
16.282.3.3 detach() [1/3]

```
int L4Re::Rm::detach (
            l4_addr_t addr,
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task = This_task) const  [inline], [noexcept]
```

Detach and unmap a region from the address space.

Parameters

	addr	Virtual address of region, any address within the region is valid.
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 765 of file rm.

References detach(), and Detach_overlap.

Referenced by detach(), detach(), detach(), free_area(), and get_info().

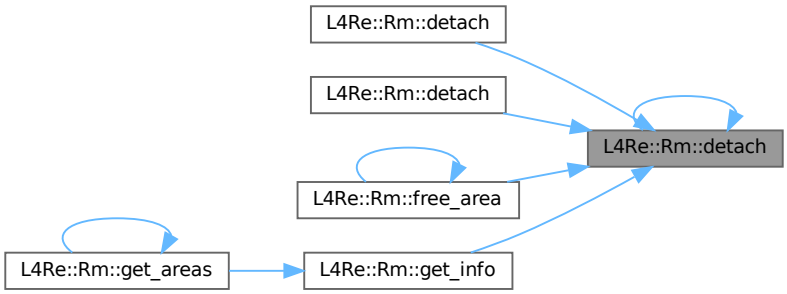
Here is the caller graph for this function:



16.282.3.4 detach() [2/3]

```
int L4Re::Rm::detach (
            l4_addr_t start,
            unsigned long size,
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task) const  [inline], [noexcept]
```

Detach and unmap all parts of the regions within the specified interval.

Parameters

	start	Start of area to detach, must be within region.
	size	Size of of area to detach (in bytes).
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

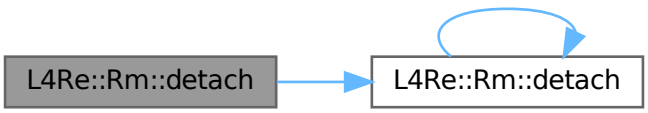
L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees all regions within the interval given by start and size. If a region overlaps the start or the end of the interval this region is only detached partly. If the interval is within one region the original region is split up into two separate regions.

Definition at line 778 of file rm.

References detach(), and Detach_exact.

Here is the call graph for this function:



16.282.3.5 detach() [3/3]

```
int L4Re::Rm::detach (
            void * addr,
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task = This_task) const  [inline], [noexcept]
```

Detach and unmap a region from the address space.

Parameters

	addr	Virtual address of region, any address within the region is valid.
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

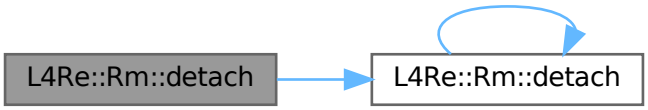
L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 770 of file rm.

References detach(), and Detach_overlap.

Here is the call graph for this function:



16.282.3.6 find()

```
long L4Re::Rm::find (
             l4_addr_t * addr,
             unsigned long * size,
             Offset * offset,
             L4Re::Rm::Flags * flags,
             L4::Cap< Dataspace > * m)  [inline], [noexcept]
```

Find a region given an address and size.

Parameters

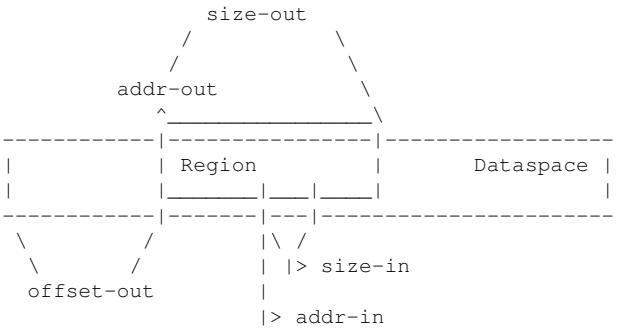
in,out	*addr*	Address to look for. Returns the start address of the found region.
in,out	*size*	Size of the area to look for (in bytes). Returns the size of the found region (in bytes).
out	*offset*	Offset at the beginning of the region within the associated dataspace.

out	*flags*	Region flags, see F::Region_flags (and F::In_area).
out	*m*	Associated dataspace or paging service.

Return values

0	Success
-L4_EPERM	Operation not allowed.
-L4_ENOENT	No region found.
<0	IPC errors

This function returns the properties of the region that contains the area described by the addr and size parameter. If no such region is found but a reserved area, the area is returned and F::In_area is set in `flags`. Note, in the case of an area the `offset` and `m` return values are invalid.



Note

The value of the size input parameter should be 1 to assure that a region can be determined unambiguously.

Definition at line 672 of file rm.

16.282.3.7 free_area()

```
long L4Re::Rm::free_area (
              l4_addr_t addr)
```

Free an area from the region map.

Parameters

addr	An address within the area to free.

Return values

0	Success
-L4_ENOENT	No area found.
<0	IPC errors

Note

The data spaces that are attached to that area are not detached by this operation.

See also

reserve_area() for more information about areas.

             l4_addr_t start,
             L4::Ipc::Ret_array< Area > areas)
```

Return the list of areas whose starting addresses are higher or equal to `start` in the address space managed by this region map.

Parameters

	start	Virtual address from where to start searching.
out	*areas*	List of areas found in this region map.

Return values

>=0	Number of returned areas in the areas array.
<0	IPC errors

Note

The returned list of areas might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last area from the previous call.

16.282.3.11 reserve_area() [1/2]

```
long L4Re::Rm::reserve_area (
            l4_addr_t * start,
            unsigned long size,
```

```
            Flags flags = Flags(0),
            unsigned char align = L4_PAGESHIFT) const  [inline], [noexcept]
```

Reserve the given area in the region map.

Parameters

in,out	*start*	The virtual start address of the area to reserve. Returns the start address of the area.
	size	The size of the area to reserve (in bytes).
	flags	Flags for the reserved area (see L4Re::Rm::F::Region_flags and L4Re::Rm::F::Attach_flags).
	align	Alignment of area if searched as bits (log2 value).

Return values

0	Success
-L4_EADDRNOTAVAIL	The given area cannot be reserved.
<0	IPC errors

This function reserves an area within the virtual address space managed by the region map. There are two kinds of areas available:

- Reserved areas (*flags* = L4Re::Rm::F::Reserved), where no data spaces can be attached
- Special purpose areas (*flags* = 0), where data spaces can be attached to the area via the L4Re::Rm::F::In_area flag and a start address within the area itself.

Note

When searching for a free place in the virtual address space (with *flags* = L4Re::Rm::F::Search_addr), the space between *start* and the end of the virtual address space is searched.

enum L4Re::Rm::F::Attach_flags : l4_uint32_t
```

Flags for attach operation.

Enumerator

Search_addr	Search for a suitable address range.
In_area	Search only in area, or map into area.
Eager_map	Eagerly map the attached data space in.
No_eager_map	Prevent eager mapping of the attached data space.
Attach_mask	Mask of all attach flags.

Definition at line 111 of file rm.

16.284.2.2 Region_flags

```
enum L4Re::Rm::F::Region_flags : l4_uint16_t
```

Region flags (permissions, cacheability, special).

Enumerator

Rights_mask	Region rights.
R	Readable region.
W	Writable region.
X	Executable region.
RW	Readable and writable region.
RX	Readable and executable region.
RWX	Readable, writable and executable region.
Kernel	Kernel-provided memory (KUMEM).
Detach_free	Free the portion of the data space after detach.
Pager	Region has a pager.
Reserved	Region is reserved (blocked).
Caching_mask	Mask of all Rm cache bits.
Cache_normal	Cache bits for normal cacheable memory. This is the default if no other cache-related flag was specified.
Cache_buffered	Cache bits for buffered (write combining) memory.
Cache_uncached	Cache bits for uncached memory.
Ds_map_mask	Mask for all bits for cache options and rights.
Region_flags_mask	Mask of all region flags.

16.286.1 Detailed Description

template<typename T>
class L4Re::Rm::Unique_region< T >

Unique region.

Capture a single region with automatic detach on destruction and unique ownership. Stores the start address and the region-mapper capability internally. A unique region is valid precisely if the internal region-mapper capability is valid. The features for unique ownership and automatic detach are only active for valid unique regions.

Definition at line 435 of file rm.

16.286.2 Constructor & Destructor Documentation

16.286.2.1 Unique_region() [1/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
            T addr)  [inline], [explicit], [noexcept]
```

Construct a `Unique_region` from an address.

No region manager is set.

Parameters

addr	The new address

Definition at line 456 of file rm.

16.286.2.2 Unique_region() [2/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
            T addr,
            L4::Cap< Rm > const & rm)  [inline], [noexcept]
```

Construct a valid `Unique_region` from an address and a region manager.

Parameters

addr	The address
rm	The region manager

Definition at line 465 of file rm.

16.286.2.3 Unique_region() [3/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (

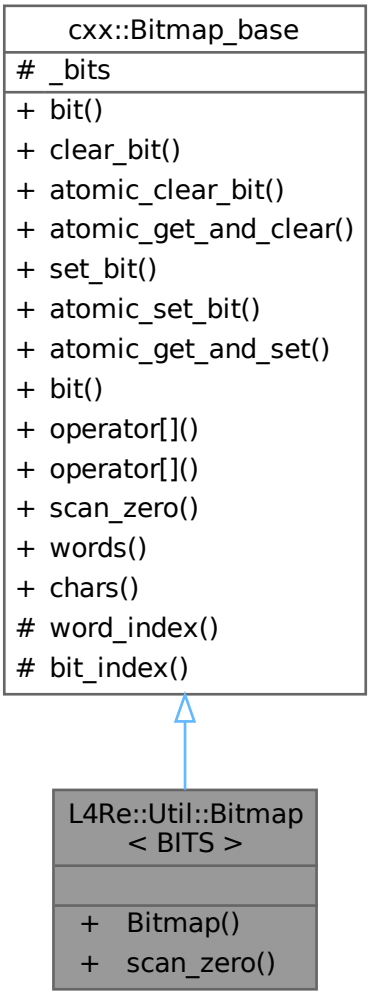
16.290 L4Re::Util::Bitmap< BITS > Class Template Reference

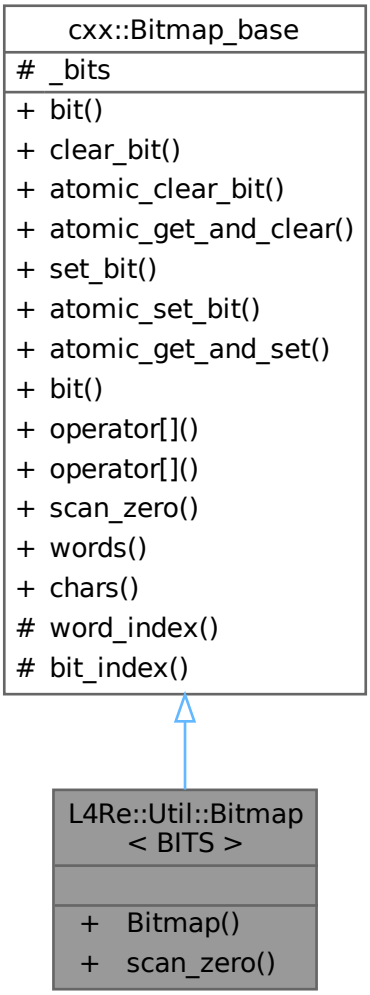
A static bitmap.

```
#include <bitmap>
```

Inheritance diagram for L4Re::Util::Bitmap< BITS >:



Collaboration diagram for L4Re::Util::Bitmap< BITS >:



Public Member Functions

- **Bitmap** () noexcept

  Create a bitmap with `BITS` *bits.*
- long scan_zero (long start_bit=0) const noexcept

  Scan for the first zero bit.

Public Member Functions inherited from cxx::Bitmap_base

- void bit (long bit, bool on) noexcept

  Set the value of bit `bit` *to* `on`*.*
- void clear_bit (long bit) noexcept

  Clear bit `bit`*.*

- void atomic_clear_bit (long bit) noexcept
  Clear bit `bit` atomically.
- word_type atomic_get_and_clear (long bit) noexcept
  Clear bit `bit` atomically and return old state.
- void set_bit (long bit) noexcept
  Set bit `bit`.
- void atomic_set_bit (long bit) noexcept
  Set bit `bit` atomically.
- word_type atomic_get_and_set (long bit) noexcept
  Set bit `bit` atomically and return old state.
- word_type bit (long bit) const noexcept
  Get the truth value of a bit.
- word_type operator[ ] (long bit) const noexcept
  Get the bit at index `bit`.
- Bit operator[ ] (long bit) noexcept
  Get the lvalue for the bit at index `bit`.
- long scan_zero (long max_bit, long start_bit=0) const noexcept
  Scan for the first zero bit.

Additional Inherited Members

Static Public Member Functions inherited from cxx::Bitmap_base

- static long **words** (long bits) noexcept
  Get the number of `Words` that are used for the bitmap.
- static long **chars** (long bits) noexcept
  Get the number of chars that are used for the bitmap.

Protected Types inherited from cxx::Bitmap_base

- enum { W_bits = sizeof(word_type) * 8 , C_bits = 8 }
- typedef unsigned long **word_type**
  Data type for each element of the bit buffer.

Static Protected Member Functions inherited from cxx::Bitmap_base

- static unsigned word_index (unsigned bit)
  Get the word index for the given bit.
- static unsigned bit_index (unsigned bit)
  Get the bit index within word_type for the given bit.

Protected Attributes inherited from cxx::Bitmap_base

- word_type * **_bits**
  Pointer to the buffer storing the bits.

16.290.1 Detailed Description

template<int BITS>
class L4Re::Util::Bitmap< BITS >

A static bitmap.

Template Parameters

BITS	The number of bits that shall be in the bitmap.

Definition at line 220 of file bitmap.

16.290.2 Member Function Documentation

16.290.2.1 scan_zero()

```
template<int BITS>
long cxx::Bitmap< BITS >::scan_zero (
             long start_bit = 0) const  [inline], [noexcept]
```

Scan for the first zero bit.

Parameters

start_bit	Hint at the number of the first bit to look at. Zero bits below `start_bit` may or may not be taken into account by the implementation.

Return values

>=	0 Number of first zero bit found.
-1	All bits at `start_bit` or higher are set.

Compared to Bitmap_base::scan_zero(), the upper bound is set to BITS.

Definition at line 365 of file bitmap.

The documentation for this class was generated from the following file:

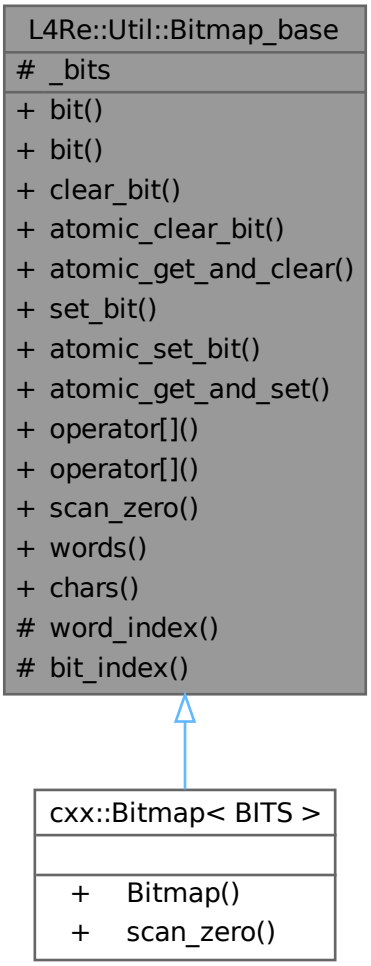
- l4/cxx/bitmap

16.291 L4Re::Util::Bitmap_base Class Reference

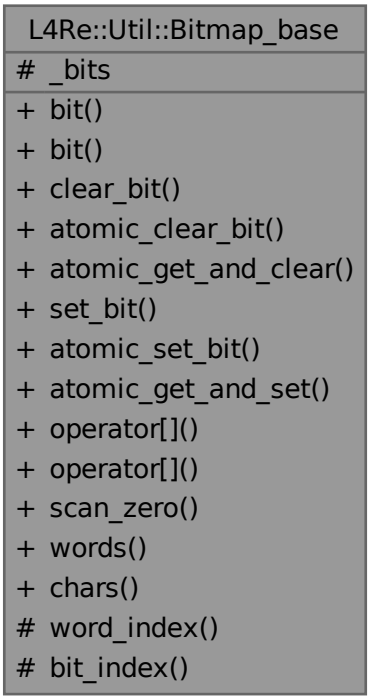
Basic bitmap abstraction.

```
#include <bitmap>
```

Inheritance diagram for L4Re::Util::Bitmap_base:



Collaboration diagram for L4Re::Util::Bitmap_base:



Data Structures

- class Bit

  A writable bit in a bitmap.
- class Word

  Helper abstraction for a word contained in the bitmap.
- class Char

  Helper abstraction for a byte contained in the bitmap.

Public Member Functions

- void bit (long bit, bool on) noexcept

  Set the value of bit `bit` to `on`.
- word_type bit (long bit) const noexcept

  Get the truth value of a bit.
- void clear_bit (long bit) noexcept

  Clear bit `bit`.
- void atomic_clear_bit (long bit) noexcept

  Clear bit `bit` atomically.
- word_type atomic_get_and_clear (long bit) noexcept

  Clear bit `bit` atomically and return old state.

- void set_bit (long bit) noexcept
  Set bit `bit`.
- void atomic_set_bit (long bit) noexcept
  Set bit `bit` atomically.
- word_type atomic_get_and_set (long bit) noexcept
  Set bit `bit` atomically and return old state.
- word_type operator[ ] (long bit) const noexcept
  Get the bit at index `bit`.
- Bit operator[ ] (long bit) noexcept
  Get the lvalue for the bit at index `bit`.
- long scan_zero (long max_bit, long start_bit=0) const noexcept
  Scan for the first zero bit.

Static Public Member Functions

- static long **words** (long bits) noexcept
  Get the number of `Words` that are used for the bitmap.
- static long **chars** (long bits) noexcept
  Get the number of chars that are used for the bitmap.

Protected Types

- enum { W_bits = sizeof(word_type) ∗ 8 , C_bits = 8 }
- typedef unsigned long **word_type**
  Data type for each element of the bit buffer.

Static Protected Member Functions

- static unsigned word_index (unsigned bit)
  Get the word index for the given bit.
- static unsigned bit_index (unsigned bit)
  Get the bit index within word_type for the given bit.

Protected Attributes

- word_type ∗ **_bits**
  Pointer to the buffer storing the bits.

16.291.1 Detailed Description

Basic bitmap abstraction.

This abstraction keeps a pointer to a memory area that is used as bitmap.

Definition at line 18 of file bitmap.

16.291.2 Member Enumeration Documentation

16.291.2.1 anonymous enum

```
anonymous enum  [protected]
```

Enumerator

W_bits	number of bits in word_type
C_bits	number of bits in char

Definition at line 26 of file bitmap.

16.291.3 Member Function Documentation

16.291.3.1 atomic_clear_bit()

```
void cxx::Bitmap_base::atomic_clear_bit (
            long bit)  [inline], [noexcept]
```

Clear bit `bit` atomically.

Use this function for multi-threaded access to the bitmap.

Parameters

bit	The number of the bit to clear.

Definition at line 269 of file bitmap.

16.291.3.2 atomic_get_and_clear()

```
Bitmap_base::word_type cxx::Bitmap_base::atomic_get_and_clear (
            long bit)  [inline], [noexcept]
```

Clear bit `bit` atomically and return old state.

Use this function for multi-threaded access to the bitmap.

Parameters

bit	The number of the bit to clear.

Definition at line 279 of file bitmap.

16.291.3.3 atomic_get_and_set()

```
Bitmap_base::word_type cxx::Bitmap_base::atomic_get_and_set (
            long bit)  [inline], [noexcept]
```

Set bit `bit` atomically and return old state.

Use this function for multi-threaded access to the bitmap.

Parameters

bit	The number of the bit to set.

Definition at line 308 of file bitmap.

16.291.3.4 atomic_set_bit()

```
void cxx::Bitmap_base::atomic_set_bit (
            long bit)  [inline], [noexcept]
```

Set bit `bit` atomically.

Use this function for multi-threaded access to the bitmap.

Parameters

bit	The number of the bit to set.

Definition at line 298 of file bitmap.

16.291.3.5 bit() [1/2]

```
Bitmap_base::word_type cxx::Bitmap_base::bit (
            long bit) const  [inline], [noexcept]
```

Get the truth value of a bit.

Parameters

bit	The number of the bit to read.

Return values

0	Bit is not set.
!=	0 Bit is set.

Definition at line 318 of file bitmap.

16.291.3.6 bit() [2/2]

```
void cxx::Bitmap_base::bit (
            long bit,
            bool on)  [inline], [noexcept]
```

Set the value of bit `bit` to `on`.

Parameters

bit	The number of the bit.
on	The boolean value that shall be assigned to the bit.

Definition at line 251 of file bitmap.

16.291.3.7 bit_index()

```
unsigned cxx::Bitmap_base::bit_index (
            unsigned bit)  [inline], [static], [protected]
```

Get the bit index within word_type for the given bit.

Parameters

bit	The bit index in the bitmap.

Returns

the bit index within word_type (bit % W_bits).

Definition at line 53 of file bitmap.

16.291.3.8 clear_bit()

```
void cxx::Bitmap_base::clear_bit (
            long bit)  [inline], [noexcept]
```

Clear bit `bit`.

Parameters

bit	The number of the bit to clear.

Definition at line 260 of file bitmap.

16.291.3.9 operator[]() [1/2]

```
word_type cxx::Bitmap_base::operator[] (
            long bit) const  [inline], [noexcept]
```

Get the bit at index `bit`.

Parameters

bit	The number of the bit to read.

Return values

0	Bit is not set.
!=	0 Bit is set.

Definition at line 181 of file bitmap.

16.291.3.10 operator[]() [2/2]

```
Bit cxx::Bitmap_base::operator[] (
            long bit)  [inline], [noexcept]
```

Get the lvalue for the bit at index `bit`.

Parameters

bit	The number.

Returns

lvalue for `bit`

Definition at line 191 of file bitmap.

16.291.3.11 scan_zero()

```
long cxx::Bitmap_base::scan_zero (
            long max_bit,
            long start_bit = 0) const  [inline], [noexcept]
```

Scan for the first zero bit.

Parameters

max_bit	Upper bound (exclusive) for the scanning operation.
start_bit	Hint at the number of the first bit to look at. Zero bits below `start_bit` may or may not be taken into account by the implementation.

Return values

>=	0 Number of first zero bit found.

-1	All bits between `start_bit` and `max_bit` are set.

Definition at line 339 of file bitmap.

16.291.3.12 set_bit()

```
void cxx::Bitmap_base::set_bit (
             long bit)  [inline], [noexcept]
```

Set bit `bit`.

Parameters

bit	The number of the bit to set.

Definition at line 289 of file bitmap.

16.291.3.13 word_index()

```
unsigned cxx::Bitmap_base::word_index (
             unsigned bit)  [inline], [static], [protected]
```

Get the word index for the given bit.

Parameters

bit	The index of the bit in question.

Returns

the index in Bitmap_base::_bits for the given bit (bit / W_bits).

Definition at line 44 of file bitmap.

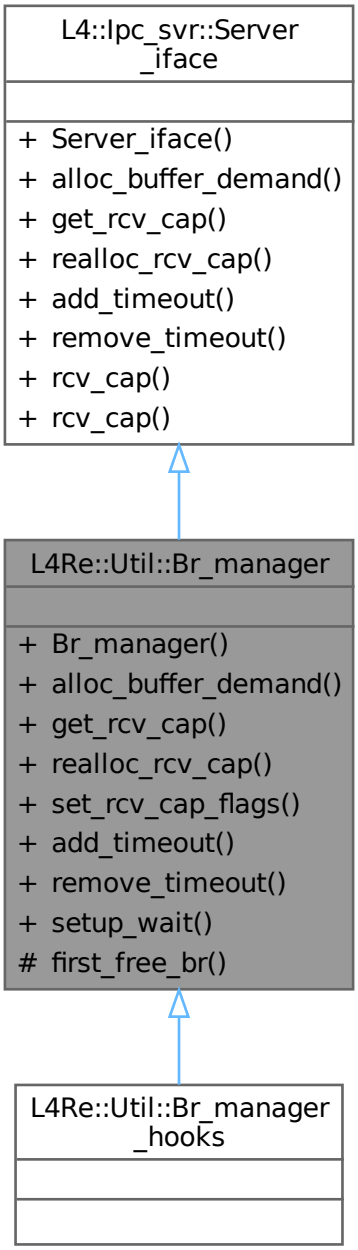
16.295 L4Re::Util::Br_manager Class Reference

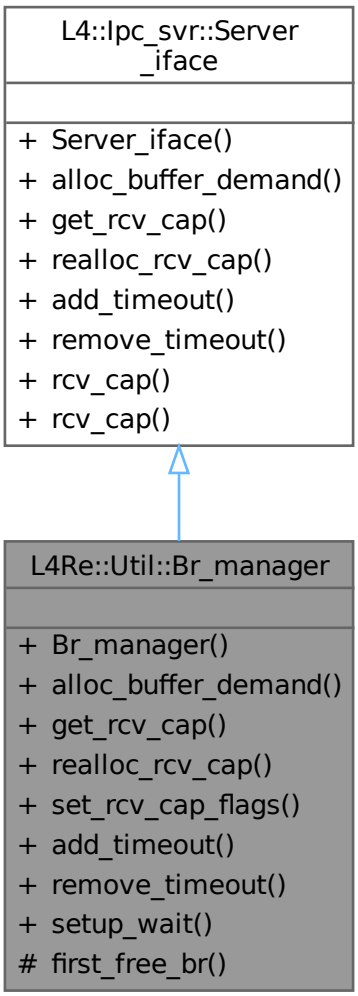
Buffer-register (BR) manager for L4::Server.

`#include <br_manager>`

Inheritance diagram for L4Re::Util::Br_manager:



Collaboration diagram for L4Re::Util::Br_manager:



Public Member Functions

- **Br_manager** ()

  Make a buffer-register (BR) manager.
- int alloc_buffer_demand (Demand const &d) override

  Tells the server to allocate buffers for the given demand.
- L4::Cap< void > get_rcv_cap (int i) const override

  Get capability slot allocated to the given receive buffer.
- int realloc_rcv_cap (int i) override

  Allocate a new capability for the given receive buffer.
- void set_rcv_cap_flags (unsigned long flags)

  Set the receive flags for the buffers.
- int **add_timeout** (L4::Ipc_svr::Timeout *, l4_kernel_clock_t) override

  No timeouts handled by us.

- int **remove_timeout** (L4::Ipc_svr::Timeout *) override

  No timeouts handled by us.
- void **setup_wait** (l4_utcb_t *utcb, L4::Ipc_svr::Reply_mode)

  setup_wait() used the server loop (L4::Server)

Public Member Functions inherited from L4::Ipc_svr::Server_iface

- **Server_iface** ()

  Make a server interface.
- template<typename T>
  L4::Cap< T > rcv_cap (int index) const

  Get given receive buffer as typed capability.
- L4::Cap< void > rcv_cap (int index) const

  Get receive cap with the given index as generic (void) type.

Protected Member Functions

- unsigned **first_free_br** () const

  Used for assigning BRs for a timeout.

Additional Inherited Members

Public Types inherited from L4::Ipc_svr::Server_iface

- typedef L4::Type_info::Demand **Demand**

  Data type expressing server-side demand for receive buffers.

16.295.1 Detailed Description

Buffer-register (BR) manager for L4::Server.

Implementation of the L4::Ipc_svr::Server_iface API for managing the server-side receive buffers needed for a set of server objects running within a server.

Definition at line 25 of file br_manager.

16.295.2 Member Function Documentation

16.295.2.1 alloc_buffer_demand()

```
int L4Re::Util::Br_manager::alloc_buffer_demand (
            Demand const & demand)  [inline], [override], [virtual]
```

Tells the server to allocate buffers for the given demand.

Parameters

demand	The total server-side demand of receive buffers needed for a given interface, see Demand.

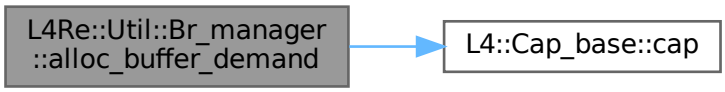
This function is not called by user applications directly. Usually the server implementation or the registry implementation calls this function whenever a new object is registered at the server.

Implements L4::Ipc_svr::Server_iface.

Definition at line 54 of file br_manager.

References L4::Cap_base::cap(), L4Re::Util::cap_alloc, L4::Type_info::Demand::caps, L4_EINVAL, L4_ENOMEM, L4_EOK, L4_ERANGE, L4::Type_info::Demand::mem, and L4::Type_info::Demand::ports.

Here is the call graph for this function:



16.295.2.2 get_rcv_cap()

```
L4::Cap< void > L4Re::Util::Br_manager::get_rcv_cap (
            int index) const  [inline], [override], [virtual]
```

Get capability slot allocated to the given receive buffer.

Parameters

index	The receive buffer index of the expected capability argument (0 <= `index` < `caps` registered with alloc_buffer_demand()).

Precondition

0 <= `index` < `caps` registered with alloc_buffer_demand()

Returns

Capability slot currently allocated to the given receive buffer.

Implements L4::Ipc_svr::Server_iface.

Definition at line 86 of file br_manager.

References L4::Cap_base::Invalid, and L4_CAP_MASK.

16.295.2.3 realloc_rcv_cap()

```
int L4Re::Util::Br_manager::realloc_rcv_cap (
            int index)  [inline], [override], [virtual]
```

Allocate a new capability for the given receive buffer.

Parameters

index	The receive buffer index of the expected capability argument (0 <= `index` < `caps` registered with alloc_buffer_demand()).

Precondition

0 <= `index` < `caps` registered with alloc_buffer_demand()

Returns

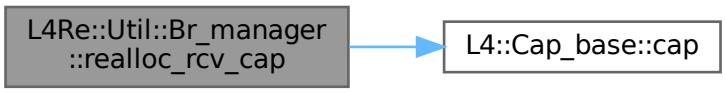
0 on success, < 0 on error.

Implements L4::Ipc_svr::Server_iface.

Definition at line 94 of file br_manager.

References L4::Cap_base::cap(), L4Re::Util::cap_alloc, L4_EINVAL, L4_ENOMEM, and L4_EOK.

Here is the call graph for this function:



16.295.2.4 set_rcv_cap_flags()

```
void L4Re::Util::Br_manager::set_rcv_cap_flags (
            unsigned long flags)  [inline]
```

Set the receive flags for the buffers.

Precondition

Must be called before any handlers are registered.

Parameters

flags	New receive capability flags, see l4_msg_item_consts_t.

Definition at line 118 of file br_manager.

References l4_assert.

The documentation for this class was generated from the following file:

  No timeouts handled by us.
- int **remove_timeout** (L4::Ipc_svr::Timeout *) override

  No timeouts handled by us.
- void **setup_wait** (l4_utcb_t *utcb, L4::Ipc_svr::Reply_mode)

  setup_wait() used the server loop (L4::Server)

Public Member Functions inherited from L4::Ipc_svr::Server_iface

- **Server_iface** ()

  Make a server interface.
- template<typename T>
  L4::Cap< T > rcv_cap (int index) const

  Get given receive buffer as typed capability.
- L4::Cap< void > rcv_cap (int index) const

  Get receive cap with the given index as generic (void) type.

Protected Member Functions inherited from L4Re::Util::Br_manager

- unsigned **first_free_br** () const

  Used for assigning BRs for a timeout.

16.296.1 Detailed Description

Predefined server-loop hooks for a server loop using the Br_manager.

This class can be used whenever a server loop including full management of receive buffer resources is needed.

Definition at line 165 of file br_manager.

