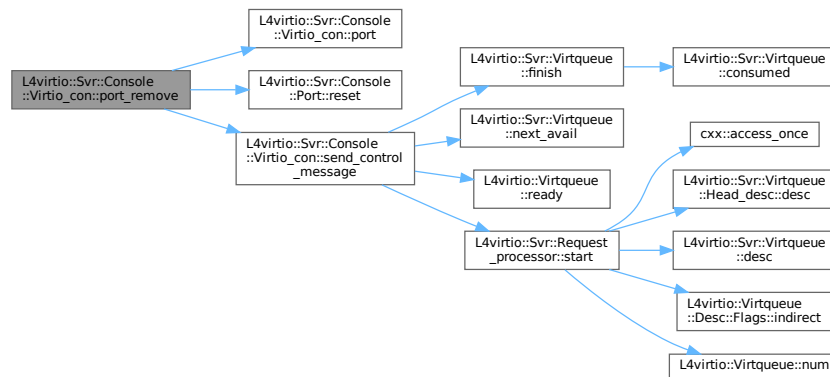

`Port` must already exist.

Definition at line 325 of file [virtio-console](#).

References [L4virtio::Svr::Console::Control\\_message::Device\\_remove](#), [L4\\_EOK](#), [L4\\_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port\\_open](#), [L4virtio::Svr::Console::Port::Port\\_ready](#), [L4virtio::Svr::Console::Port::reset\(\)](#), [send\\_control\\_message\(\)](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [L4virtio::Svr::Console::Device::process\\_port\\_ready\(\)](#), and [L4virtio::Svr::Console::Device::resend\\_stalled\\_control\\_mes](#)

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.395.3.7 process\_device\_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_device_ready (
    uint16_t value ) [pure virtual]
```

Callback called on DEVICE\_READY event.

#### Parameters

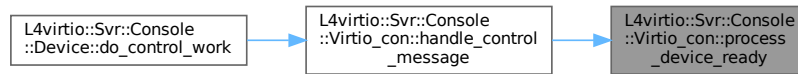

<i>value</i>	The value field of the control message, indicating if the initialization was successful.
--------------	--

Needs to be overridden by the derived class if the MULTIPORT feature is enabled. Control messages may be sent only after the driver has successfully initialized the device.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle\\_control\\_message\(\)](#).

Here is the caller graph for this function:

### 15.395.3.8 process\_port\_open()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_open (
    14_uint32_t id,
    14_uint16_t value ) [pure virtual]
```

Callback called on PORT\_OPEN event.

#### Parameters

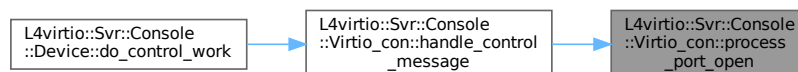

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the port was opened or closed.

Needs to be overridden by the derived class if the MULTIPORT feature is enabled. The device must acknowledge the message by calling `port_open()`.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle\\_control\\_message\(\)](#).

Here is the caller graph for this function:

### 15.395.3.9 process\_port\_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_ready (
    14_uint32_t id,
    14_uint16_t value ) [inline], [virtual]
```

Callback called on PORT\_READY event.

#### Parameters

<i>id</i>	The id field of the control message, i.e. the port number.
<i>value</i>	The value field of the control message, indicating if the initialization was successful.

May be overridden by the derived class if the MULTIPORT feature is enabled. This default implementation just sets the status of the port according to the driver message.

Reimplemented in [L4virtio::Svr::Console::Device](#).

Definition at line 606 of file [virtio-console](#).

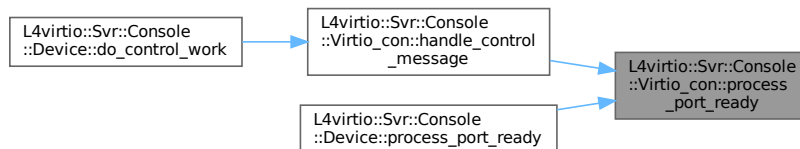

References [port\(\)](#), [L4virtio::Svr::Console::Port::Port\\_added](#), [L4virtio::Svr::Console::Port::Port\\_failed](#), [L4virtio::Svr::Console::Port::Port\\_ready](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [handle\\_control\\_message\(\)](#), and [L4virtio::Svr::Console::Device::process\\_port\\_ready\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.395.3.10 reset\_device()

```
virtual void L4virtio::Svr::Console::Virtio_con::reset_device ( ) [inline], [virtual]
```

Reset the state of the actual console device.

This callback is called at the end of [reset\(\)](#), allowing the derived class to reset internal state.

Definition at line 560 of file [virtio-console](#).

Referenced by [reset\(\)](#).

Here is the caller graph for this function:

### 15.395.3.11 send\_control\_message()

```
int L4virtio::Svr::Console::Virtio_con::send_control_message (
    l4_uint32_t idx,
    l4_uint16_t event,
    l4_uint16_t value = 0,
    const char * name = 0 ) [inline]
```

Send control message to driver.

#### Parameters

<i>idx</i>	Port number.
<i>event</i>	Kind of control event.
<i>value</i>	Extra information for the event.
<i>name</i>	Name to be used for Port_name message

#### Return values

<i>L4_EOK</i>	Message has been sent.
<i>-L4_ENODEV</i>	Control queue is not ready.
<i>-L4_EBUSY</i>	Currently no descriptor available in the control queue.
<i>-L4_ENOMEM</i>	Client-issued descriptor too small. Device will be set to failed state.

#### Precondition

`port` must be smaller than the configured number of ports.

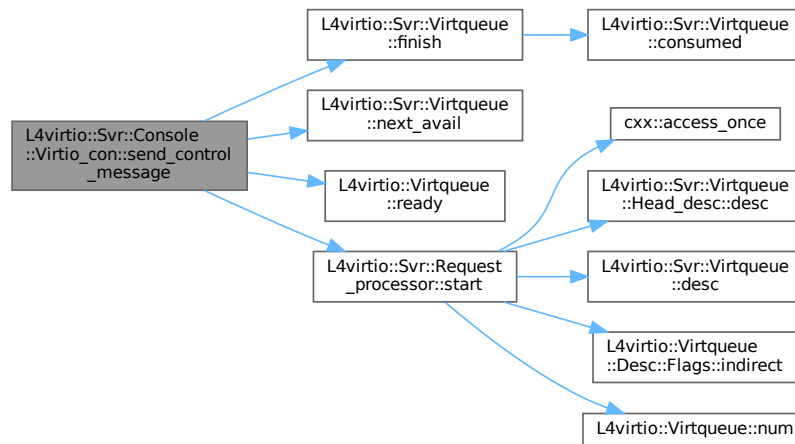

The convenience functions `port_add()`, `port_remove()` and `port_open()` should cover the most use cases and are the preferred way of communication with the driver. If you use this function directly, it is your responsibility to guarantee no invalid control messages are sent to the driver.

Definition at line 393 of file `virtio-console`.

## 15.396.1 Detailed Description

Abstract data buffer.

Definition at line 287 of file virtio.

## 15.396.2 Constructor & Destructor Documentation

### 15.396.2.1 Data\_buffer()

```
template<typename T >
L4virtio::Svr::Data_buffer::Data_buffer (
    T * p ) [inline], [explicit]
```

Create buffer for object *p*.

#### Template Parameters

<i>T</i>	Type of object (implicit)
----------	---------------------------

#### Parameters

<i>p</i>	Pointer to object.
----------	--------------------

The buffer shall point to the start of the object *p* and the size left is `sizeof(T)`.

Definition at line 304 of file [virtio](#).

## 15.396.3 Member Function Documentation

### 15.396.3.1 copy\_to()

```
l4_uint32_t L4virtio::Svr::Data_buffer::copy_to (
    Data_buffer * dst,
    l4_uint32_t max = UINT_MAX ) [inline]
```

Copy contents from this buffer to the destination buffer.

#### Parameters

<i>dst</i>	Destination buffer.
<i>max</i>	(optional) Maximum number of bytes to copy.

#### Returns

the number of bytes copied.

This function copies at most *max* bytes from this to *dst*. If *max* is omitted, copies the maximum number of bytes available that fit *dst*.

Definition at line 335 of file [virtio](#).

References [left](#), and [pos](#).

Referenced by [L4virtio::Svr::Console::Device::port\\_write\(\)](#).

Here is the caller graph for this function:

### 15.396.3.2 done()

```
bool L4virtio::Svr::Data_buffer::done ( ) const [inline]
```

Check if there are no more bytes left in the buffer.

#### Returns

true if there are no more bytes left in the buffer.

Definition at line 369 of file [virtio](#).

References [left](#).

### 15.396.3.3 set()

```
template<typename T >
void L4virtio::Svr::Data_buffer::set (
    T * p ) [inline]
```

Set buffer for object p.

#### Template Parameters

<i>T</i>	Type of object (implicit)
----------	---------------------------

#### Parameters

<i>p</i>	Pointer to object.
----------	--------------------

The buffer shall point to the start of the object p and the size left is sizeof(T).

Definition at line 318 of file [virtio](#).

References [left](#), and [pos](#).

### 15.396.3.4 skip()

```
l4_uint32_t L4virtio::Svr::Data_buffer::skip (
    l4_uint32_t bytes ) [inline]
```

Skip given number of bytes in this buffer.

#### Parameters

<i>bytes</i>	Number of bytes that shall be skipped.
--------------	--

#### Returns

The number of bytes skipped.

Try to skip the given number of bytes in this buffer, if there are less bytes left in the buffer that given then at most left bytes are skipped and the amount is returned.

Definition at line 356 of file [virtio](#).

References [left](#), and [pos](#).

## 15.397.1 Detailed Description

Abstraction for L4-Virtio device config memory.

Virtio defines a device configuration mechanism, L4-Virtio implements this mechanism based on shared memory a [set\\_status\(\)](#) and a [config\\_queue\(\)](#) call. This class provides an abstraction for L4-Virtio host implementations to establish such a shared memory data space and providing the necessary contents and access functions.

Definition at line 52 of file [l4virtio](#).

## 15.397.2 Constructor & Destructor Documentation

### 15.397.2.1 Dev\_config() [1/2]

```
L4virtio::Svr::Dev_config::Dev_config (
    l4\_uint32\_t vendor,
    l4\_uint32\_t device,
    unsigned cfg_size,
    l4\_uint32\_t num_queues = 0 ) [inline]
```

Create a L4-Virtio config data space.

#### Parameters

<i>vendor</i>	The vendor ID to store in config header.
<i>device</i>	The device ID to store in config header.
<i>cfg_size</i>	The size of the device-specific config data in bytes.
<i>num_queues</i>	The number of queues provided by the device.

This constructor allocates a data space used for L4-virtio config attaches the data space to the local address space and writes the initial contents to the config header.

Definition at line 112 of file [l4virtio](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4Re::Env::env\(\)](#), and [L4\\_PAGESIZE](#).

Here is the call graph for this function:

### 15.397.2.2 Dev\_config() [2/2]

```

L4virtio::Svr::Dev_config::Dev_config (
    Cfg_cap const & cfg,
    l4_addr_t cfg_offset,
    l4_uint32_t vendor,
    l4_uint32_t device,
    unsigned cfg_size,
    l4_uint32_t num_queues = 0 ) [inline]

```

Setup an L4-Virtio config space in an existing data space.

#### Parameters

<i>cfg</i>	Dataspace that should hold the L4-Virtio configuration.
<i>cfg_offset</i>	Offset into the dataspace where the configuration starts.
<i>vendor</i>	The vendor ID to store in config header.
<i>device</i>	The device ID to store in config header.
<i>cfg_size</i>	The size of the device-specific config data in bytes.
<i>num_queues</i>	The number of queues provided by the device.

Definition at line 146 of file [l4virtio](#).

References [L4\\_PAGESIZE](#).

## 15.397.3 Member Function Documentation

### 15.397.3.1 add\_irq\_status()

```

void L4virtio::Svr::Dev_config::add_irq_status (
    l4_uint32_t status ) [inline]

```

Adds irq status bit.

## Parameters

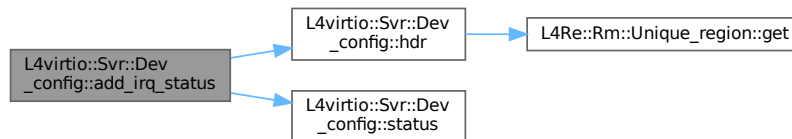

<i>status</i>	The value to add to the irq status register.
---------------	--

This function adds the status bit to the irq status register.

Definition at line 265 of file [l4virtio](#).

References [hdr\(\)](#), and [status\(\)](#).

Here is the call graph for this function:

## 15.397.3.2 change\_queue\_config()

```
bool L4virtio::Svr::Dev_config::change_queue_config (
    l4_uint32_t num_queues ) [inline]
```

Setup new queue configuration.

## Parameters

<i>num_queues</i>	The number of queues provided by the device.
-------------------	--

Definition at line 286 of file [l4virtio](#).

References [L4\\_PAGESIZE](#), [num\\_queues\(\)](#), and [reset\\_hdr\(\)](#).

Here is the call graph for this function:

### 15.397.3.3 ds()

```
L4::Cap< L4Re::Dataspace > L4virtio::Svr::Dev_config::ds ( ) const [inline]
```

Get data-space capability for the shared config data space.

#### Returns

Capability for the shared config data space.

Definition at line 375 of file [l4virtio](#).

### 15.397.3.4 get\_cmd()

```
l4_uint32_t L4virtio::Svr::Dev_config::get_cmd ( ) const [inline]
```

Get the value from the cmd register.

Note, the most significant eight bits are the command (0 is nothing to do). The upper eight bit are reset to zero after the command was handled.

Definition at line 230 of file [l4virtio](#).

References [hdr\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::handle\\_mem\\_cmd\\_write\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.397.3.5 guest\_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::guest_features (
    unsigned idx ) const [inline]
```

Return a specific set of guest features.

## Parameters

<i>idx</i>	Index into the guest features array.
------------	--------------------------------------

## Return values

<i>The</i>	selected set of guest features.
------------	---------------------------------

This function returns a specific 32bit set of features enabled by the guest/driver. `idx` is the index in the guest features array, resp. the 32 bit set to return.

Definition at line 198 of file [l4virtio](#).

### 15.397.3.6 `hdr()`

```
l4virtio_config_hdr_t const volatile * L4virtio::Svr::Dev_config::hdr ( ) const [inline]
```

Get a read-only pointer to the config header.

## Returns

Read-only pointer to the shared config header.

Definition at line 368 of file [l4virtio](#).

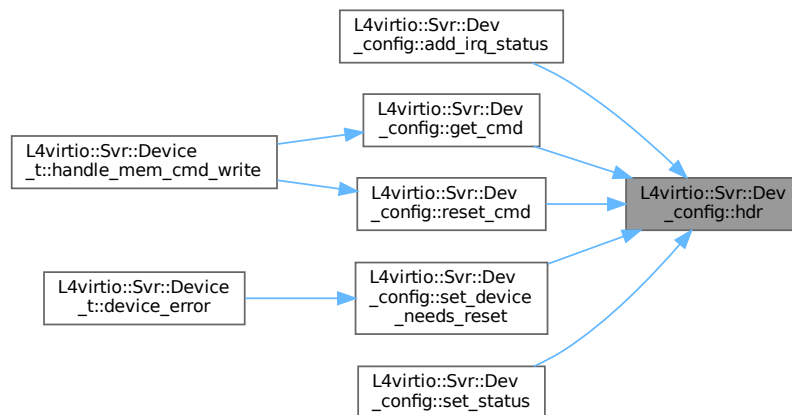

References [L4Re::Rm::Unique\\_region< T >::get\(\)](#).