The documentation for this struct was generated from the following file:

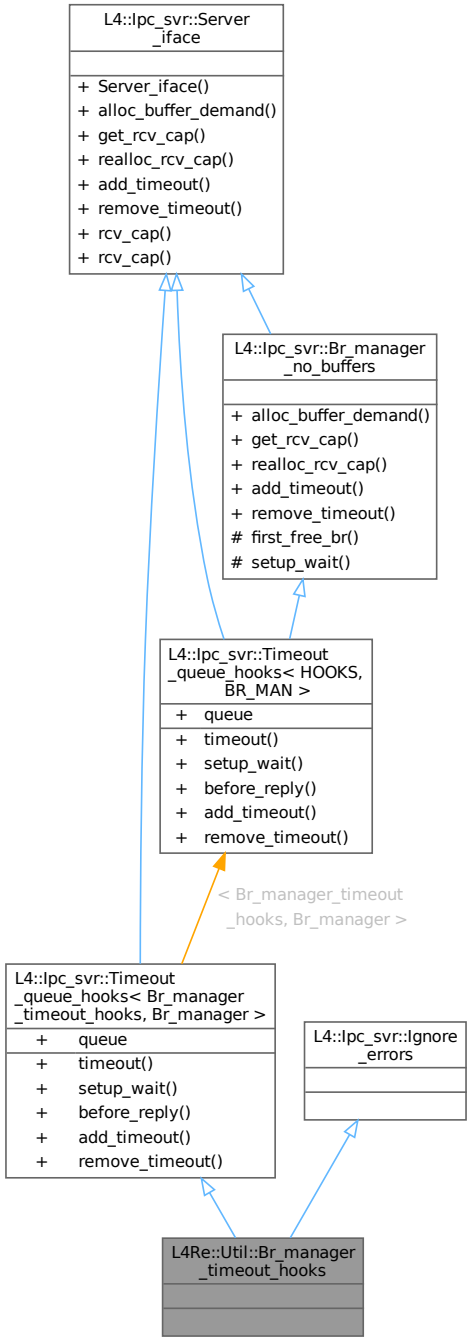
- l4/re/util/br_manager

16.297 L4Re::Util::Br_manager_timeout_hooks Struct Reference

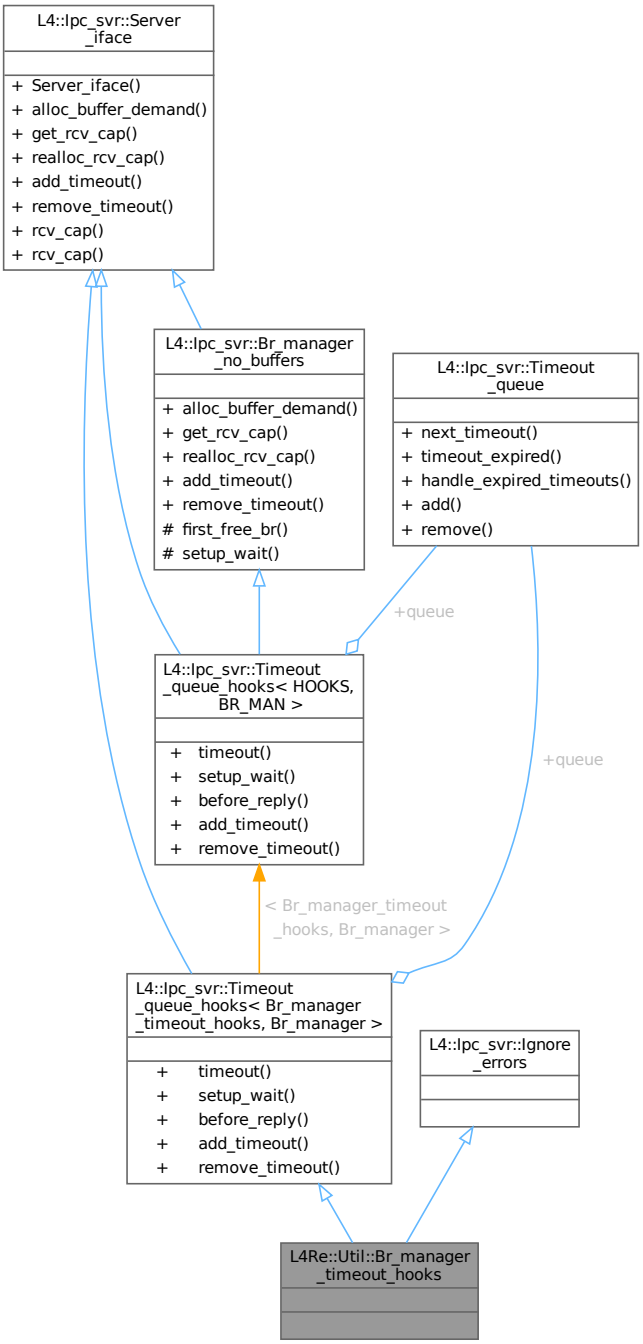
Predefined server-loop hooks for a server with using the Br_manager and a timeout queue.

`#include <br_manager>`

Inheritance diagram for L4Re::Util::Br_manager_timeout_hooks:



Collaboration diagram for L4Re::Util::Br_manager_timeout_hooks:



Additional Inherited Members

Public Types inherited from L4::Ipc_svr::Server_iface

- typedef L4::Type_info::Demand **Demand**

  Data type expressing server-side demand for receive buffers.

Public Member Functions inherited from L4::Ipc_svr::Timeout_queue_hooks< Br_manager_timeout_hooks, Br_manager >

- l4_timeout_t **timeout** ()

  get the time for the next timeout
- void **setup_wait** (l4_utcb_t *utcb, L4::Ipc_svr::Reply_mode mode)

  setup_wait() for the server loop
- L4::Ipc_svr::Reply_mode **before_reply** (l4_msgtag_t, l4_utcb_t *)

  server loop hook
- int add_timeout (Timeout *timeout, l4_kernel_clock_t time) override

  Add a timeout to the queue for time time.
- int remove_timeout (Timeout *timeout) override

  Remove timeout from the queue.

Public Member Functions inherited from L4::Ipc_svr::Server_iface

- **Server_iface** ()

  Make a server interface.
- virtual int alloc_buffer_demand (Demand const &demand)=0

  Tells the server to allocate buffers for the given demand.
- virtual L4::Cap< void > get_rcv_cap (int index) const =0

  Get capability slot allocated to the given receive buffer.
- virtual int realloc_rcv_cap (int index)=0

  Allocate a new capability for the given receive buffer.
- template<typename T>
  L4::Cap< T > rcv_cap (int index) const

  Get given receive buffer as typed capability.
- L4::Cap< void > rcv_cap (int index) const

  Get receive cap with the given index as generic (void) type.

Data Fields inherited from L4::Ipc_svr::Timeout_queue_hooks< Br_manager_timeout_hooks, Br_manager >

- Timeout_queue **queue**

  Use this timeout queue.

16.297.1 Detailed Description

Predefined server-loop hooks for a server with using the Br_manager and a timeout queue.

This class can be used for server loops that need the full package of buffer-register management and a timeout queue.

Definition at line 179 of file br_manager.

The documentation for this struct was generated from the following file:

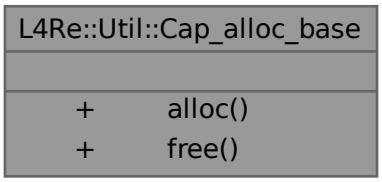
- l4/re/util/br_manager

16.298 L4Re::Util::Cap_alloc_base Class Reference

Capability allocator.

`#include <bitmap_cap_alloc>`

Collaboration diagram for L4Re::Util::Cap_alloc_base:



Public Member Functions

- template<typename T>
  L4::Cap< T > **alloc** () noexcept

  Allocate a capability slot.
- template<typename T>
  void **free** (L4::Cap< T > const &cap, l4_cap_idx_t task=L4_INVALID_CAP, l4_umword_t unmap_↩
  flags=L4_FP_ALL_SPACES) noexcept

  Free a capability slot.

16.298.1 Detailed Description

Capability allocator.

Definition at line 28 of file bitmap_cap_alloc.

The documentation for this class was generated from the following file:

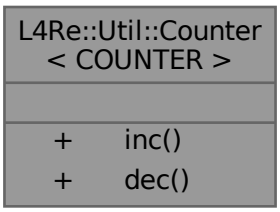
- l4/re/util/bitmap_cap_alloc

16.299 L4Re::Util::Counter< COUNTER > Struct Template Reference

Counter for Counting_cap_alloc with variable data width.

`#include <counting_cap_alloc>`

Collaboration diagram for L4Re::Util::Counter< COUNTER >:



Public Member Functions

- bool inc ()

  Increment counter if not yet saturated.
- Type dec ()

  Decrement counter if not saturated.

16.299.1 Detailed Description

template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter< COUNTER >

Counter for Counting_cap_alloc with variable data width.

This version is not thread safe.

Definition at line 27 of file counting_cap_alloc.

16.299.2 Member Function Documentation

16.299.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter< COUNTER >::dec ()  [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 67 of file counting_cap_alloc.

16.299.2.2 inc()

```
template<typename COUNTER = unsigned char>
bool L4Re::Util::Counter< COUNTER >::inc ()  [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Return values

false	The counter just went saturated after it was increased.
true	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 50 of file counting_cap_alloc.

The documentation for this struct was generated from the following file:

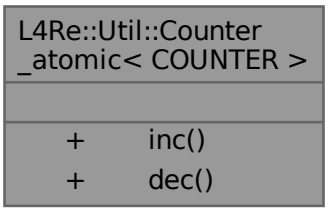
- l4/re/util/counting_cap_alloc

16.300 L4Re::Util::Counter_atomic< COUNTER > Struct Template Reference

Thread safe version of counter for Counting_cap_alloc.

`#include <counting_cap_alloc>`

Collaboration diagram for L4Re::Util::Counter_atomic< COUNTER >:



Public Member Functions

- bool inc ()

  Increment counter if not yet saturated.
- Type dec ()

  Decrement counter if not saturated.

16.300.1 Detailed Description

template<typename COUNTER = unsigned char>
struct L4Re::Util::Counter_atomic< COUNTER >

Thread safe version of counter for Counting_cap_alloc.

Despite using atomic instructions, this version has to make sure that capability slots are not reused too early. If the last reference is gone, the capability slot has to be unmapped. The slot must only be allocated again when the unmap has completed. This is accomplished by starting with an initial count of 2. The last reference will decrease the counter to 1. Only then, after the slot was unmapped, will the counter be set to 0. This will allow other threads to reallocate the slot.

Definition at line 98 of file counting_cap_alloc.

16.300.2 Member Function Documentation

16.300.2.1 dec()

```
template<typename COUNTER = unsigned char>
Type L4Re::Util::Counter_atomic< COUNTER >::dec ()  [inline]
```

Decrement counter if not saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Definition at line 142 of file counting_cap_alloc.

16.300.2.2 inc()

```
template<typename COUNTER = unsigned char>
bool L4Re::Util::Counter_atomic< COUNTER >::inc ()  [inline]
```

Increment counter if not yet saturated.

Once the counter reached the saturated state, the counter value isn't changed.

Return values

false	The counter just went saturated after it was increased.
true	Either the counter was already saturated – in that case the counter value was not changed, or the counter was not saturated – in that case the counter was increased.

Definition at line 121 of file counting_cap_alloc.

The documentation for this struct was generated from the following file:

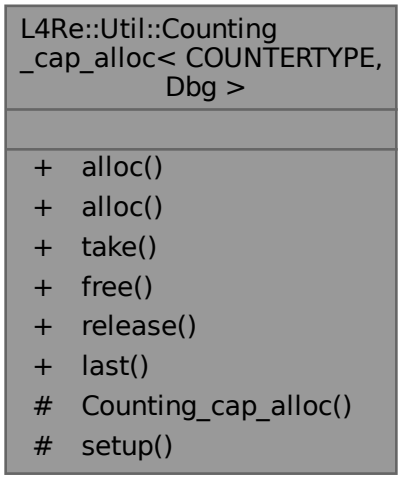
- l4/re/util/counting_cap_alloc

16.301 L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg > Class Template Reference

Internal reference-counting cap allocator.

```
#include <counting_cap_alloc>
```

Collaboration diagram for L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >:



Public Member Functions

- L4::Cap< void > alloc () noexcept

  Allocate a new capability slot.
- template<typename T>
  L4::Cap< T > alloc () noexcept

  Allocate a new capability slot.
- void take (L4::Cap< void > cap) noexcept

  Increase the reference counter for the capability.
- bool free (L4::Cap< void > cap, l4_cap_idx_t task=L4_INVALID_CAP, unsigned unmap_flags=L4_FP_ALL_SPACES) noexcept

  Free the capability.
- bool release (L4::Cap< void > cap, l4_cap_idx_t task=L4_INVALID_CAP, unsigned unmap_flags=L4_FP_ALL_SPACES) noexcept

  Decrease the reference counter for a capability.
- long **last** () noexcept

  Return highest capability id managed by this allocator.

Protected Member Functions

- Counting_cap_alloc () noexcept

  Create a new, empty allocator.
- void setup (void *m, long capacity, long bias, Dbg *dbg) noexcept

  Set up the backing memory for the allocator and the area of managed capability slots.

16.301.1 Detailed Description

template<typename COUNTERTYPE, typename Dbg>
class L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >

Internal reference-counting cap allocator.

This is intended for internal use only. L4Re applications should use L4Re::Util::cap_alloc().

Allocator for capability slots that automatically frees the slot and optionally unmaps the capability when the reference count goes down to zero. Reference counting must be done manually via take() and release(). The backing store for the reference counters must be provided in the setup() method. The allocator can recognize capability slots that are not managed by itself and does nothing on such slots.

Note

The user must ensure that the backing store is zero-initialized.

The user must ensure that the capability slots managed by this allocator are not used by a different allocator, see setup().

The operations in this class are not thread-safe.

Definition at line 191 of file counting_cap_alloc.

16.301.2 Constructor & Destructor Documentation

16.301.2.1 Counting_cap_alloc()

```
template<typename COUNTERTYPE, typename Dbg>
L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::Counting_cap_alloc ()  [inline], [protected],
[noexcept]
```

Create a new, empty allocator.

Needs to be initialized with setup() before it can be used.

Definition at line 224 of file counting_cap_alloc.

16.301.3 Member Function Documentation

16.301.3.1 alloc() [1/2]

```
template<typename COUNTERTYPE, typename Dbg>
template<typename T>
L4::Cap< T > L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::alloc ()  [inline], [noexcept]
```

Allocate a new capability slot.

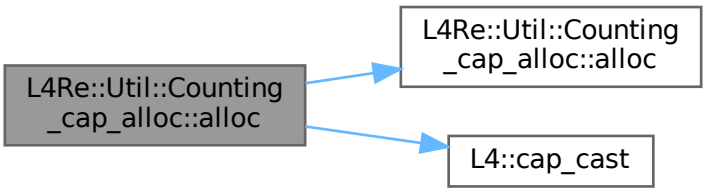
Returns

The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 282 of file counting_cap_alloc.

References alloc(), and L4::cap_cast().

Here is the call graph for this function:



16.301.3.2 alloc() [2/2]

```
template<typename COUNTERTYPE, typename Dbg>
L4::Cap< void > L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::alloc ()  [inline], [noexcept]
```

Allocate a new capability slot.

Returns

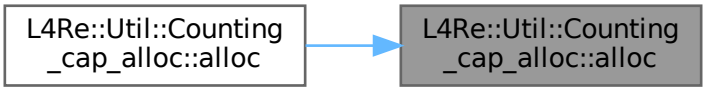
The newly allocated capability slot, invalid if the allocator was exhausted.

Definition at line 257 of file counting_cap_alloc.

References L4::Cap_base::Invalid, and L4_CAP_SHIFT.

Referenced by alloc().

Here is the caller graph for this function:



16.301.3.3 free()

```
template<typename COUNTERTYPE, typename Dbg>
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::free (
            L4::Cap< void > cap,
            l4_cap_idx_t task = L4_INVALID_CAP,
            unsigned unmap_flags = L4_FP_ALL_SPACES)  [inline], [noexcept]
```

Free the capability.

Parameters

cap	Capability to free.
task	If set, task to unmap the capability from.
unmap_flags	Flags for unmap, see l4_unmap_flags_t.

Precondition

The capability has been allocated. Calling free twice on a capability managed by this allocator results in undefined behaviour.

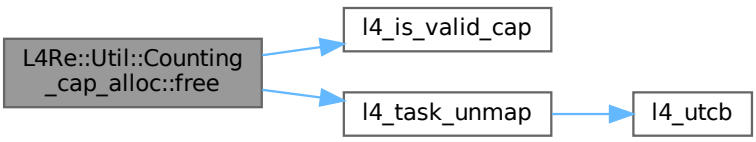
Returns

True, if the capability was managed by this allocator.

Definition at line 321 of file counting_cap_alloc.

References l4_assert, L4_FP_ALL_SPACES, L4_INVALID_CAP, l4_is_valid_cap(), and l4_task_unmap().

Here is the call graph for this function:



16.301.3.4 release()

```
template<typename COUNTERTYPE, typename Dbg>
bool L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::release (
            L4::Cap< void > cap,
            l4_cap_idx_t task = L4_INVALID_CAP,
            unsigned unmap_flags = L4_FP_ALL_SPACES)  [inline], [noexcept]
```

Decrease the reference counter for a capability.

Parameters

cap	Capability to release.
task	If set, task to unmap the capability from.
unmap_flags	Flags for unmap, see l4_unmap_flags_t.

Precondition

The capability has been allocated. Calling release on a free capability results in undefined behaviour.

Returns

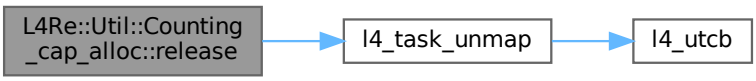
True, if the capability was freed as a result of this operation. If false is returned the capability is either still in use or is not managed by this allocator.

Does nothing apart from returning false if the capability is not managed by this allocator.

Definition at line 359 of file counting_cap_alloc.

References l4_assert, L4_FP_ALL_SPACES, L4_INVALID_CAP, and l4_task_unmap().

Here is the call graph for this function:



16.301.3.5 setup()

```
template<typename COUNTERTYPE, typename Dbg>
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::setup (
             void * m,
             long capacity,
             long bias,
             Dbg * dbg)  [inline], [protected], [noexcept]
```

Set up the backing memory for the allocator and the area of managed capability slots.

Parameters

m	Pointer to backing memory.
capacity	Number of capabilities that can be stored.
bias	First capability id to use by this allocator.
dbg	Logger for warnings if counter got saturated.

The allocator will manage the capability slots between `bias` and `bias + capacity - 1` (inclusive). It is the responsibility of the user to ensure that these slots are not used otherwise.

Definition at line 242 of file counting_cap_alloc.

16.301.3.6 take()

```
template<typename COUNTERTYPE, typename Dbg>
void L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::take (
            L4::Cap< void > cap)  [inline], [noexcept]
```

Increase the reference counter for the capability.

Parameters

cap	Capability, whose reference counter should be increased.

If the capability was still free, it will be automatically allocated. Silently does nothing if the capability is not managed by this allocator.

Definition at line 296 of file counting_cap_alloc.

References L4_CAP_SHIFT, and L4_UNLIKELY.

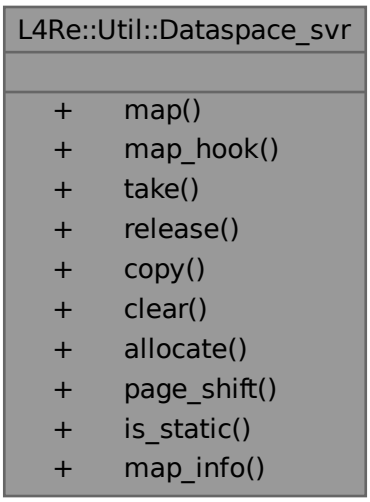
16.302 L4Re::Util::Dataspace_svr Class Reference

Dataspace server class.

```
#include <dataspace_svr>
```

Collaboration diagram for L4Re::Util::Dataspace_svr:



Public Member Functions

- int map (Dataspace::Offset offset, Dataspace::Map_addr local_addr, Dataspace::Flags flags, Dataspace::↩ Map_addr min_addr, Dataspace::Map_addr max_addr, L4::Ipc::Snd_fpage &memory)

  Map a region of the dataspace.
- virtual int map_hook (Dataspace::Offset offs, unsigned order, Dataspace::Flags flags, Dataspace::Map_addr ∗base, unsigned ∗send_order)

  A hook that is called for acquiring the data to be mapped.
- virtual void take () noexcept

  Take a reference to this dataspace.
- virtual unsigned long release () noexcept

  Release a reference to this dataspace.
- virtual long copy (l4_addr_t dst_offs, l4_umword_t src_id, l4_addr_t src_offs, unsigned long size) noexcept

  Copy from src dataspace to this destination dataspace.
- virtual long clear (unsigned long offs, unsigned long size) const noexcept

  Clear a region in the dataspace.
- virtual long allocate (l4_addr_t offset, l4_size_t size, unsigned access) noexcept

  Allocate a region within a dataspace.
- virtual unsigned long page_shift () const noexcept

  Define the size of the flexpage to map.
- virtual bool is_static () const noexcept

  Return whether the dataspace is static.
- virtual long map_info (l4_addr_t &start_addr, l4_addr_t &end_addr) noexcept

  Return mapping information for no-MMU systems.

16.302.1 Detailed Description

Dataspace server class.

The default implementation of the interface provides a continuous dataspace with contiguous pages.

Definition at line 29 of file dataspace_svr.

16.302.2 Member Function Documentation

16.302.2.1 allocate()

```
virtual long L4Re::Util::Dataspace_svr::allocate (
            l4_addr_t offset,
            l4_size_t size,
            unsigned access)  [inline], [virtual], [noexcept]
```

Allocate a region within a dataspace.

Parameters

offset	Offset in the dataspace, in bytes.
size	Size of the range, in bytes.

access	Access mode with which the memory backing the dataspace region should be allocated.

Return values

0	Success
<0	Error

Definition at line 224 of file dataspace_svr.

References L4_ENODEV.

16.302.2.2 clear()

```
virtual long L4Re::Util::Dataspace_svr::clear (
            unsigned long offs,
            unsigned long size) const  [inline], [virtual], [noexcept]
```

Clear a region in the dataspace.

Parameters

offs	Start of the region
size	Size of the region

Return values

0	Success
<0	Error

Definition at line 192 of file dataspace_svr.

References L4_ERANGE.

16.302.2.3 copy()

```
virtual long L4Re::Util::Dataspace_svr::copy (
            l4_addr_t dst_offs,
            l4_umword_t src_id,
            l4_addr_t src_offs,
            unsigned long size)  [inline], [virtual], [noexcept]
```

Copy from src dataspace to this destination dataspace.

Parameters

dst_offs	Offset into the destination dataspace
src_id	Local id of the source dataspace
src_offs	Offset into the source dataspace
size	Number of bytes to copy

Return values

>=0	Number of bytes copied
<0	An error occured. The error code may depend on the implementation.

Definition at line 175 of file dataspace_svr.

References L4_ENODEV.

16.302.2.4 is_static()

```
virtual bool L4Re::Util::Dataspace_svr::is_static () const  [inline], [virtual], [noexcept]
```

Return whether the dataspace is static.

Returns

True if dataspace is static

Definition at line 244 of file dataspace_svr.

16.302.2.5 map()

```
int L4Re::Util::Dataspace_svr::map (
              Dataspace::Offset offset,
              Dataspace::Map_addr local_addr,
              Dataspace::Flags flags,
              Dataspace::Map_addr min_addr,
              Dataspace::Map_addr max_addr,
              L4::Ipc::Snd_fpage & memory)  [inline]
```

Map a region of the dataspace.

Parameters

	offset	Offset to start within data space
	local_addr	Local address to map to.
	flags	Dataspace flags, see L4Re::Dataspace::F::Flags.
	min_addr	Defines start of receive window.

	max_addr	Defines end of receive window.
out	*memory*	Send fpage to map

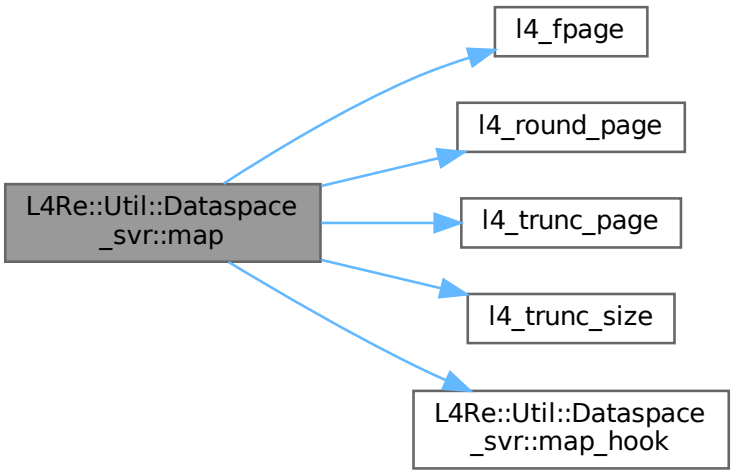
Return values

0	Success
<0	Error

Definition at line 57 of file dataspace_svr.

References L4_EOK, L4_ERANGE, l4_fpage(), L4_PAGESHIFT, l4_round_page(), l4_trunc_page(), l4_trunc_size(), and map_hook().

Here is the call graph for this function:



16.302.2.6 map_hook()

```
virtual int L4Re::Util::Dataspace_svr::map_hook (
            Dataspace::Offset offs,
            unsigned order,
            Dataspace::Flags flags,
            Dataspace::Map_addr * base,
            unsigned * send_order)  [inline], [virtual]
```

A hook that is called for acquiring the data to be mapped.

Parameters

offs	Offset in dataspace to supply
order	Log2-size of data to supply
flags	Flags for the mapping
base	Start address of the flexpage to be mapped
send_order	Order (log2 of size) of the flexpage to be mapped

Return values

<0	Error and the map request will be aborted with that error.
>=0	Success

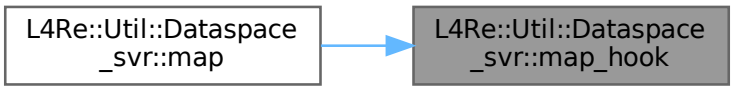
See also

map

Definition at line 136 of file dataspace_svr.

Referenced by map().

Here is the caller graph for this function:



16.302.2.7 map_info()

```
virtual long L4Re::Util::Dataspace_svr::map_info (
             l4_addr_t & start_addr,
             l4_addr_t & end_addr)  [inline], [virtual], [noexcept]
```

Return mapping information for no-MMU systems.

The method is only called on no-MMU systems. It should return the address of the underlying backing buffer so that the caller might map the dataspace.

The default implementation always returns an error because the derived class must provide the required information.

See also

L4Re::Dataspace::map_info()

Definition at line 259 of file dataspace_svr.

References L4_EPERM.

16.302.2.8 page_shift()

```
virtual unsigned long L4Re::Util::Dataspace_svr::page_shift () const  [inline], [virtual],
[noexcept]
```

Define the size of the flexpage to map.

Returns

flexpage size

Definition at line 236 of file dataspace_svr.

References L4_LOG2_PAGESIZE.

16.302.2.9 release()

```
virtual unsigned long L4Re::Util::Dataspace_svr::release ()  [inline], [virtual], [noexcept]
```

Release a reference to this dataspace.

Returns

Number of references to the dataspace

Default does nothing and returns always zero.

Definition at line 160 of file dataspace_svr.

16.302.2.10 take()

```
virtual void L4Re::Util::Dataspace_svr::take ()  [inline], [virtual], [noexcept]
```

Take a reference to this dataspace.

Default does nothing.

Definition at line 150 of file dataspace_svr.

16.303.1 Detailed Description

template<typename PAYLOAD>
class L4Re::Util::Event_buffer_consumer_t< PAYLOAD >

An event buffer consumer.

Definition at line 83 of file event_buffer.

16.303.2 Member Function Documentation

16.303.2.1 foreach_available_event()

```
template<typename PAYLOAD>
template<typename CB, typename D>
void L4Re::Util::Event_buffer_consumer_t< PAYLOAD >::foreach_available_event (
             CB const & cb,
             D data = D())  [inline]
```

Call function on every available event.

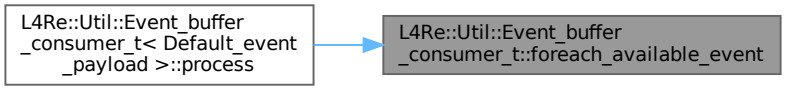
Parameters

cb	Function callback.
data	Data to pass as an argument to the callback.

Definition at line 94 of file event_buffer.

Referenced by L4Re::Util::Event_buffer_consumer_t< Default_event_payload >::process().

Here is the caller graph for this function:



16.303.2.2 process()

```
template<typename PAYLOAD>
template<typename CB, typename D>
void L4Re::Util::Event_buffer_consumer_t< PAYLOAD >::process (
             L4::Cap< L4::Irq > irq,
             L4::Cap< L4::Thread > thread,
             CB const & cb,
             D data = D())  [inline]
```

Continuously wait for events and process them.

Parameters

irq	Event signal to wait for.
thread	Thread capability of the thread calling this function.
cb	Callback function that is called for each received event.
data	Data to pass as an argument to the processing callback.

Note

This function never returns.

Definition at line 115 of file event_buffer.

16.304.2.1 attach()

```
template<typename PAYLOAD>
long L4Re::Util::Event_buffer_t< PAYLOAD >::attach (
             L4::Cap< L4Re::Dataspace > ds,
             L4::Cap< L4Re::Rm > rm)  [inline], [noexcept]
```

Attach event buffer from address space.

Parameters

ds	Dataspace of the event buffer.
rm	Region manager to attach buffer to.

Returns

0 on success, negative error code otherwise.

Definition at line 45 of file event_buffer.

16.304.2.2 buf()

```
template<typename PAYLOAD>
void * L4Re::Util::Event_buffer_t< PAYLOAD >::buf () const  [inline], [noexcept]
```

Return the buffer.

Returns

Pointer to the event buffer.

Definition at line 35 of file event_buffer.

16.304.2.3 detach()

```
template<typename PAYLOAD>
long L4Re::Util::Event_buffer_t< PAYLOAD >::detach (
             L4::Cap< L4Re::Rm > rm)  [inline], [noexcept]
```

Detach event buffer from address space.

Parameters

rm	Region manager to detach buffer from.

Returns

0 on success, negative error code otherwise.

Definition at line 68 of file event_buffer.

  Get event buffer.
- L4::Cap< L4::Triggerable > irq () const

  Get event IRQ.

16.306.1 Detailed Description

template<typename PAYLOAD>
class L4Re::Util::Event_t< PAYLOAD >

Convenience wrapper for getting access to an event object.

After calling init() the class supplies the event-buffer and the associated IRQ object.

Definition at line 32 of file event.

16.306.2 Member Enumeration Documentation

16.306.2.1 Mode

```
template<typename PAYLOAD>
enum L4Re::Util::Event_t::Mode
```

Modes of operation.

Enumerator

Mode_irq	Create an IRQ and attach, to get notifications.
Mode_polling	Do not use an IRQ.

Definition at line 38 of file event.

16.306.3 Member Function Documentation

16.306.3.1 buffer()

```
template<typename PAYLOAD>
L4Re::Event_buffer_t< PAYLOAD > & L4Re::Util::Event_t< PAYLOAD >::buffer ()  [inline]
```

Get event buffer.

Returns

Event buffer object.

Definition at line 148 of file event.

16.306.3.2 init()

```
template<typename PAYLOAD>
template<typename IRQ_TYPE>
int L4Re::Util::Event_t< PAYLOAD >::init (
            L4::Cap< L4Re::Event > event,
            L4Re::Env const * env = L4Re::Env::env(),
            L4Re::Cap_alloc * ca = &L4Re::Util::cap_alloc)  [inline]
```

Initialise an event object.

Template Parameters

IRQ_TYPE	Type used for handling notifications from the event provider. This must be derived from L4::Triggerable.

Parameters

event	Capability to event.
env	Pointer to L4Re-Environment
ca	Pointer to capability allocator.

Return values

0	Success
-L4_ENOMEM	No memory to allocate required capabilities.
<0	Other IPC errors.

Definition at line 59 of file event.

16.306.3.3 init_poll()

```
template<typename PAYLOAD>
int L4Re::Util::Event_t< PAYLOAD >::init_poll (
            L4::Cap< L4Re::Event > event,
            L4Re::Env const * env = L4Re::Env::env(),
            L4Re::Cap_alloc * ca = &L4Re::Util::cap_alloc)  [inline]
```

Initialise an event object in polling mode.

Parameters

event	Capability to event.
env	Pointer to L4Re-Environment
ca	Pointer to capability allocator.

Return values

0	Success
-L4_ENOMEM	No memory to allocate required capabilities.
<0	Other IPC errors.

Definition at line 112 of file event.

16.306.3.4 irq()

```
template<typename PAYLOAD>
L4::Cap< L4::Triggerable > L4Re::Util::Event_t< PAYLOAD >::irq () const  [inline]
```

Get event IRQ.

Returns

Event IRQ.

Additional Inherited Members

Public Types inherited from cxx::String

- typedef char const ∗ **Index**

  Character index type.

Public Member Functions inherited from cxx::String

- **String** (char const ∗s) noexcept

  Initialize from a zero-terminated string.
- **String** (char const ∗s, unsigned long len) noexcept

  Initialize from a pointer to first character and a length.
- String (char const ∗s, char const ∗e) noexcept

  Initialize with start and end pointer.
- **String** ()

  Zero-initialize. Create an invalid string.
- Index **start** () const

  Pointer to first character.

- Index **end** () const

  Pointer to first byte behind the string.
- int **len** () const

  Length.
- void **start** (char const *s)

  Set start.
- void **len** (unsigned long len)

  Set length.
- bool **empty** () const

  Check if the string has length zero.
- String **head** (Index end) const

  Return prefix up to index.
- String **head** (unsigned long end) const

  Prefix of length `end`.
- String **substr** (unsigned long idx, unsigned long len=~0UL) const

  Substring of length `len` starting at `idx`.
- String **substr** (char const *start, unsigned long len=0) const

  Substring of length `len` starting at `start`.
- template<typename F>
  char const * **find_match** (F &&match) const

  Find matching character. `match` should be a function such as `isspace`.
- char const * **find** (char const *c) const

  Find character. Return end() if not found.
- char const * **find** (int c) const

  Find character. Return end() if not found.
- char const * **rfind** (char const *c) const

  Find right-most character. Return end() if not found.
- Index starts_with (cxx::String const &c) const

  Check if `c` is a prefix of string.
- char const * **find** (int c, char const *s) const

  Find character `c` starting at position `s`. Return end() if not found.
- char const * find (char const *c, char const *s) const

  Find character set at position.
- char const & **operator[ ]** (unsigned long idx) const

  Get character at `idx`.
- char const & **operator[ ]** (int idx) const

  Get character at `idx`.
- char const & **operator[ ]** (Index idx) const

  Get character at `idx`.
- bool **eof** (char const *s) const

  Check if pointer `s` points behind string.
- template<typename INT>
  int from_dec (INT *v) const

  Convert decimal string to integer.
- template<typename INT>
  int from_hex (INT *v) const

  Convert hex string to integer.
- bool **operator==** (String const &o) const

  Equality.
- bool **operator!=** (String const &o) const

  Inequality.

16.308.1 Detailed Description

Name class.

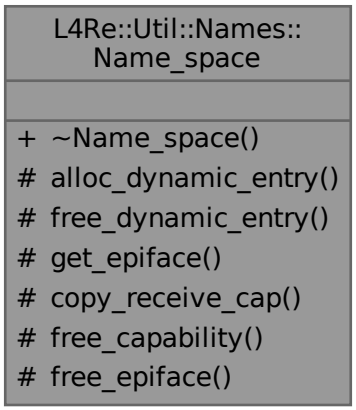
16.309 L4Re::Util::Names::Name_space Class Reference

Abstract server-side implementation of the L4::Namespace interface.

`#include <name_space_svr>`

Collaboration diagram for L4Re::Util::Names::Name_space:



Public Member Functions

- virtual ~**Name_space** ()

  The destructor of the derived class is responsible for freeing resources.

Protected Member Functions

- virtual Entry * alloc_dynamic_entry (Name const &n, unsigned flags)=0

  Allocate a new entry for the given name.
- virtual void free_dynamic_entry (Entry *e)=0

  Free an entry previously allocated with alloc_dynamic_entry().
- virtual int get_epiface (l4_umword_t data, bool is_local, L4::Epiface **lo)=0

  Return a pointer to the epiface assigned to a given label.
- virtual int copy_receive_cap (L4::Cap< void > *cap)=0

  Return the receive capability for permanent use.
- virtual void free_capability (L4::Cap< void > cap)=0

  Free a capability previously acquired with copy_receive_cap().
- virtual void free_epiface (L4::Epiface *epiface)=0

  Free epiface previously acquired with get_epiface().

16.309.1 Detailed Description

Abstract server-side implementation of the L4::Namespace interface.

Note

The derived class is resposible for resource management through the provided interfaces. This includes freeing all resources on destruction!

Definition at line 180 of file name_space_svr.

16.309.2 Member Function Documentation

16.309.2.1 alloc_dynamic_entry()

```
virtual Entry * L4Re::Util::Names::Name_space::alloc_dynamic_entry (
            Name const & n,
            unsigned flags)  [protected], [pure virtual]
```

Allocate a new entry for the given name.

Parameters

n	Name of the entry, must be copied.
flags	Entry flags, see Obj::Flags.

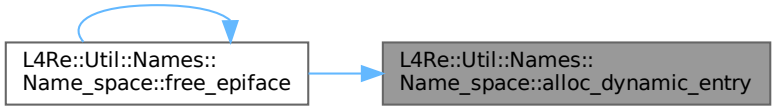
Returns

A pointer to the newly allocated entry or NULL on error.

This method is called when a new entry was received. It must allocate memory, copy `n` out of the receive buffer and wrap everything in an Entry.

Referenced by free_epiface().

Here is the caller graph for this function:



16.309.2.2 copy_receive_cap()

```
virtual int L4Re::Util::Names::Name_space::copy_receive_cap (
            L4::Cap< void > * cap)  [protected], [pure virtual]
```

Return the receive capability for permanent use.

Parameters

out	*cap*	Capability slot with the received capability. Must be permanently available until free_capability() is called.

This method is called when a new entry is registered together with a capability mapping. It must decide whether and where to store the capability and return the final capability slot. Typical implementations return the capability slot in the receive window and allocate a new receive window.

16.309.2.3 free_capability()

```
virtual void L4Re::Util::Names::Name_space::free_capability (
            L4::Cap< void > cap)  [protected], [pure virtual]
```

Free a capability previously acquired with copy_receive_cap().

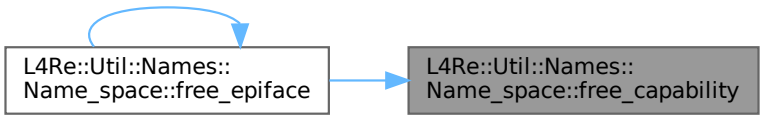
Parameters

in	*cap*	Capability to free.

Counterpart of copy_receive_cap. Free the capability slot when the entry is deleted or changed.

Referenced by free_epiface().

Here is the caller graph for this function:



16.309.2.4 free_dynamic_entry()

```
virtual void L4Re::Util::Names::Name_space::free_dynamic_entry (
            Entry * e)  [protected], [pure virtual]
```

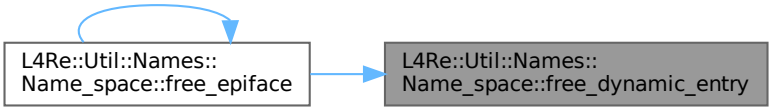
Free an entry previously allocated with alloc_dynamic_entry().

Parameters

e	Entry to free.

Referenced by free_epiface().

Here is the caller graph for this function:



16.309.2.5 free_epiface()

```
virtual void L4Re::Util::Names::Name_space::free_epiface (
            L4::Epiface * epiface)  [protected], [pure virtual]
```

Free epiface previously acquired with get_epiface().

Parameters

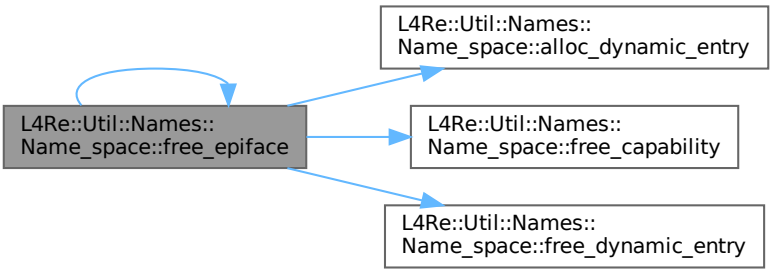
in	*epiface*	Epiface to free.

Called when an entry that points to an epiface is deleted allowing implementations that hold resources to free them.

References alloc_dynamic_entry(), free_capability(), free_dynamic_entry(), free_epiface(), L4_BASE_TASK_CAP, L4_EEXIST, L4_ENOMEM, and L4Re::Namespace::Overwrite.

Referenced by free_epiface().

Here is the call graph for this function:



Here is the caller graph for this function:

16.309.2.6 get_epiface()

```
virtual int L4Re::Util::Names::Name_space::get_epiface (
            l4_umword_t data,
            bool is_local,
            L4::Epiface ** lo)  [protected], [pure virtual]
```

Return a pointer to the epiface assigned to a given label.

Parameters

in	*data*	Label or in the local case the capability slot of the receiving capability.
in	*is_local*	If true, a local capability slot was supplied, if false the label of a locally bound IPC gate.
out	*lo*	Pointer to epiface responsible for the capability.

Returns

L4_EOK if a valid interface could be found or an error message otherwise.

This method is called when a new entry is registered and some local ID was received for the capability. In this case, the generic implementation needs to get the epiface in order to get the capability.

The callee must make sure that the epiface remains valid until free_epiface is called. In particular, the capability slot must not be reallocated as long as the namespace server holds a reference to the epiface.

The documentation for this class was generated from the following file:

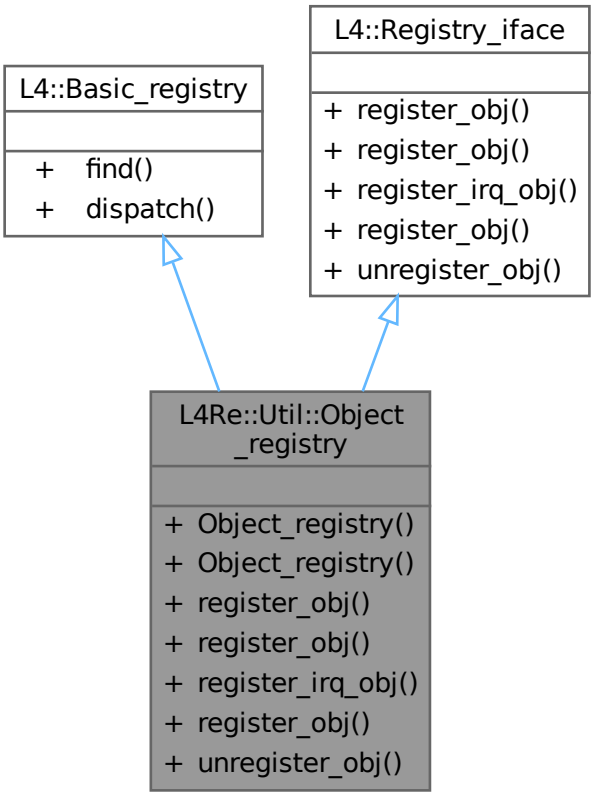
16.310 L4Re::Util::Object_registry Class Reference

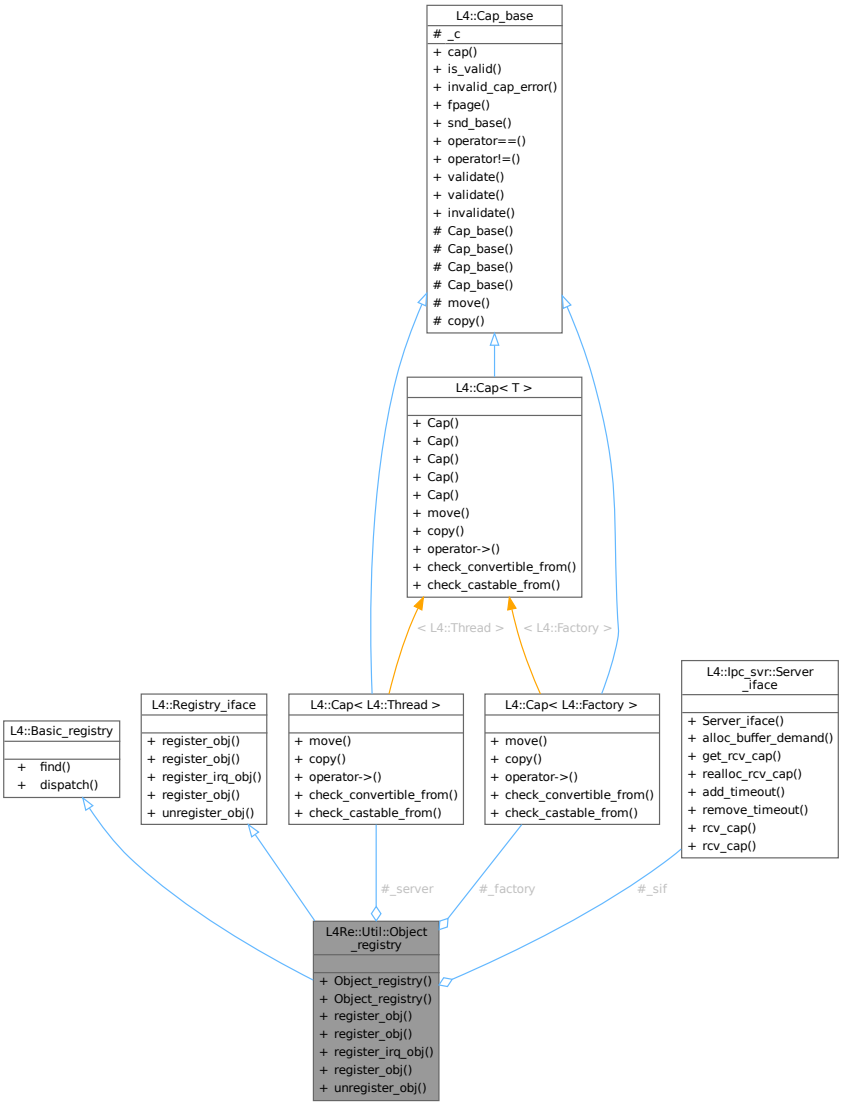
A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

`#include <object_registry>`

Inheritance diagram for L4Re::Util::Object_registry:



Collaboration diagram for L4Re::Util::Object_registry:



Public Member Functions

- Object_registry (L4::Ipc_svr::Server_iface *sif)

  Create a registry for the main thread of the task using the default factory.
- Object_registry (L4::Ipc_svr::Server_iface *sif, L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)

  Create a registry for arbitrary threads.
- L4::Cap< void > register_obj (L4::Epiface *o, char const *service) override

  Register a new server object to a pre-allocated receive endpoint.
- L4::Cap< void > register_obj (L4::Epiface *o) override

  Register a new server object on a newly allocated capability.
- L4::Cap< L4::Irq > register_irq_obj (L4::Epiface *o) override

  Register a handler for an interrupt.
- L4::Cap< L4::Rcv_endpoint > register_obj (L4::Epiface *o, L4::Cap< L4::Rcv_endpoint > ep) override

Register a handler for an already existing interrupt.

- void unregister_obj (L4::Epiface *o, bool unmap=true) override

  Remove a server object from the handler list.

Additional Inherited Members

Static Public Member Functions inherited from L4::Basic_registry

- static Value * find (l4_umword_t label)

  Get the server object for an Ipc_gate label.
- static l4_msgtag_t dispatch (l4_msgtag_t tag, l4_umword_t label, l4_utcb_t *utcb)

  The dispatch function called by the server loop.

16.310.1 Detailed Description

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

This class manages most of the setup of a server object. If necessary, an IPC gate is created, the specified thread is bound to the IPC gate. Incoming IPC is dispatched to the server object based on the label of the IPC gate.

The object registry is also able to manage IRQ endpoints. They require a different method for the object creation. Otherwise they are handled in the same way as IPC gates: a server object is responsible to process the incoming interrupts.

Definition at line 41 of file object_registry.

16.310.2 Constructor & Destructor Documentation

16.310.2.1 Object_registry() [1/2]

```
L4Re::Util::Object_registry::Object_registry (
            L4::Ipc_svr::Server_iface * sif)  [inline], [explicit]
```

Create a registry for the main thread of the task using the default factory.

Parameters

sif	Server loop interface.

Definition at line 67 of file object_registry.

16.310.2.2 Object_registry() [2/2]

```
L4Re::Util::Object_registry::Object_registry (
            L4::Ipc_svr::Server_iface * sif,
            L4::Cap< L4::Thread > server,
            L4::Cap< L4::Factory > factory)  [inline]
```

Create a registry for arbitrary threads.

Parameters

sif	Server loop interface.
server	Capability to the thread that executes the server objects.
factory	Capability to a factory object capable of creating new IPC gates.

Definition at line 81 of file object_registry.

16.310.3 Member Function Documentation

16.310.3.1 register_irq_obj()

```
L4::Cap< L4::Irq > L4Re::Util::Object_registry::register_irq_obj (
            L4::Epiface * o)  [inline], [override], [virtual]
```

Register a handler for an interrupt.

Parameters

o	Server object that handles IRQs.

Return values

L4::Cap<L4::Irq>	Capability to a new IRQ object on success.
L4::Cap<L4::Irq>::Invalid	The allocation of the IRQ has failed.

The IRQ will be newly allocated using the registry's factory object. The caller must call unregister_obj() to free all resources.

Implements L4::Registry_iface.

Definition at line 227 of file object_registry.

16.310.3.2 register_obj() [1/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
            L4::Epiface * o)  [inline], [override], [virtual]
```

Register a new server object on a newly allocated capability.

Parameters

o	Server object that handles IPC requests.

Return values

L4::Cap<void>	A valid capability to a new IPC gate.
L4::Cap<void>::Invalid	The allocation of the IPC gate has failed.

The IPC gate will be allocated using the registry's factory. The caller must call unregister_obj() to free all resources.

Implements L4::Registry_iface.

Definition at line 211 of file object_registry.

16.310.3.3 register_obj() [2/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
            L4::Epiface * o,
            char const * service)  [inline], [override], [virtual]
```

Register a new server object to a pre-allocated receive endpoint.

Parameters

o	Server object that handles IPC requests.
service	Name of a pre-allocated receive endpoint.

Return values

L4::Cap<void>	The capability known as `service` on success.
L4::Cap<void>::Invalid	No capability with the given name found.

The interface must be freed with unregister_obj() by the caller to unbind the thread from the capability.

Implements L4::Registry_iface.

Definition at line 194 of file object_registry.

16.310.3.4 register_obj() [3/3]

```
L4::Cap< L4::Rcv_endpoint > L4Re::Util::Object_registry::register_obj (
            L4::Epiface * o,
            L4::Cap< L4::Rcv_endpoint > ep)  [inline], [override], [virtual]
```

Register a handler for an already existing interrupt.

Parameters

o	Server object that handles the IPC.
ep	Capability to a receive endpoint, may be a hardware or software interrupt or an IPC gate.

Return values

L4::Cap<L4::Rcv_endpoint>	Capability `ep` on success.
L4::Cap<L4::Rcv_endpoint>::Invalid	The IRQ attach operation has failed.

The interface must be freed with unregister_obj() by the caller to unbind the thread from the capability.

Implements L4::Registry_iface.

Definition at line 246 of file object_registry.

16.310.3.5 unregister_obj()

```
void L4Re::Util::Object_registry::unregister_obj (
            L4::Epiface * o,
            bool unmap = true)  [inline], [override], [virtual]
```

Remove a server object from the handler list.

Parameters

o	Server object to unbind.
unmap	Specifies if the object capability shall be unmapped (true) or not. The default (true) is to unmap the capability.

The capability used by the server object will be unmapped if `unmap` is true.

Implements L4::Registry_iface.

Definition at line 262 of file object_registry.

References L4::Thread::Modify_senders::add(), L4Re::Util::cap_alloc, L4::Cap_base::fpage(), L4::Cap_base::Invalid, L4::Cap_base::is_valid(), L4_FP_ALL_SPACES, L4::Epiface::obj_cap(), and L4::Epiface::set_server().

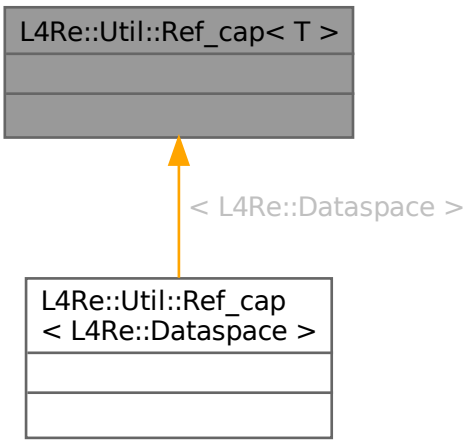
16.311 L4Re::Util::Ref_cap< T > Struct Template Reference

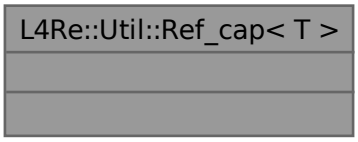
Automatic capability that implements automatic free and unmap of the capability selector.

`#include <cap_alloc>`

Inheritance diagram for L4Re::Util::Ref_cap< T >:



Collaboration diagram for L4Re::Util::Ref_cap< T >:



16.311.1 Detailed Description

template<typename T>
struct L4Re::Util::Ref_cap< T >

Automatic capability that implements automatic free and unmap of the capability selector.

Template Parameters

T	Type of the object that is referred by the capability.

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero.

Usage:

```
L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
  L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap
    ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
  // reference count for the allocated cap selector is now 1

  // use the dataspace cap
  L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

  global_ds_cap = ds_cap;
  // reference count is now 2
  ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
```

Definition at line 142 of file cap_alloc.

The documentation for this struct was generated from the following file:

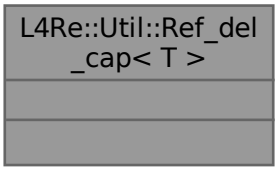
- l4/re/util/cap_alloc

16.312 L4Re::Util::Ref_del_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap+delete of the capability selector.

`#include <cap_alloc>`

Collaboration diagram for L4Re::Util::Ref_del_cap< T >:



16.312.1 Detailed Description

template<typename T>
struct L4Re::Util::Ref_del_cap< T >

Automatic capability that implements automatic free and unmap+delete of the capability selector.

Template Parameters

T	Type of the object that is referred by the capability.

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero. The main difference to Ref_cap is that the unmap is done with the deletion flag enabled and this leads to the deletion of the object if the current task holds appropriate deletion rights.

Usage:

```
L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
  L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap
    ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
  // reference count for the allocated cap selector is now 1

  // use the dataspace cap
  L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

  global_ds_cap = ds_cap;
  // reference count is now 2
  ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
...
global_ds_cap = L4_INVALID_CAP;
// reference count dropped to 0 (data space shall be deleted).
```

Definition at line 183 of file cap_alloc.

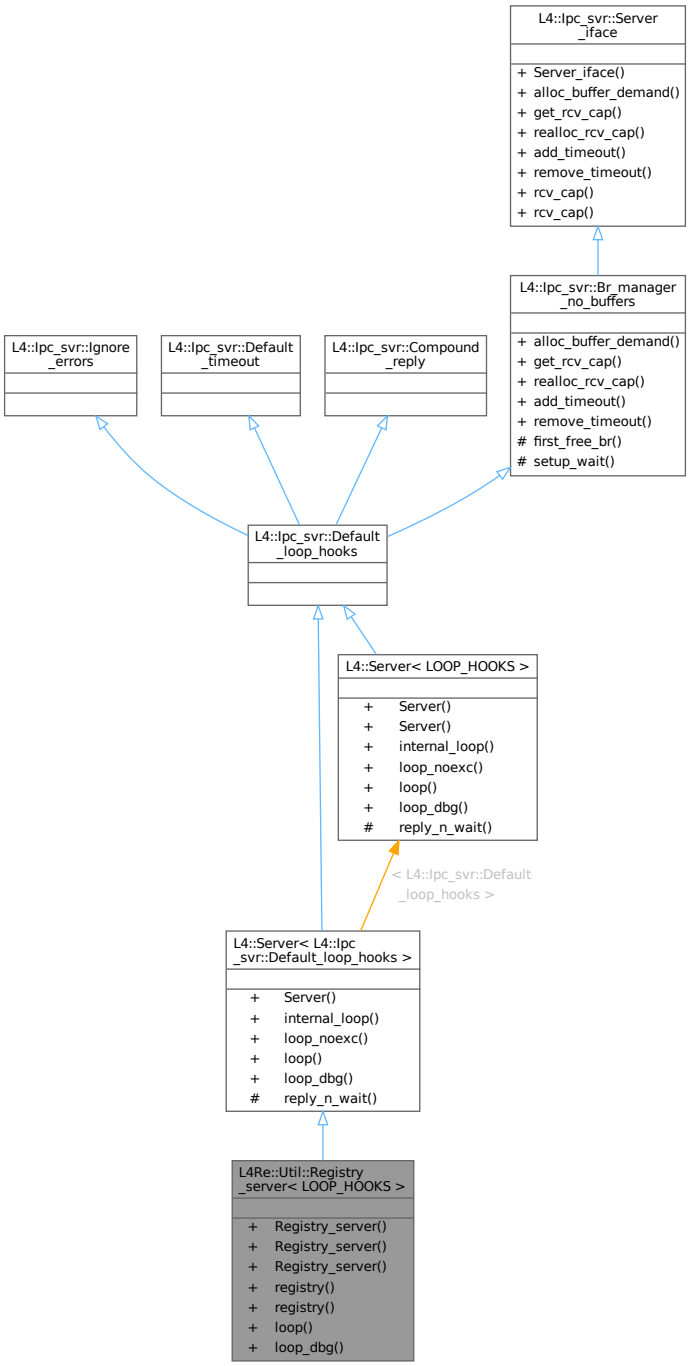
16.313 L4Re::Util::Registry_server< LOOP_HOOKS > Class Template Reference

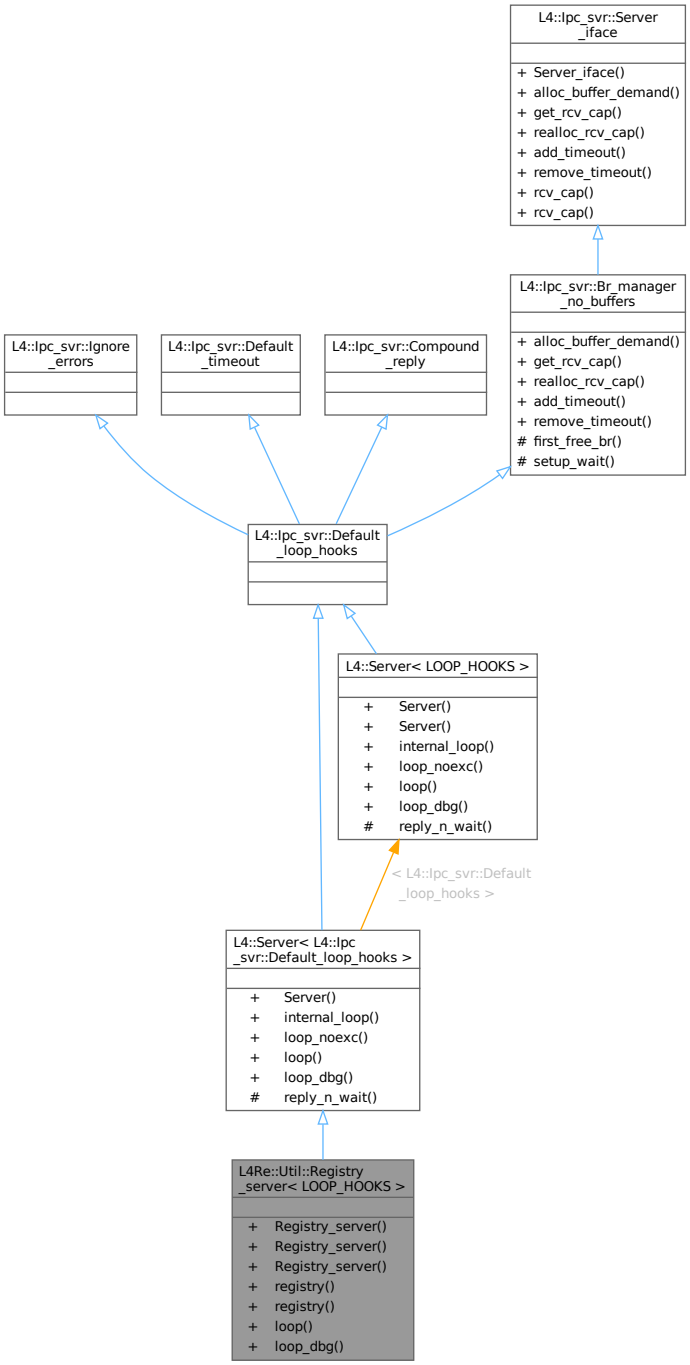
A server loop object which has a Object_registry included.

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:



Collaboration diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:



Public Member Functions

- Registry_server ()

  Create a new server loop object for the main thread of the task.
- Registry_server (l4_utcb_t *, L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)

  Create a new server loop object for an arbitrary thread and factory.
- Registry_server (L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)

Create a new server loop object for an arbitrary thread and factory.

- Object_registry const * **registry** () const

  Return registry of this server loop.
- Object_registry * **registry** ()

  Return registry of this server loop.
- void L4_NORETURN loop (l4_utcb_t *utcb=l4_utcb())

  Start the server loop.
- template<typename Printer>
  void L4_NORETURN loop_dbg (Printer printer, l4_utcb_t *utcb=l4_utcb())

  Start the server loop with error printing.

Public Member Functions inherited from L4::Server< L4::Ipc_svr::Default_loop_hooks >

- Server (l4_utcb_t *)

  Initializes the server loop.
- L4_NORETURN void internal_loop (DISPATCH dispatch, l4_utcb_t *)

  The server loop.
- L4_NORETURN void **loop_noexc** (R r, l4_utcb_t *u=l4_utcb())

  Server loop without exception handling.
- L4_NORETURN void loop (R r, l4_utcb_t *u=l4_utcb())

  Server loop with internal exception handling.
- L4_NORETURN void loop_dbg (R r, Printer p, l4_utcb_t *u=l4_utcb())

  Server loop with internal exception handling including message printing.

Public Member Functions inherited from L4::Ipc_svr::Br_manager_no_buffers

- int alloc_buffer_demand (Demand const &demand) override

  Tells the server to allocate buffers for the given demand.
- L4::Cap< void > **get_rcv_cap** (int) const override

  Returns L4::Cap<void>::Invalid, we have no buffer management.
- int **realloc_rcv_cap** (int) override

  Returns -L4_ENOMEM, we have no buffer management.
- int **add_timeout** (Timeout *, l4_kernel_clock_t) override

  Returns -L4_ENOSYS, we have no timeout queue.
- int **remove_timeout** (Timeout *) override

  Returns -L4_ENOSYS, we have no timeout queue.

Public Member Functions inherited from L4::Ipc_svr::Server_iface

- **Server_iface** ()

  Make a server interface.
- template<typename T>
  L4::Cap< T > rcv_cap (int index) const

  Get given receive buffer as typed capability.
- L4::Cap< void > rcv_cap (int index) const

  Get receive cap with the given index as generic (void) type.

Additional Inherited Members

Public Types inherited from L4::Ipc_svr::Server_iface

- typedef L4::Type_info::Demand **Demand**

  Data type expressing server-side demand for receive buffers.

Protected Member Functions inherited from L4::Server< L4::Ipc_svr::Default_loop_hooks >

- l4_msgtag_t **reply_n_wait** (l4_msgtag_t reply, l4_umword_t *p, l4_utcb_t *)

  Internal implementation for reply and wait.

Protected Member Functions inherited from L4::Ipc_svr::Br_manager_no_buffers

- unsigned **first_free_br** () const

  Returns 1 as first free buffer.
- void **setup_wait** (l4_utcb_t *utcb, L4::Ipc_svr::Reply_mode)

  Setup wait function for the server loop (Server<>).

16.313.1 Detailed Description

template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
class L4Re::Util::Registry_server< LOOP_HOOKS >

A server loop object which has a Object_registry included.

Examples

examples/clntsrv/src/server.cc, examples/libs/l4re/c++/shared_ds/ds_srv.cc, and examples/libs/l4re/streammap/server.cc.

Definition at line 293 of file object_registry.

16.313.2 Constructor & Destructor Documentation

16.313.2.1 Registry_server() [1/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server ()  [inline]
```

Create a new server loop object for the main thread of the task.

Precondition

Must be called from the main thread or behaviour is undefined.

Definition at line 305 of file object_registry.

16.313.2.2 Registry_server() [2/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
            l4_utcb_t * ,
            L4::Cap< L4::Thread > server,
            L4::Cap< L4::Factory > factory)  [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

server	Capability to thread running the server loop.
factory	Capability to factory object used to create new IPC gates.

Deprecated Note that this variant of the constructor is deprecated, please do not supply the UTCB pointer, it's not used.

Definition at line 317 of file object_registry.

16.313.2.3 Registry_server() [3/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
            L4::Cap< L4::Thread > server,
            L4::Cap< L4::Factory > factory)  [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

server	Capability to thread running the server loop.
factory	Capability to factory object used to create new IPC gates.

Definition at line 328 of file object_registry.