Referenced by [add\\_irq\\_status\(\)](#), [get\\_cmd\(\)](#), [reset\\_cmd\(\)](#), [set\\_device\\_needs\\_reset\(\)](#), and [set\\_status\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.397.3.7 negotiated\_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::negotiated_features (
    unsigned idx ) const [inline]
```

Compute a specific set of negotiated features.

#### Parameters

<i>idx</i>	Index into the guest/host features array.
------------	---

#### Return values

<i>The</i>	selected set of negotiated features.
------------	--------------------------------------

This function returns a specific 32-bit set of features negotiated by the guest/driver and host/device. *idx* is the index in the guest/host features array, resp. the 32-bit set to return.

Definition at line 212 of file [l4virtio](#).

### 15.397.3.8 qconfig()

```
l4virtio_config_queue_t volatile const * L4virtio::Svr::Dev_config::qconfig (
    unsigned index ) const [inline]
```

Get queue read-only config data for queue with the given *index*.

#### Parameters

<i>index</i>	The index of the queue.
--------------	-------------------------

**Returns**

Read-only pointer to the config of the queue with the given *index*, or NULL if *index* is out of range.

Definition at line 303 of file [l4virtio](#).

References [L4Re::Rm::Unique\\_region< T >::get\(\)](#), and [L4\\_UNLIKELY](#).

Referenced by [reset\\_queue\(\)](#), and [L4virtio::Svr::Device\\_t< DATA >::setup\\_queue\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**15.397.3.9 reset\_cmd()**

```
void L4virtio::Svr::Dev_config::reset_cmd ( ) [inline]
```

Reset the `cmd` register after execution of a command.

This function resets the `cmd` register in order for the client to detect that the command was executed by the device.

Definition at line 241 of file [l4virtio](#).

References [hdr\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::handle\\_mem\\_cmd\\_write\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.397.3.10 reset\_queue()

```

bool L4virtio::Svr::Dev_config::reset_queue (
    unsigned index,
    unsigned num_max,
    bool inc_generation = false ) const [inline]
  
```

Reset queue config for the given queue.

#### Parameters

<i>index</i>	The index of the queue to reset.
<i>num_max</i>	The maximum number of descriptors supported by this queue.
<i>inc_generation</i>	The config generation will be incremented when this is true.

#### Returns

true on success, or false when *index* is out of range.

Definition at line 345 of file [l4virtio](#).

References [L4\\_UNLIKELY](#), [l4virtio\\_config\\_queue\\_t::num](#), [l4virtio\\_config\\_queue\\_t::num\\_max](#), [qconfig\(\)](#), and [l4virtio\\_config\\_queue\\_t::ready](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::reset\\_queue\\_config\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.397.3.11 set\_device\_needs\_reset()

```
void L4virtio::Svr::Dev_config::set_device_needs_reset ( ) [inline]
```

Set DEVICE\_NEEDS\_RESET bit in device status register.

This function sets the internal status register and also the status register in the shared memory to DEVICE\_NEEDS\_RESET.

Definition at line 276 of file [l4virtio](#).

References [L4virtio::Svr::Dev\\_status::device\\_needs\\_reset\(\)](#), [hdr\(\)](#), and [L4virtio::Svr::Dev\\_status::raw](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::device\\_error\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**15.397.3.12 set\_status()**

```
void L4virtio::Svr::Dev_config::set_status (  
    Status status ) [inline]
```

Set device status register.

## Parameters

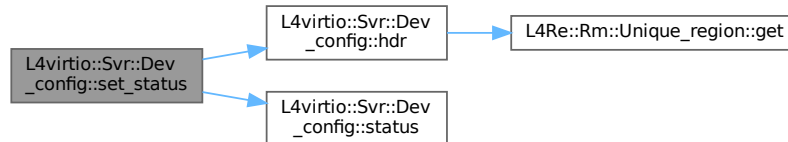

<i>status</i>	The new value for the device status register.
---------------	---

This function sets the internal status register and also the status register in the shared memory to *status*.

Definition at line 253 of file [l4virtio](#).

References [hdr\(\)](#), [L4virtio::Svr::Dev\\_status::raw](#), and [status\(\)](#).

Here is the call graph for this function:

**15.397.3.13 status()**

```
Status L4virtio::Svr::Dev_config::status ( ) const [inline]
```

Get current device status (trusted).

## Returns

Current device status register (trusted).

The status returned by this function is value stored internally and cannot be written by the guest (i.e., the value can be taken as trusted.)

Definition at line 222 of file [l4virtio](#).

Referenced by [add\\_irq\\_status\(\)](#), [L4virtio::Svr::Device\\_t< DATA >::device\\_error\(\)](#), and [set\\_status\(\)](#).

Here is the caller graph for this function:

## 15.400.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Device_t< DATA >
```

Server-side L4-VIRTIO device stub.

This stub supports new-style multi-event registration (using [get\\_device\\_config\(\)](#), [bind\(\)](#) and [get\\_device\\_notification\\_irq\(\)](#)).

Definition at line [795](#) of file [l4virtio](#).

## 15.400.2 Member Function Documentation

### 15.400.2.1 [add\\_trusted\\_dataspaces\(\)](#)

```
template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::add_trusted_dataspaces (
    std::shared_ptr< Ds_vector const > ds ) [inline]
```

Provide a list of trusted dataspaces that can be used for validation.

#### Parameters

<i>ds</i>	list of trusted dataspaces.
-----------	-----------------------------

Definition at line 1192 of file [l4virtio](#).

### 15.400.2.2 device\_error()

```
template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::device_error ( ) [inline]
```

Transition device into DEVICE\_NEEDS\_RESET state.

This function does a full reset, sets the DEVICE\_NEEDS\_RESET bit in the device status register, triggering a guest config IRQ if necessary. The driver still needs to perform its own reset and initialization sequence.

Definition at line 1018 of file [l4virtio](#).

References [L4virtio::Svr::Dev\\_status::driver\\_ok\(\)](#), [L4virtio::Svr::Device\\_t< DATA >::reset\(\)](#), [L4virtio::Svr::Dev\\_config::set\\_device\\_needs\\_reset\(\)](#), [L4virtio::Svr::Dev\\_config::status\(\)](#), and [L4virtio::Svr::Device\\_t< DATA >::trigger\\_driver\\_config\\_irq\(\)](#).

Here is the call graph for this function:

### 15.400.2.3 device\_notify\_irq()

```
template<typename DATA >
virtual L4::Cap< L4::Irq > L4virtio::Svr::Device_t< DATA >::device_notify_irq (
    unsigned idx ) [inline], [virtual]
```

Callback to gather the device notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 868 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Device\\_t< DATA >::device\\_notify\\_irq\(\)](#), and [L4\\_ENOSYS](#).

Here is the call graph for this function:

#### 15.400.2.4 `handle_mem_cmd_write()`

```
template<typename DATA >
bool L4virtio::Svr::Device_t< DATA >::handle_mem_cmd_write ( ) [inline]
```

Check for a value in the `cmd` register and handle a write.

This function checks for a value in the `cmd` register and executes the command if there is any, or returns false if there was no command.

Execution of the command is signaled by a zero in the `cmd` register.

Definition at line 1148 of file `l4virtio`.

References `L4virtio::Svr::Device_t< DATA >::cfg_changed()`, `L4virtio::Svr::Dev_config::get_cmd()`, `L4_LIKELY`, `L4VIRTIO_CMD_CFG_CHANGED`, `L4VIRTIO_CMD_CFG_QUEUE`, `L4VIRTIO_CMD_MASK`, `L4VIRTIO_CMD_SET_STATUS`, `L4virtio::Svr::Device_t< DATA >::reconfig_queue()`, and `L4virtio::Svr::Dev_config::reset_cmd()`.

Here is the call graph for this function:

#### 15.400.2.5 `init_mem_info()`

```
template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::init_mem_info (
    unsigned num ) [inline]
```

Initialize the memory region list to the given maximum.

##### Parameters

<i>num</i>	Maximum number of memory regions that can be managed.
------------	---

Definition at line 1006 of file `l4virtio`.

References `L4virtio::Svr::Device_t< DATA >::_mem_info`.

#### 15.400.2.6 `register_driver_irq()`

```
template<typename DATA >
virtual void L4virtio::Svr::Device_t< DATA >::register_driver_irq (
    unsigned idx ) [inline], [virtual]
```

Callback for registering an notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 854 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4\\_ENOSYS](#), and [L4virtio::Svr::Device\\_t< DATA >::register\\_single\\_driver\\_irq\(\)](#).

Here is the call graph for this function:

### 15.400.2.7 reset\_queue\_config()

```

template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::reset_queue_config (
    unsigned idx,
    unsigned num_max,
    bool inc_generation = false ) [inline]
  
```

Trigger reset for the configuration space for queue *idx*.

#### Parameters

<i>idx</i>	The queue index to reset.
<i>num_max</i>	Maximum number of entries in this queue.
<i>inc_generation</i>	The config generation will be incremented when this is true.

This function resets the driver-readable configuration space for the queue with the given index. The queue configuration is reset to all 0, and the maximum number of entries in the queue is set to *num\_max*.

Definition at line 996 of file [l4virtio](#).

References [L4virtio::Svr::Dev\\_config::reset\\_queue\(\)](#).

Here is the call graph for this function:

### 15.400.2.8 setup\_queue()

```
template<typename DATA >
bool L4virtio::Svr::Device_t< DATA >::setup_queue (
    Virtqueue * q,
    unsigned qn,
    unsigned num_max ) [inline]
```

Enable/disable the specified queue.

#### Parameters

<i>q</i>	Pointer to the ring that represents the virtqueue internally.
<i>qn</i>	Index of the queue.
<i>num_max</i>	Maximum number of supported entries in this queue.

#### Returns

true for success.

- This function calculates the parameters of the virtqueue from the clients configuration space values, checks the accessibility of the queue data structures and initializes *q* to ready state when all checks succeeded.

### 15.401.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Driver_mem_list_t< DATA >
```

List of driver memory regions assigned to a single L4-VIRTIO transport instance.

#### Note

The regions added to this list *must* never overlap.

Definition at line 629 of file [l4virtio](#).

### 15.401.2 Member Function Documentation

#### 15.401.2.1 add()

```
template<typename DATA >
Mem_region const * L4virtio::Svr::Driver_mem_list_t< DATA >::add (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds ) [inline]
```

Add a new region to the list.

#### Parameters

<i>drv_base</i>	Driver base address of the region.
<i>size</i>	Size of the region in bytes.
<i>offset</i>	Offset within the data space attached to <i>drv_base</i> .
<i>ds</i>	Data space backing the driver memory.

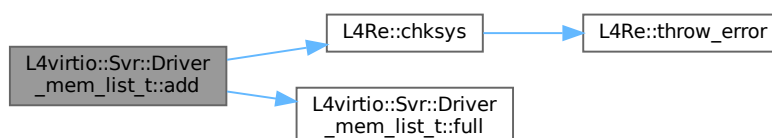

#### Returns

A pointer to the new region.

Definition at line 669 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::full\(\)](#), and [L4\\_ENOMEM](#).

Here is the call graph for this function:

## 15.401.2.2 find()

```
template<typename DATA >
Mem_region * L4virtio::Svr::Driver_mem_list_t< DATA >::find (
    l4_uint64_t base,
    l4_umword_t size ) const [inline]
```

Find memory region containing the given driver address region.

## Parameters

<i>base</i>	Driver base address.
<i>size</i>	Size of the region.

## Returns

Pointer to the region containing the given region, NULL if none is found.

Definition at line 703 of file [l4virtio](#).

Referenced by [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#), and [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::load\\_desc\(\)](#).

Here is the caller graph for this function:

## 15.401.2.3 full()

```
template<typename DATA >
bool L4virtio::Svr::Driver_mem_list_t< DATA >::full ( ) const [inline]
```

**Returns**

True if the remaining capacity is 0.

Definition at line 658 of file [l4virtio](#).

Referenced by [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::add\(\)](#).

Here is the caller graph for this function:

**15.401.2.4 init()**

```
template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::init (
    unsigned max ) [inline]
```

Make a fresh list with capacity *max*.

**Parameters**

<i>max</i>	The capacity of this vector.
------------	------------------------------

Definition at line 650 of file [l4virtio](#).

**15.401.2.5 load\_desc() [1/3]**

```
template<typename DATA >
template<typename ARG >
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    ARG * data ) const [inline]
```

Default implementation returning generic information.

**Template Parameters**

<i>ARG</i>	Abstract argument type used with <a href="#">Request_processor::start()</a> and <a href="#">Request_processor::next()</a> to deliver the result of loading a descriptor. This type must provide a constructor taking three arguments: (1) pointer to a <code>Driver_mem_region</code> , (2) the <a href="#">Virtqueue::Desc</a> descriptor, and (3) a pointer to the calling <a href="#">Request_processor</a> .
------------	--

## Parameters

	<i>desc</i>	The descriptor to load
	<i>p</i>	The request processor calling us
out	<i>data</i>	Shall be assigned to ARG(mem, desc, p)

## Exceptions

<a href="#"><i>Bad_descriptor</i></a>	The descriptor address could not be translated.
---------------------------------------	---

Definition at line 764 of file [l4virtio](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Svr::Bad\\_descriptor::Bad\\_address](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::find](#), [L4virtio::Ptr< T >::get\(\)](#), [L4\\_UNLIKELY](#), and [L4virtio::Virtqueue::Desc::len](#).

Here is the call graph for this function:

## 15.401.2.6 load\_desc() [2/3]

```

template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Mem_region const ** data ) const [inline]
  
```

Default implementation returning the Driver\_mem\_region.

## Parameters

	<i>desc</i>	The descriptor to load
	<i>p</i>	The request processor calling us
out	<i>data</i>	Shall be set to a pointer to the Driver_mem_region that covers the descriptor.

## Exceptions

<a href="#"><i>Bad_descriptor</i></a>	The descriptor address could not be translated.
---------------------------------------	---

Definition at line 737 of file [l4virtio](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Svr::Bad\\_descriptor::Bad\\_address](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::find](#), [L4virtio::Ptr< T >::get\(\)](#), [L4\\_UNLIKELY](#), and [L4virtio::Virtqueue::Desc::len](#).

Here is the call graph for this function:

#### 15.401.2.7 `load_desc()` [3/3]

```

template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Virtqueue::Desc const ** table ) const [inline]
  
```

Default implementation for loading an indirect descriptor.

##### Parameters

	<i>desc</i>	The descriptor to load
	<i>p</i>	The request processor calling us
out	<i>table</i>	Shall be set to the loaded descriptor table

##### Exceptions

<a href="#">Bad_descriptor</a>	The descriptor address could not be translated.
--------------------------------	---

Definition at line 717 of file [l4virtio](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Svr::Bad\\_descriptor::Bad\\_address](#), [L4virtio::Svr::Driver\\_mem\\_list\\_t< DATA >::find](#), [L4virtio::Ptr< T >::get\(\)](#), [L4\\_UNLIKELY](#), and [L4virtio::Virtqueue::Desc::len](#).

### 15.401.2.8 remove()

```
template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::remove (
    Mem_region const * r ) [inline]
```

Remove the given region from the list.

#### Parameters

<i>r</i>	The region to remove (result from <a href="#">add()</a> , or <a href="#">find()</a> ).
----------	--

Definition at line 683 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), and [L4\\_ERANGE](#).

## 15.402.1 Detailed Description

template<typename DATA>

class L4virtio::Svr::Driver\_mem\_region\_t< DATA >

Region of driver memory, that shall be managed locally.

## Template Parameters

<i>DATA</i>	Class defining additional information
-------------	---------------------------------------

Definition at line 450 of file [l4virtio](#).

## 15.402.2 Constructor & Destructor Documentation

### 15.402.2.1 Driver\_mem\_region\_t()

```
template<typename DATA >
L4virtio::Svr::Driver_mem_region_t< DATA >::Driver_mem_region_t (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds ) [inline]
```

Make a local memory region for the given driver values.

## Parameters

<i>drv_base</i>	Base address of the memory region used by the driver.
<i>size</i>	Size of the memory region.
<i>offset</i>	Offset within the data space that is mapped to <i>drv_base</i> within the driver.
<i>ds</i>	Data space capability backing the memory.

This constructor attaches the region of given data space to the local address space and stores the corresponding data for later reference.

Definition at line 498 of file [l4virtio](#).

`bool next (DESC_MAN *dm, ARGS... args)`  
*Switch to the next descriptor in a descriptor chain.*

### 15.403.1 Detailed Description

Encapsulate the state for processing a VIRTIO request.

A VIRTIO request is a possibly chained list of descriptors retrieved from the available ring of a virtqueue, using [Virtqueue::next\\_avail\(\)](#).

The descriptor processing depends on helper (DESC\_MAN) for interpreting the descriptors in the context of the device implementation.

DESC\_MAN has to provide the functionality to safely dereference a descriptor from a descriptor list.

The following methods must be provided by DESC\_MAN:

- `DESC_MAN::load_desc(Virtqueue::Desc const &desc,`  
`Request_processor const *proc,`  
`Virtqueue::Desc const **table)`

This function is used to dereference `desc` as an indirect descriptor table, and must return a pointer to an indirect descriptor table.

- `DESC_MAN::load_desc(Virtqueue::Desc const &desc,`  
`Request_processor const *proc, ...)`

This function is used to dereference a descriptor as a normal data buffer, and '...' are the arguments that are passed to [start\(\)](#) and [next\(\)](#).

Definition at line 453 of file [virtio](#).

## 15.403.2 Member Function Documentation

### 15.403.2.1 current\_flags()

```
Virtqueue::Desc::Flags L4virtio::Svr::Request_processor::current_flags ( ) const [inline]
```

Get the flags of the currently processed descriptor.

#### Returns

The flags of the currently processed descriptor.

Definition at line 526 of file [virtio](#).

References [L4virtio::Virtqueue::Desc::flags](#).

### 15.403.2.2 has\_more()

```
bool L4virtio::Svr::Request_processor::has_more ( ) const [inline]
```

Are there more chained descriptors?

#### Returns

true if there are more chained descriptors in the current request.

Definition at line 534 of file [virtio](#).

Here is the caller graph for this function:

### 15.403.2.3 next()

```

template<typename DESC_MAN , typename ... ARGS>
bool L4virtio::Svr::Request_processor::next (
    DESC_MAN * dm,
    ARGS... args ) [inline]
  
```

Switch to the next descriptor in a descriptor chain.

#### Template Parameters

<i>DESC_MAN</i>	Type of descriptor manager (implicit).
-----------------	--

#### Parameters

<i>dm</i>	Descriptor manager that is used to translate VIRTIO descriptor addresses.
<i>args</i>	Extra arguments passed to <code>dm-&gt;load_desc()</code>

#### Return values

<i>true</i>	A next descriptor is available.
<i>false</i>	No descriptor available.

#### Exceptions

<a href="#">Bad_descriptor</a>	The <code>next</code> index of this descriptor is invalid.
--------------------------------	--

Definition at line 551 of file [virtio](#).

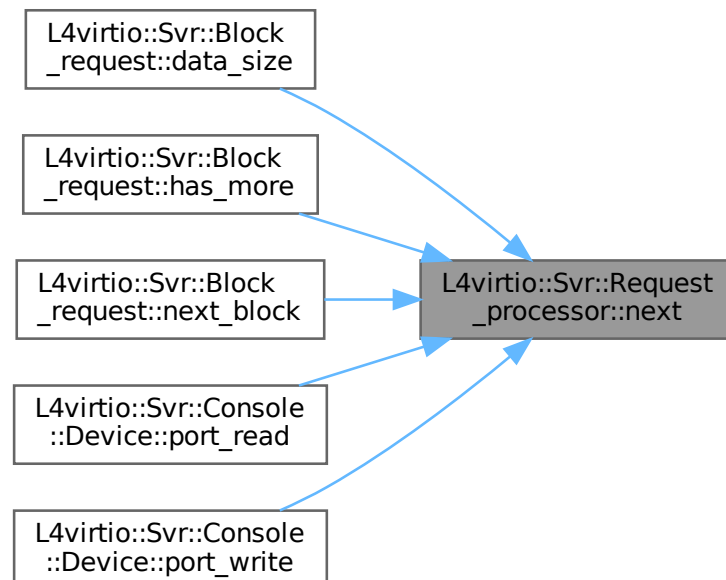

References [cxx::access\\_once\(\)](#), [L4virtio::Svr::Bad\\_descriptor::Bad\\_flags](#), [L4virtio::Svr::Bad\\_descriptor::Bad\\_next](#), [L4virtio::Virtqueue::Desc::flags](#), [L4virtio::Virtqueue::Desc::Flags::indirect\(\)](#), [L4\\_UNLIKELY](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), and [L4virtio::Virtqueue::Desc::next](#).

Virtqueue::Request const & L4virtio::Svr::Request_processor::start (
    DESC_MAN * dm,
    Virtqueue::Request const & request,
    ARGS... args ) [inline]
  
```

Start processing a new request.

## Template Parameters

<i>DESC_MAN</i>	Type of descriptor manager (implicit).
-----------------	--

## Parameters

<i>dm</i>	Descriptor manager that is used to translate VIRTIO descriptor addresses.
<i>request</i>	VIRTIO request from <a href="#">Virtqueue::next_avail()</a>
<i>args</i>	Extra arguments passed to <code>dm-&gt;load_desc()</code>

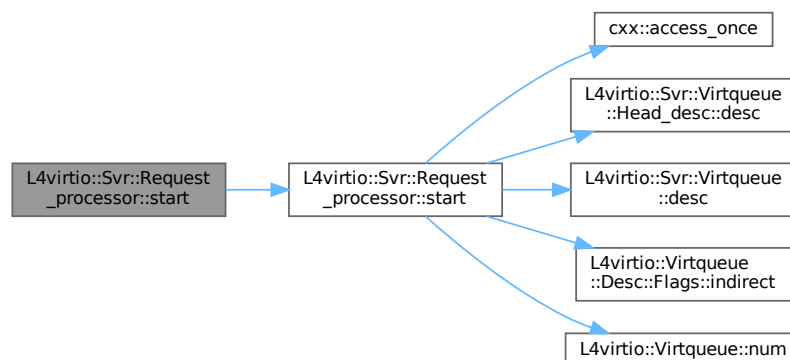

## Precondition

The given request must be valid.

Definition at line 515 of file [virtio](#).

References [start\(\)](#).

*Memory region list.*

## 15.412.1 Detailed Description

A server implementation of the virtio-scmi protocol.

Use this class as a base to implement your own specific SCMI device.

SCMI defines multiple protocols which can be optionally handled. This server implementation is flexible enough to handle any combination of them. The user of this server has to deviate from the provided [Proto](#) classes (for the protocols he want to handle) and needs to implement the required callbacks.

Right now, support for the base and the performance protocol is provided.

The base protocol is mandatory.

If you want to use this from a Uvmm Linux guest, the device tree needs to look something like this:

```
firmware {
    scmi {
        compatible = "arm,scmi-virtio";

        #address-cells = <1>;
        #size-cells = <0>;

        // ... supported protocols ...
    };
};
```

Definition at line 336 of file [virtio-scmi-device](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/server/virtio-scmi-device

## 15.413 L4virtio::Svr::Scmi::Scmi\_hdr\_t Struct Reference

SCMI header.

```
#include <virtio-scmi-device>
```

Collaboration diagram for L4virtio::Svr::Scmi::Scmi\_hdr\_t:

*mask used for indexing into the descriptor table and the rings.*

## 15.414.1 Detailed Description

[Virtqueue](#) implementation for the device.

This class represents a single virtqueue, with a local running available index.

#### Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 87 of file [virtio](#).

## 15.414.2 Member Function Documentation

### 15.414.2.1 consumed() [1/2]

```
void L4virtio::Svr::Virtqueue::consumed (
    Head_desc const & r,
    14_uint32_t len = 0 ) [inline]
```

Put the given descriptor into the used ring.

#### Parameters

<i>r</i>	Request that shall be marked as finished.
<i>len</i>	The total number of bytes written.

#### Precondition

queue must be in working state.

*r* must be a valid request from this queue.

Definition at line 171 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Used::idx](#), and [L4virtio::Virtqueue::Used::ring](#).

Referenced by [finish\(\)](#), [finish\(\)](#), and [L4virtio::Svr::Console::Virtio\\_con::handle\\_control\\_message\(\)](#).

Here is the caller graph for this function:

### 15.414.2.2 consumed() [2/2]

```
template<typename ITER >
void L4virtio::Svr::Virtqueue::consumed (
    ITER const & begin,
    ITER const & end ) [inline]
```

Put multiple descriptors into the used ring.

A range of descriptors, specified by *begin* and *end* iterators is added. Each iterator points to a struct that has a *first* member that is a [Head\\_desc](#) and a *second* member that is the corresponding number of bytes written.

## Template Parameters

<i>ITER</i>	The type of the iterator (inferred).
-------------	--------------------------------------

## Parameters

<i>begin</i>	Iterator pointing to first new descriptor.
<i>end</i>	Iterator pointing to one past last entry.

## Precondition

queue must be in working state.

Definition at line 194 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#), [L4virtio::Virtqueue::\\_idx\\_mask](#), [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Used::idx](#), and [L4virtio::Virtqueue::Used::ring](#).

## 15.414.2.3 desc()

```
Desc const * L4virtio::Svr::Virtqueue::desc (
    unsigned idx ) const [inline]
```

Get a descriptor from the descriptor list.

## Parameters

<i>idx</i>	The index of the descriptor.
------------	------------------------------

## Precondition

$idx < num$

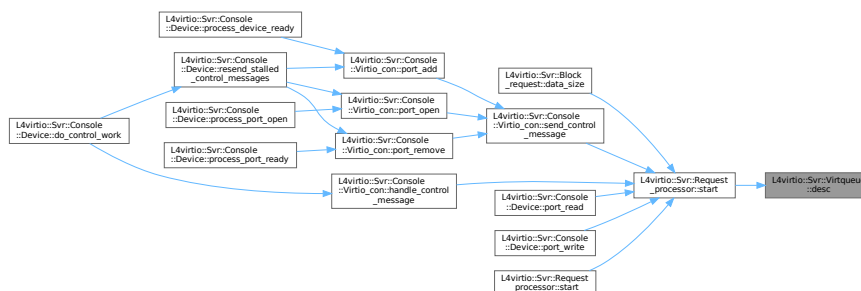

queue must be in working state

Definition at line 279 of file [virtio](#).

References [L4virtio::Virtqueue::\\_desc](#).

Referenced by [L4virtio::Svr::Request\\_processor::start\(\)](#).

Here is the caller graph for this function:

#### 15.414.2.4 desc\_avail()

```
bool L4virtio::Svr::Virtqueue::desc_avail ( ) const [inline]
```

Test for available descriptors.

##### Returns

true if there are descriptors available, false if not.

##### Precondition

The queue must be in working state.

Definition at line 156 of file [virtio](#).

References [L4virtio::Virtqueue::\\_avail](#), [L4virtio::Virtqueue::\\_current\\_avail](#), and [L4virtio::Virtqueue::Avail::idx](#).

#### 15.414.2.5 disable\_notify()

```
void L4virtio::Svr::Virtqueue::disable_notify ( ) [inline]
```

Set the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 254 of file [virtio](#).

References [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Used::flags](#), [L4\\_LIKELY](#), [L4virtio::Virtqueue::Used::Flags::no\\_notify\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

### 15.414.2.6 enable\_notify()

```
void L4virtio::Svr::Virtqueue::enable_notify ( ) [inline]
```

Clear the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 265 of file [virtio](#).

References [L4virtio::Virtqueue::\\_used](#), [L4virtio::Virtqueue::Used::flags](#), [L4\\_LIKELY](#), [L4virtio::Virtqueue::Used::Flags::no\\_notify\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

### 15.414.2.7 finish() [1/2]

```
template<typename QUEUE_OBSERVER >
void L4virtio::Svr::Virtqueue::finish (
    Head_desc & d,
    QUEUE_OBSERVER * o,
    14_uint32_t len = 0 ) [inline]
```

Add a descriptor to the used ring, and notify an observer.

#### Template Parameters

<code>QUEUE_OBSERVER</code>	The type of the observer (inferred).
-----------------------------	--------------------------------------

#### Parameters

<code>d</code>	descriptor of the request that is to be marked as finished.
<code>o</code>	Pointer to the observer that is notified.
<code>len</code>	Number of bytes written for this request.

**Precondition**

- queue must be in working state.
- d must be a valid request from this queue.

Definition at line 221 of file [virtio](#).

References [consumed\(\)](#).

Referenced by [L4virtio::Svr::Console::Device::port\\_read\(\)](#), [L4virtio::Svr::Console::Device::port\\_write\(\)](#), and [L4virtio::Svr::Console::Virtio\\_con::send\\_control\\_message\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**15.414.2.8 finish() [2/2]**

```

template<typename ITER , typename QUEUE_OBSERVER >
void L4virtio::Svr::Virtqueue::finish (
    ITER const & begin,
    ITER const & end,
    QUEUE_OBSERVER * o ) [inline]
  
```

Add a range of descriptors to the used ring, and notify an observer once.

The iterators are passed to [consumed<ITER>\(ITER const &, ITER const &\)](#), and the requirements detailed there apply.

**Template Parameters**

<i>ITER</i>	type of the iterator (inferred)
<i>QUEUE_OBSERVER</i>	the type of the observer (inferred).

**Parameters**

<i>begin</i>	iterator pointing to first element.
<i>end</i>	iterator pointing to one past last element.
<i>o</i>	pointer to the observer that is notified.

**Precondition**

queue must be in working state.

Definition at line 243 of file [virtio](#).

References [consumed\(\)](#).

Here is the call graph for this function:

**15.414.2.9 next\_avail()**

```
Request L4virtio::Svr::Virtqueue::next_avail ( ) [inline]
```

Get the next available descriptor from the available ring.

**Precondition**

The queue must be in working state.

**Returns**

A Request for the next available descriptor, the Request is invalid if there are no descriptors in the available ring.

### 15.415.2.3 valid()

```
bool L4virtio::Svr::Virtqueue::Head_desc::valid ( ) const [inline]
```

#### Returns

True if the request is valid (not NULL).

Definition at line 107 of file [virtio](#).

The documentation for this class was generated from the following file:

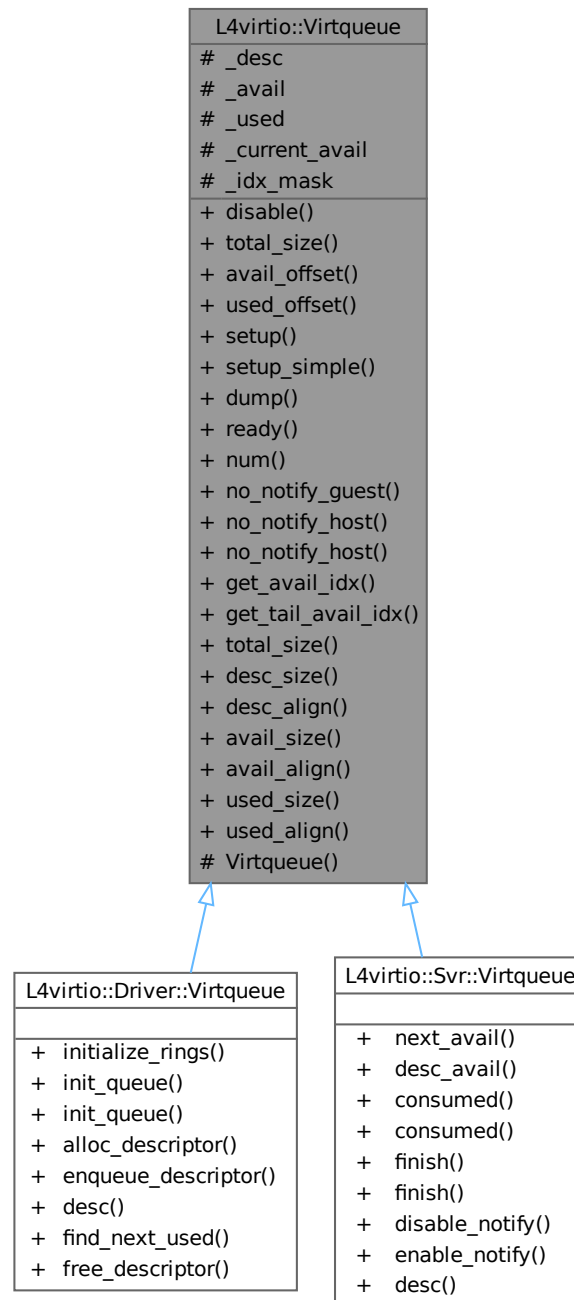

- l4/l4virtio/server/virtio

## 15.416.1 Detailed Description

Low-level [Virtqueue](#).