16.313.3 Member Function Documentation

16.313.3.1 loop()

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
void L4_NORETURN L4Re::Util::Registry_server< LOOP_HOOKS >::loop (
            l4_utcb_t * utcb = l4_utcb())  [inline]
```

Start the server loop.

Parameters

utcb	The UTCB of the thread running the server loop, defaults to l4_utcb().

Definition at line 344 of file object_registry.

References L4_NORETURN, and loop().

Referenced by loop().

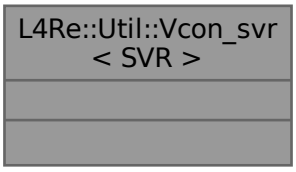
16.316 L4Re::Util::Vcon_svr< SVR > Class Template Reference

Console server template class.

`#include <vcon_svr>`

Collaboration diagram for L4Re::Util::Vcon_svr< SVR >:



16.316.1 Detailed Description

template<typename SVR>
class L4Re::Util::Vcon_svr< SVR >

Console server template class.

This template uses vcon_write() and vcon_read() to get and deliver data from the implementor.

vcon_read() needs to update the status argument with the L4_vcon_read_stat flags, especially the L4_VCON_↩ READ_STAT_DONE flag to indicate that there's nothing more to read for the other end.

vcon_write() gets the live data from the UTCB. Make sure to copy out the data before using the UTCB again.

The size parameter of both functions is given in bytes.

Definition at line 36 of file vcon_svr.

The documentation for this class was generated from the following file:

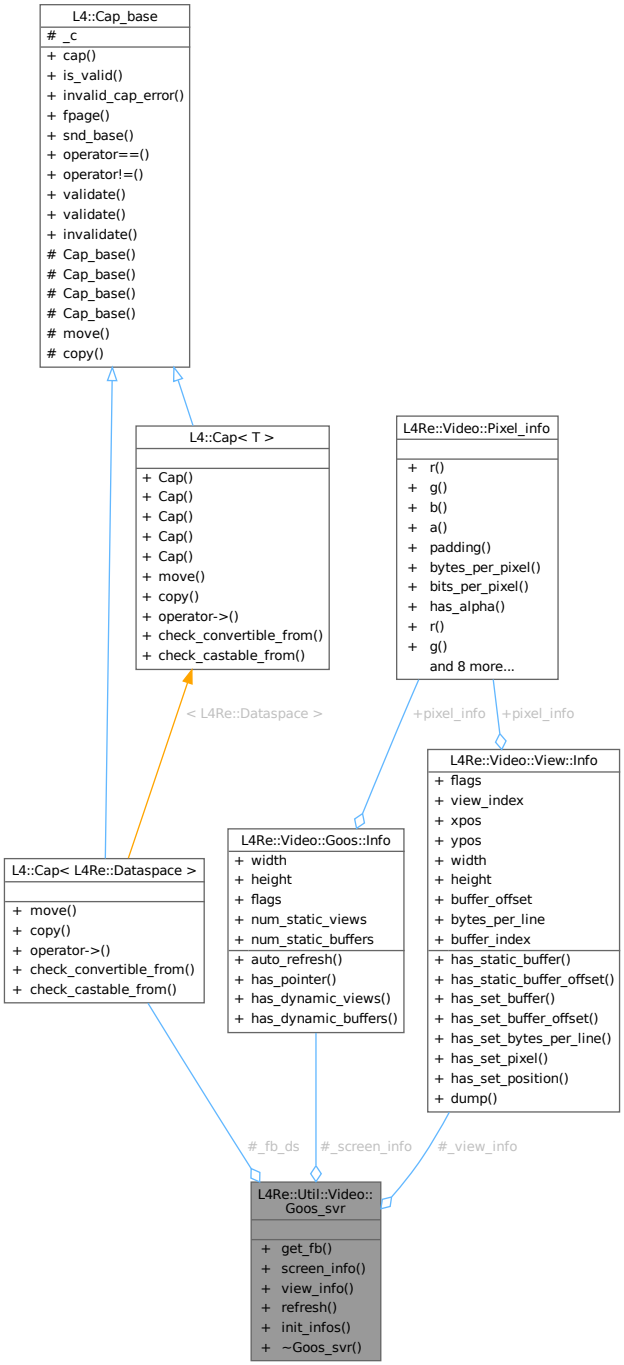
- l4/re/util/vcon_svr

16.317 L4Re::Util::Video::Goos_svr Class Reference

Goos server class.

`#include <goos_svr>`

Collaboration diagram for L4Re::Util::Video::Goos_svr:



Public Member Functions

- L4::Cap< L4Re::Dataspace > get_fb () const

  Return framebuffer memory dataspace.
- L4Re::Video::Goos::Info const * screen_info () const

  Goos information structure.
- L4Re::Video::View::Info const * view_info () const

View information structure.

- virtual int refresh (int x, int y, int w, int h)

  Refresh area of the framebuffer.
- void init_infos ()

  Initialize the view information structure of this object.
- virtual ~**Goos_svr** ()

  Destructor.

Protected Attributes

- L4::Cap< L4Re::Dataspace > **_fb_ds**

  Goos memory dataspace.
- L4Re::Video::Goos::Info **_screen_info**

  Goos information.
- L4Re::Video::View::Info **_view_info**

  View information.

16.317.1 Detailed Description

Goos server class.

Definition at line 25 of file goos_svr.

16.317.2 Member Function Documentation

16.317.2.1 get_fb()

```
L4::Cap< L4Re::Dataspace > L4Re::Util::Video::Goos_svr::get_fb () const  [inline]
```

Return framebuffer memory dataspace.

Returns

Goos memory dataspace

Definition at line 42 of file goos_svr.

References _fb_ds.

16.317.2.2 init_infos()

```
void L4Re::Util::Video::Goos_svr::init_infos ()  [inline]
```

Initialize the view information structure of this object.

This function initializes the view info structure of this goos object based on the information in the goos information, i.e. the width, height and pixel_info of the goos information has to contain valid values before calling init_info().

Definition at line 78 of file goos_svr.

References _screen_info, and _view_info.

16.317.2.3 refresh()

```
virtual int L4Re::Util::Video::Goos_svr::refresh (
             int x,
             int y,
             int w,
             int h)  [inline], [virtual]
```

Refresh area of the framebuffer.

Parameters

x	X coordinate (pixels)
y	Y coordinate (pixels)
w	Width of area in pixels
h	Height of area in pixels

Returns

0 on success, negative error code otherwise

Definition at line 66 of file goos_svr.

References L4_ENOSYS.

16.317.2.4 screen_info()

```
L4Re::Video::Goos::Info const * L4Re::Util::Video::Goos_svr::screen_info () const  [inline]
```

Goos information structure.

Returns

Return goos information structure.

Definition at line 48 of file goos_svr.

References _screen_info.

16.317.2.5 view_info()

```
L4Re::Video::View::Info const * L4Re::Util::Video::Goos_svr::view_info () const  [inline]
```

View information structure.

Returns

Return view information structure.

Definition at line 54 of file goos_svr.

References _view_info.

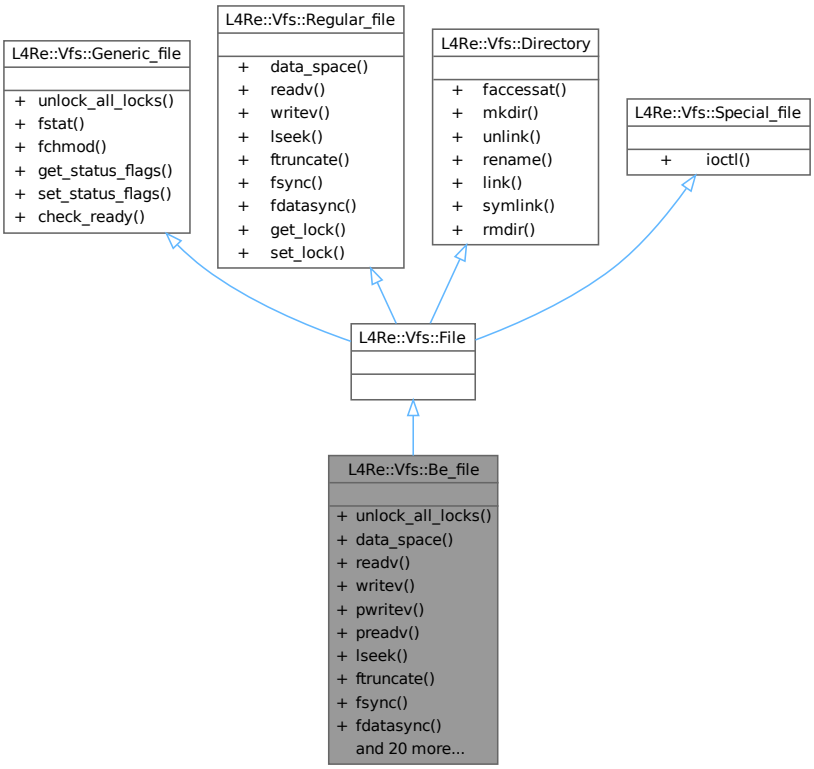
16.318 L4Re::Vfs::Be_file Class Reference

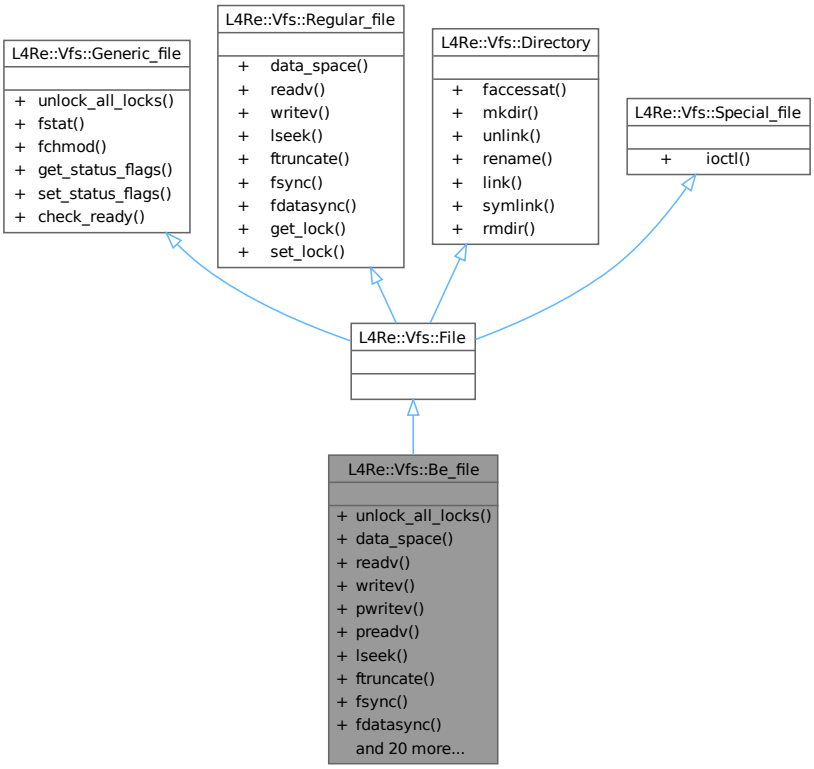
Boiler plate class for implementing an open file for L4Re::Vfs.

`#include <backend>`

Inheritance diagram for L4Re::Vfs::Be_file:



Collaboration diagram for L4Re::Vfs::Be_file:



Public Member Functions

- int unlock_all_locks () noexcept override

  Unlock all locks on the file.
- L4::Cap< L4Re::Dataspace > data_space () noexcept override

  Get an L4Re::Dataspace object for the file.
- ssize_t **readv** (const struct iovec *, int) noexcept override

  Default backend for POSIX read and readv functions.
- ssize_t **writev** (const struct iovec *, int) noexcept override

  Default backend for POSIX write and writev functions.
- ssize_t **pwritev** (const struct iovec *, int, off64_t) noexcept override

  Default backend for POSIX pwrite and pwritev functions.
- ssize_t **preadv** (const struct iovec *, int, off64_t) noexcept override

  Default backend for POSIX pread and preadv functions.
- off64_t **lseek** (off64_t, int) noexcept override

  Default backend for POSIX seek and lseek functions.
- int **ftruncate** (off64_t) noexcept override

  Default backend for the POSIX truncate, ftruncate and similar functions.
- int **fsync** () const noexcept override

  Default backend for POSIX fsync.
- int **fdatasync** () const noexcept override

  Default backend for POSIX fdatasync.

- int **ioctl** (unsigned long, va_list) noexcept override

  Default backend for POSIX ioctl.
- int fstat (struct stat64 ∗) const noexcept override

  Get status information for the file.
- int **fchmod** (mode_t) noexcept override

  Default backend for POSIX chmod and fchmod.
- int **get_status_flags** () const noexcept override

  Default backend for POSIX fcntl subfunctions.
- int **set_status_flags** (long) noexcept override

  Default backend for POSIX fcntl subfunctions.
- int **get_lock** (struct flock64 ∗) noexcept override

  Default backend for POSIX fcntl subfunctions.
- int **set_lock** (struct flock64 ∗, bool) noexcept override

  Default backend for POSIX fcntl subfunctions.
- int **faccessat** (const char ∗, int, int) noexcept override

  Default backend for POSIX access and faccessat functions.
- int **fchmodat** (const char ∗, mode_t, int) noexcept override

  Default backend for POSIX fchmodat function.
- int **utime** (const struct utimbuf ∗) noexcept override

  Default backend for POSIX utime.
- int **utimes** (const struct timeval[2]) noexcept override

  Default backend for POSIX utimes.
- int **utimensat** (const char ∗, const struct timespec[2], int) noexcept override

  Default backend for POSIX utimensat.
- int **mkdir** (const char ∗, mode_t) noexcept override

  Default backend for POSIX mkdir and mkdirat.
- int **unlink** (const char ∗) noexcept override

  Default backend for POSIX unlink, unlinkat.
- int **rename** (const char ∗, const char ∗) noexcept override

  Default backend for POSIX rename, renameat.
- int **link** (const char ∗, const char ∗) noexcept override

  Default backend for POSIX link, linkat.
- int **symlink** (const char ∗, const char ∗) noexcept override

  Default backend for POSIX symlink, symlinkat.
- int **rmdir** (const char ∗) noexcept override

  Default backend for POSIX rmdir, rmdirat.
- ssize_t **readlink** (char ∗, size_t) override

  Default backend for POSIX readlink, readlinkat.
- bool check_ready (Ready_type) noexcept override

  Default implementation of a readiness check.

Additional Inherited Members

Public Types inherited from L4Re::Vfs::Generic_file

- enum Ready_type : unsigned

  Type of I/O operation/condition a file can indicate readiness.

16.318.1 Detailed Description

Boiler plate class for implementing an open file for L4Re::Vfs.

This class may be used as a base class for everything that a POSIX file descriptor may point to. This are things such as regular files, directories, special device files, streams, pipes, and so on.

Examples

tmpfs/lib/src/fs.cc.

Definition at line 30 of file backend.

16.318.2 Member Function Documentation

16.318.2.1 check_ready()

```
bool L4Re::Vfs::Be_file::check_ready (
            Ready_type )  [inline], [override], [virtual], [noexcept]
```

Default implementation of a readiness check.

By default, we assume a file is not ready for an I/O operation/condition since the proper semantics of that relies on the backend.

Returns

Always false.

Implements L4Re::Vfs::Generic_file.

Definition at line 217 of file backend.

16.318.2.2 data_space()

```
L4::Cap< L4Re::Dataspace > L4Re::Vfs::Be_file::data_space ()  [inline], [override], [virtual],
[noexcept]
```

Get an L4Re::Dataspace object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an L4Re::Dataspace that represents the file contents in an L4Re way.

Implements L4Re::Vfs::Regular_file.

Definition at line 47 of file backend.

References L4::Cap_base::Invalid.

16.318.2.3 fstat()

```
int L4Re::Vfs::Be_file::fstat (
            struct stat64 * buf) const  [inline], [override], [virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

out	*buf*	This buffer is filled with the status information.

Returns

0 on success, or <0 on error.

Implements L4Re::Vfs::Generic_file.

Definition at line 86 of file backend.

16.318.2.4 unlock_all_locks()

```
int L4Re::Vfs::Be_file::unlock_all_locks ()  [inline], [override], [virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

0 on success, or <0 on error.

Implements L4Re::Vfs::Generic_file.

Definition at line 43 of file backend.

The documentation for this class was generated from the following file:

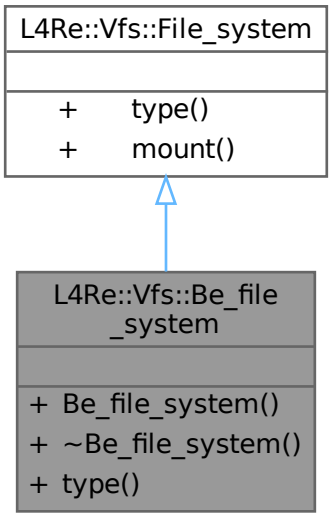
- l4/l4re_vfs/backend

16.319 L4Re::Vfs::Be_file_system Class Reference

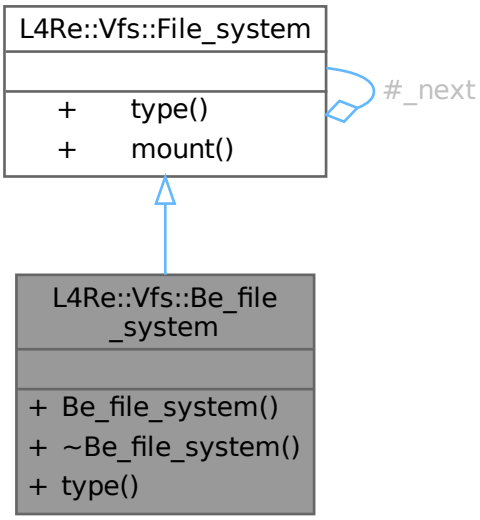
Boilerplate class for implementing a L4Re::Vfs::File_system.

`#include <backend>`

Inheritance diagram for L4Re::Vfs::Be_file_system:



Collaboration diagram for L4Re::Vfs::Be_file_system:



Public Member Functions

- Be_file_system (char const ∗fstype) noexcept
  Create a file-system object for the given fstype.
- ∼Be_file_system () noexcept
  Destroy a file-system object.
- char const ∗ type () const noexcept override
  Return the file-system type.

Public Member Functions inherited from L4Re::Vfs::File_system

- virtual int mount (char const ∗source, unsigned long mountflags, void const ∗data, cxx::Ref_ptr< File > ∗dir) noexcept=0
  Create a directory object dir representing source mounted with this file system.

16.319.1 Detailed Description

Boilerplate class for implementing a L4Re::Vfs::File_system.

This class already takes care of registering and unregistering the file system in the global registry and implements the type() method.

Examples

tmpfs/lib/src/fs.cc.

Definition at line 310 of file backend.

16.319.2 Constructor & Destructor Documentation

16.319.2.1 Be_file_system()

```
L4Re::Vfs::Be_file_system::Be_file_system (
            char const * fstype)  [inline], [explicit], [noexcept]
```

Create a file-system object for the given *fstype*.

Parameters

fstype	The type that type() shall return.

This constructor takes care of registering the file system in the registry of L4Re::Vfs::vfs_ops.

Definition at line 324 of file backend.

16.319.2.2 ~Be_file_system()

```
L4Re::Vfs::Be_file_system::~Be_file_system ()  [inline], [noexcept]
```

Destroy a file-system object.

This destructor takes care of removing this file system from the registry of L4Re::Vfs::vfs_ops.

Definition at line 336 of file backend.

16.319.3 Member Function Documentation

16.319.3.1 type()

```
char const * L4Re::Vfs::Be_file_system::type () const  [inline], [override], [virtual], [noexcept]
```

Return the file-system type.

Returns the file-system type given as *fstype* in the constructor.

Implements L4Re::Vfs::File_system.

Definition at line 346 of file backend.

The documentation for this class was generated from the following file:

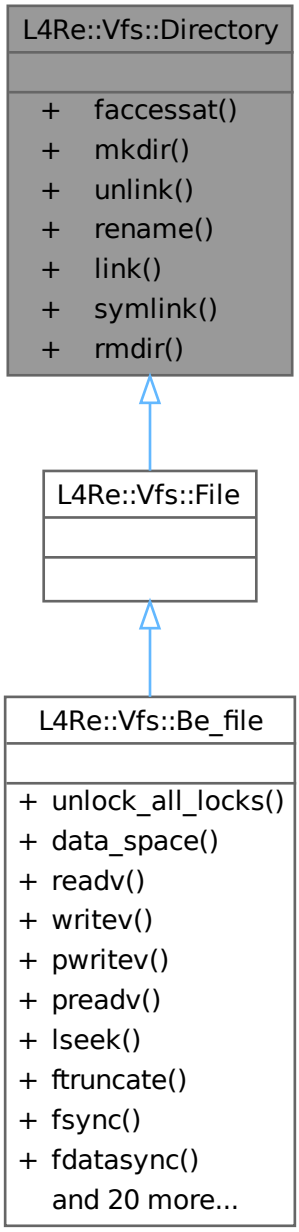
- l4/l4re_vfs/backend

16.320 L4Re::Vfs::Directory Class Reference

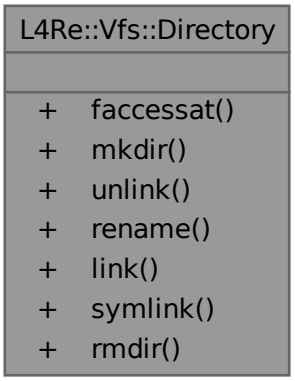
Interface for a POSIX file that is a directory.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Directory:



Collaboration diagram for L4Re::Vfs::Directory:



Public Member Functions

- virtual int faccessat (const char ∗path, int mode, int flags) noexcept=0

  Check access permissions on the given file.
- virtual int mkdir (const char ∗path, mode_t mode) noexcept=0

  Create a new subdirectory.
- virtual int unlink (const char ∗path) noexcept=0

  Unlink the given file from that directory.
- virtual int rename (const char ∗src_path, const char ∗dst_path) noexcept=0

  Rename the given file.
- virtual int link (const char ∗src_path, const char ∗dst_path) noexcept=0

  Create a hard link (second name) for the given file.
- virtual int symlink (const char ∗src_path, const char ∗dst_path) noexcept=0

  Create a symbolic link for the given file.
- virtual int rmdir (const char ∗path) noexcept=0

  Delete an empty directory.

16.320.1 Detailed Description

Interface for a POSIX file that is a directory.

This interface provides functionality for directory files in the L4Re::Vfs. However, real objects always use the combined L4Re::Vfs::File interface.

Definition at line 160 of file vfs.h.

16.320.2 Member Function Documentation

16.320.2.1 faccessat()

```
virtual int L4Re::Vfs::Directory::faccessat (
            const char * path,
            int mode,
            int flags)  [pure virtual], [noexcept]
```

Check access permissions on the given file.

Backend function for POSIX access and faccessat functions.

Parameters

path	The path relative to this directory. Note: *path* is relative to this directory and may contain subdirectories.
mode	The access mode to check.
flags	The flags as in POSIX faccessat (AT_EACCESS, AT_SYMLINK_NOFOLLOW).

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

16.320.2.2 link()

```
virtual int L4Re::Vfs::Directory::link (
            const char * src_path,
            const char * dst_path)  [pure virtual], [noexcept]
```

Create a hard link (second name) for the given file.

Backend for the POSIX link and linkat functions.

Parameters

src_path	The old name of the file. Note: *src_path* is relative to this directory and may contain subdirectories.
dst_path	The new (second) name for the file. Note: *dst_path* is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

16.320.2.3 mkdir()

```
virtual int L4Re::Vfs::Directory::mkdir (
            const char * path,
            mode_t mode)  [pure virtual], [noexcept]
```

Create a new subdirectory.

Backend for POSIX mkdir and mkdirat function calls.

Parameters

path	The name of the subdirectory to create. Note: *path* is relative to this directory and may contain subdirectories.
mode	The file mode to use for the new directory.

Returns

0 on success, or <0 on error. -ENOTDIR if this or some component in path is not a directory.

Implemented in L4Re::Vfs::Be_file.

16.320.2.4 rename()

```
virtual int L4Re::Vfs::Directory::rename (
            const char * src_path,
            const char * dst_path)  [pure virtual], [noexcept]
```

Rename the given file.

Backend for the POSIX rename, renameat functions.

Parameters

src_path	The old name of the file to rename. Note: *src_path* is relative to this directory and may contain subdirectories.
dst_path	The new name for the file. Note: *dst_path* is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

16.320.2.5 rmdir()

```
virtual int L4Re::Vfs::Directory::rmdir (
            const char * path)  [pure virtual], [noexcept]
```

Delete an empty directory.

Backend for POSIX rmdir, rmdirat functions.

Parameters

path	The name of the directory to remove. Note: *path* is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

16.320.2.6 symlink()

```
virtual int L4Re::Vfs::Directory::symlink (
             const char * src_path,
             const char * dst_path)  [pure virtual], [noexcept]
```

Create a symbolic link for the given file.

Backend for the POSIX symlink and symlinkat functions.

Parameters

src_path	The old name of the file. Note: *src_path* shall be an absolute path.
dst_path	The name for symlink. Note: *dst_path* is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

16.320.2.7 unlink()

```
virtual int L4Re::Vfs::Directory::unlink (
             const char * path)  [pure virtual], [noexcept]
```

Unlink the given file from that directory.

Backend for the POSIX unlink and unlinkat functions.

Parameters

path	The name of the file to unlink. Note: *path* is relative to this directory and may contain subdirectories.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

The documentation for this class was generated from the following file:

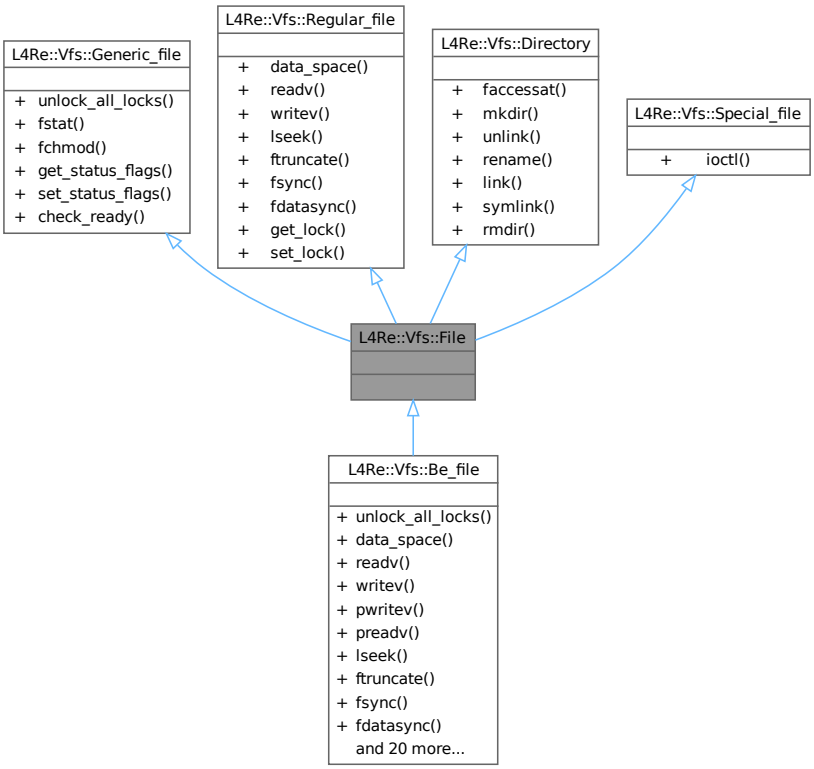
- l4/l4re_vfs/vfs.h

16.321 L4Re::Vfs::File Class Reference

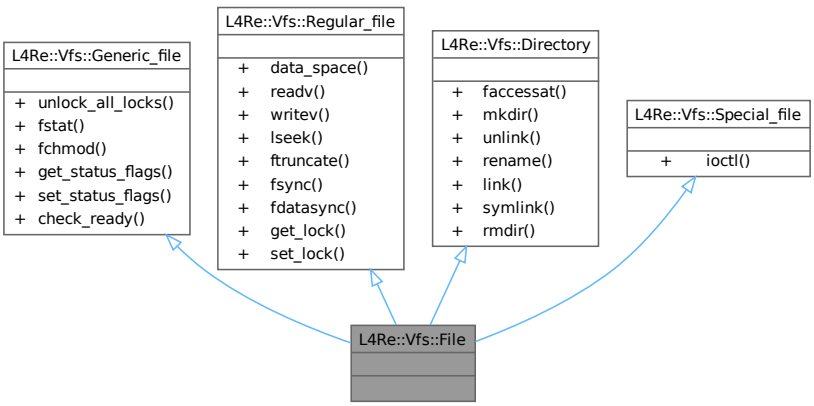
The basic interface for an open POSIX file.

`#include <vfs.h>`

Inheritance diagram for L4Re::Vfs::File:



Collaboration diagram for L4Re::Vfs::File:



Additional Inherited Members

Public Types inherited from L4Re::Vfs::Generic_file

- enum Ready_type : unsigned

  Type of I/O operation/condition a file can indicate readiness.

Public Member Functions inherited from L4Re::Vfs::Generic_file

- virtual int unlock_all_locks () noexcept=0

  Unlock all locks on the file.
- virtual int fstat (struct stat64 ∗buf) const noexcept=0

  Get status information for the file.
- virtual int fchmod (mode_t) noexcept=0

  Change POSIX access rights on the file.
- virtual int get_status_flags () const noexcept=0

  Get file status flags (fcntl F_GETFL).
- virtual int set_status_flags (long flags) noexcept=0

  Set file status flags (fcntl F_SETFL).
- virtual bool check_ready (Ready_type rt) noexcept=0

  Check whether the file is ready for an I/O operation/condition.

Public Member Functions inherited from L4Re::Vfs::Regular_file

- virtual L4::Cap< L4Re::Dataspace > data_space () noexcept=0

  Get an L4Re::Dataspace object for the file.
- virtual ssize_t readv (const struct iovec ∗, int iovcnt) noexcept=0

  Read one or more blocks of data from the file.
- virtual ssize_t writev (const struct iovec ∗, int iovcnt) noexcept=0

  Write one or more blocks of data to the file.
- virtual off64_t lseek (off64_t, int) noexcept=0

  Change the file pointer.
- virtual int ftruncate (off64_t pos) noexcept=0

  Truncate the file at the given position.
- virtual int fsync () const noexcept=0

  Sync the data and meta data to persistent storage.
- virtual int fdatasync () const noexcept=0

  Sync the data to persistent storage.
- virtual int get_lock (struct flock64 ∗lock) noexcept=0

  Test if the given lock can be placed in the file.
- virtual int set_lock (struct flock64 ∗lock, bool wait) noexcept=0

  Acquire or release the given lock on the file.

Public Member Functions inherited from L4Re::Vfs::Directory

- virtual int faccessat (const char ∗path, int mode, int flags) noexcept=0

  Check access permissions on the given file.
- virtual int mkdir (const char ∗path, mode_t mode) noexcept=0

  Create a new subdirectory.
- virtual int unlink (const char ∗path) noexcept=0

  Unlink the given file from that directory.
- virtual int rename (const char ∗src_path, const char ∗dst_path) noexcept=0

  Rename the given file.
- virtual int link (const char ∗src_path, const char ∗dst_path) noexcept=0

  Create a hard link (second name) for the given file.
- virtual int symlink (const char ∗src_path, const char ∗dst_path) noexcept=0

  Create a symbolic link for the given file.
- virtual int rmdir (const char ∗path) noexcept=0

  Delete an empty directory.

Public Member Functions inherited from L4Re::Vfs::Special_file

- virtual int ioctl (unsigned long cmd, va_list args) noexcept=0

  The famous IO control.

16.321.1 Detailed Description

The basic interface for an open POSIX file.

An open POSIX file can be anything that hides behind a POSIX file descriptor. This means that even directories are files. An open file can be anything from a directory to a special device file so see Generic_file, Regular_file, Directory, and Special_file for more information.

Note

For implementing a backend for the L4Re::Vfs L4Re::Vfs::Be_file may be used as a base class.

Definition at line 455 of file vfs.h.

The documentation for this class was generated from the following file:

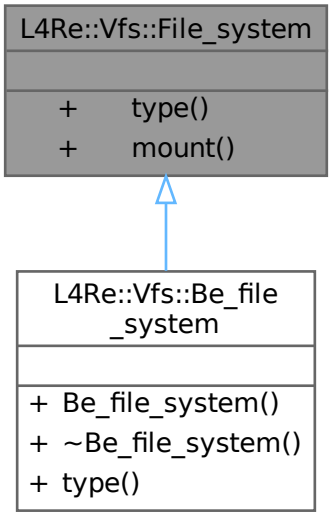
- l4/l4re_vfs/vfs.h

16.322 L4Re::Vfs::File_system Class Reference

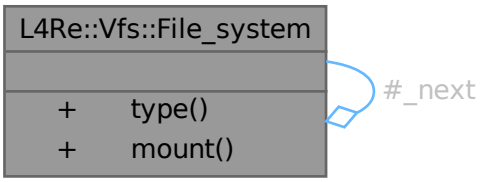
Basic interface for an L4Re::Vfs file system.

`#include <vfs.h>`

Inheritance diagram for L4Re::Vfs::File_system:



Collaboration diagram for L4Re::Vfs::File_system:



Public Member Functions

- virtual char const * type () const noexcept=0

  Returns the type of the file system used in mount as fstype argument.
- virtual int mount (char const *source, unsigned long mountflags, void const *data, cxx::Ref_ptr< File > *dir) noexcept=0

  Create a directory object dir representing source mounted with this file system.

16.322.1 Detailed Description

Basic interface for an L4Re::Vfs file system.

Note

For implementing a special file system L4Re::Vfs::Be_file_system may be used as a base class.

The main purpose of this interface is to have a single object for each supported file-system type (e.g., ext2, vfat) that exists in the application and is registered at the L4Re::Vfs::Fs singleton available via L4Re::Vfs::vfs_ops. Ultimately, the POSIX mount function calls the File_system::mount method matching the file-system type given in mount.

Definition at line 857 of file vfs.h.

16.322.2 Member Function Documentation

16.322.2.1 mount()

```
virtual int L4Re::Vfs::File_system::mount (
             char const * source,
             unsigned long mountflags,
             void const * data,
             cxx::Ref_ptr< File > * dir)  [pure virtual], [noexcept]
```

Create a directory object *dir* representing *source* mounted with this file system.

Parameters

	source	The path to the source device to mount. This may also be some URL or anything file-system specific.
	mountflags	The mount flags as specified in the POSIX mount call.
	data	The data as specified in the POSIX mount call. The contents are file-system specific.
out	*dir*	A new directory object representing the file-system root directory.

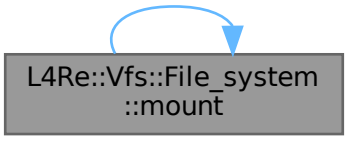
Returns

0 on success, and <0 on error (e.g. -EINVAL).

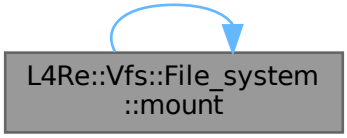
References mount().

Referenced by mount().

Here is the call graph for this function:



Here is the caller graph for this function:



16.322.2.2 type()

```
virtual char const * L4Re::Vfs::File_system::type () const  [pure virtual], [noexcept]
```

Returns the type of the file system used in mount as fstype argument.

Note

This method is already provided by Be_file_system.

Implemented in L4Re::Vfs::Be_file_system.

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

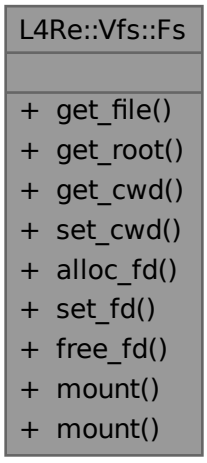
16.323 L4Re::Vfs::Fs Class Reference

POSIX File-system related functionality.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Fs:

Collaboration diagram for L4Re::Vfs::Fs:



Public Member Functions

- virtual cxx::Ref_ptr< File > get_file (int fd) noexcept=0

  Get the L4Re::Vfs::File for the file descriptor fd.
- virtual cxx::Ref_ptr< File > **get_root** () noexcept=0

  Get the directory object for the application's root directory.
- virtual cxx::Ref_ptr< File > **get_cwd** () noexcept

  Get the directory object for the application's current working directory.
- virtual void **set_cwd** (cxx::Ref_ptr< File > const &) noexcept

  Set the current working directory for the application.
- virtual int alloc_fd (cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil) noexcept=0

  Allocate the next free file descriptor.
- virtual cxx::Pair< cxx::Ref_ptr< File >, int > set_fd (int fd, cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>↩ ::Nil) noexcept=0

  Set the file object referenced by the file descriptor fd.
- virtual cxx::Ref_ptr< File > free_fd (int fd) noexcept=0

  Free the file descriptor fd.
- virtual int mount (char const *path, cxx::Ref_ptr< File > const &dir) noexcept=0

  Mount a given file object at the given global path in the VFS.
- int **mount** (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data) noexcept

  Backend for the POSIX mount call.

16.323.1 Detailed Description

POSIX File-system related functionality.

Note

This class usually exists as a singleton and as a superclass of L4Re::Vfs::Ops (

See also

L4Re::Vfs::vfs_ops).

Definition at line 946 of file vfs.h.

16.323.2 Member Function Documentation

16.323.2.1 alloc_fd()

```
virtual int L4Re::Vfs::Fs::alloc_fd (
            cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil)  [pure virtual], [noexcept]
```

Allocate the next free file descriptor.

Parameters

f	The file to assign to that file descriptor.

Returns

The allocated file descriptor, or -EMFILE on error.

16.323.2.2 free_fd()

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::free_fd (
            int fd)  [pure virtual], [noexcept]
```

Free the file descriptor *fd*.

Parameters

fd	The file descriptor to free.

Returns

A pointer to the file object that was assigned to the fd.