This class represents a single virtqueue, with a local running available index.

### Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 87 of file [virtqueue](#).

## 15.416.2 Member Function Documentation

### 15.416.2.1 `avail_align()`

```
static unsigned long L4virtio::Virtqueue::avail_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the available ring.

### Returns

The alignment in zero LSBs needed for an available ring.

Definition at line 293 of file [virtqueue](#).

### 15.416.2.2 `avail_size()`

```
static unsigned long L4virtio::Virtqueue::avail_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the available ring for `num` entries.

## Parameters

<i>num</i>	The number of entries in the available ring.
------------	--

## Returns

The size in bytes needed for an available ring with *num* entries.

Definition at line 285 of file [virtqueue](#).

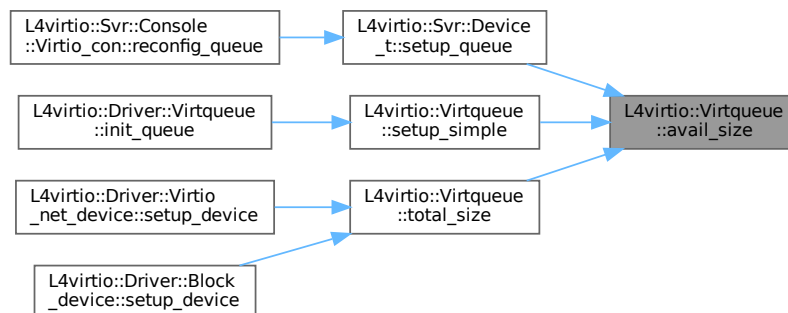

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::setup\\_queue\(\)](#), [setup\\_simple\(\)](#), and [total\\_size\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.416.2.3 desc\_align()

```
static unsigned long L4virtio::Virtqueue::desc_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the descriptor table.

## Returns

The alignment in zero LSBs needed for a descriptor table.

Definition at line 275 of file [virtqueue](#).

### 15.416.2.4 desc\_size()

```
static unsigned long L4virtio::Virtqueue::desc_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the descriptor table for `num` entries.

#### Parameters

<i>num</i>	The number of entries in the descriptor table.
------------	--

#### Returns

The size in bytes needed for a descriptor table with `num` entries.

Definition at line 267 of file [virtqueue](#).

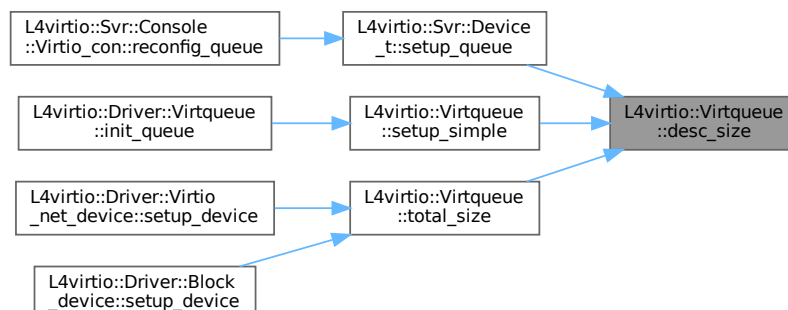

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::setup\\_queue\(\)](#), [setup\\_simple\(\)](#), and [total\\_size\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

### 15.416.2.5 disable()

```
void L4virtio::Virtqueue::disable ( ) [inline]
```

Completely disable the queue.

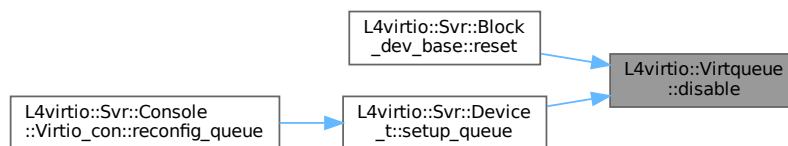

[setup\(\)](#) must be used to enable the queue again.

Definition at line 230 of file [virtqueue](#).

References [\\_desc](#).

Referenced by [L4virtio::Svr::Block\\_dev\\_base< Ds\\_data >::reset\(\)](#), and [L4virtio::Svr::Device\\_t< DATA >::setup\\_queue\(\)](#).

Here is the caller graph for this function:

### 15.416.2.6 dump()

```
void L4virtio::Virtqueue::dump (
    Desc const * d ) const [inline]
```

Dump descriptors for this queue.

#### Precondition

the queue must be in working state.

Definition at line 398 of file [virtqueue](#).

References [\\_desc](#), and [L4virtio::Virtqueue::Desc::dump\(\)](#).

Here is the call graph for this function:

### 15.416.2.7 get\_avail\_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_avail_idx ( ) const [inline]
```

Get available index from available ring (for debugging).

#### Precondition

Queue must be in a working state.

#### Returns

current index in the available ring (shared between device model and device driver).

Definition at line 455 of file [virtqueue](#).

References [\\_avail](#), and [L4virtio::Virtqueue::Avail::idx](#).

### 15.416.2.8 get\_tail\_avail\_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_tail_avail_idx ( ) const [inline]
```

Get tail-available index stored in local state (for debugging).

#### Returns

current tail index for the the available ring.

Definition at line 462 of file [virtqueue](#).

References [\\_current\\_avail](#).

### 15.416.2.9 no\_notify\_guest()

```
bool L4virtio::Virtqueue::no_notify_guest ( ) const [inline]
```

Get the no IRQ flag of this queue.

#### Precondition

queue must be in working state.

**Returns**

true if the guest does not want to get IRQs (currently).

Definition at line 420 of file [virtqueue](#).

References [\\_avail](#), [L4virtio::Virtqueue::Avail::flags](#), and [L4virtio::Virtqueue::Avail::Flags::no\\_irq\(\)](#).

## 15.416.2.14 setup()

```

void L4virtio::Virtqueue::setup (
    unsigned num,
    void * desc,
    void * avail,
    void * used ) [inline]

```

Enable this queue.

## Parameters

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>desc</i>	The address of the descriptor table. (Must be Desc_align aligned and at least desc_size (num) bytes in size.)
<i>avail</i>	The address of the available ring. (Must be Avail_align aligned and at least avail_size (num) bytes in size.)
<i>used</i>	The address of the used ring. (Must be Used_align aligned and at least used_size (num) bytes in size.)

Due to the data type of the descriptors, the queue can have a maximum size of  $2^{16}$ .

Definition at line 355 of file [virtqueue](#).

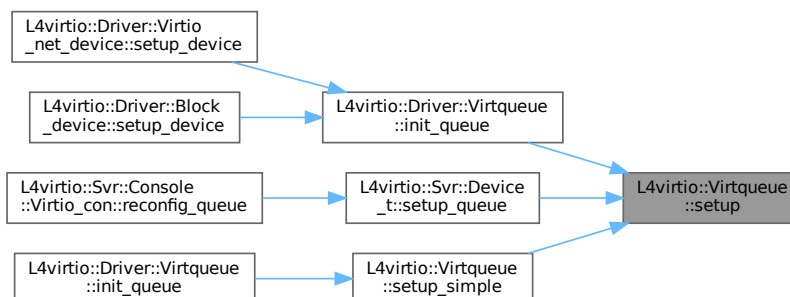

References [\\_avail](#), [\\_current\\_avail](#), [\\_desc](#), [\\_idx\\_mask](#), [\\_used](#), [L4\\_EINVAL](#), and [num\(\)](#).

Here is the caller graph for this function:

### 15.416.2.15 setup\_simple()

```
void L4virtio::Virtqueue::setup_simple (
    unsigned num,
    void * ring ) [inline]
```

Enable this queue.

#### Parameters

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
<i>ring</i>	The base address for the queue data structure. The memory block at <code>ring</code> must be at least <code>total_size(num)</code> bytes in size and have an alignment of <code>Desc_align(desc_align())</code> bits.

Due to the data type of the descriptors, the queue can have a maximum size of  $2^{16}$ .

Definition at line 384 of file [virtqueue](#).

References [avail\\_size\(\)](#), [desc\\_size\(\)](#), [l4\\_round\\_size\(\)](#), [num\(\)](#), and [setup\(\)](#).

Here is the caller graph for this function:

#### 15.416.2.16 total\_size() [1/2]

```
unsigned long L4virtio::Virtqueue::total_size ( ) const [inline]
```

Calculate the total size of this virtqueue.

**Precondition**

The queue has been set up.

Definition at line 320 of file [virtqueue](#).

References [\\_desc](#), [\\_used](#), [num\(\)](#), and [used\\_size\(\)](#).

Here is the call graph for this function:

**15.416.2.17 total\_size() [2/2]**

```
static unsigned long L4virtio::Virtqueue::total_size (
    unsigned num ) [inline], [static]
```

Calculate the total size for a virtqueue of the given dimensions.

**Parameters**

<i>num</i>	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
------------	--

**Returns**

The total size in bytes of the queue data structures.

Definition at line 251 of file [virtqueue](#).

References [avail\\_size\(\)](#), [desc\\_size\(\)](#), [l4\\_round\\_size\(\)](#), [num\(\)](#), and [used\\_size\(\)](#).

Here is the caller graph for this function:

### 15.416.2.18 used\_align()

```
static unsigned long L4virtio::Virtqueue::used_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the used ring.

#### Returns

The alignment in zero LSBs needed for an used ring.

Definition at line 312 of file [virtqueue](#).

### 15.416.2.19 used\_size()

```
static unsigned long L4virtio::Virtqueue::used_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the used ring for `num` entries.

## Parameters

<i>num</i>	The number of entries in the used ring.
------------	---

## Returns

The size in bytes needed for an used ring with *num* entries.

Definition at line 304 of file [virtqueue](#).

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device\\_t< DATA >::setup\\_queue\(\)](#), [total\\_size\(\)](#), and [total\\_size\(\)](#).

*raw 16bit flags value of the available ring.*

### 15.418.1 Detailed Description

[Flags](#) of the available ring.

Definition at line 141 of file [virtqueue](#).

## 15.418.2 Member Typedef Documentation

### 15.418.2.1 no\_irq\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 0 , 0 > L4virtio::Virtqueue::Avail::Flags::no\_irq\_bfm\_t
```

Guest does not want to receive interrupts when requests are finished.

Type to access the `no_irq` bits ( 0 to 0 ) of `raw`.

Definition at line [150](#) of file [virtqueue](#).

The documentation for this struct was generated from the following file:

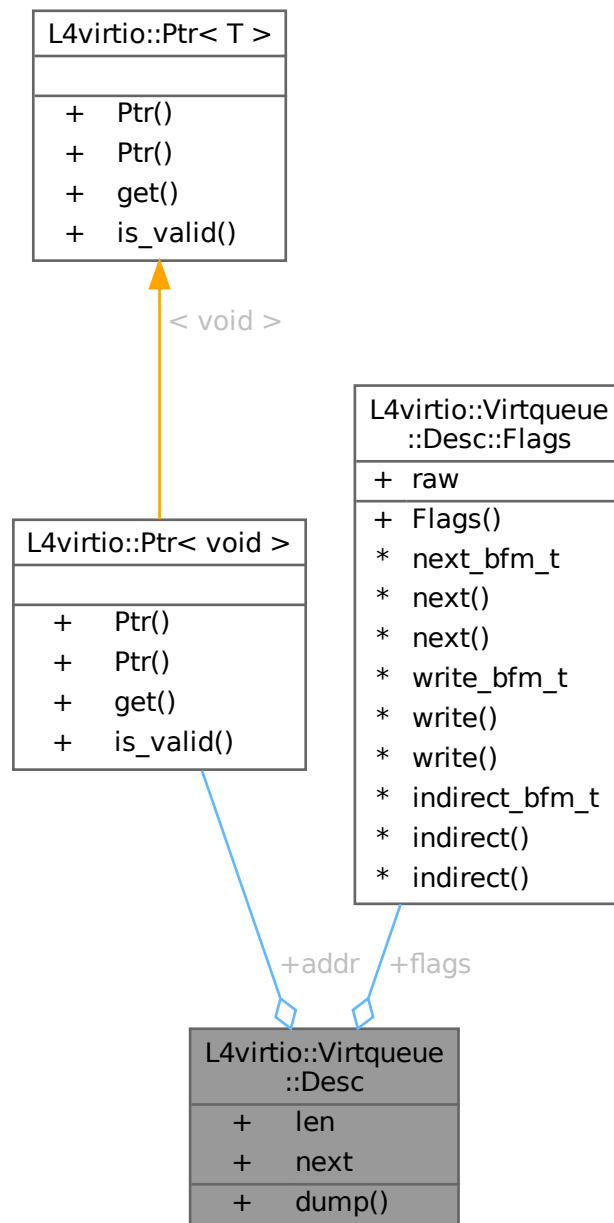

- [l4/l4virtio/virtqueue](#)

## 15.419 L4virtio::Virtqueue::Desc Class Reference

Descriptor in the descriptor table.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Desc:

## Data Structures

- struct [Flags](#)  
*Type for descriptor flags.*

## Public Member Functions

- void **dump** (unsigned idx) const  
*Dump a single descriptor.*

## Data Fields

- [Ptr](#)< void > **addr**  
*Address stored in descriptor.*
- [l4\\_uint32\\_t](#) **len**  
*Length of described buffer.*
- [Flags](#) **flags**  
*Descriptor flags.*
- [l4\\_uint16\\_t](#) **next**  
*Index of the next chained descriptor.*

### 15.419.1 Detailed Description

Descriptor in the descriptor table.

Definition at line 93 of file [virtqueue](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/virtqueue

## 15.420 L4virtio::Virtqueue::Desc::Flags Struct Reference

Type for descriptor flags.

```
#include <virtqueue>
```

*Make [Flags](#) from raw 16bit value.*

## Data Fields

- [l4\\_uint16\\_t](#) raw  
*raw flags value of a virtio descriptor.*

### 15.420.1 Detailed Description

Type for descriptor flags.

Definition at line 99 of file [virtqueue](#).

### 15.420.2 Member Typedef Documentation

#### 15.420.2.1 indirect\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 2 , 2 > L4virtio::Virtqueue::Desc::Flags::indirect\_bfm\_t
```

Indirect descriptor, block contains a list of descriptors.

Type to access the `indirect` bits ( 2 to 2 ) of `raw`.

Definition at line 112 of file [virtqueue](#).

#### 15.420.2.2 next\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 0 , 0 > L4virtio::Virtqueue::Desc::Flags::next\_bfm\_t
```

Part of a descriptor chain which is continued with the next field.

Type to access the `next` bits ( 0 to 0 ) of `raw`.

Definition at line 108 of file [virtqueue](#).

#### 15.420.2.3 write\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 1 , 1 > L4virtio::Virtqueue::Desc::Flags::write\_bfm\_t
```

Block described by this descriptor is writeable.

Type to access the `write` bits ( 1 to 1 ) of `raw`.

Definition at line 110 of file [virtqueue](#).

The documentation for this struct was generated from the following file:

- `l4/l4virtio/virtqueue`

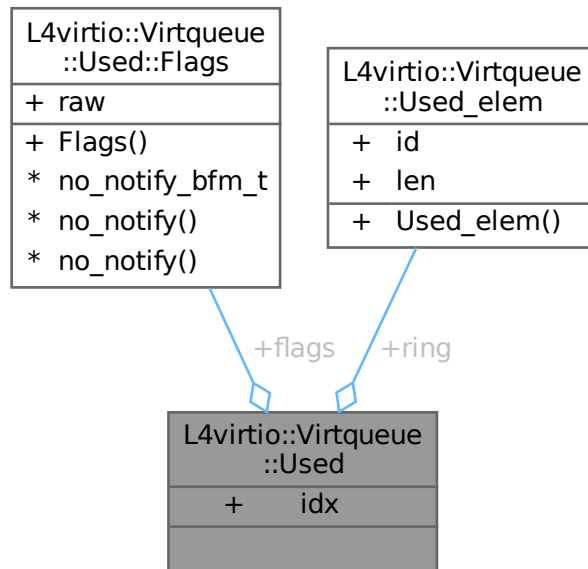

## 15.421 L4virtio::Virtqueue::Used Class Reference

Used ring.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Used:

### Data Structures

- struct [Flags](#)  
*flags for the used ring.*

### Data Fields

- [Flags](#) **flags**  
*flags of the used ring.*
- [l4\\_uint16\\_t](#) **idx**  
*index of the last entry in the ring.*
- [Used\\_elem](#) **ring** []  
*array of used descriptors.*

### 15.421.1 Detailed Description

Used ring.

Definition at line 180 of file [virtqueue](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/virtqueue

## 15.422 L4virtio::Virtqueue::Used::Flags Struct Reference

flags for the used ring.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Used::Flags:

L4virtio::Virtqueue ::Used::Flags
+ raw
+ Flags()
* no_notify_bfm_t
* no_notify()
* no_notify()

### Public Member Functions

- **Flags** ([l4\\_uint16\\_t](#) v)  
*make [Flags](#) from raw value*

### Data Fields

- [l4\\_uint16\\_t](#) raw  
*raw flags value as specified by virtio.*

### 15.422.1 Detailed Description

flags for the used ring.

Definition at line 186 of file [virtqueue](#).

### 15.422.2 Member Typedef Documentation

#### 15.422.2.1 no\_notify\_bfm\_t

```
typedef cxx::Bitfield<decltype( raw ), 0 , 0 > L4virtio::Virtqueue::Used::Flags::no\_notify\_bfm\_t
```

host does not want to be notified when new requests have been queued.

Type to access the no\_notify bits ( 0 to 0 ) of raw.

Definition at line 195 of file [virtqueue](#).

The documentation for this struct was generated from the following file:

- [l4/l4virtio/virtqueue](#)

## 15.423 L4virtio::Virtqueue::Used\_elem Struct Reference

Type of an element of the used ring.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Used\_elem:

L4virtio::Virtqueue ::Used_elem
+ id
+ len
+ Used_elem()

### Public Member Functions

- [Used\\_elem](#) ([l4\\_uint16\\_t](#) id, [l4\\_uint32\\_t](#) len)  
*Initialize a used ring element.*

### Data Fields

- [l4\\_uint32\\_t](#) id  
*descriptor index*
- [l4\\_uint32\\_t](#) len  
*length field*

### 15.423.1 Detailed Description

Type of an element of the used ring.

Definition at line 161 of file [virtqueue](#).

### 15.423.2 Constructor & Destructor Documentation

#### 15.423.2.1 Used\_elem()

```
L4virtio::Virtqueue::Used_elem::Used_elem (
    l4\_uint16\_t id,
    l4\_uint32\_t len ) [inline]
```

Initialize a used ring element.

## Parameters

<i>id</i>	The index of the descriptor to be marked as used.
<i>len</i>	The total bytes written into the buffer of the descriptor chain.

Definition at line 172 of file [virtqueue](#).

The documentation for this struct was generated from the following file:

- I4/I4virtio/virtqueue

## 15.424 I4virtio\_block\_config\_t Struct Reference

Device configuration for block devices.

```
#include <virtio_block.h>
```

Collaboration diagram for I4virtio\_block\_config\_t:

I4virtio_block_config_t	
+	capacity
+	size_max
+	seg_max
+	blk_size

## Data Fields

- [I4\\_uint64\\_t](#) **capacity**  
*Capacity of device in 512-byte sectors.*
- [I4\\_uint32\\_t](#) **size\_max**  
*Maximum size of a single segment.*
- [I4\\_uint32\\_t](#) **seg\_max**  
*Maximum number of segments per request.*
- [I4\\_uint32\\_t](#) **blk\_size**  
*Block size of underlying disk.*

### 15.424.1 Detailed Description

Device configuration for block devices.

Definition at line 68 of file [virtio\\_block.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_block.h

## 15.425 l4virtio\_block\_discard\_t Struct Reference

Structure used for the write zeroes and discard commands.

```
#include <virtio_block.h>
```

Collaboration diagram for l4virtio\_block\_discard\_t:

### 15.425.1 Detailed Description

Structure used for the write zeroes and discard commands.

Definition at line 58 of file [virtio\\_block.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_block.h

## 15.426 l4virtio\_block\_header\_t Struct Reference

Header structure of a request for a block device.

```
#include <virtio_block.h>
```

Collaboration diagram for l4virtio\_block\_header\_t:

l4virtio_block_header_t	
+	type
+	ioprio
+	sector

### Data Fields

- [l4\\_uint32\\_t](#) **type**  
*Kind of request, see L4virtio\_block\_operations.*
- [l4\\_uint32\\_t](#) **ioprio**  
*Priority (unused)*
- [l4\\_uint64\\_t](#) **sector**  
*First sector to read/write.*

### 15.426.1 Detailed Description

Header structure of a request for a block device.

Definition at line 42 of file [virtio\\_block.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_block.h

## 15.427 l4virtio\_config\_hdr\_t Struct Reference

L4-VIRTIO config header, provided in shared data space.

```
#include <virtio.h>
```

Inherited by L4virtio::Device::Config\_hdr.

Collaboration diagram for l4virtio\_config\_hdr\_t:

l4virtio_config_hdr_t
+ magic
+ version
+ device
+ vendor
+ dev_features
+ num_queues
+ queues_offset

### Data Fields

- [l4\\_uint32\\_t](#) **magic**  
*magic value (must be 'virt').*
- [l4\\_uint32\\_t](#) **version**  
*VIRTIO version.*
- [l4\\_uint32\\_t](#) **device**  
*device ID*
- [l4\\_uint32\\_t](#) **vendor**  
*vendor ID*
- [l4\\_uint32\\_t](#) **dev\_features**  
*device features windows selected by device\_feature\_sel*
- [l4\\_uint32\\_t](#) **num\_queues**  
*number of virtqueues*
- [l4\\_uint32\\_t](#) **queues\_offset**  
*offset of virtqueue config array*

### 15.427.1 Detailed Description

L4-VIRTIO config header, provided in shared data space.

Definition at line 129 of file [virtio.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio.h

## 15.428 l4virtio\_config\_queue\_t Struct Reference

Queue configuration entry.

```
#include <virtio.h>
```

Collaboration diagram for l4virtio\_config\_queue\_t:

l4virtio_config_queue_t
+ num_max
+ num
+ ready
+ driver_notify_index
+ desc_addr
+ avail_addr
+ used_addr
+ device_notify_index

### Data Fields

- [l4\\_uint16\\_t](#) **num\_max**  
*R: maximum number of descriptors supported by this queue.*
- [l4\\_uint16\\_t](#) **num**  
*RW: number of descriptors configured for this queue.*
- [l4\\_uint16\\_t](#) **ready**  
*RW: queue ready flag (read-write)*
- [l4\\_uint16\\_t](#) **driver\_notify\_index**  
*W: Event index to be used for device notifications (device to driver)*
- [l4\\_uint64\\_t](#) **desc\_addr**  
*W: address of descriptor table.*
- [l4\\_uint64\\_t](#) **avail\_addr**  
*W: address of available ring.*
- [l4\\_uint64\\_t](#) **used\_addr**  
*W: address of used ring.*
- [l4\\_uint16\\_t](#) **device\_notify\_index**  
*R: Event index to be used by the driver (driver to device)*

### 15.428.1 Detailed Description

Queue configuration entry.

An array of such entries is available at the [l4virtio\\_config\\_hdr\\_t::queues\\_offset](#) in the config data space.

Consistency rules for the queue config are:

- A driver might read `num_max` at any time.
- A driver must write to `num`, `desc_addr`, `avail_addr`, and `used_addr` only when `ready` is zero (0). Values in these fields are validated and used by the device only after successfully setting `ready` to one (1), either by the IPC or by `L4VIRTIO_CMD_CFG_QUEUE`.
- The value of `device_notify_index` is valid only when `ready` is one.
- The driver might write to `device_notify_index` at any time, however the change is guaranteed to take effect after a successful `L4VIRTIO_CMD_CFG_QUEUE` or after a `config_queue` IPC. Note, the change might also have immediate effect, depending on the device implementation.

Definition at line 220 of file [virtio.h](#).

The documentation for this struct was generated from the following file:

- `l4/l4virtio/virtio.h`

## 15.429 l4virtio\_input\_absinfo\_t Struct Reference

Information about the absolute axis in the underlying evdev implementation.

```
#include <virtio_input.h>
```

Collaboration diagram for `l4virtio_input_absinfo_t`:

### 15.429.1 Detailed Description

Information about the absolute axis in the underlying evdev implementation.

Definition at line 33 of file [virtio\\_input.h](#).

The documentation for this struct was generated from the following file:

```

Collaboration diagram for l4virtio\_input\_config\_t:

### 15.430.1 Detailed Description

Device configuration for input devices.

Definition at line 56 of file [virtio\\_input.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_input.h

## 15.431 l4virtio\_input\_devids\_t Struct Reference

Device ID information for the device.

```
#include <virtio_input.h>
```

Collaboration diagram for l4virtio\_input\_devids\_t:

### 15.431.1 Detailed Description

Device ID information for the device.

Definition at line 45 of file [virtio\\_input.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_input.h

## 15.432 l4virtio\_input\_event\_t Struct Reference

Single event in event or status queue.

```
#include <virtio_input.h>
```

Collaboration diagram for l4virtio\_input\_event\_t:

### 15.432.1 Detailed Description

Single event in event or status queue.

Definition at line 74 of file [virtio\\_input.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_input.h

## 15.433 l4virtio\_net\_config\_t Struct Reference

Device configuration for network devices.

```
#include <virtio_net.h>
```

Collaboration diagram for l4virtio\_net\_config\_t:

### 15.433.1 Detailed Description

Device configuration for network devices.

Definition at line 34 of file [virtio\\_net.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_net.h

## 15.434 l4virtio\_net\_header\_t Struct Reference

Header structure of a request for a network device.

```
#include <virtio_net.h>
```

Collaboration diagram for l4virtio\_net\_header\_t:

### 15.434.1 Detailed Description

Header structure of a request for a network device.

Definition at line 20 of file [virtio\\_net.h](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/virtio\_net.h

## 16.56.1 Detailed Description

Segment handling.

Definition in file [segment.h](#).

## 16.56.2 Enumeration Type Documentation

### 16.56.2.1 L4\_sys\_segment

```
enum L4_sys_segment
```

Constants for identifying segments.

Enumerator

L4_AMD64_SEGMENT_FS	Constant identifying the FS segment.
L4_AMD64_SEGMENT_GS	Constant identifying the GS segment.

Definition at line 117 of file [segment.h](#).

### 16.56.2.2 L4\_task\_ldt\_x86\_consts

```
enum L4_task_ldt_x86_consts
```

Constants for LDT handling.

Enumerator

L4_TASK_LDT_X86_ENTRY_SIZE	Size of an LDT entry.
L4_TASK_LDT_X86_MAX_ENTRIES	Maximum number of LDT entries that can be written with one call.

Definition at line 86 of file [segment.h](#).

## 16.56.3 Function Documentation

### 16.56.3.1 fiasco\_amd64\_segment\_info()

```
long fiasco_amd64_segment_info (  
    l4_cap_idx_t thread,  
    unsigned * user_ds,  
    unsigned * user_cs,  
    unsigned * user32_cs,  
    l4_utcb_t * utcb ) [inline]
```

Get segment information.

## Parameters

in	<i>thread</i>	Thread to get info from.
out	<i>user_ds</i>	DS segment selector.
out	<i>user_cs</i>	64-bit CS segment selector.
out	<i>user32_cs</i>	32-bit CS segment selector.
	<i>utcb</i>	UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> .

## Returns

System call error

Definition at line 186 of file [segment.h](#).

References [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), [L4\\_THREAD\\_AMD64\\_GET\\_SEGMENT\\_INFO\\_OP](#), and [l4\\_msg\\_regs\\_t::mr](#).

Here is the call graph for this function:

## 16.56.3.2 fiasco\_amd64\_set\_fs()

```

long fiasco_amd64_set_fs (
    l4_cap_idx_t thread,
    l4_umword_t base,
    l4_utcb_t * utcb ) [inline]

```

Set the base address for the FS segment.

## Parameters

<i>thread</i>	Thread for which the FS base address shall be modified.
<i>base</i>	Base address.
<i>utcb</i>	UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> .

## Return values

<i>L4_EOK</i>	Success.
<i>-L4_EINVAL</i>	Invalid base address ( <i>base</i> ).
<i>-L4_ENOSYS</i>	Operation not supported with current kernel configuration.

## Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↔AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 35 of file [segment.h](#).

References [L4\\_AMD64\\_SEGMENT\\_FS](#), [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), [L4\\_THREAD\\_AMD64\\_SET\\_SEGMENT\\_BASE\\_OP](#), and [l4\\_msg\\_regs\\_t::mr](#).

Here is the call graph for this function:

### 16.56.3.3 fiasco\_amd64\_set\_segment\_base()

```

long fiasco_amd64_set_segment_base (
    l4_cap_idx_t thread,
    enum L4_sys_segment segr,
    l4_umword_t base,
    l4_utcb_t * utcb ) [inline]
  
```

Set the base address for a segment.

## Parameters

<i>thread</i>	Thread for which the base address of the selected segment shall be modified.
<i>segr</i>	Segment to modify (one of <a href="#">L4_sys_segment</a> ).
<i>base</i>	Base address.
<i>utcb</i>	UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> .

## Return values

<i>L4_EOK</i>	Success.
<i>-L4_EINVAL</i>	Invalid segment ( <i>segr</i> ) or base address ( <i>base</i> ).
<i>-L4_ENOSYS</i>	Operation not supported with current kernel configuration.

Definition at line 43 of file [segment.h](#).

References [l4\\_ipc\\_call\(\)](#), [L4\\_IPC\\_NEVER](#), [l4\\_msgtag\(\)](#), [L4\\_PROTO\\_THREAD](#), [L4\\_THREAD\\_AMD64\\_SET\\_SEGMENT\\_BASE\\_OP](#), and [l4\\_msg\\_regs\\_t::mr](#).

## 16.58.1 Detailed Description

l4f specific fs/gs manipulation

Definition in file [segment.h](#).

## 16.58.2 Function Documentation

### 16.58.2.1 fiasco\_amd64\_set\_fs()

```
long fiasco_amd64_set_fs (
    l4\_cap\_idx\_t thread,
    l4\_umword\_t base,
    l4\_utcb\_t * utcb ) [inline]
```

Set the base address for the FS segment.

## Parameters

<i>thread</i>	Thread for which the FS base address shall be modified.
<i>base</i>	Base address.
<i>utcb</i>	UTCB to be used for this operation, shall be the UTCB of the calling thread. See <a href="#">l4_utcb</a> .

## Return values

<i>L4_EOK</i>	Success.
<i>-L4_EINVAL</i>	Invalid base address ( <i>base</i> ).
<i>-L4_ENOSYS</i>	Operation not supported with current kernel configuration.

## Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↔AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 35 of file [segment.h](#).

- int [l4util\\_ioport\\_map](#) ([l4\\_cap\\_idx\\_t](#) sigma0id, unsigned port\_start, unsigned log2size)  
Map a range of I/O ports.

## 16.70.1 Detailed Description

port I/O functions

Date

06/2003

Author

Frank Mehnert [fm3@os.inf.tu-dresden.de](mailto:fm3@os.inf.tu-dresden.de)

Definition in file [port\\_io.h](#).

## 16.70.2 Function Documentation

### 16.70.2.1 l4util\_ioport\_map()

```
int l4util_ioport_map (
    l4_cap_idx_t sigma0id,
    unsigned port_start,
    unsigned log2size ) [inline]
```

Map a range of I/O ports.

#### Parameters

<i>sigma0id</i>	I/O port service (sigma0).
<i>port_start</i>	(Start) Port to request.
<i>log2size</i>	Log2size of range to request.

#### Returns

IPC result: 0 if the range could be successfully mapped on error: IPC failure, or -L4\_ENOENT if nothing mapped

Include dependency graph for mem_op.h:
```

## Enumerations

- enum `L4_mem_op_widths` { `L4_MEM_WIDTH_1BYTE` = 0 , `L4_MEM_WIDTH_2BYTE` = 1 , `L4_MEM_WIDTH_4BYTE` = 2 }

*Memory access width definitions.*

## Functions

- unsigned long `l4_mem_read` (unsigned long virtaddress, unsigned width)  
*Read user task memory from kernel privilege level.*
- void `l4_mem_write` (unsigned long virtaddress, unsigned width, unsigned long value)  
*Write user task memory from kernel privilege level.*
- unsigned long `l4_mem_arm_op_call` (unsigned long op, unsigned long va, unsigned long width, unsigned long value)  
*Implementations.*

### 16.90.1 Detailed Description

Memory access functions (ARM specific)

#### Date

2010-10

#### Author

Adam Lackorzynski [adam@os.inf.tu-dresden.de](mailto:adam@os.inf.tu-dresden.de)

Definition in file `mem_op.h`.