16.323.2.3 get_file()

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::get_file (
            int fd)  [pure virtual], [noexcept]
```

Get the L4Re::Vfs::File for the file descriptor *fd*.

Parameters

fd	The POSIX file descriptor number.

Returns

A pointer to the File object, or 0 if *fd* is not open.

16.323.2.4 mount()

```
virtual int L4Re::Vfs::Fs::mount (
            char const * path,
            cxx::Ref_ptr< File > const & dir)  [pure virtual], [noexcept]
```

Mount a given file object at the given global path in the VFS.

Parameters

path	The global path to mount *dir* at.
dir	A pointer to the file/directory object that shall be mounted at *path*.

Returns

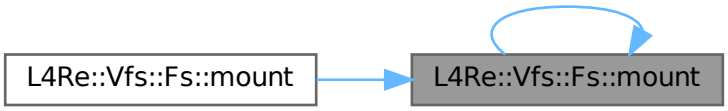
0 on success, or <0 on error.

References mount().

Referenced by mount(), and mount().

Here is the call graph for this function:

Here is the caller graph for this function:



16.323.2.5 set_fd()

```
virtual cxx::Pair< cxx::Ref_ptr< File >, int > L4Re::Vfs::Fs::set_fd (
            int fd,
            cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil)  [pure virtual], [noexcept]
```

Set the file object referenced by the file descriptor *fd*.

Parameters

fd	The file descriptor to set to *f*.

f	The file object to assign.

Returns

A pair of a pointer to the file object that was previously assigned to fd (`first`) and a return value (`second`). `second` contains `-#EBADF` if the passed file descriptor is outside the valid range. `first` contains a Nil pointer in that case. On success, `second` contains 0.

The documentation for this class was generated from the following files:

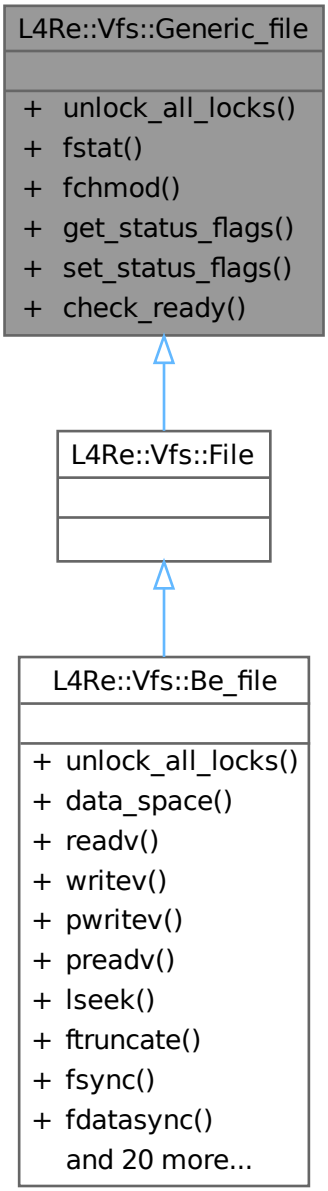
- l4/l4re_vfs/vfs.h
- l4/l4re_vfs/impl/vfs_impl.h

16.324 L4Re::Vfs::Generic_file Class Reference

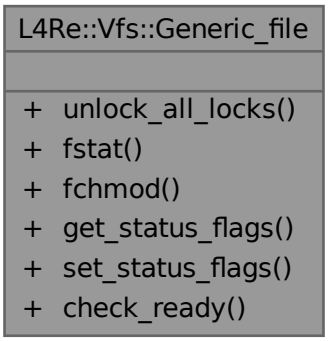
The common interface for an open POSIX file.

`#include <vfs.h>`

Inheritance diagram for L4Re::Vfs::Generic_file:



Collaboration diagram for L4Re::Vfs::Generic_file:



Public Types

- enum Ready_type : unsigned

  Type of I/O operation/condition a file can indicate readiness.

Public Member Functions

- virtual int unlock_all_locks () noexcept=0

  Unlock all locks on the file.
- virtual int fstat (struct stat64 *buf) const noexcept=0

  Get status information for the file.
- virtual int fchmod (mode_t) noexcept=0

  Change POSIX access rights on the file.
- virtual int get_status_flags () const noexcept=0

  Get file status flags (fcntl F_GETFL).
- virtual int set_status_flags (long flags) noexcept=0

  Set file status flags (fcntl F_SETFL).
- virtual bool check_ready (Ready_type rt) noexcept=0

  Check whether the file is ready for an I/O operation/condition.

16.324.1 Detailed Description

The common interface for an open POSIX file.

This interface is common to all kinds of open files, independent of the file type (e.g., directory, regular file etc.). However, in the L4Re::Vfs the interface File is used for every real object.

See also

L4Re::Vfs::File for more information.

Definition at line 52 of file vfs.h.

16.324.2 Member Enumeration Documentation

16.324.2.1 Ready_type

```
enum L4Re::Vfs::Generic_file::Ready_type :  unsigned
```

Type of I/O operation/condition a file can indicate readiness.

As defined by select() and similar functions.

Definition at line 60 of file vfs.h.

16.324.3 Member Function Documentation

16.324.3.1 check_ready()

```
virtual bool L4Re::Vfs::Generic_file::check_ready (
             Ready_type rt)  [pure virtual], [noexcept]
```

Check whether the file is ready for an I/O operation/condition.

This method is used by the implementation of select() and similar functions.

Parameters

rt	Type of the I/O operation/condition to be ready, as defined by the select() and similar functions (Read, Write, Exception).

Return values

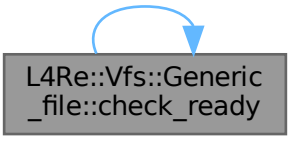
true	The file is ready for the given type of I/O operation/condition.
false	The file is not ready for the given type of I/O operation/condition.

Implemented in L4Re::Vfs::Be_file.

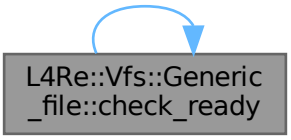
References check_ready().

Referenced by check_ready().

Here is the call graph for this function:



Here is the caller graph for this function:



16.324.3.2 fchmod()

```
virtual int L4Re::Vfs::Generic_file::fchmod (
            mode_t )  [pure virtual], [noexcept]
```

Change POSIX access rights on the file.

Backend for POSIX chmod and fchmod.

Implemented in L4Re::Vfs::Be_file.

References fchmod().

Referenced by fchmod().

Here is the call graph for this function:

Here is the caller graph for this function:

16.324.3.3 fstat()

```
virtual int L4Re::Vfs::Generic_file::fstat (
            struct stat64 * buf) const  [pure virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

out	*buf*	This buffer is filled with the status information.

Returns

0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

References fstat().

Referenced by fstat().

Here is the call graph for this function:

Here is the caller graph for this function:

16.324.3.4 get_status_flags()

```
virtual int L4Re::Vfs::Generic_file::get_status_flags () const  [pure virtual], [noexcept]
```

Get file status flags (fcntl F_GETFL).

This function is used by the fcntl implementation for the F_GETFL command.

Returns

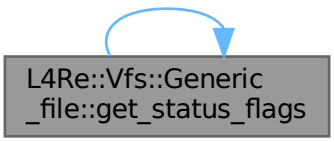
flags such as O_RDONLY, O_WRONLY, O_RDWR, O_DIRECT, O_ASYNC, O_NOATIME, O_NONBLOCK, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

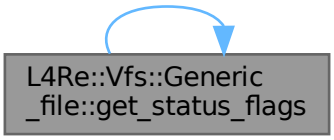
References get_status_flags().

Referenced by get_status_flags().

Here is the call graph for this function:



Here is the caller graph for this function:



16.324.3.5 set_status_flags()

```
virtual int L4Re::Vfs::Generic_file::set_status_flags (
            long flags)  [pure virtual], [noexcept]
```

Set file status flags (fcntl F_SETFL).

This function is used by the fcntl implementation for the F_SETFL command.

Parameters

flags	The file status flags to set. This must be a combination of O_RDONLY, O_WRONLY, O_RDWR, O_↩ APPEND, O_ASYNC, O_DIRECT, O_NOATIME, O_NONBLOCK.

Note

Creation flags such as O_CREAT, O_EXCL, O_NOCTTY, O_TRUNC are ignored.

Returns

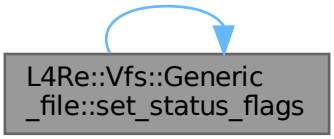
0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

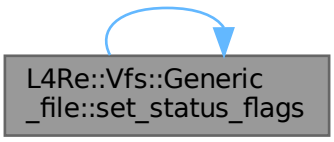
References set_status_flags().

Referenced by set_status_flags().

Here is the call graph for this function:



Here is the caller graph for this function:



16.324.3.6 unlock_all_locks()

```
virtual int L4Re::Vfs::Generic_file::unlock_all_locks ()  [pure virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

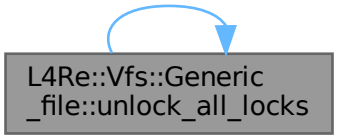
0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

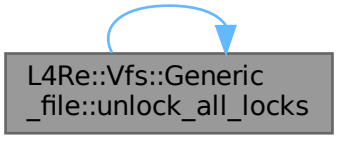
References unlock_all_locks().

Referenced by unlock_all_locks().

Here is the call graph for this function:



Here is the caller graph for this function:



The documentation for this class was generated from the following file:

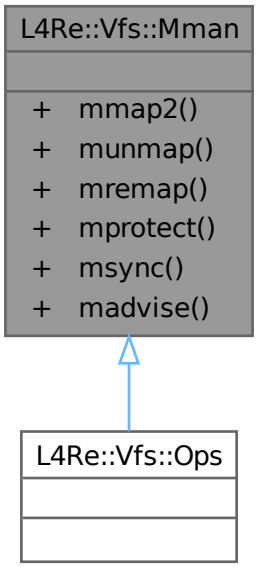
- l4/l4re_vfs/vfs.h

16.325 L4Re::Vfs::Mman Class Reference

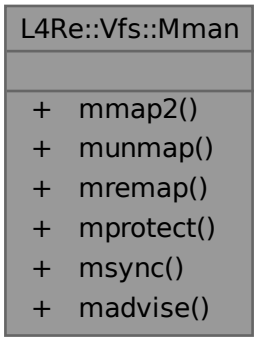
Interface for POSIX memory management.

`#include <vfs.h>`

Inheritance diagram for L4Re::Vfs::Mman:



Collaboration diagram for L4Re::Vfs::Mman:



Public Member Functions

- virtual int **mmap2** (void ∗start, size_t len, int prot, int flags, int fd, off_t offset, void ∗∗ptr) noexcept=0

  Backend for the mmap2 system call.
- virtual int **munmap** (void ∗start, size_t len) noexcept=0

  Backend for the munmap system call.
- virtual int **mremap** (void ∗old, size_t old_sz, size_t new_sz, int flags, void ∗∗new_addr) noexcept=0

  Backend for the mremap system call.
- virtual int **mprotect** (const void ∗a, size_t sz, int prot) noexcept=0

  Backend for the mprotect system call.
- virtual int **msync** (void ∗addr, size_t len, int flags) noexcept=0

  Backend for the msync system call.
- virtual int **madvise** (void ∗addr, size_t len, int advice) noexcept=0

  Backend for the madvice system call.

16.325.1 Detailed Description

Interface for POSIX memory management.

Note

This interface usually exists as a singleton and as a superclass of L4Re::Vfs::Ops.

An implementation for this interface is in l4/l4re_vfs/impl/vfs_impl.h and used by the l4re_vfs library or by the VFS implementation in ldso.

Definition at line 773 of file vfs.h.

The documentation for this class was generated from the following file:

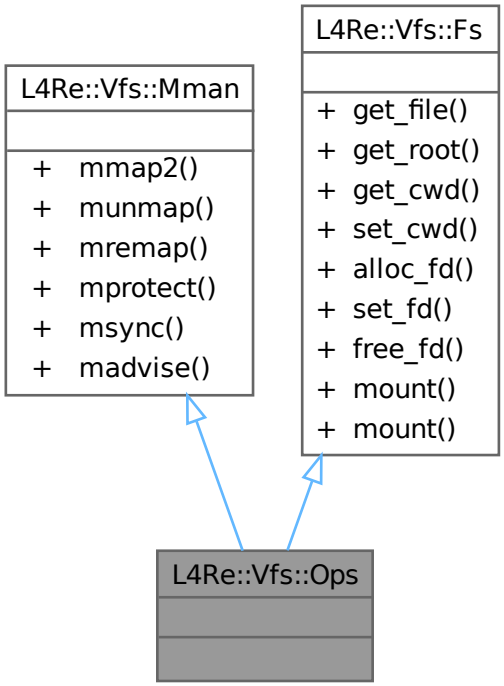
- l4/l4re_vfs/vfs.h

16.326 L4Re::Vfs::Ops Class Reference

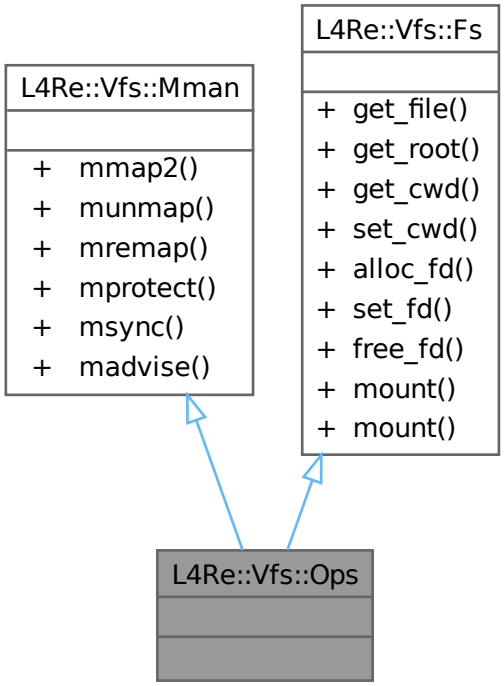
Interface for the POSIX backends of an application.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Ops:



Collaboration diagram for L4Re::Vfs::Ops:



Additional Inherited Members

Public Member Functions inherited from L4Re::Vfs::Mman

- virtual int **mmap2** (void ∗start, size_t len, int prot, int flags, int fd, off_t offset, void ∗∗ptr) noexcept=0

  Backend for the mmap2 system call.
- virtual int **munmap** (void ∗start, size_t len) noexcept=0

  Backend for the munmap system call.
- virtual int **mremap** (void ∗old, size_t old_sz, size_t new_sz, int flags, void ∗∗new_addr) noexcept=0

  Backend for the mremap system call.
- virtual int **mprotect** (const void ∗a, size_t sz, int prot) noexcept=0

  Backend for the mprotect system call.
- virtual int **msync** (void ∗addr, size_t len, int flags) noexcept=0

  Backend for the msync system call.
- virtual int **madvise** (void ∗addr, size_t len, int advice) noexcept=0

  Backend for the madvice system call.

Public Member Functions inherited from L4Re::Vfs::Fs

- virtual cxx::Ref_ptr< File > get_file (int fd) noexcept=0

  Get the L4Re::Vfs::File for the file descriptor fd.

- virtual cxx::Ref_ptr< File > **get_root** () noexcept=0

  Get the directory object for the application's root directory.
- virtual cxx::Ref_ptr< File > **get_cwd** () noexcept

  Get the directory object for the application's current working directory.
- virtual void **set_cwd** (cxx::Ref_ptr< File > const &) noexcept

  Set the current working directory for the application.
- virtual int alloc_fd (cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil) noexcept=0

  Allocate the next free file descriptor.
- virtual cxx::Pair< cxx::Ref_ptr< File >, int > set_fd (int fd, cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>↩ ::Nil) noexcept=0

  Set the file object referenced by the file descriptor fd.
- virtual cxx::Ref_ptr< File > free_fd (int fd) noexcept=0

  Free the file descriptor fd.
- virtual int mount (char const *path, cxx::Ref_ptr< File > const &dir) noexcept=0

  Mount a given file object at the given global path in the VFS.
- int **mount** (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data) noexcept

  Backend for the POSIX mount call.

16.326.1 Detailed Description

Interface for the POSIX backends of an application.

Note

There usually exists a single instance of this interface available via L4Re::Vfs::vfs_ops that is used for all kinds of C-Library functions.

Definition at line 1109 of file vfs.h.

The documentation for this class was generated from the following file:

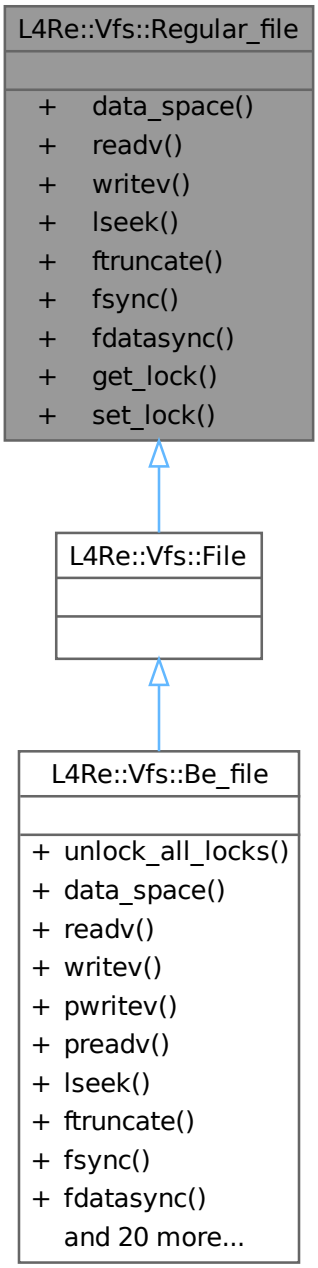
- l4/l4re_vfs/vfs.h

16.327 L4Re::Vfs::Regular_file Class Reference

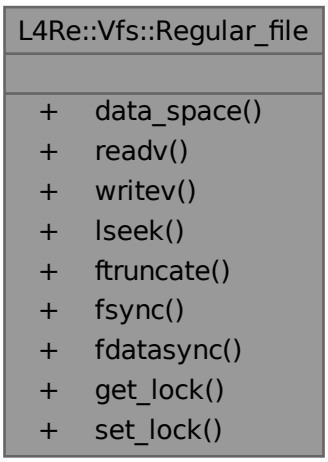
Interface for a POSIX file that provides regular file semantics.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Regular_file:



Collaboration diagram for L4Re::Vfs::Regular_file:



Public Member Functions

- virtual L4::Cap< L4Re::Dataspace > data_space () noexcept=0
  Get an L4Re::Dataspace object for the file.
- virtual ssize_t readv (const struct iovec *, int iovcnt) noexcept=0
  Read one or more blocks of data from the file.
- virtual ssize_t writev (const struct iovec *, int iovcnt) noexcept=0
  Write one or more blocks of data to the file.
- virtual off64_t lseek (off64_t, int) noexcept=0
  Change the file pointer.
- virtual int ftruncate (off64_t pos) noexcept=0
  Truncate the file at the given position.
- virtual int fsync () const noexcept=0
  Sync the data and meta data to persistent storage.
- virtual int fdatasync () const noexcept=0
  Sync the data to persistent storage.
- virtual int get_lock (struct flock64 *lock) noexcept=0
  Test if the given lock can be placed in the file.
- virtual int set_lock (struct flock64 *lock, bool wait) noexcept=0
  Acquire or release the given lock on the file.

16.327.1 Detailed Description

Interface for a POSIX file that provides regular file semantics.

Real objects always use the combined L4Re::Vfs::File interface.

Definition at line 287 of file vfs.h.

16.327.2 Member Function Documentation

16.327.2.1 data_space()

```
virtual L4::Cap< L4Re::Dataspace > L4Re::Vfs::Regular_file::data_space ()  [pure virtual],
[noexcept]
```

Get an L4Re::Dataspace object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an L4Re::Dataspace that represents the file contents in an L4Re way.

Implemented in L4Re::Vfs::Be_file.

16.327.2.2 fdatasync()

```
virtual int L4Re::Vfs::Regular_file::fdatasync () const  [pure virtual], [noexcept]
```

Sync the data to persistent storage.

This is the backend for POSIX fdatasync.

Implemented in L4Re::Vfs::Be_file.

References fdatasync().

Referenced by fdatasync().

Here is the call graph for this function:

Here is the caller graph for this function:

16.327.2.3 fsync()

```
virtual int L4Re::Vfs::Regular_file::fsync () const  [pure virtual], [noexcept]
```

Sync the data and meta data to persistent storage.

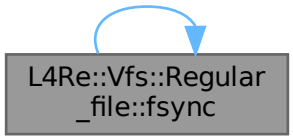
This is the backend for POSIX fsync.

Implemented in L4Re::Vfs::Be_file.

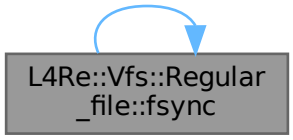
References fsync().

Referenced by fsync().

Here is the call graph for this function:



Here is the caller graph for this function:



16.327.2.4 ftruncate()

```
virtual int L4Re::Vfs::Regular_file::ftruncate (
             off64_t pos)  [pure virtual], [noexcept]
```

Truncate the file at the given position.

This function is the backend for truncate and friends.

Parameters

pos	The offset at which the file shall be truncated.

Returns

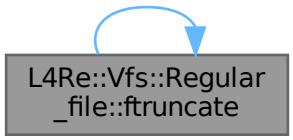
0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

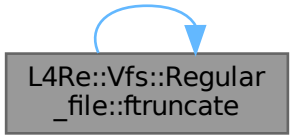
References ftruncate().

Referenced by ftruncate().

Here is the call graph for this function:



Here is the caller graph for this function:



16.327.2.5 get_lock()

```
virtual int L4Re::Vfs::Regular_file::get_lock (
             struct flock64 * lock)  [pure virtual], [noexcept]
```

Test if the given lock can be placed in the file.

This function is used as backend for fcntl F_GETLK commands.

Parameters

lock	The lock that shall be placed on the file. The *l_type* member will contain `F_UNLCK` if the lock could be placed.

Returns

0 on success, <0 on error.

Implemented in L4Re::Vfs::Be_file.

References get_lock().

Referenced by get_lock().

Here is the call graph for this function:

Here is the caller graph for this function:

16.327.2.6 lseek()

```
virtual off64_t L4Re::Vfs::Regular_file::lseek (
            off64_t ,
            int )  [pure virtual], [noexcept]
```

Change the file pointer.

This is the backend for POSIX seek, lseek and friends.

Returns

The new file position, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

References lseek().

Referenced by lseek().

Here is the call graph for this function:

Here is the caller graph for this function:

16.327.2.7 readv()

```
virtual ssize_t L4Re::Vfs::Regular_file::readv (
            const struct iovec * ,
            int iovcnt)  [pure virtual], [noexcept]
```

Read one or more blocks of data from the file.

This function acts as backend for POSIX read and readv calls and reads data starting from the f_pos pointer of that open file. The file pointer is advanced according to the number of bytes read.

Returns

The number of bytes read from the file, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

References readv().

Referenced by readv().

Here is the call graph for this function:

Here is the caller graph for this function:

16.327.2.8 set_lock()

```
virtual int L4Re::Vfs::Regular_file::set_lock (
             struct flock64 * lock,
             bool wait)  [pure virtual], [noexcept]
```

Acquire or release the given lock on the file.

This function is used as backend for fcntl F_SETLK and F_SETLKW commands.

Parameters

lock	The lock that shall be placed on the file.

wait	If true, then block if there is a conflicting lock on the file.

Returns

0 on success, <0 on error.

Implemented in L4Re::Vfs::Be_file.

References set_lock().

Referenced by set_lock().

Here is the call graph for this function:

Here is the caller graph for this function:

16.327.2.9 writev()

```
virtual ssize_t L4Re::Vfs::Regular_file::writev (
            const struct iovec * ,
            int iovcnt)  [pure virtual], [noexcept]
```

Write one or more blocks of data to the file.

This function acts as backend for POSIX write and writev calls. The data is written starting at the current file pointer and the file pointer must be advanced according to the number of written bytes.

Returns

The number of bytes written to the file, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

References writev().

Referenced by writev().

Here is the call graph for this function:

Here is the caller graph for this function:

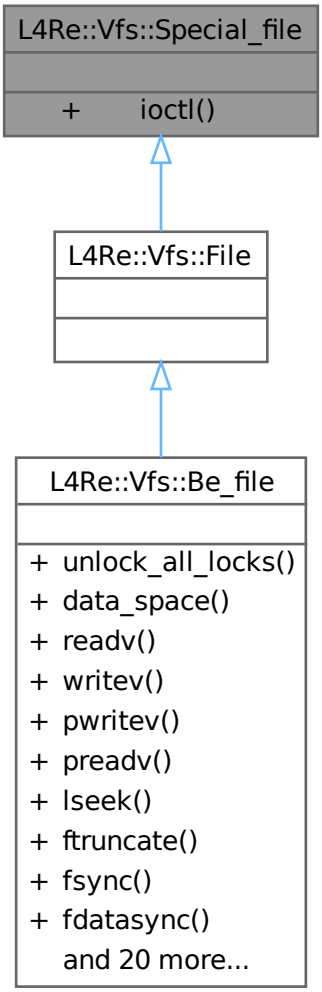
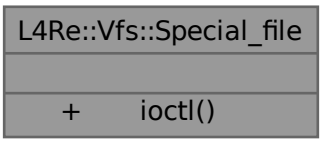
Inheritance diagram for L4Re::Vfs::Special_file:



Collaboration diagram for L4Re::Vfs::Special_file:



Public Member Functions

- virtual int ioctl (unsigned long cmd, va_list args) noexcept=0

  The famous IO control.

16.328.1 Detailed Description

Interface for a POSIX file that provides special file semantics.

Real objects always use the combined L4Re::Vfs::File interface.

Definition at line 420 of file vfs.h.

16.328.2 Member Function Documentation

16.328.2.1 ioctl()

```
virtual int L4Re::Vfs::Special_file::ioctl (
             unsigned long cmd,
             va_list args)  [pure virtual], [noexcept]
```

The famous IO control.

Backend for POSIX generic object invocation ioctl.

Parameters

cmd	The ioctl command.
args	The arguments for the ioctl, usually some kind of pointer.

Returns

>=0 on success, or <0 on error.

Implemented in L4Re::Vfs::Be_file.

The documentation for this class was generated from the following file:

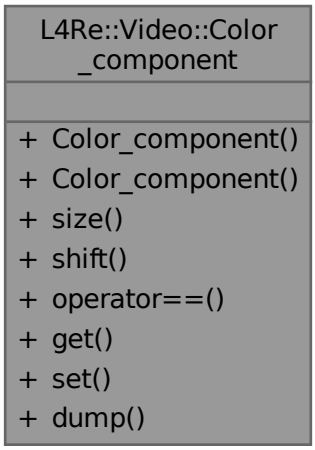
- l4/l4re_vfs/vfs.h

16.329 L4Re::Video::Color_component Class Reference

A color component.

`#include <colors>`

Collaboration diagram for L4Re::Video::Color_component:



Public Member Functions

- **Color_component** ()
  Constructor.
- Color_component (unsigned char bits, unsigned char shift)
  Constructor.
- unsigned char size () const
  Return the number of bits used by the component.
- unsigned char shift () const
  Return the position of the component in the pixel.
- bool operator== (Color_component const &o) const
  Compare for equality.
- int get (unsigned long v) const
  Get component from value (normalized to 16bits).
- long unsigned set (int v) const
  Transform 16bit normalized value to the component in the color space.
- template<typename OUT>
  void dump (OUT &s) const
  Dump information on the view information to a stream.

16.329.1 Detailed Description

A color component.

Definition at line 21 of file colors.

16.329.2 Constructor & Destructor Documentation

16.329.2.1 Color_component()

```
L4Re::Video::Color_component::Color_component (
            unsigned char bits,
            unsigned char shift)  [inline]
```

Constructor.

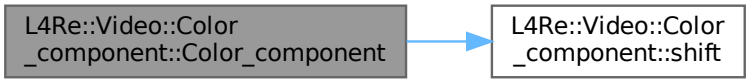
Parameters

bits	Number of bits used by the component
shift	Position in bits of the component in the pixel

Definition at line 36 of file colors.

References shift().

Here is the call graph for this function:



16.329.3 Member Function Documentation

16.329.3.1 dump()

```
template<typename OUT>
void L4Re::Video::Color_component::dump (
            OUT & s) const  [inline]
```

Dump information on the view information to a stream.

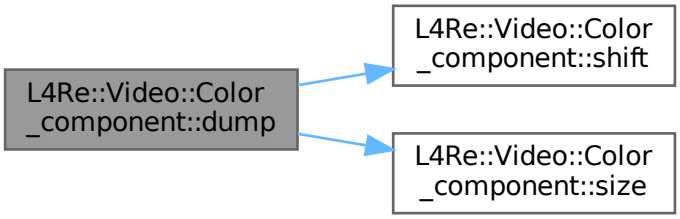
Parameters

s	Stream

Definition at line 81 of file colors.

References shift(), and size().

Here is the call graph for this function:



16.329.3.2 get()

```
int L4Re::Video::Color_component::get (
            unsigned long v) const  [inline]
```

Get component from value (normalized to 16bits).

Parameters

v	Value

Returns

Converted value

Definition at line 63 of file colors.

16.329.3.3 operator==()

```
bool L4Re::Video::Color_component::operator== (
            Color_component const & o) const  [inline]
```

Compare for equality.

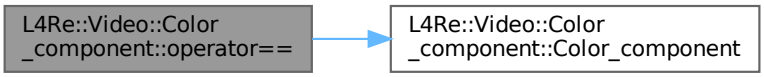
Returns

True if the same components are described, false if not.

Definition at line 55 of file colors.

References Color_component().

Here is the call graph for this function:



16.329.3.4 set()

```
long unsigned L4Re::Video::Color_component::set (
             int v) const  [inline]
```

Transform 16bit normalized value to the component in the color space.

Parameters

v	Value return Converted value.

Definition at line 73 of file colors.

16.329.3.5 shift()

```
unsigned char L4Re::Video::Color_component::shift () const  [inline]
```

Return the position of the component in the pixel.

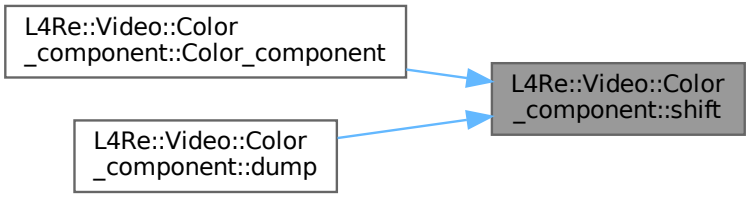
Returns

Position in bits of the component in the pixel

Definition at line 49 of file colors.

Referenced by Color_component(), and dump().

Here is the caller graph for this function:



16.329.3.6 size()