00019  * Note: The following Assembler statement may produce wrong code:
00020  *   asm volatile ("btsl %1, %2" : "=ccc"(r) : "Jr"(63), "m"(m) : "memory");
00021  *
00022  * The compiler might chose the first variant because the bit number is smaller
00023  * than 64. However, 'bts' is encoded as 32-bit variant ('btsl') and thus only
00024  * supports immediate bit values up to 31. Some assemblers support immediate
00025  * offsets > 31 by adapting the memory address accordingly but GAS does not.

```

```

00026  * With GAS, the instruction will encode an immediate value of 63 but the CPU
00027  * will set bit 31 instead of bit 63!
00028  *
00029  * Therefore, if we would use 'btsl' instead of 'btsq', the correct constraint
00030  * for the bit number parameter would be "Ir" instead of "Jr".

*Request all available IO-port resources.*
- int [l4io\\_has\\_resource](#) (enum [l4io\\_resource\\_types\\_t](#) type, [l4vbus\\_paddr\\_t](#) start, [l4vbus\\_paddr\\_t](#) end)  
*Check if a resource is available.*

## 16.124.1 Function Documentation

### 16.124.1.1 l4io\_get\_root\_device()

```
l4io_device_handle_t l4io_get_root_device (
    void ) [inline]
```

Get root device handle of the device bus.

#### Returns

root device handle

Definition at line 258 of file [io.h](#).

### 16.124.1.2 l4io\_iterate\_devices()

```
int l4io_iterate_devices (
    l4io_device_handle_t * devhandle,
    l4io\_device\_t * dev,
    l4io_resource_handle_t * reshandle )
```

Iterate over the device bus.

#### Parameters

in, out	<i>devhandle</i>	Device handle to start iterating at. The next device handle is returned here.
out	<i>dev</i>	Device information, may be NULL.
out	<i>reshandle</i>	Resource handle.

#### Returns

0 on success, error code otherwise

**16.124.1.3 l4io\_request\_all\_ioports()**

```
void l4io_request_all_ioports (
    void(*) (l4vbus_resource_t const *res) res_cb )
```

Request all available IO-port resources.

**Parameters**

<i>res_cb</i>	Callback function called for every port resource found, give NULL for no callback.
---------------	--

**16.124.1.4 l4io\_request\_icu()**

```
l4_cap_idx_t l4io_request_icu (
    void )
```

Request the ICU object of the client.

**Returns**

Client ICU object, an invalid capability selector is returned if no ICU is available.

**16.125 io.h**

*Test if a capability selector is a valid selector.*
- unsigned `l4_capability_equal` (`l4_cap_idx_t` c1, `l4_cap_idx_t` c2) `L4_NOTHROW`  
*Test if the capability indices of two capability selectors are equal.*
- `l4_cap_idx_t l4_capability_next` (`l4_cap_idx_t` c) `L4_NOTHROW`  
*Get the next capability selector after c.*

## 16.128.1 Detailed Description

Common [L4](#) ABI Data Types.

Definition in file [types.h](#).

## 16.128.2 Function Documentation

### 16.128.2.1 l4\_capability\_next()

```
l4_cap_idx_t l4_capability_next (
    l4_cap_idx_t c ) [inline]
```

Get the next capability selector after *c*.

#### Parameters

<i>c</i>	The capability selector for which the next selector shall be computed.
----------	--

#### Returns

The next capability selector after *c*.

Definition at line [480](#) of file [types.h](#).

### 16.158.1 Detailed Description

Implementation of a list of smart-pointer-managed objects.

Definition in file [smart\\_ptr\\_list.h](#).

## 16.159 smart\_ptr\_list.h

## 16.162 l4/cxx/exceptions File Reference

Base exceptions.

```

#include <l4/cxx/l4types.h>
#include <l4/cxx/basic_ostream>
#include <l4/sys/err.h>
#include <l4/sys/capability>
#include <l4/util/backtrace.h>

```

*Exception for an unknown condition.*

- class `L4::Element_not_found`

*Exception for a failed lookup (element not found).*

- class `L4::Invalid_capability`

*Indicates that an invalid object was invoked.*

- class `L4::Com_error`

*Error conditions during IPC.*

- class `L4::Bounds_error`

*Access out of bounds.*

## Namespaces

- namespace `L4`

*L4 low-level kernel interface.*

## Macros

- `#define L4_CXX_EXCEPTION_BACKTRACE 20`

*Number of instruction pointers in backtrace.*

### 16.162.1 Detailed Description

Base exceptions.

Definition in file [exceptions](#).

### 16.172.1 Detailed Description

IPC stream.

Definition in file [ipc\\_stream](#).

### 16.172.2 Function Documentation

#### 16.172.2.1 `operator<<()` [1/4]

```
L4::lpc::Ostream & operator<< (
    L4::lpc::Ostream & s,
    bool v ) [inline]
```

Insert an element to type `T` into the stream `s`.

##### Parameters

<code>s</code>	The stream to insert the element <code>v</code> .
<code>v</code>	The element to insert.

##### Returns

The stream `s`.

Definition at line 1208 of file [ipc\\_stream](#).

References [L4::lpc::Ostream::put\(\)](#).

Here is the call graph for this function:

**16.172.2.2 operator<<() [2/4]**

```
L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    char const * v ) [inline]
```

Insert a zero terminated character string into the stream *s*.

**Parameters**

<i>s</i>	The stream to insert the string <i>v</i> .
<i>v</i>	The string to insert.

**Returns**

The stream *s*.

This operator produces basically the same content as the array insertion, however the length of the array is calculated using `strlen(v) + 1`. The string is copied into the message including the trailing zero.

Definition at line 1280 of file `ipc_stream`.

References `L4::Ipc::Ostream::put()`.

Here is the call graph for this function:

**16.172.2.3 operator<<() [3/4]**

```
template<typename T >
L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    L4::Ipc::Internal::Buf_cp_out< T > const & v ) [inline]
```

Insert an array with elements of type *T* into the stream *s*.

**Parameters**

<i>s</i>	The stream to insert the array <i>v</i> .
<i>v</i>	The array to insert (see <code>Ipc::Buf_cp_out()</code> ).

**Returns**

The stream *s*.

Definition at line 1259 of file [ipc\\_stream](#).

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

**16.172.2.4 operator<<() [4/4]**

```

L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    l4_msgtag_t const & v ) [inline]
  
```

Insert the [L4](#) message tag into the stream *s*.

**Parameters**

<i>s</i>	The stream to insert the tag <i>v</i> .
<i>v</i>	The <a href="#">L4</a> message tag to insert.

**Returns**

The stream *s*.

**Note**

Only one message tag can be inserted into a stream. Multiple insertions simply overwrite previous insertions.

Definition at line 1243 of file [ipc\\_stream](#).

References [L4::Ipc::Ostream::tag\(\)](#).

Here is the call graph for this function:

**16.172.2.5 operator>>() [1/6]**

```
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    bool & v ) [inline]
```

Extract one element of type T from the stream s.

**Parameters**

	<i>s</i>	The stream to extract from.
out	<i>v</i>	Extracted value.

**Returns**

The stream s.

Definition at line 1055 of file [ipc\\_stream](#).

References [L4::Ipc::Istream::get\(\)](#).

Here is the call graph for this function:

**16.172.2.6 operator>>>() [2/6]**

```
template<typename T >
L4::Ipc::Istream & operator>>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Internal::Buf_cp_in< T > const & v ) [inline]
```

Extract an array of T elements from the stream s.

**Parameters**

	<i>s</i>	The stream to extract from.
out	<i>v</i>	Buffer description to copy the array to (Ipc::Buf_cp_out()).

**Returns**

The stream s.

This operator does a copy out of the data into the given buffer.

See `lpc::Buf_in`, `lpc::Buf_cp_in`, and `lpc::Buf_cp_out`.

Definition at line 1162 of file `ipc_stream`.

References `L4::lpc::lstream::get()`.

Here is the call graph for this function:

### 16.172.2.7 operator>>() [3/6]

```

template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Internal::Buf_in< T > const & v ) [inline]
  
```

Extract an array of T elements from the stream `s`.

#### Parameters

	<code>s</code>	The stream to extract from.
<code>out</code>	<code>v</code>	Pointer to the extracted array ( <code>ipc_buf_in()</code> ).

#### Returns

The stream `s`.

This operator actually does not copy out the data in the array, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

#### Note

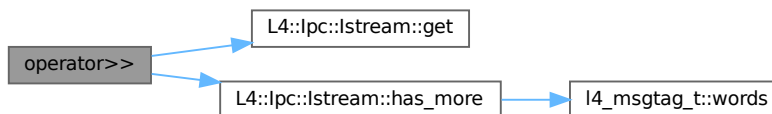

If array does not fit into transmitted words size will be set to zero. Client has to implement check against zero.

See `lpc::Buf_in`, `lpc::Buf_cp_in`, and `lpc::Buf_cp_out`.

Definition at line 1114 of file `ipc_stream`.

References `L4::lpc::lstream::get()`, and `L4::lpc::lstream::has_more()`.

Here is the call graph for this function:

### 16.172.2.8 operator>>() [4/6]

```

template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Msg_ptr< T > const & v ) [inline]
  
```

Extract an element of type T from the stream s.

#### Parameters

	s	The stream to extract from.
out	v	Pointer to the extracted element.

#### Returns

The stream s.

This operator actually does not copy out the data, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

See `Msg_ptr`.

Definition at line 1141 of file `ipc_stream`.

References [L4::ipc::Istream::get\(\)](#).

**16.172.2.9 operator>>() [5/6]**

```
template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Str_cp_in< T > const & v ) [inline]
```

Extract a zero-terminated string from the stream.

**Parameters**

	<i>s</i>	The stream to extract from.
out	<i>v</i>	Buffer description to copy the array to (lpc::Str_cp_out()).

**Returns**

The stream *s*.

This operator does a copy out of the data into the given buffer.

Definition at line 1183 of file [ipc\\_stream](#).

References [L4::lpc::Istream::get\(\)](#).

Here is the call graph for this function:

**16.172.2.10 operator>>() [6/6]**

```
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    l4_msgtag_t & v ) [inline]
```

Extract the [L4](#) message tag from the stream *s*.

**Parameters**

	<i>s</i>	The stream to extract from.
out	<i>v</i>	The extracted tag.

## Returns

The stream `s`.

Definition at line 1089 of file `ipc_stream`.

References `L4::ipc::Istream::tag()`.

Here is the call graph for this function:

## 16.173 ipc\_stream

## 16.188 l4/cxx/ref\_ptr\_list File Reference

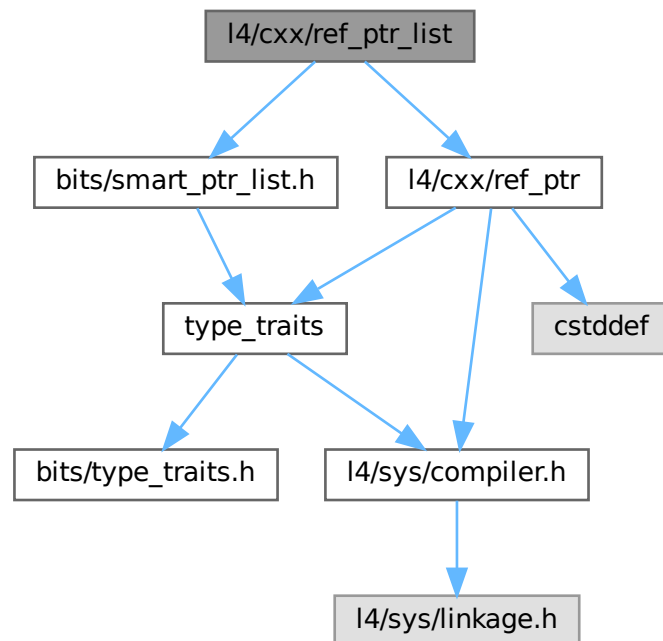

Implementation of a list of ref-ptr-managed objects.

```

#include <l4/cxx/ref_ptr>
#include "bits/smart_ptr_list.h"

```

Include dependency graph for `ref_ptr_list`:

This graph shows which files directly or indirectly include this file:

## Data Structures

- struct `cxx::Ref_obj_list_item< T >`  
Item for list linked via `cxx::Ref_ptr` with default reference counting.

## Namespaces

- namespace `cxx`  
Our C++ library.

## Typedefs

- `template<typename T>`  
`using cxx::Ref_ptr_list_item = Bits::Smart_ptr_list_item< T, cxx::Ref_ptr< T> >`  
*Item for list linked with `cxx::Ref_ptr`.*
- `template<typename T>`  
`using cxx::Ref_ptr_list = Bits::Smart_ptr_list< Ref_ptr_list_item< T> >`  
*Single-linked list where elements are connected via a `cxx::Ref_ptr`.*

### 16.188.1 Detailed Description

Implementation of a list of ref-ptr-managed objects.

Definition in file [ref\\_ptr\\_list](#).

**16.250.1 Detailed Description**

Bitmap renderer header file.

Definition in file [bitmap.h](#).

**16.250.2 Macro Definition Documentation****16.250.2.1 pSLIM\_BMAP\_START\_LSB**

```
#define pSLIM_BMAP_START_LSB 0x01
```

the other way round

Definition at line 41 of file [bitmap.h](#).

## 16.250.3 Typedef Documentation

### 16.250.3.1 gfxbitmap\_color\_pix\_t

```
typedef unsigned int gfxbitmap_color_pix_t
```

Specific color type.

This color type is specific for a particular framebuffer, it can be use to write pixel on a framebuffer. Use `gfxbitmap_convert_color` to convert from `gfxbitmap_color_t` to `gfxbitmap_color_pix_t`.

Definition at line 64 of file [bitmap.h](#).

### 16.250.3.2 gfxbitmap\_color\_t

```
typedef unsigned int gfxbitmap_color_t
```

Standard color type.

It's a RGB type with 8bits for each channel, regardless of the framebuffer used.

Definition at line 55 of file [bitmap.h](#).

## 16.250.4 Function Documentation

### 16.250.4.1 gfxbitmap\_bmap()

```
void gfxbitmap_bmap (
    14_uint8_t * vfb,
    14re_video_view_info_t * vi,
    14_int16_t x,
    14_int16_t y,
    14_uint32_t w,
    14_uint32_t h,
    14_uint8_t * bmap,
    gfxbitmap_color_pix_t fg,
    gfxbitmap_color_pix_t bg,
    struct gfxbitmap_offset * offset,
    14_uint8_t mode )
```

Fill a rectangular area with a bicolor bitmap pattern.

#### Parameters

<i>vfb</i>	Frame buffer.
<i>vi</i>	Frame buffer information structure.
<i>x</i>	X position of area.
<i>y</i>	Y position of area.
<i>w</i>	Width of area.
<i>h</i>	Height of area.
<i>bmap</i>	Bitmap pattern.
<i>fg</i>	Foreground color.
<i>bg</i>	Background color.
<i>offset</i>	Offsets.
<i>mode</i>	Mode

See also

[pSLIM\\_BMAP\\_START\\_MSB](#) and [pSLIM\\_BMAP\\_START\\_LSB](#).

#### 16.250.4.2 gfxbitmap\_convert\_color()

```
gfxbitmap_color_pix_t gfxbitmap_convert_color (
    l4re_video_view_info_t * vi,
    gfxbitmap_color_t rgb )
```

Convert a color.

Converts a given color in standard format to the format used in the framebuffer.

#### 16.250.4.3 gfxbitmap\_copy()

```
void gfxbitmap_copy (
    l4_uint8_t * dest,
    l4_uint8_t * src,
    l4re_video_view_info_t * vi,
    int x,
    int y,
    int w,
    int h,
    int dx,
    int dy )
```

Copy a rectangular area.

##### Parameters

<i>dest</i>	Destination frame buffer.
<i>src</i>	Source frame buffer.
<i>vi</i>	Frame buffer information structure.
<i>x</i>	Source X position of area.
<i>y</i>	Source Y position of area.
<i>w</i>	Width of area.
<i>h</i>	Height of area.
<i>dx</i>	Source X position of area.
<i>dy</i>	Source Y position of area.

#### 16.250.4.4 gfxbitmap\_fill()

```
void gfxbitmap_fill (
    l4_uint8_t * vfb,
    l4re_video_view_info_t * vi,
    int x,
    int y,
    int w,
```

```
int h,
gfxbitmap_color_pix_t color )
```

Fill a rectangular area with a color.

#### Parameters

<i>vfb</i>	Frame buffer.
<i>vi</i>	Frame buffer information structure.
<i>x</i>	X position of area.
<i>y</i>	Y position of area.
<i>w</i>	Width of area.
<i>h</i>	Height of area.
<i>color</i>	Color of area.

#### 16.250.4.5 gfxbitmap\_set()

```
void gfxbitmap_set (
    l4_uint8_t * vfb,
    l4re_video_view_info_t * vi,
    l4_int16_t x,
    l4_int16_t y,
    l4_uint32_t w,
    l4_uint32_t h,
    l4_uint32_t xoffs,
    l4_uint32_t yoffs,
    l4_uint8_t * pmap,
    struct gfxbitmap_offset * offset,
    l4_uint32_t pwidth )
```

Set area from source area.

#### Parameters

<i>vfb</i>	Frame buffer.
<i>vi</i>	Frame buffer information structure.
<i>x</i>	X position of area.
<i>y</i>	Y position of area.
<i>w</i>	Width of area.
<i>h</i>	Height of area.
<i>pmap</i>	Source.
<i>xoffs</i>	X offset.
<i>yoffs</i>	Y offset.
<i>offset</i>	Offsets.
<i>pwidth</i>	Width of source in bytes.

*Render a string to a framebuffer, including scaling.*

## 16.252.1 Detailed Description

Bitmap font renderer header file.

Definition in file [font.h](#).

## 16.252.2 Enumeration Type Documentation

### 16.252.2.1 anonymous enum

anonymous enum

Constant for length field.

Use this if the function should call strlen on the text argument itself.

Definition at line 38 of file [font.h](#).

## 16.252.3 Function Documentation

### 16.252.3.1 gfxbitmap\_font\_data()

```
void * gfxbitmap_font_data (  
    gfxbitmap\_font\_t font,  
    unsigned c )
```

Get bitmap font data for a specific character.

Parameters

<i>font</i>	Font.
<i>c</i>	Character.

**Returns**

Pointer to bmap data, NULL on error.

**16.252.3.2 gfxbitmap\_font\_get()**

```
gfxbitmap_font_t gfxbitmap_font_get (
    const char * name )
```

Get a font descriptor.

**Parameters**

<i>name</i>	Name of the font.
-------------	-------------------

**Returns**

A (opaque) font descriptor, or NULL if font could not be found.

**16.252.3.3 gfxbitmap\_font\_height()**

```
unsigned gfxbitmap_font_height (
    gfxbitmap_font_t font )
```

Get the font height.

**Parameters**

<i>font</i>	Font.
-------------	-------

**Returns**

Font height, 0 if font height could not be retrieved.

**16.252.3.4 gfxbitmap\_font\_init()**

```
int gfxbitmap_font_init (
    void )
```

Initialize the library.

This function must be called before any other font function of this library.

**Returns**

0 on success, other on error

### 16.252.3.5 gfxbitmap\_font\_text()

```
void gfxbitmap_font_text (
    void * fb,
    l4re_video_view_info_t * vi,
    gfxbitmap_font_t font,
    const char * text,
    unsigned len,
    unsigned x,
    unsigned y,
    gfxbitmap_color_pix_t fg,
    gfxbitmap_color_pix_t bg )
```

Render a string to a framebuffer.

#### Parameters

<i>fb</i>	Pointer to frame buffer.
<i>vi</i>	Frame buffer info structure.
<i>font</i>	Font.
<i>text</i>	Text string.
<i>len</i>	Length of the text string.
<i>x</i>	Horizontal position in the frame buffer.
<i>y</i>	Vertical position in the frame buffer.
<i>fg</i>	Foreground color.
<i>bg</i>	Background color.

### 16.252.3.6 gfxbitmap\_font\_text\_scale()

```
void gfxbitmap_font_text_scale (
    void * fb,
    l4re_video_view_info_t * vi,
    gfxbitmap_font_t font,
    const char * text,
    unsigned len,
    unsigned x,
    unsigned y,
    gfxbitmap_color_pix_t fg,
    gfxbitmap_color_pix_t bg,
    int scale_x,
    int scale_y )
```

Render a string to a framebuffer, including scaling.

#### Parameters

<i>fb</i>	Pointer to frame buffer.
<i>vi</i>	Frame buffer info structure.
<i>font</i>	Font.
<i>text</i>	Text string.
<i>len</i>	Length of the text string.
<i>x</i>	Horizontal position in the frame buffer.

## Parameters

<i>y</i>	Vertical position in the frame buffer.
<i>fg</i>	Foreground color.
<i>bg</i>	Background color.
<i>scale</i> <sub><i>_x</i></sub>	Horizonal scale factor.
<i>scale</i> <sub><i>_y</i></sub>	Vertical scale factor.

**16.252.3.7 gfxbitmap\_font\_width()**

```
unsigned gfxbitmap_font_width (
    gfxbitmap_font_t font )
```

Get the font width.

## Parameters

<i>font</i>	Font.
-------------	-------

## Returns

Font width, 0 if font width could not be retrieved.

**16.253 font.h**

*Associate a (kernel) [DMA space](#) for a device to this [Dma\\_space](#).*

- long [l4re\\_dma\\_space\\_disassociate](#) ([l4re\\_dma\\_space\\_t](#) dma)

*Disassociate the (kernel) [DMA space](#) from this [Dma\\_space](#).*

### 16.261.1 Detailed Description

DMA space C interface.

Definition in file [dma\\_space.h](#).

### 16.261.2 Enumeration Type Documentation

#### 16.261.2.1 [l4re\\_dma\\_space\\_direction](#)

enum [l4re\\_dma\\_space\\_direction](#)

Direction of the DMA transfers.

Enumerator

<a href="#">L4RE_DMA_SPACE_BIDIRECTIONAL</a>	device reads and writes to the memory
<a href="#">L4RE_DMA_SPACE_TO_DEVICE</a>	device reads the memory
<a href="#">L4RE_DMA_SPACE_FROM_DEVICE</a>	device writes to the memory
<a href="#">L4RE_DMA_SPACE_NONE</a>	device is coherently connected

Definition at line 37 of file [dma\\_space.h](#).

#### 16.261.2.2 [l4re\\_dma\\_space\\_space\\_attrbs](#)

enum [l4re\\_dma\\_space\\_space\\_attrbs](#)

Attributes assigned to the DMA space when associated with a specific device.

See also

[Space\\_attrbs](#)

## Enumerator

L4RE_DMA_SPACE_COHERENT	The device is connected coherently with the cache. This means that the map() and unmap() do not need to sync CPU caches before and after DMA.
L4RE_DMA_SPACE_PHYS_SPACE	The DMA space has no DMA task assigned and uses the CPUs physical memory.

Definition at line 48 of file [dma\\_space.h](#).

## 16.264 l4/re/c/inhibitor.h File Reference

Inhibitor C interface.

```
#include <l4/sys/types.h>
```

Include dependency graph for inhibitor.h:

## Functions

- long `l4re_inhibitor_acquire` (`l4_cap_idx_t` cap, `l4_umword_t` id, char const \*reason)  
*Acquire an inhibitor lock.*
- long `l4re_inhibitor_release` (`l4_cap_idx_t` cap, `l4_umword_t` id)  
*Release an inhibitor lock.*
- long `l4re_inhibitor_next_lock_info` (`l4_cap_idx_t` cap, char \*name, unsigned len, `l4_mword_t` current\_id)  
*Get information for the next available inhibitor lock.*

### 16.264.1 Detailed Description

Inhibitor C interface.

Definition in file [inhibitor.h](#).

### 16.264.2 Function Documentation

#### 16.264.2.1 l4re\_inhibitor\_acquire()

```
long l4re_inhibitor_acquire (
    l4_cap_idx_t cap,
    l4_umword_t id,
    char const * reason )
```

Acquire an inhibitor lock.

## Parameters

<i>cap</i>	Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> )
<i>id</i>	ID of the inhibitor lock that shall be acquired.
<i>reason</i>	Reason why the inhibitor lock is acquired. (Used for informing the user or debugging.)

## Returns

0 for success, <0 on error.

## See also

[L4Re::Inhibitor::acquire\(\)](#).

**16.264.2.2 l4re\_inhibitor\_next\_lock\_info()**

```
long l4re_inhibitor_next_lock_info (
    l4_cap_idx_t cap,
    char * name,
    unsigned len,
    l4_mword_t current_id )
```

Get information for the next available inhibitor lock.

## Parameters

<i>cap</i>	Capability to the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> )
<i>name</i>	A pointer to a buffer for the name of the lock.
<i>len</i>	The length of the available buffer (usually <a href="#">L4Re::Inhibitor::Name_max</a> is used).
<i>current_id</i>	The ID of the last available lock, use -1 to get the first lock.

## Return values

>0	The ID of the next available lock if there is one (in this case name shall contain the name of the inhibitor lock).
-L4_ENODEV	if there are no more locks.
<0	Any other negative failure value.

## See also

[L4Re::Inhibitor::next\\_lock\\_info\(\)](#).

**16.264.2.3 l4re\_inhibitor\_release()**

```
long l4re_inhibitor_release (
    l4_cap_idx_t cap,
    l4_umword_t id )
```

Release an inhibitor lock.

## Parameters

<i>cap</i>	Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> ).
<i>id</i>	ID of inhibitor that shall be released.

## Returns

0 for success, <0 on error.

## See also

[L4Re::Inhibitor::release\(\)](#).

Parent C interface.

Definition in file [parent.h](#).

## 16.272.2 Function Documentation

### 16.272.2.1 l4re\_parent\_signal()

```
long l4re_parent_signal (
    l4\_cap\_idx\_t parent,
    unsigned long sig,
    unsigned long val )
```

Send a signal using the parent protocol.

#### Parameters

<i>parent</i>	Capability index of parent to send signal to.
<i>sig</i>	Signal to send
<i>val</i>	Value of the signal

## Return values

0	Success
<0	IPC error

## See also

## 16.276 l4/re/c/util/cap\_alloc.h File Reference

Capability allocator C interface.

```
#include <l4/sys/types.h>
```

```
#include <l4/sys/linkage.h>
```

Include dependency graph for cap\_alloc.h:

### Functions

- `l4_cap_idx_t l4re_util_cap_alloc (void) L4_NOTHROW`  
Get free capability index at capability allocator.
- `void l4re_util_cap_free (l4_cap_idx_t cap) L4_NOTHROW`  
Return capability index to capability allocator.

- void **l4re\_util\_cap\_free\_um** (**l4\_cap\_idx\_t** cap) **L4\_NOTHROW**  
*Return capability index to capability allocator, and unmaps the object.*
- long **l4re\_util\_cap\_last** (void) **L4\_NOTHROW**  
*Return last capability index the allocator can return.*

## 16.278 l4re/c/util/kumem\_alloc.h File Reference

Kumem allocator utility C interface.

```
#include <l4/sys/types.h>
#include <l4/sys/linkage.h>
Include dependency graph for kumem_alloc.h:
```

## Functions

- int [l4re\\_util\\_kumem\\_alloc](#) ([l4\\_addr\\_t](#) \*mem, unsigned pages\_order, [l4\\_cap\\_idx\\_t](#) task, [l4\\_cap\\_idx\\_t](#) rm)  
[L4\\_NOTHROW](#)  
*Allocate state area.*

## 16.278.1 Detailed Description

Kumem allocator utility C interface.

Definition in file [kumem\\_alloc.h](#).

## 16.278.2 Function Documentation

### 16.278.2.1 l4re\_util\_kumem\_alloc()

```
int l4re_util_kumem_alloc (
    l4\_addr\_t * mem,
    unsigned pages_order,
    l4\_cap\_idx\_t task,
    l4\_cap\_idx\_t rm )
```

Allocate state area.

#### Parameters

out	<i>mem</i>	Pointer to memory that has been allocated.
	<i>pages_order</i>	Size to allocate, in log2 pages.
Generated for L4 by Doxygen		Task to use for allocation.
	<i>rm</i>	Region manager to use for allocation.

## Return values

0	for success
<0	error code on failure

## Note

The amount of kernel-user memory that can be allocated at once is limited by the used kernel implementation. The minimum allocatable amount is one page. A portable implementation should not depend on allocations greater than 16KiB to succeed.

## Examples

[examples/sys/aliens/main.c](#), and [examples/sys/utcb-ipc/main.c](#).

- enum

*Defaults for local thread priorities.*

### 16.300.1 Detailed Description

Constants.

Definition in file [consts.h](#).

### 16.300.2 Enumeration Type Documentation

#### 16.300.2.1 anonymous enum

anonymous enum

Defaults for local thread priorities.

Priorities are to be seen as local. These are used by the loader and libpthread. They are to be understood as 'local', which means the actual priority of the thread (as seen by the kernel) is the base priority as defined by the scheduler plus the local priority.

## 16.413.1 Function Documentation

### 16.413.1.1 l4shmc\_rb\_attach\_receiver()

```
void l4shmc_rb_attach_receiver (
    l4shmc_ringbuf_t * buf,
    l4_cap_idx_t owner )
```

Attach to receiver signal of a ring buffer.

Attach owner to the receiver-side signal of a ring buffer, which is triggered whenever new data has been produced.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

## Parameters

<i>buf</i>	pointer to ring buffer struct
<i>owner</i>	owner thread

**16.413.1.2 l4shmc\_rb\_attach\_sender()**

```
int l4shmc_rb_attach_sender (
    l4shmc_ringbuf_t * buf,
    char const * signal_name,
    l4_cap_idx_t owner )
```

Attach to sender signal of a ring buffer.

Attach owner to the sender-side signal of a ring buffer, which is triggered whenever new space has been freed in the buffer for the sender to write to.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

## Parameters

<i>buf</i>	pointer to ring buffer struct
<i>signal_name</i>	signal base name
<i>owner</i>	owner thread

## Returns

0 on success, error otherwise

**16.413.1.3 l4shmc\_rb\_deinit\_buffer()**

```
void l4shmc_rb_deinit_buffer (
    l4shmc_ringbuf_t * buf )
```

De-init a ring buffer.