```
unsigned char L4Re::Video::Color_component::size () const  [inline]
```

Return the number of bits used by the component.

Returns

Number of bits used by the component

Definition at line 43 of file colors.

Referenced by dump().

Here is the caller graph for this function:

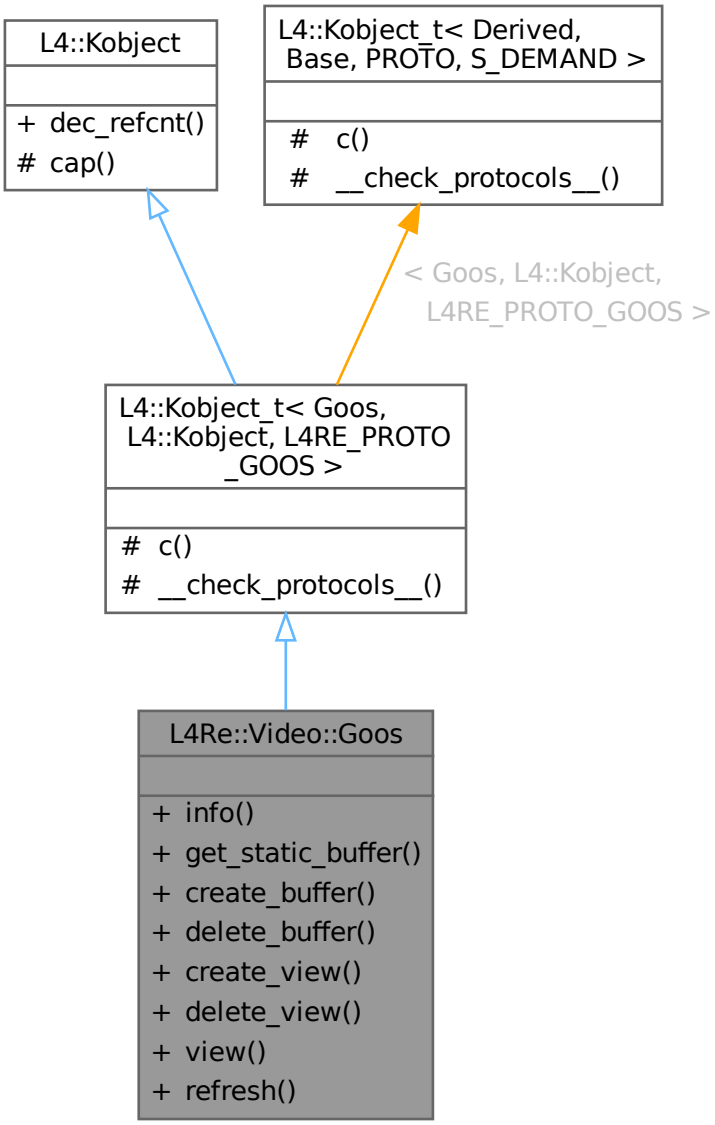
16.330 L4Re::Video::Goos Class Reference

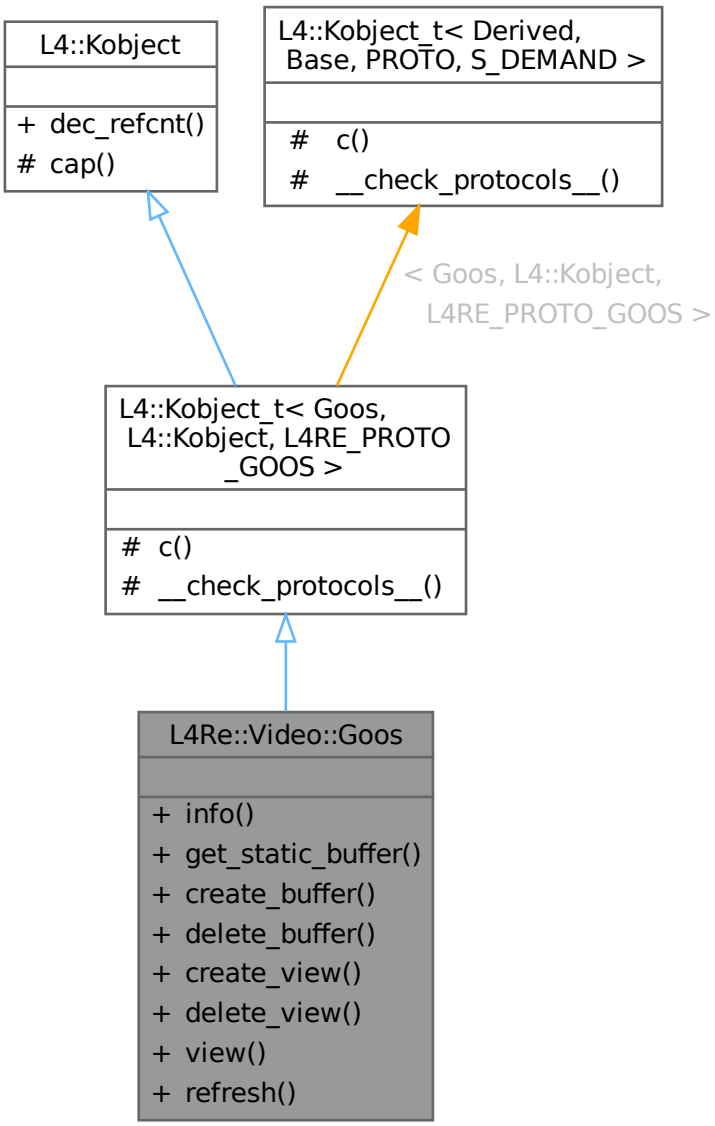
Class that abstracts framebuffers.

`#include <goos>`

Inheritance diagram for L4Re::Video::Goos:



Collaboration diagram for L4Re::Video::Goos:



Data Structures

- struct Info

  Information structure of a Goos.

Public Types

- enum Flags { F_auto_refresh = 0x01 , F_pointer = 0x02 , F_dynamic_views = 0x04 , F_dynamic_buffers = 0x08 }

  Flags for a Goos.

Public Member Functions

- long info (Info *info)

  Return the Goos information of the Goos.
- long get_static_buffer (unsigned idx, L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf)

  Return a static buffer of a Goos.
- long create_buffer (unsigned long size, L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf)

  Create a buffer.
- long delete_buffer (unsigned idx)

  Delete a buffer.
- int create_view (View *view, l4_utcb_t *utcb=l4_utcb()) const noexcept

  Create a view.
- int delete_view (View const &v, l4_utcb_t *utcb=l4_utcb()) const noexcept

  Delete a view.
- View view (unsigned index) const noexcept

  Return a view.
- long **refresh** (int x, int y, int w, int h)

  Trigger refreshing of the given area on the virtual screen.

Public Member Functions inherited from L4::Kobject

- l4_msgtag_t dec_refcnt (l4_mword_t diff, l4_utcb_t *utcb=l4_utcb())

  Decrement the in kernel reference counter for the object.

Additional Inherited Members

Protected Types inherited from L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- typedef Goos **Class**

  The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO, Goos > **__Iface**

  The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, typename L4::Kobject::__Iface_list > **__Iface_list**

  The list of all RPC interfaces provided directly or through inheritance.

Protected Member Functions inherited from L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- L4::Cap< Class > **c** () const noexcept

  Get the capability to ourselves.

Protected Member Functions inherited from L4::Kobject

- l4_cap_idx_t cap () const noexcept

  Return capability selector.

Static Protected Member Functions inherited from L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- static void **__check_protocols__** () noexcept

  Helper to check for protocol conflicts.

16.330.1 Detailed Description

Class that abstracts framebuffers.

A framebuffer is the pixel data that is displayed on a screen and a Goos object lets the user manipulate that data. A Goos makes use of two kinds of objects:

- Buffers in the form of L4Re::Dataspace objects. These hold the bytes for the pixel data.
- L4Re::Video::View objects.

Both can either be static, that is their number and configuration is fixed and determined by the framebuffer, or they can be dynamic, with the user allocating them.

Definition at line 223 of file goos.

16.330.2 Member Enumeration Documentation

16.330.2.1 Flags

```
enum L4Re::Video::Goos::Flags
```

Flags for a Goos.

Enumerator

F_auto_refresh	The graphics display is automatically refreshed.
F_pointer	We have a mouse pointer.
F_dynamic_views	Supports dynamically allocated views.
F_dynamic_buffers	Supports dynamically allocated buffers.

Definition at line 228 of file goos.

16.330.3 Member Function Documentation

16.330.3.1 create_buffer()

```
long L4Re::Video::Goos::create_buffer (
            unsigned long size,
            L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
```

Create a buffer.

Parameters

size	Size of buffer in bytes.
rbuf	Capability slot to point the buffer dataspace to.

Return values

>=0	Success, the value returned is the buffer index.
<0	Error

Referenced by get_static_buffer().

Here is the caller graph for this function:

16.330.3.2 create_view()

```
int L4Re::Video::Goos::create_view (
            View * view,
            l4_utcb_t * utcb = l4_utcb()) const  [inline], [noexcept]
```

Create a view.

Parameters

out	*view*	A view object.
	utcb	UTCB of the caller. This is a default parameter.

Return values

>=0	Success, the value returned is the view index.
<0	Error

Definition at line 312 of file goos.

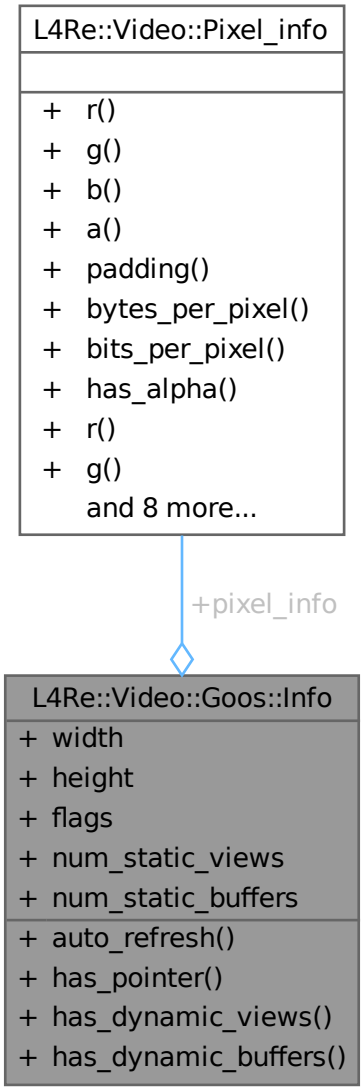
16.331 L4Re::Video::Goos::Info Struct Reference

Information structure of a Goos.

`#include <goos>`

Collaboration diagram for L4Re::Video::Goos::Info:



Public Member Functions

- bool **auto_refresh** () const

  Return whether this Goos does auto refreshing or the view refresh functions must be used to make changes visible.
- bool **has_pointer** () const

  Return whether a pointer is used by the provider of the Goos.
- bool **has_dynamic_views** () const

  Return whether dynamic view are supported.
- bool **has_dynamic_buffers** () const

  Return whether dynamic buffers are supported.

Data Fields

- unsigned long **width**

  Width.
- unsigned long **height**

  Height.
- unsigned **flags**

  Flags, see Flags.
- unsigned **num_static_views**

  Number of static view.
- unsigned **num_static_buffers**

  Number of static buffers.
- Pixel_info **pixel_info**

  Pixel information.

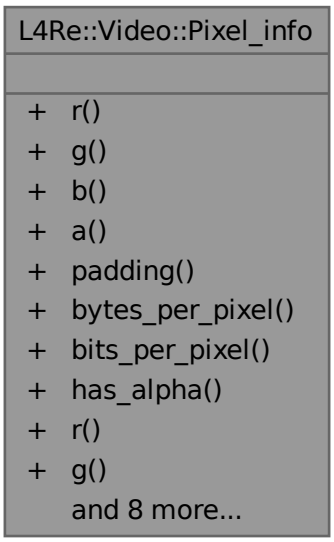
16.332 L4Re::Video::Pixel_info Class Reference

Pixel information.

`#include <colors>`

Collaboration diagram for L4Re::Video::Pixel_info:



Public Member Functions

- Color_component const & r () const
  Return the red color compoment of the pixel.
- Color_component const & g () const
  Return the green color compoment of the pixel.
- Color_component const & b () const
  Return the blue color compoment of the pixel.
- Color_component const & a () const
  Return the alpha color compoment of the pixel.
- Color_component const padding () const
  Compute the padding pseudo component.
- unsigned char bytes_per_pixel () const
  Query size of pixel in bytes.
- unsigned char bits_per_pixel () const
  Number of bits of the pixel.
- bool has_alpha () const
  Return whether the pixel has an alpha channel.
- void r (Color_component const &c)
  Set the red color component of the pixel.
- void g (Color_component const &c)
  Set the green color component of the pixel.
- void b (Color_component const &c)
  Set the blue color component of the pixel.
- void a (Color_component const &c)
  Set the alpha color component of the pixel.
- void bytes_per_pixel (unsigned char bpp)
  Set the size of the pixel in bytes.
- **Pixel_info** ()
  Constructor.
- Pixel_info (unsigned char bpp, char r, char rs, char g, char gs, char b, char bs, char a=0, char as=0)
  Constructor.
- template<typename VBI>
  Pixel_info (VBI const *vbi)
  Convenience constructor.
- bool operator== (Pixel_info const &o) const
  Compare for complete equality of the color space.
- template<typename OUT>
  void dump (OUT &s) const
  Dump information on the pixel to a stream.

16.332.1 Detailed Description

Pixel information.

This class wraps the information on a pixel, such as the size and position of each color component in the pixel.

Definition at line 94 of file colors.

16.332.2 Constructor & Destructor Documentation

16.332.2.1 Pixel_info() [1/2]

```
L4Re::Video::Pixel_info::Pixel_info (
             unsigned char bpp,
             char r,
             char rs,
             char g,
             char gs,
             char b,
             char bs,
             char a = 0,
             char as = 0)  [inline]
```

Constructor.

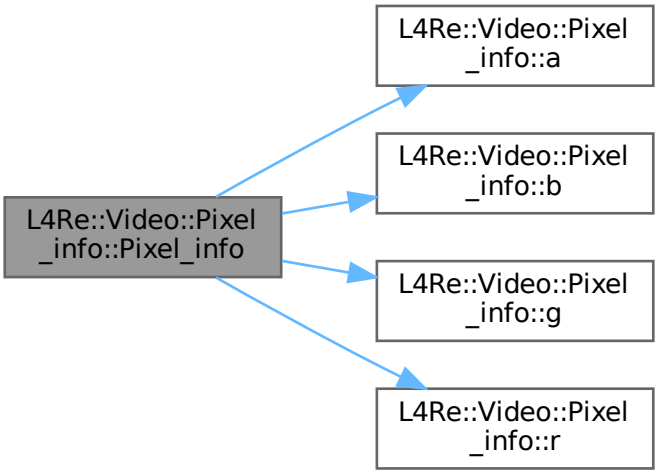
Parameters

bpp	Size of pixel in bytes.
r	Red component size.
rs	Red component shift.
g	Green component size.
gs	Green component shift.
b	Blue component size.
bs	Blue component shift.
a	Alpha component size, defaults to 0.
as	Alpha component shift, defaults to 0.

Definition at line 212 of file colors.

References a(), b(), g(), and r().

Here is the call graph for this function:



16.332.2.2 Pixel_info() [2/2]

```
template<typename VBI>
L4Re::Video::Pixel_info::Pixel_info (
            VBI const * vbi)  [inline], [explicit]
```

Convenience constructor.

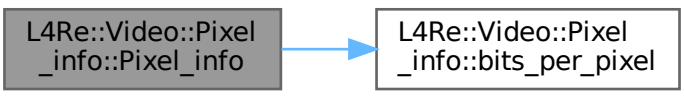
Parameters

vbi	Suitable information structure. Convenience constructor to create the pixel info from a VESA Framebuffer Info.

Definition at line 224 of file colors.

References bits_per_pixel().

Here is the call graph for this function:



16.332.3 Member Function Documentation

16.332.3.1 a() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::a () const  [inline]
```

Return the alpha color compoment of the pixel.

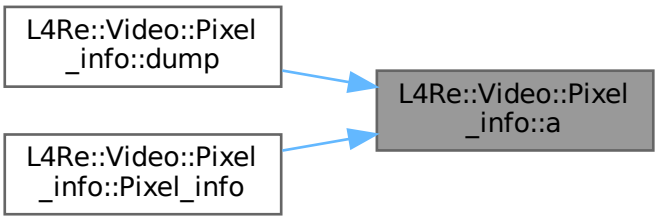
Returns

Alpha color component.

Definition at line 123 of file colors.

Referenced by dump(), and Pixel_info().

Here is the caller graph for this function:



16.332.3.2 a() [2/2]

```
void L4Re::Video::Pixel_info::a (
            Color_component const & c)  [inline]
```

Set the alpha color component of the pixel.

Parameters

c	Alpha color component.

Definition at line 187 of file colors.

16.332.3.3 b() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::b () const  [inline]
```

Return the blue color compoment of the pixel.

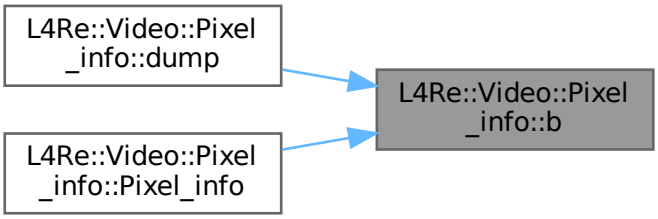
Returns

Blue color component.

Definition at line 117 of file colors.

Referenced by dump(), and Pixel_info().

Here is the caller graph for this function:



16.332.3.4 b() [2/2]

```
void L4Re::Video::Pixel_info::b (
            Color_component const & c)  [inline]
```

Set the blue color component of the pixel.

Parameters

c	Blue color component.

Definition at line 181 of file colors.

16.332.3.5 bits_per_pixel()

```
unsigned char L4Re::Video::Pixel_info::bits_per_pixel () const  [inline]
```

Number of bits of the pixel.

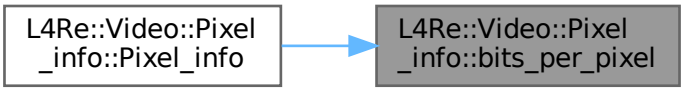
Returns

Number of bits used by the pixel.

Definition at line 156 of file colors.

Referenced by Pixel_info().

Here is the caller graph for this function:



16.332.3.6 bytes_per_pixel() [1/2]

```
unsigned char L4Re::Video::Pixel_info::bytes_per_pixel () const  [inline]
```

Query size of pixel in bytes.

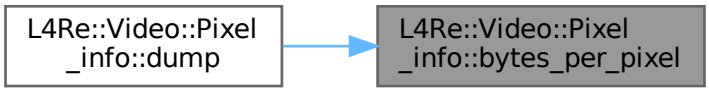
Returns

Size of pixel in bytes.

Definition at line 150 of file colors.

Referenced by dump().

Here is the caller graph for this function:



16.332.3.7 bytes_per_pixel() [2/2]

```
void L4Re::Video::Pixel_info::bytes_per_pixel (
            unsigned char bpp)  [inline]
```

Set the size of the pixel in bytes.

Parameters

bpp	Size of pixel in bytes.

Definition at line 193 of file colors.

16.332.3.8 dump()

```
template<typename OUT>
void L4Re::Video::Pixel_info::dump (
             OUT & s) const  [inline]
```

Dump information on the pixel to a stream.

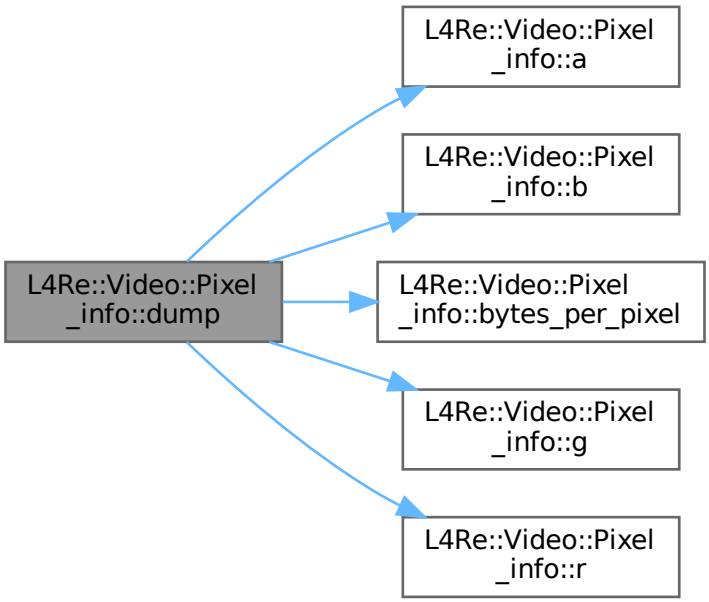
Parameters

s	Stream

Definition at line 246 of file colors.

References a(), b(), bytes_per_pixel(), g(), and r().

Here is the call graph for this function:



16.332.3.9 g() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::g () const  [inline]
```

Return the green color compoment of the pixel.

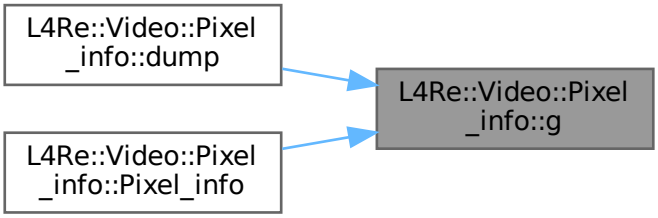
Returns

Green color component.

Definition at line 111 of file colors.

Referenced by dump(), and Pixel_info().

Here is the caller graph for this function:



16.332.3.10 g() [2/2]

```
void L4Re::Video::Pixel_info::g (
            Color_component const & c)  [inline]
```

Set the green color component of the pixel.

Parameters

c	Green color component.

Definition at line 175 of file colors.

16.332.3.11 has_alpha()

```
bool L4Re::Video::Pixel_info::has_alpha () const  [inline]
```

Return whether the pixel has an alpha channel.

Returns

True if the pixel has an alpha channel, false if not.

Definition at line 163 of file colors.

16.332.3.12 operator==()

```
bool L4Re::Video::Pixel_info::operator== (
            Pixel_info const & o) const  [inline]
```

Compare for complete equality of the color space.

Parameters

o	A Pixel_info to compare to.

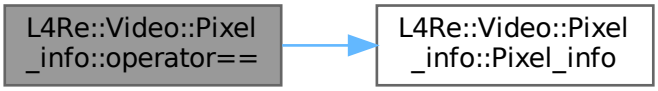
Returns

true if the both Pixel_info's are equal, false if not.

Definition at line 236 of file colors.

References Pixel_info().

Here is the call graph for this function:



16.332.3.13 padding()

```
Color_component const L4Re::Video::Pixel_info::padding () const  [inline]
```

Compute the padding pseudo component.

The padding pseudo component represents the tailing bits that are reserved in RGB32 and similar pixel formats.

Returns

Padding pseudo component.

Definition at line 131 of file colors.

16.332.3.14 r() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::r () const  [inline]
```

Return the red color compoment of the pixel.

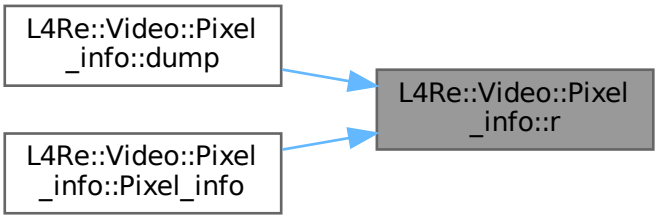
Returns

Red color component.

Definition at line 105 of file colors.

Referenced by dump(), and Pixel_info().

Here is the caller graph for this function:



16.332.3.15 r() [2/2]

```
void L4Re::Video::Pixel_info::r (
            Color_component const & c)  [inline]
```

Set the red color component of the pixel.

Parameters

c	Red color component.

Definition at line 169 of file colors.

The documentation for this class was generated from the following file:

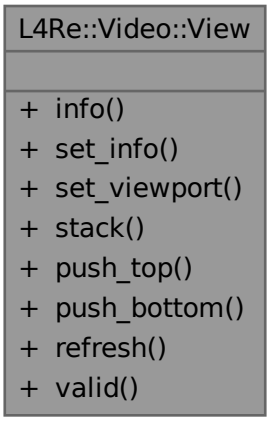
- l4/re/video/colors

16.333 L4Re::Video::View Class Reference

View of a framebuffer.

`#include <goos>`

Collaboration diagram for L4Re::Video::View:



Data Structures

- struct Info

  Information structure of a view.

Public Types

- enum Flags {
  F_none = 0x00 , F_set_buffer = 0x01 , F_set_buffer_offset = 0x02 , F_set_bytes_per_line = 0x04 ,
  F_set_pixel = 0x08 , F_set_position = 0x10 , F_dyn_allocated = 0x20 , F_set_background = 0x40 ,
  F_set_flags = 0x80 , F_fully_dynamic }

  Flags on a view.
- enum V_flags { F_above = 0x1000 , F_flags_mask = 0xff000 }

  Property flags of a view.

Public Member Functions

- int info (Info *info) const noexcept

  Return the view information of the view.
- int set_info (Info const &info) const noexcept

  Set the information structure for this view.
- int set_viewport (int scr_x, int scr_y, int w, int h, unsigned long buf_offset) const noexcept

  Set the position of the view in the Goos.

- int stack (View const &pivot, bool behind=true) const noexcept

  Move this view in the view stack.
- int **push_top** () const noexcept

  Make this view the top-most view.
- int **push_bottom** () const noexcept

  Push this view the back.
- int refresh (int x, int y, int w, int h) const noexcept

  Refresh/Redraw the view.
- bool **valid** () const

  Return whether this view is valid.

16.333.1 Detailed Description

View of a framebuffer.

A view is a rectangular subset of a framebuffer managed by a Goos object. The Goos orders multiple views in a stack which determines which view is on top in case they overlap. The view's pixel data is provided by a backing buffer, which must belong to the Goos. It can be static or dynamically allocated, depending on the framebuffer.

See also

L4Re::Video::Goos

Definition at line 39 of file goos.

16.333.2 Member Enumeration Documentation

16.333.2.1 Flags

`enum L4Re::Video::View::Flags`

Flags on a view.

Enumerator

F_none	everything for this view is static (the VESA-FB case)
F_set_buffer	buffer object for this view can be changed
F_set_buffer_offset	buffer offset can be set
F_set_bytes_per_line	bytes per line can be set
F_set_pixel	pixel type can be set
F_set_position	position on screen can be set
F_dyn_allocated	View is dynamically allocated.
F_set_background	Set view as background for session.

F_set_flags	Set view flags (. **See also** V_flags)
F_fully_dynamic	Flags for a fully dynamic view.

Definition at line 59 of file goos.

16.333.2.2 V_flags

```
enum L4Re::Video::View::V_flags
```

Property flags of a view.

Such flags can be set or deleted with the F_set_flags operation using the `set_info()` method.

Enumerator

F_above	Flag the view as stay on top.
F_flags_mask	Mask containing all possible property flags.

Definition at line 82 of file goos.

16.333.3 Member Function Documentation

16.333.3.1 info()

```
int L4Re::Video::View::info (
            Info * info) const  [inline], [noexcept]
```

Return the view information of the view.

Parameters

out	*info*	Information structure pointer.

Return values

0	Success
<0	Error

Definition at line 367 of file goos.

References info().

Referenced by info(), and set_info().

Here is the caller graph for this function:

16.333.3.2 refresh()

```
int L4Re::Video::View::refresh (
              int x,
              int y,
              int w,
              int h) const  [inline], [noexcept]
```

Refresh/Redraw the view.

Parameters

x	X position.
y	Y position.
w	Width.
h	Height.

Return values

0	Success
<0	Error

Definition at line 379 of file goos.

16.333.3.3 set_info()

```
int L4Re::Video::View::set_info (
            Info const & info) const  [inline], [noexcept]
```

Set the information structure for this view.

Parameters

info	Information structure.

Return values

0	Success
<0	Error

The function will also set the view port according to the values given in the information structure.

Definition at line 371 of file goos.

References info().

Referenced by set_viewport().

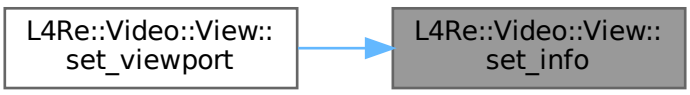
Here is the caller graph for this function:



16.333.3.4 set_viewport()

```
int L4Re::Video::View::set_viewport (
             int scr_x,
             int scr_y,
             int w,
             int h,
             unsigned long buf_offset) const  [inline], [noexcept]
```

Set the position of the view in the Goos.

Parameters

scr_x	X position
scr_y	Y position
w	Width
h	Height
buf_offset	Offset in the buffer in bytes

Return values

0	Success
<0	Error

Definition at line 383 of file goos.

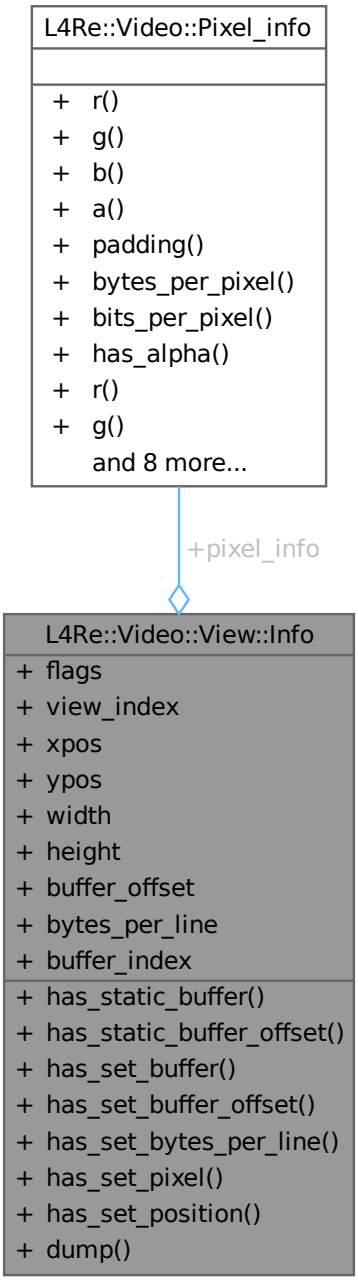
16.334 L4Re::Video::View::Info Struct Reference

Information structure of a view.

`#include <goos>`

Collaboration diagram for L4Re::Video::View::Info:



Public Member Functions

- bool **has_static_buffer** () const

  Return whether the view has a static buffer.
- bool **has_static_buffer_offset** () const

  Return whether the static buffer offset is available.
- bool **has_set_buffer** () const

Return whether a buffer is set.

- bool **has_set_buffer_offset** () const

  Return whether the given buffer offset is valid.

- bool **has_set_bytes_per_line** () const

  Return whether the given bytes-per-line value is valid.

- bool **has_set_pixel** () const

  Return whether the given pixel information is valid.

- bool **has_set_position** () const

  Return whether the position information given is valid.

- template<typename OUT>
  void **dump** (OUT &s) const

  Dump information on the view information to a stream.

Data Fields

- unsigned **flags** = 0

  Flags, see Flags and V_flags.

- unsigned **view_index** = 0

  Index of the view.

- unsigned long **xpos** = 0

  X position in pixels of the view in the Goos.

- unsigned long **ypos** = 0

  Y position in pixels of the view in the Goos.

- unsigned long **width** = 0

  Width of the view in pixels.

- unsigned long **height** = 0

  Height of the view in pixels.

- unsigned long **buffer_offset** = 0

  Offset in the memory buffer in bytes.

- unsigned long **bytes_per_line** = 0

  Bytes per line.

- Pixel_info **pixel_info**

  Pixel information.

- unsigned **buffer_index** = 0

  Number of the buffer used for this view.

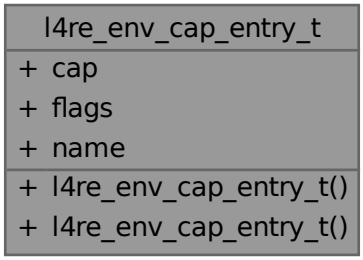
16.340 l4re_env_cap_entry_t Struct Reference

Entry in the L4Re environment array for the named initial objects.

`#include <env.h>`

Collaboration diagram for l4re_env_cap_entry_t:



Public Member Functions

- **l4re_env_cap_entry_t** () L4_NOTHROW

  Create an invalid entry.
- l4re_env_cap_entry_t (char const *n, l4_cap_idx_t c, l4_umword_t f=0) L4_NOTHROW

  Create an entry with the name n, capability c, and flags f.

Data Fields

- l4_cap_idx_t **cap**

  The capability selector for the object.
- l4_umword_t flags

  Flags for the object.
- char **name** [16]

  The name of the object.

16.340.1 Detailed Description

Entry in the L4Re environment array for the named initial objects.

Definition at line 39 of file env.h.

16.340.2 Constructor & Destructor Documentation

16.340.2.1 l4re_env_cap_entry_t()

```
l4re_env_cap_entry_t::l4re_env_cap_entry_t (
            char const * n,
            l4_cap_idx_t c,
            l4_umword_t f = 0)  [inline]
```

Create an entry with the name *n*, capability *c*, and flags *f*.

Parameters

n	is the name of the initial object.
c	is the capability selector that refers the initial object.
f	are the additional flags for the object.

Definition at line 70 of file env.h.

References cap, flags, L4_NOTHROW, and name.

16.340.3 Field Documentation

16.340.3.1 flags

```
l4_umword_t l4re_env_cap_entry_t::flags
```

Flags for the object.

Note

Currently unused, except as an end marker for the entry list.

- l4_cap_idx_t **itas**

  ITAS services object-capability.
- l4_cap_idx_t **dbg_events**

  Object-capability of the debug events service.
- l4_cap_idx_t **first_free_cap**

  First capability index available to the application.
- l4_fpage_t **utcb_area**

  UTCB area of the task.
- l4_addr_t **first_free_utcb**

  First UTCB within the UTCB area available to the application.
- l4re_env_cap_entry_t * caps

  Pointer to the first entry in the initial objects array which contains l4re_env_cap_entry_t elements.

16.341.1 Detailed Description

Initial environment data structure.

See also

Initial environment

Definition at line 98 of file env.h.

16.341.2 Field Documentation

16.341.2.1 caps

```
l4re_env_cap_entry_t* l4re_env_t::caps
```

Pointer to the first entry in the initial objects array which contains l4re_env_cap_entry_t elements.

The array is terminated by an invalid entry with a `flags` value of `~0ul`.

Definition at line 117 of file env.h.

The documentation for this struct was generated from the following file:

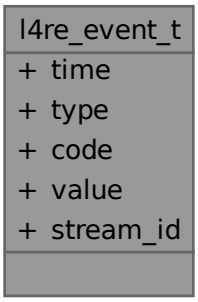
- l4/re/env.h

16.342 l4re_event_t Struct Reference

Event structure used in buffer.

`#include <event.h>`

Collaboration diagram for l4re_event_t:



Data Fields

- long long **time**
  Time stamp of the event.
- unsigned short **type**
  Type of the event.
- unsigned short **code**
  Code of the event.
- int **value**
  Value of the event.
- l4_umword_t **stream_id**
  Stream ID.

16.342.1 Detailed Description

Event structure used in buffer.

Definition at line 30 of file event.h.

The documentation for this struct was generated from the following file:

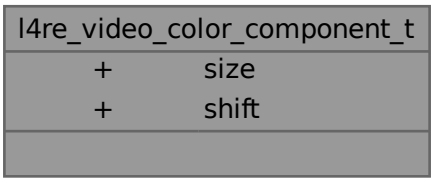
- l4/re/c/event.h

16.343 l4re_video_color_component_t Struct Reference

Color component structure.

`#include <colors.h>`

Collaboration diagram for l4re_video_color_component_t:



Data Fields

- unsigned char **size**
  Size in bits.
- unsigned char **shift**
  offset in pixel

16.343.1 Detailed Description

Color component structure.

Definition at line 20 of file colors.h.

The documentation for this struct was generated from the following file:

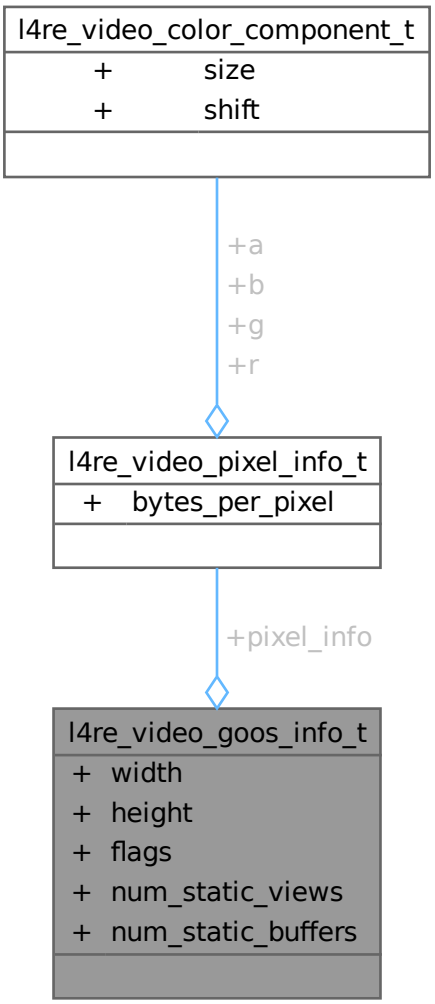
- l4/re/c/video/colors.h

16.344 l4re_video_goos_info_t Struct Reference

Goos information structure.

`#include <goos.h>`

Collaboration diagram for l4re_video_goos_info_t:



Data Fields

- unsigned long **width**

  Width of the goos.
- unsigned long **height**

  Height of the goos.
- unsigned **flags**

  Flags of the framebuffer, see l4re_video_goos_info_flags_t.
- unsigned **num_static_views**

  Number of static views.
- unsigned **num_static_buffers**

  Number of static buffers.
- l4re_video_pixel_info_t **pixel_info**

  Pixel layout of the goos.

16.344.1 Detailed Description

Goos information structure.

Definition at line 41 of file goos.h.

The documentation for this struct was generated from the following file:

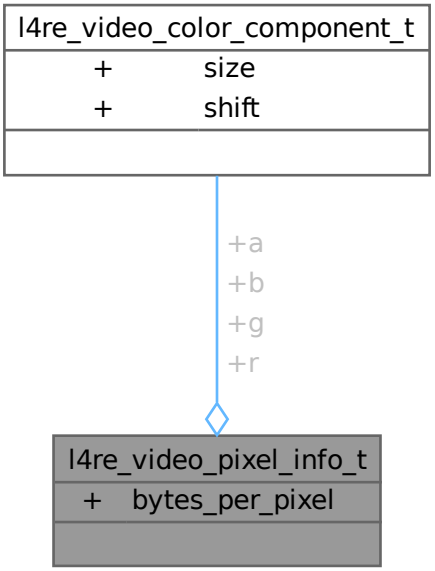
- l4/re/c/video/goos.h

16.345 l4re_video_pixel_info_t Struct Reference

Pixel_info structure.

`#include <colors.h>`

Collaboration diagram for l4re_video_pixel_info_t:



Data Fields

- l4re_video_color_component_t **a**

  Colors.
- unsigned char **bytes_per_pixel**

  Bytes per pixel.

16.345.1 Detailed Description

Pixel_info structure.

Definition at line 30 of file colors.h.

The documentation for this struct was generated from the following file:

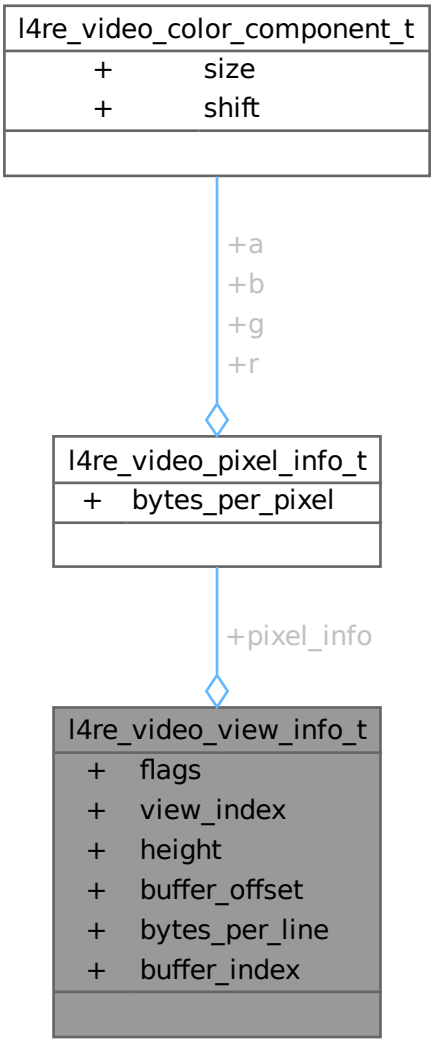
- l4/re/c/video/colors.h

16.346 l4re_video_view_info_t Struct Reference

View information structure.

`#include <view.h>`

Collaboration diagram for l4re_video_view_info_t:



Data Fields

- unsigned **flags**

  Flags.
- unsigned **view_index**

  Number of view in the goos.
- unsigned long **height**

  Position in goos and size of view.
- unsigned long **buffer_offset**

  Memory offset in goos buffer.
- unsigned long **bytes_per_line**

  Size of line in view.
- l4re_video_pixel_info_t **pixel_info**

  Pixel info.
- unsigned **buffer_index**

  Number of buffer of goos.

16.346.1 Detailed Description

View information structure.

Definition at line 49 of file view.h.

The documentation for this struct was generated from the following file:

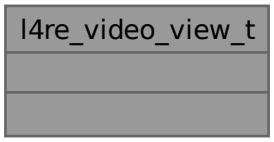
- l4/re/c/video/view.h

16.347 l4re_video_view_t Struct Reference

C representation of a goos view.