## Parameters

<i>buf</i>	pointer to ring buffer struct
------------	-------------------------------

**16.413.1.4 l4shmc\_rb\_init\_buffer()**

```
int l4shmc_rb_init_buffer (
    l4shmc_ringbuf_t * buf,
    l4shmc_area_t * area,
    char const * chunk_name,
```

```
char const * signal_name,  
unsigned size )
```

Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.

This needs to be done by one of the participating parties when setting up communication channel.

#### Precondition

area has been attached using [l4shmc\\_attach\(\)](#).

#### Parameters

<i>buf</i>	pointer to ring buffer struct
<i>area</i>	pointer to SHMC area
<i>chunk_name</i>	name of SHMC chunk to create in area
<i>signal_name</i>	base name for SHMC signals to create
<i>size</i>	chunk size

#### Returns

0 on success, error otherwise

#### 16.413.1.5 l4shmc\_rb\_init\_receiver()

```
int l4shmc_rb_init_receiver (  
    l4shmc_ringbuf_t * buf,  
    l4shmc_area_t * area,  
    char const * chunk_name,  
    char const * signal_name )
```

Initialize receive buffer.

Initialize the receiver-side of a ring buffer. This requires the underlying SHMC chunk and the corresponding signals to be valid already (read: to be initialized by the sender).

#### Precondition

chunk & signals have been created and initialized by the sender side

#### Parameters

<i>buf</i>	pointer to ring buffer struct
<i>area</i>	pointer to SHMC area
<i>chunk_name</i>	name of SHMC chunk to create in area
<i>signal_name</i>	base name for SHMC signals to create

**Returns**

0 on success, error otherwise

**16.413.1.6 l4shmc\_rb\_receiver\_copy\_out()**

```
int l4shmc_rb_receiver_copy_out (
    l4shmc_ringbuf_head_t * head,
    char * target,
    unsigned * tsize )
```

Copy data out of the buffer.

**Parameters**

	<i>head</i>	ring buffer head pointer
	<i>target</i>	valid target buffer
<i>in, out</i>	<i>tsize</i>	size of target buffer (must be $\geq$ packet size!); contains the real data size

**Returns**

0 on success, negative error otherwise

**16.413.1.7 l4shmc\_rb\_receiver\_notify\_done()**

```
void l4shmc_rb_receiver_notify_done (
    l4shmc_ringbuf_t * buf )
```

Notify producer that space is available.

**Parameters**

<i>buf</i>	pointer to ring buffer struct
------------	-------------------------------

**16.413.1.8 l4shmc\_rb\_receiver\_read\_next\_size()**

```
int l4shmc_rb_receiver_read_next_size (
    l4shmc_ringbuf_head_t * head )
```

Have a look at the ring buffer and see which size the next packet to be read has.

Does not modify anything.

**Returns**

size of next buffer or -1 if no data available

### 16.413.1.9 l4shmc\_rb\_receiver\_wait\_for\_data()

```
int l4shmc_rb_receiver_wait_for_data (
    l4shmc_ringbuf_t * buf,
    int blocking )
```

Check if (and optionally block until) new data is ready.

#### Parameters

<i>buf</i>	pointer to ring buffer struct
<i>blocking</i>	block if data is not available immediately

Returns immediately, if data is available.

#### Returns

0 success, data available, != 0 otherwise

### 16.413.1.10 l4shmc\_rb\_sender\_alloc\_packet()

```
char * l4shmc_rb_sender_alloc_packet (
    l4shmc_ringbuf_head_t * head,
    unsigned psize )
```

Allocate a packet of a given size within the ring buffer.

This packet may wrap around at the end of the buffer. Users need to be aware of that.

#### Parameters

<i>head</i>	ring buffer head pointer
<i>psize</i>	packet size

#### Returns

valid address on success

#### Return values

<i>NULL</i>	if not enough space available
-------------	-------------------------------

### 16.413.1.11 l4shmc\_rb\_sender\_commit\_packet()

```
void l4shmc_rb_sender_commit_packet (
    l4shmc_ringbuf_t * buf )
```

Tell the consumer that new data is available.

## Parameters

<i>buf</i>	pointer to ring buffer struct
------------	-------------------------------

**16.413.1.12 l4shmc\_rb\_sender\_next\_copy\_in()**

```
int l4shmc_rb_sender_next_copy_in (
    l4shmc_ringbuf_t * buf,
    char * data,
    unsigned size,
    int block_if_necessary )
```

Copy in packet from an external data source.

This is the function you'll want to use. Just pass it a buffer pointer and let the lib do the work.

## Parameters

<i>buf</i>	pointer to ring buffer struct
<i>data</i>	valid buffer
<i>size</i>	data size
<i>block_if_necessary</i>	bool: block if buffer currently full

## Return values

0	on success
-L4_ENOMEM	if block == false and no space available

**16.413.1.13 l4shmc\_rb\_sender\_put\_data()**

```
void l4shmc_rb_sender_put_data (
    l4shmc_ringbuf_t * buf,
    char * addr,
    char * data,
    unsigned dsize )
```

Copy data into a previously allocated packet.

This function is wrap-around aware.

## Parameters

<i>buf</i>	pointer to ring buffer struct
<i>addr</i>	valid destination (allocate with alloc_packet())
<i>data</i>	data source
<i>dsize</i>	data size

```

Include dependency graph for shmc.h:

This graph shows which files directly or indirectly include this file:

## Functions

- long [l4shmc\\_create](#) (char const \*shmc\_name)  
*Create a shared memory area.*
- long [l4shmc\\_attach](#) (char const \*shmc\_name, l4shmc\_area\_t \*shmarea)  
*Attach to a shared memory area.*
- long [l4shmc\\_get\\_client\\_nr](#) (l4shmc\_area\_t const \*shmarea)  
*Determine the client number of the shared memory region.*
- long [l4shmc\\_mark\\_client\\_initialized](#) (l4shmc\_area\_t \*shmarea)  
*Mark this shared memory client as 'initialized'.*
- long [l4shmc\\_get\\_initialized\\_clients](#) (l4shmc\_area\_t \*shmarea, l4\_umword\_t \*bitmask)  
*Fetch the `_clients_init_done` bitmask of the shared memory area.*
- long [l4shmc\\_add\\_chunk](#) (l4shmc\_area\_t \*shmarea, char const \*chunk\_name, l4\_umword\_t chunk\_capacity, l4shmc\_chunk\_t \*chunk)  
*Add a chunk in the shared memory area.*
- long [l4shmc\\_add\\_signal](#) (l4shmc\_area\_t \*shmarea, char const \*signal\_name, l4shmc\_signal\_t \*signal)  
*Add a signal for the shared memory area.*
- long [l4shmc\\_trigger](#) (l4shmc\_signal\_t \*signal)  
*Trigger a signal.*

- long [l4shmc\\_chunk\\_try\\_to\\_take](#) (l4shmc\_chunk\_t \*chunk)  
*Try to mark chunk busy.*
- long [l4shmc\\_chunk\\_try\\_to\\_take\\_for\\_writing](#) (l4shmc\_chunk\_t \*chunk)  
*Try to mark chunk busy writing.*
- long [l4shmc\\_chunk\\_try\\_to\\_take\\_for\\_overwriting](#) (l4shmc\_chunk\_t \*chunk)  
*Try to mark the chunk busy writing after it was ready for reading.*
- long [l4shmc\\_chunk\\_try\\_to\\_take\\_for\\_reading](#) (l4shmc\_chunk\_t \*chunk)  
*Try to mark chunk busy reading.*
- long [l4shmc\\_chunk\\_ready](#) (l4shmc\_chunk\_t \*chunk, l4\_umword\_t size)  
*Mark chunk as filled (ready).*
- long [l4shmc\\_chunk\\_ready\\_sig](#) (l4shmc\_chunk\_t \*chunk, l4\_umword\_t size)  
*Mark chunk as filled (ready) and signal consumer.*
- long [l4shmc\\_get\\_chunk](#) (l4shmc\_area\_t \*shmarea, char const \*chunk\_name, l4shmc\_chunk\_t \*chunk)  
*Get chunk out of shared memory area.*
- long [l4shmc\\_get\\_chunk\\_to](#) (l4shmc\_area\_t \*shmarea, char const \*chunk\_name, l4\_umword\_t timeout\_ms, l4shmc\_chunk\_t \*chunk)  
*Get chunk out of shared memory area, with timeout.*
- long [l4shmc\\_iterate\\_chunk](#) (l4shmc\_area\_t const \*shmarea, char const \*\*chunk\_name, long offs)  
*Iterate over names of all existing chunks.*
- long [l4shmc\\_attach\\_signal](#) (l4shmc\_area\_t \*shmarea, char const \*signal\_name, l4\_cap\_idx\_t thread, l4shmc\_signal\_t \*signal)  
*Attach to signal.*
- long [l4shmc\\_get\\_signal](#) (l4shmc\_area\_t \*shmarea, char const \*signal\_name, l4shmc\_signal\_t \*signal)  
*Get signal object from the shared memory area.*
- long [l4shmc\\_enable\\_signal](#) (l4shmc\_signal\_t \*signal)  
*Enable a signal.*
- long [l4shmc\\_enable\\_chunk](#) (l4shmc\_chunk\_t \*chunk)  
*Enable a signal connected with a chunk.*
- long [l4shmc\\_wait\\_any](#) (l4shmc\_signal\_t \*\*retsignal)  
*Wait on any signal.*
- long [l4shmc\\_wait\\_any\\_try](#) (l4shmc\_signal\_t \*\*retsignal)  
*Check whether any waited signal has an event pending.*
- long [l4shmc\\_wait\\_any\\_to](#) (l4\_timeout\_t timeout, l4shmc\_signal\_t \*\*retsignal)  
*Wait for any signal with timeout.*
- long [l4shmc\\_wait\\_signal](#) (l4shmc\_signal\_t \*signal)  
*Wait on a specific signal.*
- long [l4shmc\\_wait\\_signal\\_to](#) (l4shmc\_signal\_t \*signal, l4\_timeout\_t timeout)  
*Wait on a specific signal, with timeout.*
- long [l4shmc\\_wait\\_signal\\_try](#) (l4shmc\_signal\_t \*signal)  
*Check whether a specific signal has an event pending.*
- long [l4shmc\\_wait\\_chunk](#) (l4shmc\_chunk\_t \*chunk)  
*Wait on a specific chunk.*
- long [l4shmc\\_wait\\_chunk\\_to](#) (l4shmc\_chunk\_t \*chunk, l4\_timeout\_t timeout)  
*Check whether a specific chunk has an event pending, with timeout.*
- long [l4shmc\\_wait\\_chunk\\_try](#) (l4shmc\_chunk\_t \*chunk)  
*Check whether a specific chunk has an event pending.*
- long [l4shmc\\_chunk\\_consumed](#) (l4shmc\_chunk\_t \*chunk)  
*Mark a chunk as free.*
- long [l4shmc\\_connect\\_chunk\\_signal](#) (l4shmc\_chunk\_t \*chunk, l4shmc\_signal\_t \*signal)  
*Connect a signal with a chunk.*
- long [l4shmc\\_is\\_chunk\\_ready](#) (l4shmc\_chunk\_t const \*chunk)

- Check whether data is available.*
- `long l4shmc_is_chunk_clear` (`l4shmc_chunk_t` const \*`chunk`)
- Check whether chunk is free.*
- `void * l4shmc_chunk_ptr` (`l4shmc_chunk_t` const \*`chunk`)
- Get data pointer to chunk.*
- `long l4shmc_chunk_size` (`l4shmc_chunk_t` const \*`chunk`)
- Get current size of a chunk.*
- `long l4shmc_chunk_capacity` (`l4shmc_chunk_t` const \*`chunk`)
- Get capacity of a chunk.*
- `l4shmc_signal_t * l4shmc_chunk_signal` (`l4shmc_chunk_t` const \*`chunk`)
- Get the registered signal of a chunk.*
- `l4_cap_idx_t l4shmc_signal_cap` (`l4shmc_signal_t` const \*`signal`)
- Get the signal capability of a signal.*
- `long l4shmc_check_magic` (`l4shmc_chunk_t` const \*`chunk`)
- Check magic value of a chunk.*
- `long l4shmc_area_size` (`l4shmc_area_t` const \*`shmarea`)
- Get size of shared memory area.*
- `long l4shmc_area_size_free` (`l4shmc_area_t` const \*`shmarea`)
- Get free size of shared memory area.*
- `long l4shmc_area_overhead` (`void`)
- Get memory overhead per area that is not available for chunks.*
- `long l4shmc_chunk_overhead` (`void`)
- Get memory overhead required in addition to the chunk capacity for adding one chunk.*

### 16.415.1 Detailed Description

Shared memory library header file.

Definition in file [shmc.h](#).

## 16.416 shmc.h

- #define **SIGMA0\_REQ\_KIP** ([SIGMA0\\_REQ\(KIP\)](#))  
KIP.
- #define **SIGMA0\_REQ\_DEBUG\_DUMP** ([SIGMA0\\_REQ\(DEBUG\\_DUMP\)](#))  
Debug dump.

## Enumerations

- enum [l4sigma0\\_return\\_flags\\_t](#) {  
[L4SIGMA0\\_OK](#) , [L4SIGMA0\\_NOTALIGNED](#) , [L4SIGMA0\\_IPCERROR](#) , [L4SIGMA0\\_NOFPAGE](#) ,  
[L4SIGMA0\\_4](#) , [L4SIGMA0\\_5](#) , [L4SIGMA0\\_SMALLERFPAGE](#) }  
Return flags of libsigma0 functions.

## Functions

- [l4\\_kernel\\_info\\_t](#) \* [l4sigma0\\_map\\_kip](#) ([l4\\_cap\\_idx\\_t](#) sigma0, void \*addr, unsigned log2\_size)  
Map the kernel info page from sigma0 to addr.
- int [l4sigma0\\_map\\_mem](#) ([l4\\_cap\\_idx\\_t](#) sigma0, [l4\\_addr\\_t](#) phys, [l4\\_addr\\_t](#) virt, [l4\\_addr\\_t](#) size)  
Request a memory mapping from sigma0.
- int [l4sigma0\\_map\\_iomem](#) ([l4\\_cap\\_idx\\_t](#) sigma0, [l4\\_addr\\_t](#) phys, [l4\\_addr\\_t](#) virt, [l4\\_addr\\_t](#) size, int cached)  
Request IO memory from sigma0.
- int [l4sigma0\\_map\\_anypage](#) ([l4\\_cap\\_idx\\_t](#) sigma0, [l4\\_addr\\_t](#) map\_area, unsigned log2\_map\_size, [l4\\_addr\\_t](#) \*base, unsigned sz)  
Request an arbitrary free page of RAM.
- void [l4sigma0\\_debug\\_dump](#) ([l4\\_cap\\_idx\\_t](#) sigma0)  
Request sigma0 to dump internal debug information.
- char const \* [l4sigma0\\_map\\_errstr](#) (int err)  
Get user readable error messages for the return codes.

### 16.417.1 Detailed Description

Sigma0 interface.

## 16.423 l4/sys/\_\_ktrace-impl.h File Reference

L4 kernel event tracing.

```

#include <l4/sys/types.h>
#include <l4/sys/kdebug.h>

```

Include dependency graph for \_\_\_ktrace-impl.h:

This graph shows which files directly or indirectly include this file:

## Functions

- `l4_umword_t fiasco_tbuf_log` (const char \*text)  
Create new trace-buffer entry with describing <text>.
- `l4_umword_t fiasco_tbuf_log_3val` (const char \*text, `l4_umword_t` v1, `l4_umword_t` v2, `l4_umword_t` v3)  
Create new trace-buffer entry with describing <text> and three additional values.
- void `fiasco_tbuf_clear` (void)  
Clear trace-buffer.
- void `fiasco_tbuf_dump` (void)  
Dump trace-buffer to kernel console.
- `l4_umword_t fiasco_tbuf_log_binary` (const unsigned char \*data)  
Create new trace-buffer entry with binary data.