```
#include <view.h>
```

Collaboration diagram for l4re_video_view_t:



16.347.1 Detailed Description

C representation of a goos view.

A view is a visible rectangle that provides a view to the contents of a buffer (frame buffer) memory object and is placed on a real screen.

Definition at line 68 of file view.h.

The documentation for this struct was generated from the following file:

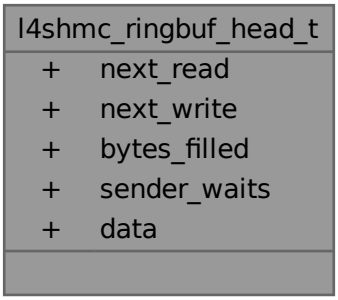
- l4/re/c/video/view.h

16.348 l4shmc_ringbuf_head_t Struct Reference

Head field of a ring buffer.

`#include <ringbuf.h>`

Collaboration diagram for l4shmc_ringbuf_head_t:



Data Fields

- unsigned **next_read**
  offset to next read packet
- unsigned **next_write**
  offset to next write packet
- unsigned **bytes_filled**
  bytes filled in buffer
- unsigned **sender_waits**
  sender waiting?
- char **data** [ ]
  tail pointer -> data

16.348.1 Detailed Description

Head field of a ring buffer.

Definition at line 59 of file ringbuf.h.

The documentation for this struct was generated from the following file:

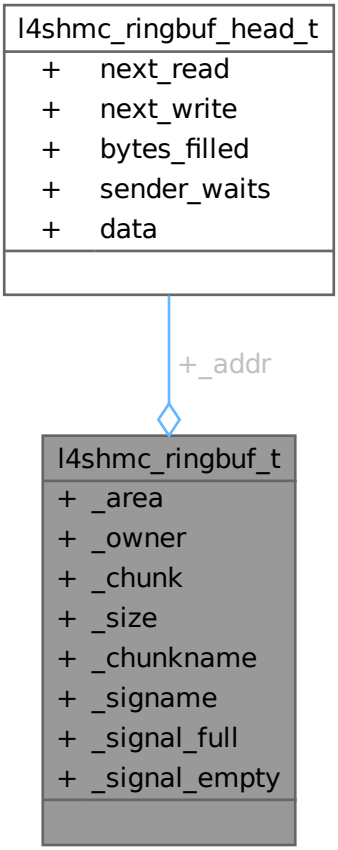
- l4/shmc/ringbuf.h

16.349 l4shmc_ringbuf_t Struct Reference

Ring buffer.

`#include <ringbuf.h>`

Collaboration diagram for l4shmc_ringbuf_t:



Data Fields

- l4shmc_area_t * **_area**
  L4SHM area this buffer is located in.
- l4_cap_idx_t **_owner**
  owner (attached to send/recv signal)
- l4shmc_chunk_t **_chunk**
  chunk descriptor
- unsigned **_size**
  chunk size // XXX do we need this?
- char * **_chunkname**
  name of the ring buffer chunk
- char * **_signame**
  base name of the ring buffer signals
- l4shmc_ringbuf_head_t * **_addr**
  pointer to ring buffer head
- l4shmc_signal_t **_signal_full**
  "full" signal - triggered when data is produced
- l4shmc_signal_t **_signal_empty**
  "empty" signal - triggered when data is consumed

16.349.1 Detailed Description

Ring buffer.

Definition at line 85 of file ringbuf.h.

The documentation for this struct was generated from the following file:

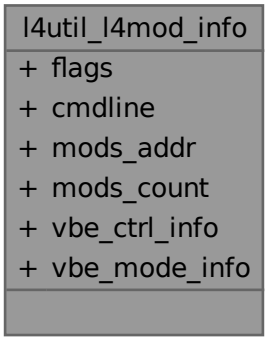
- l4/shmc/ringbuf.h

16.350 l4util_l4mod_info Struct Reference

Base module structure.

`#include <l4mod.h>`

Collaboration diagram for l4util_l4mod_info:



Data Fields

- l4_uint64_t **flags**
  Flags.
- l4_uint64_t **cmdline**
  Pointer to kernel command line.
- l4_uint64_t **mods_addr**
  Module list.
- l4_uint32_t **mods_count**
  Number of modules.
- l4_uint64_t vbe_ctrl_info
  VESA video info, valid if one of vbe_ctrl_info or vbe_mode_info is not zero.
- l4_uint64_t **vbe_mode_info**
  VESA video mode info.

16.350.1 Detailed Description

Base module structure.

Definition at line 36 of file l4mod.h.

16.350.2 Field Documentation

16.350.2.1 vbe_ctrl_info

```
l4_uint64_t l4util_l4mod_info::vbe_ctrl_info
```

VESA video info, valid if one of vbe_ctrl_info or vbe_mode_info is not zero.

VESA video controller info

Definition at line 48 of file l4mod.h.

The documentation for this struct was generated from the following file:

- l4/util/l4mod.h

16.351 l4util_l4mod_mod Struct Reference

A single module.

```
#include <l4mod.h>
```

Collaboration diagram for l4util_l4mod_mod:

Data Fields

- l4_uint64_t **flags**

  Module flags (l4util_l4mod_mod_info_flag).
- l4_uint64_t **mod_start**

  Starting address of module in memory.
- l4_uint64_t **mod_end**

  End address of module in memory.
- l4_uint64_t **cmdline**

  Module command line.

16.351.1 Detailed Description

A single module.

Definition at line 27 of file l4mod.h.

The documentation for this struct was generated from the following file:

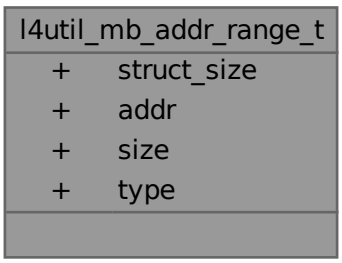
- l4/util/l4mod.h

16.352 l4util_mb_addr_range_t Struct Reference

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

```
#include <mb_info.h>
```

Collaboration diagram for l4util_mb_addr_range_t:



Data Fields

- l4_uint32_t **struct_size**
  Size of structure.
- l4_uint64_t **addr**
  Start address.
- l4_uint64_t **size**
  Size of memory range.
- l4_uint32_t **type**
  type of memory range

16.352.1 Detailed Description

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

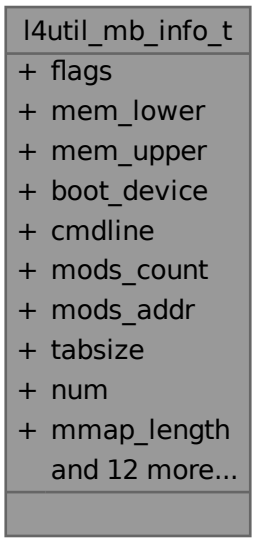
MultiBoot Info description.

`#include <mb_info.h>`

Collaboration diagram for l4util_mb_info_t:



Data Fields

- l4_uint32_t **flags**
  MultiBoot info version number.
- l4_uint32_t **mem_lower**
  available memory below 1MB
- l4_uint32_t **mem_upper**
  available memory starting from 1MB [KB]
- l4_uint32_t **boot_device**
  "root" partition
- l4_uint32_t **cmdline**
  Kernel command line.
- l4_uint32_t **mods_count**
  number of modules
- l4_uint32_t **mods_addr**
  module list
- l4_uint32_t **mmap_length**
  size of memory mapping buffer
- l4_uint32_t **mmap_addr**
  address of memory mapping buffer

- l4_uint32_t **drives_length**

  size of drive info buffer
- l4_uint32_t **drives_addr**

  address of driver info buffer
- l4_uint32_t **config_table**

  ROM configuration table.
- l4_uint32_t **boot_loader_name**

  Boot Loader Name.
- l4_uint32_t **apm_table**

  APM table.
- l4_uint32_t **vbe_ctrl_info**

  VESA video contoller info.
- l4_uint32_t **vbe_mode_info**

  VESA video mode info.
- l4_uint16_t **vbe_mode**

  VESA video mode number.
- l4_uint16_t **vbe_interface_seg**

  VESA segment of prot BIOS interface.
- l4_uint16_t **vbe_interface_off**

  VESA offset of prot BIOS interface.
- l4_uint16_t **vbe_interface_len**

  VESA lenght of prot BIOS interface.

16.355.1 Detailed Description

MultiBoot Info description.

This is the struct passed to the boot image. This is done by placing its address in the EAX register.

Definition at line 247 of file mb_info.h.

The documentation for this struct was generated from the following file:

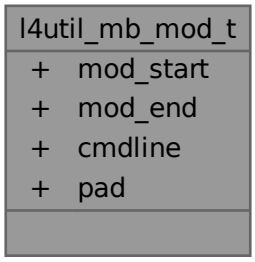
- l4/util/mb_info.h

16.356 l4util_mb_mod_t Struct Reference

The structure type "mod_list" is used by the multiboot_info structure.

```
#include <mb_info.h>
```

Collaboration diagram for l4util_mb_mod_t:



Data Fields

- l4_uint32_t **mod_start**

  Starting address of module in memory.
- l4_uint32_t **mod_end**

  End address of module in memory.
- l4_uint32_t **cmdline**

  Module command line.
- l4_uint32_t **pad**

  padding to take it to 16 bytes

16.356.1 Detailed Description

The structure type "mod_list" is used by the multiboot_info structure.

Definition at line 33 of file mb_info.h.

The documentation for this struct was generated from the following file:

VBE controller information.

Definition at line 106 of file mb_info.h.

The documentation for this struct was generated from the following file:

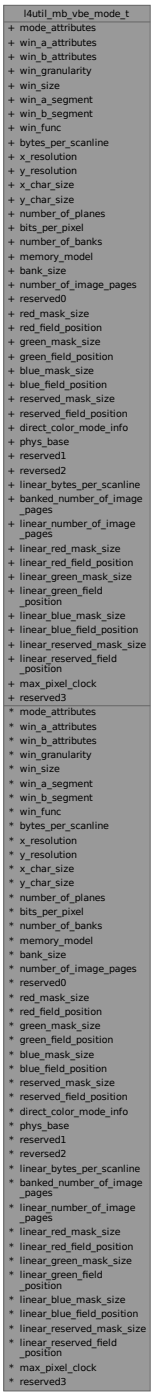
- l4/util/mb_info.h

16.358 l4util_mb_vbe_mode_t Struct Reference

VBE mode information.

`#include <mb_info.h>`

Collaboration diagram for l4util_mb_vbe_mode_t:



Data Fields

all VESA versions

- l4_uint16_t **mode_attributes**
  Mode attributes.
- l4_uint8_t **win_a_attributes**
  Window A attributes.

- l4_uint8_t **win_b_attributes**
  Window B attributes.
- l4_uint16_t **win_granularity**
  Window granularity.
- l4_uint16_t **win_size**
  Window size.
- l4_uint16_t **win_a_segment**
  Window A start segment.
- l4_uint16_t **win_b_segment**
  Window B start segment.
- l4_uint32_t **win_func**
  Real mode pointer to window function.
- l4_uint16_t **bytes_per_scanline**
  Bytes per scan line.

>= VESA version 1.2

- l4_uint16_t **x_resolution**
  Horizontal resolution in pixels or characters.
- l4_uint16_t **y_resolution**
  Vertical resolution in pixels or characters.
- l4_uint8_t **x_char_size**
  Character cell width in pixels.
- l4_uint8_t **y_char_size**
  Character cell height in pixels.
- l4_uint8_t **number_of_planes**
  Number of memory planes.
- l4_uint8_t **bits_per_pixel**
  Bits per pixel.
- l4_uint8_t **number_of_banks**
  Number of banks.
- l4_uint8_t **memory_model**
  Memory model type.
- l4_uint8_t **bank_size**
  Bank size in KiB.
- l4_uint8_t **number_of_image_pages**
  Number of images.
- l4_uint8_t **reserved0**
  Reserved for page function.

direct color

- l4_uint8_t **red_mask_size**
  Size of direct color red mask in bits.
- l4_uint8_t **red_field_position**
  Bit position of LSB of red mask.
- l4_uint8_t **green_mask_size**
  Size of direct color green mask in bits.
- l4_uint8_t **green_field_position**
  Bit position of LSB of green mask.
- l4_uint8_t **blue_mask_size**
  Size of direct color blue mask in bits.
- l4_uint8_t **blue_field_position**
  Bit position of LSB of blue mask.
- l4_uint8_t **reserved_mask_size**
  Size of direct color reserved mask in bits.
- l4_uint8_t **reserved_field_position**
  Bit position of LSB of reserved mask.

- l4_uint8_t **direct_color_mode_info**
  Direct color mode attributes.

>= VESA version 2.0

- l4_uint32_t **phys_base**
  Physical address for flat memory memory frame buffer.
- l4_uint32_t **reserved1**
  Reserved – always set to 0.
- l4_uint16_t **reversed2**
  Reserved – always set to 0.

>= VESA version 3.0

- l4_uint16_t **linear_bytes_per_scanline**
  Bytes per scan line for linear modes.
- l4_uint8_t **banked_number_of_image_pages**
  Number of images for banked modes.
- l4_uint8_t **linear_number_of_image_pages**
  Number of images for linear modes.
- l4_uint8_t **linear_red_mask_size**
  Size of direct color red mask (linear modes).
- l4_uint8_t **linear_red_field_position**
  Bit position of LSB of red mask (linear modes).
- l4_uint8_t **linear_green_mask_size**
  Size of direct color green mask (linear modes).
- l4_uint8_t **linear_green_field_position**
  Bit position of LSB of green mask (linear modes).
- l4_uint8_t **linear_blue_mask_size**
  Size of direct color blue mask (linear modes).
- l4_uint8_t **linear_blue_field_position**
  Bit position of LSB of blue mask (linear modes).
- l4_uint8_t **linear_reserved_mask_size**
  Size of direct color reserved mask (linear modes).
- l4_uint8_t **linear_reserved_field_position**
  Bit position of LSB of reserved mask (linear modes).
- l4_uint32_t **max_pixel_clock**
  Maximum pixel clock (in Hz) for graphics mode.
- l4_uint8_t **reserved3** [190]
  Reserved (padding).

16.358.1 Detailed Description

VBE mode information.

Definition at line 125 of file mb_info.h.

The documentation for this struct was generated from the following file:

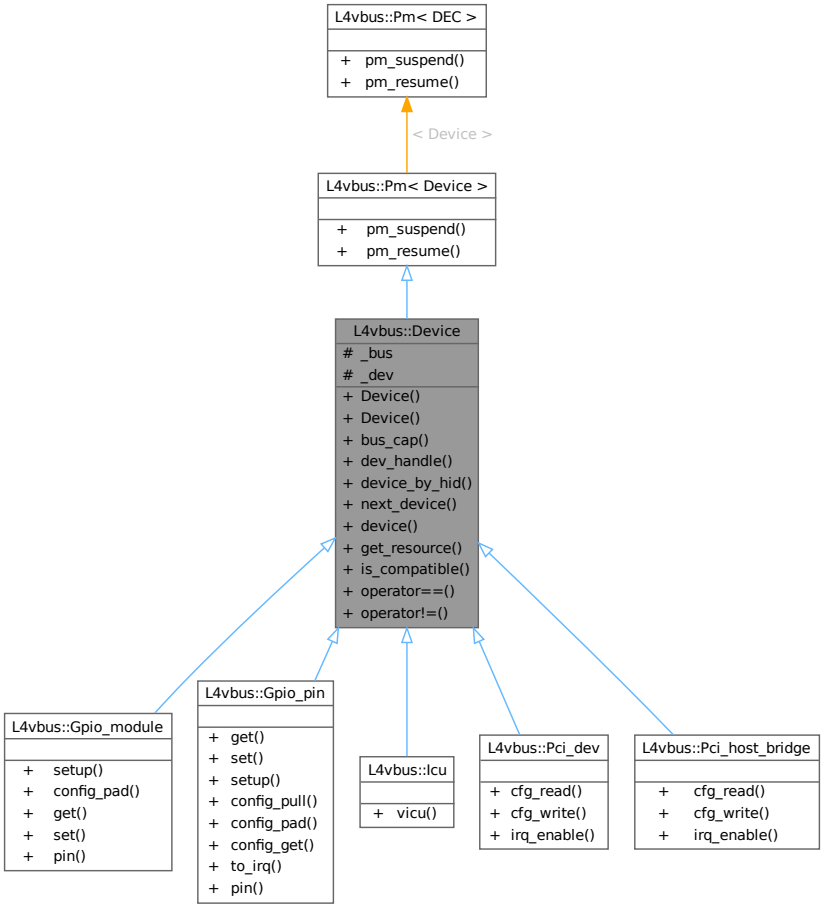
- l4/util/mb_info.h

16.359 L4vbus::Device Class Reference

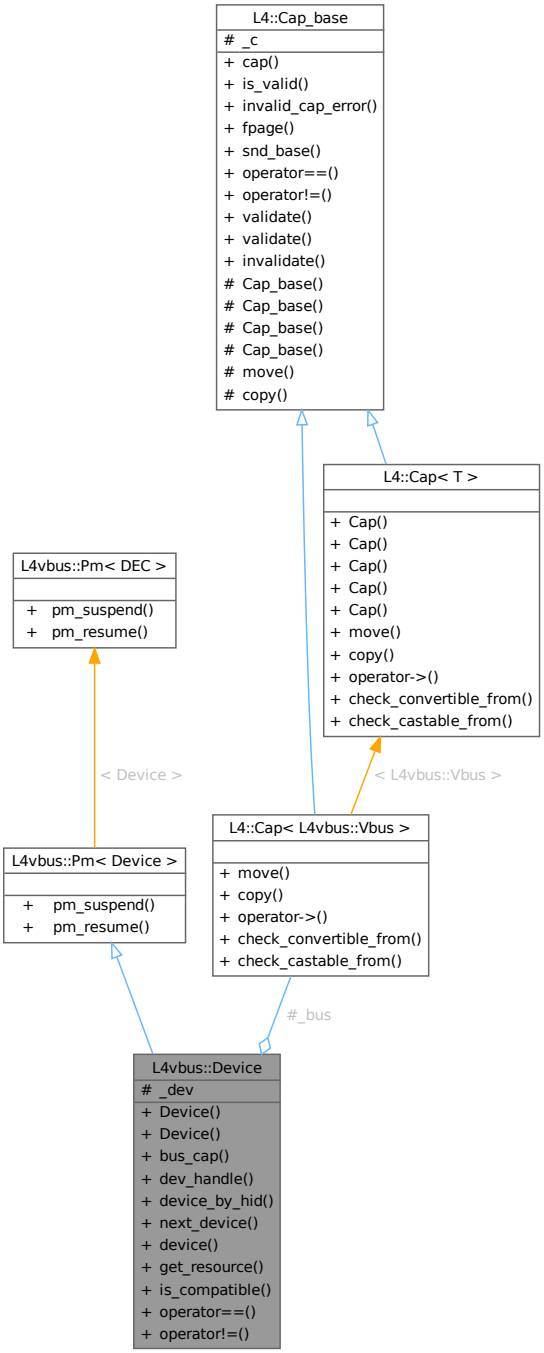
Device on a L4vbus::Vbus.

`#include <vbus>`

Inheritance diagram for L4vbus::Device:



Collaboration diagram for L4vbus::Device:



Public Member Functions

- **Device** ()

  Construct a new vbus device using the NULL device L4VBUS_NULL.

- Device (L4::Cap< Vbus > bus, l4vbus_device_handle_t dev)

  Construct a new vbus device using a device handle.

- L4::Cap< Vbus > bus_cap () const

Access the Vbus capability of the underlying virtual bus.

- l4vbus_device_handle_t dev_handle () const

  Access the device handle of this device.
- int device_by_hid (Device *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const

  Find a device by the hardware interface identifier (HID).
- int next_device (Device *child, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const

  Find next child following `child`.
- int device (l4vbus_device_t *devinfo) const

  Obtain detailed information about a Vbus device.
- int get_resource (unsigned res_idx, l4vbus_resource_t *res) const

  Obtain the resource description of an individual device resource.
- int is_compatible (char const *cid) const

  Check if the given device has a compatibility ID (CID) or HID that matches cid.
- bool operator== (Device const &o) const

  Test if two devices are the same Vbus device.
- bool operator!= (Device const &o) const

  Test if two Vbus devices are not the same.

Public Member Functions inherited from L4vbus::Pm< Device >

- int pm_suspend () const

  Suspend the device.
- int pm_resume () const

  Resume the device.

Protected Attributes

- L4::Cap< Vbus > **_bus**

  The Vbus capability where this device is located on.
- l4vbus_device_handle_t **_dev**

  The device handle for this device.

16.359.1 Detailed Description

Device on a L4vbus::Vbus.

Definition at line 83 of file vbus.

16.359.2 Constructor & Destructor Documentation

16.359.2.1 Device()

```
L4vbus::Device::Device (
            L4::Cap< Vbus > bus,
            l4vbus_device_handle_t dev)  [inline]
```

Construct a new vbus device using a device handle.

Specifying the special root bus device handle L4VBUS_ROOT_BUS forms the root device of the corresponding vbus, see Vbus::root.

Parameters

bus	The vbus capability where this device is assigned.
dev	The device handle of the device.

Definition at line 100 of file vbus.

References _bus, and _dev.

16.359.3 Member Function Documentation

16.359.3.1 bus_cap()

```
L4::Cap< Vbus > L4vbus::Device::bus_cap () const  [inline]
```

Access the Vbus capability of the underlying virtual bus.

Returns

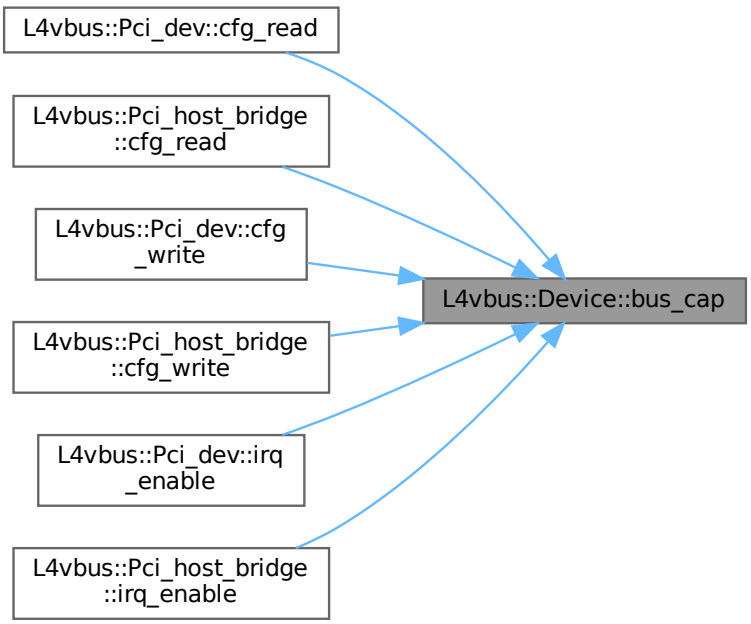
the capability to the underlying Vbus.

Definition at line 107 of file vbus.

References _bus.

Referenced by L4vbus::Pci_dev::cfg_read(), L4vbus::Pci_host_bridge::cfg_read(), L4vbus::Pci_dev::cfg_write(), L4vbus::Pci_host_bridge::cfg_write(), L4vbus::Pci_dev::irq_enable(), and L4vbus::Pci_host_bridge::irq_enable().

Here is the caller graph for this function:



16.359.3.2 dev_handle()

```
l4vbus_device_handle_t L4vbus::Device::dev_handle () const  [inline]
```

Access the device handle of this device.

Returns

the device handle for this device.

The device handle is used to directly address the device on its virtual bus.

Definition at line 116 of file vbus.

References _dev.

16.359.3.3 device()

```
int L4vbus::Device::device (
            l4vbus_device_t * devinfo) const  [inline]
```

Obtain detailed information about a Vbus device.

Parameters

out	*devinfo*	Information structure which contains details about the device. The pointer might be NULL.

Return values

0	Success.
-L4_ENODEV	No device with the given device handle dev could be found.

Definition at line 189 of file vbus.

References _bus, _dev, and l4vbus_get_device().

Here is the call graph for this function:

16.359.3.4 device_by_hid()

```
int L4vbus::Device::device_by_hid (
             Device * child,
             char const * hid,
             int depth = L4VBUS_MAX_DEPTH,
             l4vbus_device_t * devinfo = 0) const  [inline]
```

Find a device by the hardware interface identifier (HID).

This function searches the vbus for a device with the given HID and returns a handle to the first matching device. The HID usually conforms to an ACPI HID or a Linux device tree compatible identifier.

It is possible to have multiple devices with the same HID on a vbus. In order to find all matching devices this function has to be called repeatedly with `child` pointing to the device found in the previous iteration. The iteration starts at `child` that might be any device node in the tree.

Parameters

`in,out`	*child*	Handle of the device from where in the device tree the search should start. To start searching from the beginning `child` must be initialized using the default (L4VBUS_NULL). If a matching device is found, its handle is returned through this parameter.
	hid	HID of the device
	depth	Maximum depth for the recursive lookup
`out`	*devinfo*	Device information structure (might be NULL)

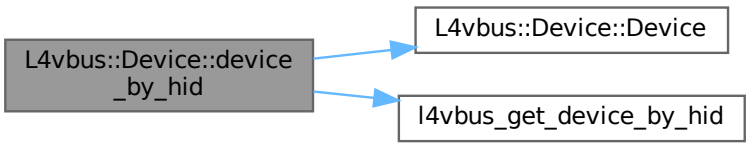
Return values

>=0	A device with the given HID was found.
-L4_ENOENT	No device with the given HID could be found on the vbus.
-L4_EINVAL	Invalid or no HID provided.
-L4_ENODEV	Function called on a non-existing device.

Definition at line 148 of file vbus.

References _bus, _dev, Device(), and l4vbus_get_device_by_hid().

Here is the call graph for this function:



16.359.3.5 get_resource()

```
int L4vbus::Device::get_resource (
            unsigned res_idx,
            l4vbus_resource_t * res) const  [inline]
```

Obtain the resource description of an individual device resource.

Parameters

	res_idx	Index of the resource for which the resource description should be returned. The total number of resources for a device is available in the l4vbus_device_t structure that is returned by L4vbus::Device::device_by_hid() and L4vbus::Device::next_device().
out	*res*	Descriptor of the resource.

This function returns the resource descriptor of an individual device resource selected by the `res_idx` parameter.

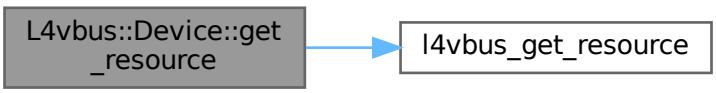
Return values

0	Success.
-L4_ENOENT	Invalid resource index `res_idx`.

Definition at line 209 of file vbus.

References _bus, _dev, and l4vbus_get_resource().

Here is the call graph for this function:



16.359.3.6 is_compatible()

```
int L4vbus::Device::is_compatible (
            char const * cid) const  [inline]
```

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.

Parameters

cid	the compatibility ID to test

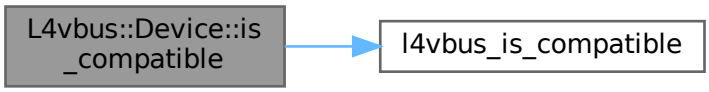
Returns

1 when the given ID (*cid*) matches this device, 0 when the given ID does not match, <0 on error.

Definition at line 223 of file vbus.

References _bus, _dev, and l4vbus_is_compatible().

Here is the call graph for this function:



16.359.3.7 next_device()

```
int L4vbus::Device::next_device (
              Device * child,
              int depth = L4VBUS_MAX_DEPTH,
              l4vbus_device_t * devinfo = 0) const  [inline]
```

Find next child following `child`.

Parameters

in,out	*child*	Handle of the device that precedes the device that shall be returned. To start from the beginning, `child` must be initialized with L4VBUS_NULL (Device::Device). If a device is found, its handle is returned through this parameter.
	depth	Depth to look for
out	*devinfo*	Device information (might be NULL)

Returns

0 on success, else failure

Definition at line 171 of file vbus.

References _bus, _dev, Device(), and l4vbus_get_next_device().

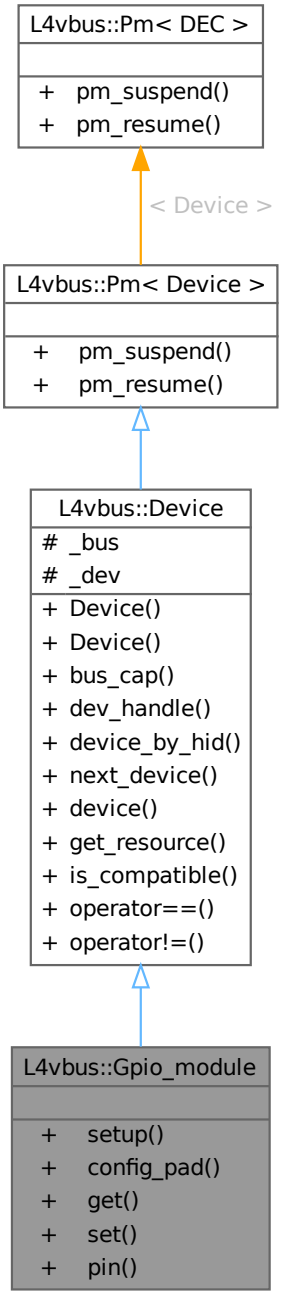
16.360 L4vbus::Gpio_module Class Reference

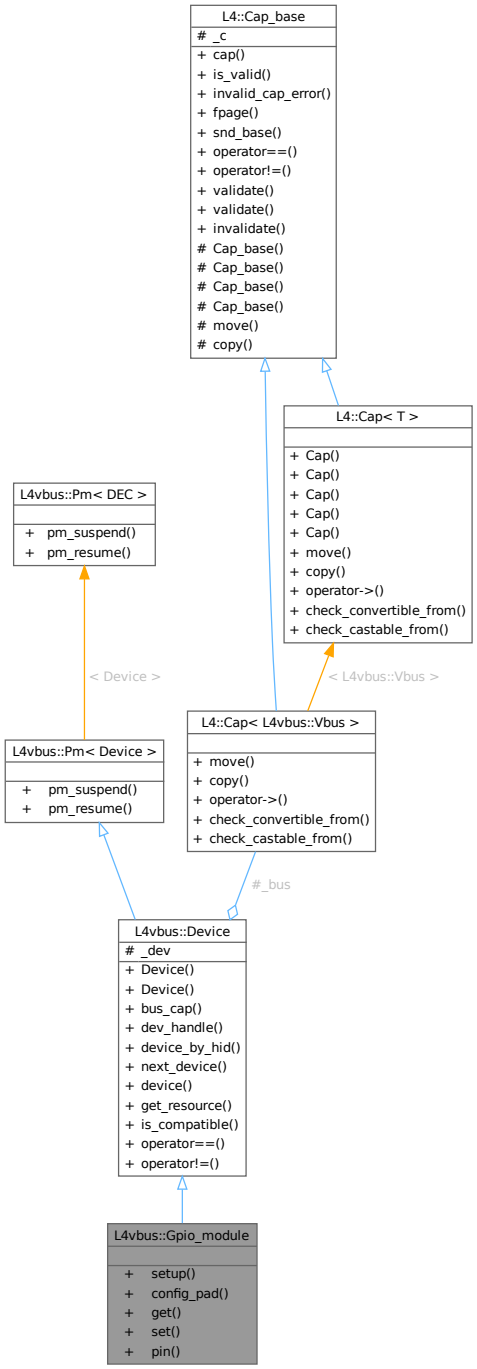
A Gpio_module groups multiple GPIO pins together.

`#include <vbus_gpio>`

Inheritance diagram for L4vbus::Gpio_module:



Collaboration diagram for L4vbus::Gpio_module:



Data Structures

- struct Pin_slice

  A slice of the pins provided by this module.

Public Member Functions

- int setup (Pin_slice const &mask, unsigned mode, unsigned value) const

Configure function of multiple GPIO pins at once.

- int config_pad (Pin_slice const &mask, unsigned func, unsigned value) const

  Hardware specific configuration function for multiple GPIO pins.
- int get (unsigned offset, unsigned *data) const

  Read values of multiple GPIO pins at once.
- int set (Pin_slice const &mask, unsigned data)

  Set multiple GPIO output pins at once.
- Gpio_pin pin (unsigned pin) const

  Get Gpio_pin for a specific pin of this Gpio_module.

Public Member Functions inherited from L4vbus::Device

- **Device** ()

  Construct a new vbus device using the NULL device L4VBUS_NULL.
- Device (L4::Cap< Vbus > bus, l4vbus_device_handle_t dev)

  Construct a new vbus device using a device handle.
- L4::Cap< Vbus > bus_cap () const

  Access the Vbus capability of the underlying virtual bus.
- l4vbus_device_handle_t dev_handle () const

  Access the device handle of this device.
- int device_by_hid (Device *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const

  Find a device by the hardware interface identifier (HID).
- int next_device (Device *child, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const

  Find next child following `child`.
- int device (l4vbus_device_t *devinfo) const

  Obtain detailed information about a Vbus device.
- int get_resource (unsigned res_idx, l4vbus_resource_t *res) const

  Obtain the resource description of an individual device resource.
- int is_compatible (char const *cid) const

  Check if the given device has a compatibility ID (CID) or HID that matches cid.
- bool operator== (Device const &o) const

  Test if two devices are the same Vbus device.
- bool operator!= (Device const &o) const

  Test if two Vbus devices are not the same.

Public Member Functions inherited from L4vbus::Pm< Device >

- int pm_suspend () const

  Suspend the device.
- int pm_resume () const

  Resume the device.

Additional Inherited Members

Protected Attributes inherited from L4vbus::Device

- L4::Cap< Vbus > **_bus**

  The Vbus capability where this device is located on.
- l4vbus_device_handle_t **_dev**

  The device handle for this device.

16.360.1 Detailed Description

A Gpio_module groups multiple GPIO pins together.

Definition at line 133 of file vbus_gpio.

16.360.2 Member Function Documentation

16.360.2.1 config_pad()

```
int L4vbus::Gpio_module::config_pad (
              Pin_slice const & mask,
              unsigned func,
              unsigned value) const  [inline]
```

Hardware specific configuration function for multiple GPIO pins.

Parameters

mask	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
func	Hardware specific configuration register, usually offset to the GPIO chip's base address.
value	Value which is written into the hardware specific configuration register for the specified pins

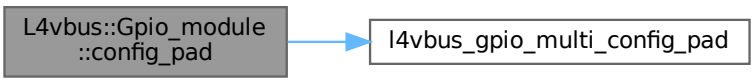
Returns

0 if OK, error code otherwise

Definition at line 185 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_multi_config_pad().

Here is the call graph for this function:



16.360.2.2 get()

```
int L4vbus::Gpio_module::get (
              unsigned offset,
              unsigned * data) const  [inline]
```

Read values of multiple GPIO pins at once.

Parameters

	offset	Pin corresponding to the LSB in *data*. Note: allowed may be hardware specific.
out	*data*	Each bit returns the value (0 or 1) for the corresponding GPIO pin. The value of pins that are not accessible is undefined.

Returns

0 if OK, error code otherwise

Definition at line 201 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_multi_get().

Here is the call graph for this function:

16.360.2.3 pin()

```
Gpio_pin L4vbus::Gpio_module::pin (
            unsigned pin) const  [inline]
```

Get Gpio_pin for a specific pin of this Gpio_module.

Parameters

pin	GPIO pin number to get Gpio_pin for.

Returns

Gpio_pin

Definition at line 229 of file vbus_gpio.

References pin().

Referenced by pin().

Here is the call graph for this function:

Here is the caller graph for this function:

16.360.2.4 set()

```
int L4vbus::Gpio_module::set (
            Pin_slice const & mask,
            unsigned data)  [inline]
```

Set multiple GPIO output pins at once.

Parameters

mask	Mask of GPIO pins to set. A bit set to 1 selects this pin. A maximum of 32 pins can be set at once. The real number depends on the hardware and the driver implementation.
data	Each bit corresponds to the GPIO pin in *mask*. The value of each bit is written to the GPIO pin if its bit in *mask* is set.

Returns

0 if OK, error code otherwise

Definition at line 217 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_multi_set().

Here is the call graph for this function:

16.360.2.5 setup()

```
int L4vbus::Gpio_module::setup (
            Pin_slice const & mask,
            unsigned mode,
            unsigned value) const  [inline]
```

Configure function of multiple GPIO pins at once.

Parameters

mask	Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation.
mode	GPIO function, see L4vbus_gpio_generic_func for generic functions. Hardware specific functions must be provided in the lower 8 bits.
value	Optional value to set the GPIO pins to if they are configured as output pins

Returns

0 if OK, error code otherwise

Definition at line 166 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_multi_setup().

Here is the call graph for this function:

16.362.1 Detailed Description

A GPIO pin.

Definition at line 26 of file vbus_gpio.

16.362.2 Member Function Documentation

16.362.2.1 config_get()

```
int L4vbus::Gpio_pin::config_get (
            unsigned func,
            unsigned * value) const  [inline]
```

Read hardware specific configuration.

Parameters

	func	Hardware specific configuration register to read from. Usually this is an offset to the GPIO chip's base address.
out	*value*	The configuration value.

Returns

0 if OK, error code otherwise

Definition at line 102 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_config_get().

Here is the call graph for this function:

16.362.2.2 config_pad()

```
int L4vbus::Gpio_pin::config_pad (
             unsigned func,
             unsigned value) const  [inline]
```

Hardware specific configuration function.

Parameters

func	Hardware specific configuration register, usually offset to the GPIO chip's base address
value	Value which is written into the hardware specific configuration register for the specified pin

Returns

0 if OK, error code otherwise

Definition at line 89 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_config_pad().

Here is the call graph for this function:

16.362.2.3 config_pull()

```
int L4vbus::Gpio_pin::config_pull (
            unsigned mode) const  [inline]
```

Generic function to set pull up/down mode.

Parameters

mode	mode for pull up/down resistors, see L4vbus_gpio_pull_modes

Returns

0 if OK, error code otherwise

Definition at line 75 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_config_pull().

Here is the call graph for this function:

16.362.2.4 get()

```
int L4vbus::Gpio_pin::get () const  [inline]
```

Read value of GPIO input pin.

Returns

Value of GPIO pin (usually 0 or 1), negative error code otherwise.

Definition at line 38 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_get().

Here is the call graph for this function:

16.362.2.5 pin()

```
unsigned L4vbus::Gpio_pin::pin () const  [inline]
```

Get pin number.

Returns

GPIO pin number

Definition at line 122 of file vbus_gpio.

16.362.2.6 set()

```
int L4vbus::Gpio_pin::set (
            int value) const  [inline]
```

Set GPIO output pin.

Parameters

value	Value to write to the GPIO pin (usually 0 or 1)

Returns

0 if OK, error code otherwise

Definition at line 49 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_set().

Here is the call graph for this function:

16.362.2.7 setup()

```
int L4vbus::Gpio_pin::setup (
            unsigned mode,
            unsigned value) const  [inline]
```

Configure the function of a GPIO pin.

Parameters

mode	GPIO function, see L4vbus_gpio_generic_func for generic functions. Hardware specific functions must be provided in the lower 8 bits.
value	Optional value to set the GPIO pin to if it is configured as an output pin

Returns

0 if OK, error code otherwise

Definition at line 64 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_setup().

Here is the call graph for this function:

16.362.2.8 to_irq()

```
int L4vbus::Gpio_pin::to_irq () const  [inline]
```

Create IRQ for GPIO pin.

Returns

IRQ number if OK, negative error code otherwise

Definition at line 112 of file vbus_gpio.

References L4vbus::Device::_bus, L4vbus::Device::_dev, and l4vbus_gpio_to_irq().

Here is the call graph for this function:

The documentation for this class was generated from the following file:

  The device handle for this device.

16.363.1 Detailed Description

Vbus Interrupt controller API.

Every Vbus contains a virtual interrupt control unit that manages the IRQs of the devices on the bus. This class provides access to a capability to an L4::Icu object which can then be used to interface with the IRQs.

See also

L4::Icu

Definition at line 260 of file vbus.

16.363.2 Member Enumeration Documentation

16.363.2.1 Src_types

```
enum L4vbus::Icu::Src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

Src_dev_handle	Flag to denote that the value should be interpreted as a device handle. This flag may be used in the `source` parameter in L4::Icu::msi_info() to denote that the ICU should interpret the source ID as a device handle.

Definition at line 264 of file vbus.

16.363.3 Member Function Documentation

16.363.3.1 vicu()

```
int L4vbus::Icu::vicu (
            L4::Cap< L4::Icu > icu) const  [inline]
```

Request an L4::Icu capability for this Vbus's virtual ICU.

Parameters

out	*icu*	Capability slot where the L4::Icu capability shall be stored.

Return values

0	Success.

otherwise	IPC error.

Definition at line 285 of file vbus.

References L4vbus::Device::_bus, L4vbus::Device::_dev, L4::Cap_base::cap(), and l4vbus_vicu_get_cap().

16.364.1 Detailed Description

A PCI device.

Definition at line 93 of file vbus_pci.

16.364.2 Member Function Documentation

16.364.2.1 cfg_read()

```
int L4vbus::Pci_dev::cfg_read (
            l4_uint32_t reg,
            l4_uint32_t * value,
            l4_uint32_t width) const  [inline]
```

Read from the device's vPCI configuration space.

Parameters

	reg	Register in configuration space to read
out	*value*	Value that has been read
	width	Width to read in bits (e.g. 8, 16, 32)

Returns

0 on success, else failure

Definition at line 105 of file vbus_pci.

References L4vbus::Device::_dev, L4vbus::Device::bus_cap(), and l4vbus_pcidev_cfg_read().

  Check if the given device has a compatibility ID (CID) or HID that matches cid.
- bool operator== (Device const &o) const

  Test if two devices are the same Vbus device.
- bool operator!= (Device const &o) const

  Test if two Vbus devices are not the same.

Public Member Functions inherited from L4vbus::Pm< Device >

- int pm_suspend () const

  Suspend the device.
- int pm_resume () const

  Resume the device.

Additional Inherited Members

Protected Attributes inherited from L4vbus::Device

- L4::Cap< Vbus > **_bus**

  The Vbus capability where this device is located on.
- l4vbus_device_handle_t **_dev**

  The device handle for this device.

16.365.1 Detailed Description

A Pci host bridge.

Definition at line 25 of file vbus_pci.

16.365.2 Member Function Documentation

16.365.2.1 cfg_read()

```
int L4vbus::Pci_host_bridge::cfg_read (
             l4_uint32_t bus,
             l4_uint32_t devfn,
             l4_uint32_t reg,
             l4_uint32_t * value,
             l4_uint32_t width) const  [inline]
```

Read from the vPCI configuration space using the PCI root bridge.

Parameters

	bus	Bus number
	devfn	Device id (upper 16bit) and function (lower 16bit)
	reg	Register in configuration space to read
out	*value*	Value that has been read
	width	Width to read in bits (e.g. 8, 16, 32)

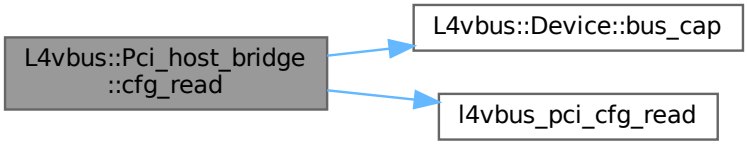
Returns

0 on success, else failure

Definition at line 39 of file vbus_pci.

References L4vbus::Device::_dev, L4vbus::Device::bus_cap(), and l4vbus_pci_cfg_read().

Here is the call graph for this function:



16.365.2.2 cfg_write()

```
int L4vbus::Pci_host_bridge::cfg_write (
            l4_uint32_t bus,
            l4_uint32_t devfn,
            l4_uint32_t reg,
            l4_uint32_t value,
            l4_uint32_t width) const  [inline]
```

Write to the vPCI configuration space using the PCI root bridge.

Parameters

bus	Bus number
devfn	Device id (upper 16bit) and function (lower 16bit)
reg	Register in configuration space to write
value	Value to write
width	Width to write in bits (e.g. 8, 16, 32)

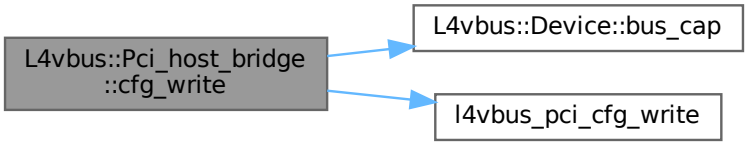
Returns

0 on success, else failure

Definition at line 58 of file vbus_pci.

References L4vbus::Device::_dev, L4vbus::Device::bus_cap(), and l4vbus_pci_cfg_write().

Here is the call graph for this function:



16.365.2.3 irq_enable()

```
int L4vbus::Pci_host_bridge::irq_enable (
            l4_uint32_t bus,
            l4_uint32_t devfn,
            int pin,
            unsigned char * trigger,
            unsigned char * polarity) const  [inline]
```

Enable PCI interrupt for a specific device using the PCI root bridge.

Parameters

	bus	Bus number
	devfn	Device id (upper 16bit) and function (lower 16bit)
	pin	Interrupt pin (normally as reported in configuration register INTR)
out	*trigger*	False if interrupt is level-triggered
out	*polarity*	True if interrupt is of low polarity

Returns

On success: Interrupt line to be used, else failure

Definition at line 79 of file vbus_pci.

References L4vbus::Device::_dev, L4vbus::Device::bus_cap(), and l4vbus_pci_irq_enable().

Here is the call graph for this function:

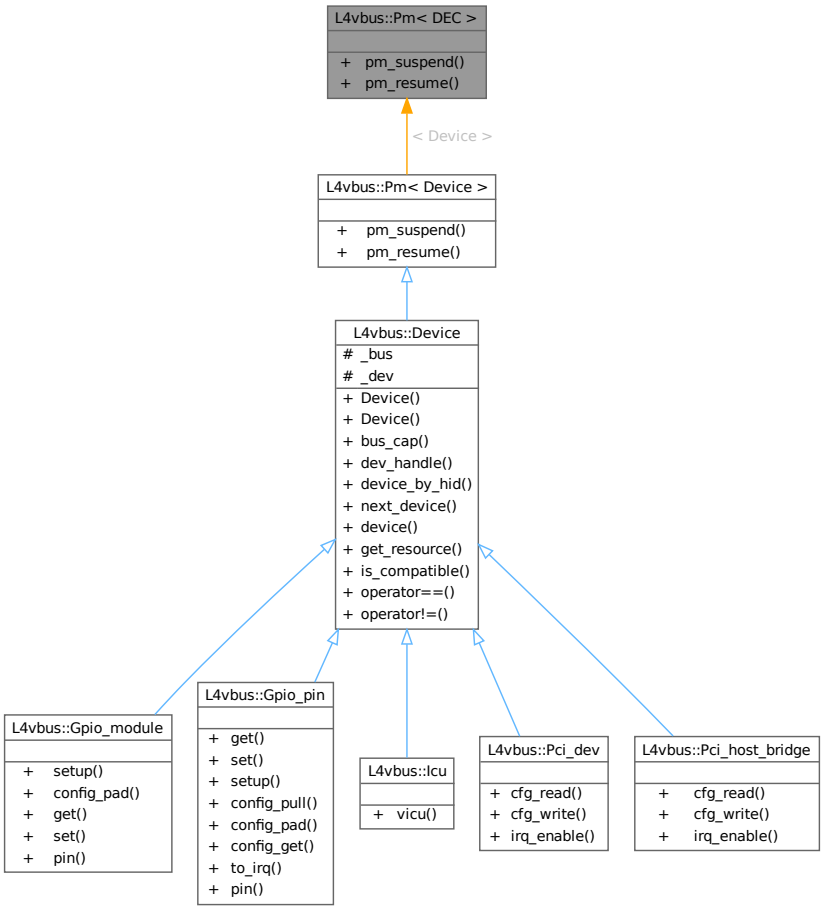
16.366 L4vbus::Pm< DEC > Class Template Reference

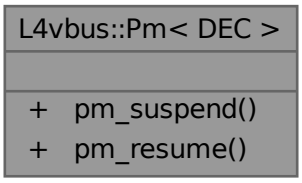
Power-management API mixin.

`#include <vbus>`

Inheritance diagram for L4vbus::Pm< DEC >:



Collaboration diagram for L4vbus::Pm< DEC >:



Public Member Functions

- int pm_suspend () const

  Suspend the device.
- int pm_resume () const

  Resume the device.

16.366.1 Detailed Description

template<typename DEC>
class L4vbus::Pm< DEC >

Power-management API mixin.

Devices that inherit from this mixin provide an API to be suspended and resumed.

Definition at line 50 of file vbus.

16.366.2 Member Function Documentation

16.366.2.1 pm_resume()

```
template<typename DEC>
int L4vbus::Pm< DEC >::pm_resume () const  [inline]
```

Resume the device.

Switches the device from low-power mode to normal operation and restores the saved state.

Return values

0	Success.

Definition at line 74 of file vbus.

References l4vbus_pm_resume().

Here is the call graph for this function:

16.366.2.2 pm_suspend()

```
template<typename DEC>
int L4vbus::Pm< DEC >::pm_suspend () const  [inline]
```

Suspend the device.

Saves the state of the device and puts it into a low-power mode.

Return values

0	Success.

Definition at line 63 of file vbus.

References l4vbus_pm_suspend().

Here is the call graph for this function:

The documentation for this class was generated from the following file:

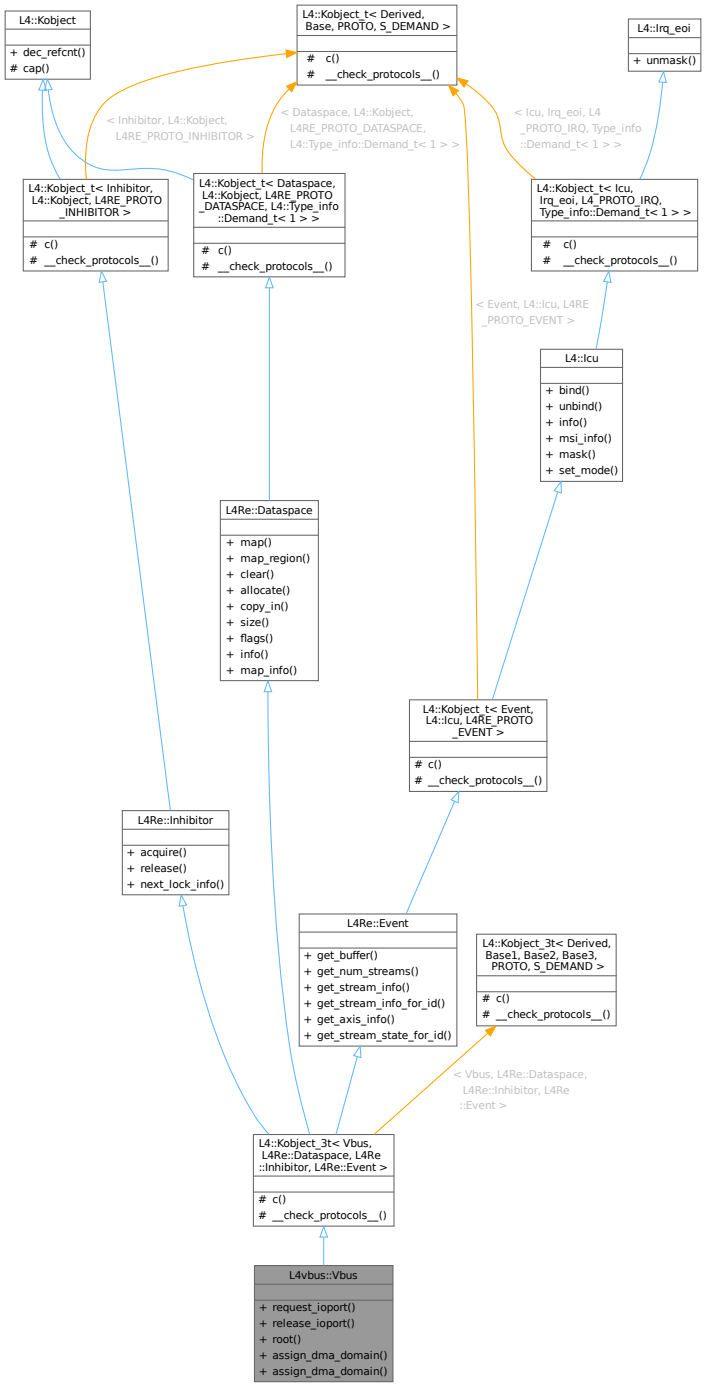
- l4/vbus/vbus

16.367 L4vbus::Vbus Class Reference

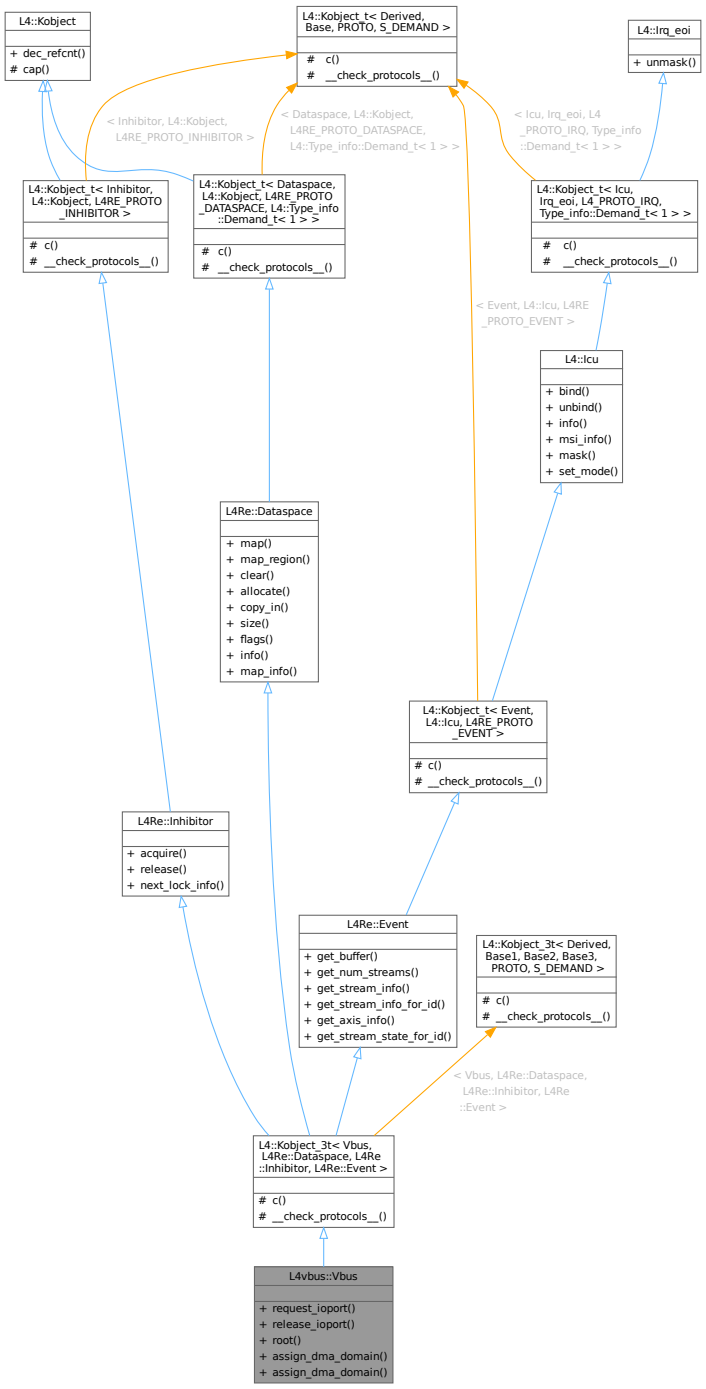
The virtual bus (Vbus) interface.

```
#include <vbus>
```

Inheritance diagram for L4vbus::Vbus:



Collaboration diagram for L4vbus::Vbus:



Public Member Functions

- int request_ioport (l4vbus_resource_t *res) const

  Request the given IO port resource from the bus.
- int release_ioport (l4vbus_resource_t *res) const

  Release the given IO port resource from the bus.
- Device root () const

Get the root device of the device tree of this bus.

- int assign_dma_domain (unsigned domain_id, unsigned flags, L4::Cap< L4Re::Dma_space > dma_space) const

  Bind or unbind an L4Re::Dma_space to a DMA domain.
- int assign_dma_domain (unsigned domain_id, unsigned flags, L4::Cap< L4::Task > dma_space) const

  Bind or unbind a kernel DMA space to a DMA domain.

Public Member Functions inherited from L4Re::Dataspace

- long map (Offset offset, Flags flags, Map_addr local_addr, Map_addr min_addr, Map_addr max_addr, L4::Cap< L4::Task > dst=L4::Cap< L4::Task >::Invalid) const noexcept

  Request a flexpage mapping from the dataspace.
- long map_region (Offset offset, Flags flags, Map_addr min_addr, Map_addr max_addr, L4::Cap< L4::Task > dst=L4::Cap< L4::Task >::Invalid) const noexcept

  Map a part of a dataspace into a local memory area.
- long clear (Offset offset, Size size)

  Clear parts of a dataspace.
- long allocate (Offset offset, Size size)

  Allocate a range in the dataspace.
- long copy_in (Offset dst_offs, L4::Ipc::Cap< Dataspace > src, Offset src_offs, Size size)

  Copy contents from another dataspace.
- Size size () const noexcept

  Get size of a dataspace.
- Flags flags () const noexcept

  Get flags of the dataspace.
- long info (Stats *stats)

  Get information on the dataspace.
- long map_info (l4_addr_t *start_addr, l4_addr_t *end_addr)

  Get mapping range of dataspace.

Public Member Functions inherited from L4::Kobject

- l4_msgtag_t dec_refcnt (l4_mword_t diff, l4_utcb_t *utcb=l4_utcb())

  Decrement the in kernel reference counter for the object.

Public Member Functions inherited from L4Re::Inhibitor

- long acquire (l4_umword_t id, L4::Ipc::String<> reason)

  Acquire a specific inhibitor lock.
- long release (l4_umword_t id)

  Release a specific inhibitor lock.
- long next_lock_info (char *name, unsigned len, l4_mword_t current_id=-1, l4_utcb_t *utcb=l4_utcb())

  Get information for the next available inhibitor lock.

Public Member Functions inherited from L4Re::Event

- long get_buffer (L4::Ipc::Out< L4::Cap< Dataspace > > ds)

  Get event signal buffer.
- long get_num_streams ()

  Get number of event streams.
- long get_stream_info (int idx, Event_stream_info *info)

  Get event stream infos.
- long get_stream_info_for_id (l4_umword_t stream_id, Event_stream_info *info)

  Get event stream infos.
- long get_axis_info (l4_umword_t stream_id, unsigned naxes, unsigned const *axis, Event_absinfo *info) const noexcept

  Get event stream axis infos.
- long get_stream_state_for_id (l4_umword_t stream_id, Event_stream_state *state)

  Get event stream state.

Public Member Functions inherited from L4::Icu

- l4_msgtag_t bind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept

  Bind an interrupt line of an interrupt controller to an interrupt object.
- l4_msgtag_t unbind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept

  Remove binding of an interrupt line from the interrupt controller object.
- l4_msgtag_t info (l4_icu_info_t *info, l4_utcb_t *utcb=l4_utcb()) noexcept

  Get information about the ICU features.
- l4_msgtag_t msi_info (l4_umword_t irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info)

  Get MSI info about IRQ.
- l4_msgtag_t mask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept

  Mask an IRQ line.
- l4_msgtag_t set_mode (unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb=l4_utcb()) noexcept

  Set interrupt mode.

Public Member Functions inherited from L4::Irq_eoi

- l4_msgtag_t unmask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept

  Unmask the given interrupt line.

Additional Inherited Members

Public Types inherited from L4Re::Inhibitor

- enum { Name_max = 20 }

Protected Types inherited from L4::Kobject_3t< Vbus, L4Re::Dataspace, L4Re::Inhibitor, L4Re::Event >

- typedef Vbus Class

  The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO_ANY, Vbus > __Iface

  The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, Typeid::Merge_list< typename L4Re::↩ Dataspace::__Iface_list, Typeid::Merge_list< typename L4Re::Inhibitor::__Iface_list, typename L4Re::↩ Event::__Iface_list > > > __Iface_list

  The list of all RPC interfaces provided directly or through inheritance.

Protected Types inherited from L4::Kobject_t< Dataspace, L4::Kobject, L4RE_PROTO_DATASPACE, L4::Type_info::Demand_t< 1 > >

- typedef Dataspace **Class**

  The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO, Dataspace > **__Iface**

  The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, typename L4::Kobject::__Iface_list > **__Iface_list**

  The list of all RPC interfaces provided directly or through inheritance.

Protected Types inherited from L4::Kobject_t< Inhibitor, L4::Kobject, L4RE_PROTO_INHIBITOR >

- typedef Inhibitor **Class**

  The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO, Inhibitor > **__Iface**

  The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, typename L4::Kobject::__Iface_list > **__Iface_list**

  The list of all RPC interfaces provided directly or through inheritance.

  Helper to check for protocol conflicts.

16.367.1 Detailed Description

The virtual bus (Vbus) interface.

See also

L4Re Vbus API

Definition at line 298 of file vbus.

16.367.2 Member Function Documentation

16.367.2.1 assign_dma_domain() [1/2]

```
int L4vbus::Vbus::assign_dma_domain (
             unsigned domain_id,
             unsigned flags,
             L4::Cap< L4::Task > dma_space) const  [inline]
```

Bind or unbind a kernel DMA space to a DMA domain.

Parameters

domain_id	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
flags	A combination of L4vbus_dma_domain_assign_flags.
dma_space	The DMA space capability to bind or unbind, this must be a kernel DMA space (L4::Task created with L4_PROTO_DMA_SPACE)

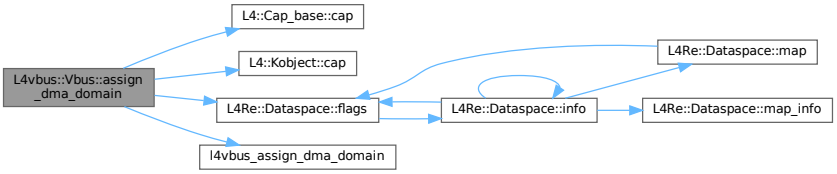
Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

Definition at line 382 of file vbus.

References L4::Cap_base::cap(), L4::Kobject::cap(), L4Re::Dataspace::flags(), l4vbus_assign_dma_domain(), L4VBUS_DMAD_KERNEL_DMA_SPACE, and L4VBUS_DMAD_L4RE_DMA_SPACE.

Here is the call graph for this function:



16.367.2.2 assign_dma_domain() [2/2]

```
int L4vbus::Vbus::assign_dma_domain (
            unsigned domain_id,
            unsigned flags,
            L4::Cap< L4Re::Dma_space > dma_space) const  [inline]
```

Bind or unbind an L4Re::Dma_space to a DMA domain.

Parameters

domain_id	DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used.
flags	A combination of L4vbus_dma_domain_assign_flags.
dma_space	The DMA space capability to bind or unbind, this must be an L4Re::Dma_space

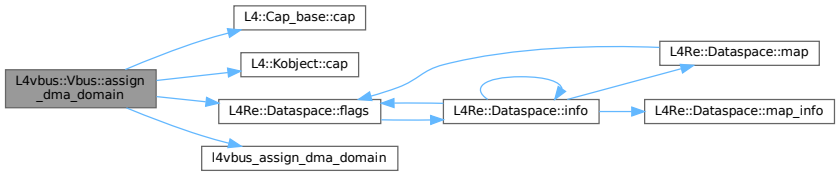
Return values

0	Operation completed successfully.
-L4_ENOENT	The vbus does not support a global DMA domain or no DMA domain could be found.
-L4_EINVAL	Invalid argument used.
-L4_EBUSY	DMA domain is already active, this means another DMA space is already assigned.

Definition at line 357 of file vbus.

References L4::Cap_base::cap(), L4::Kobject::cap(), L4Re::Dataspace::flags(), l4vbus_assign_dma_domain(), L4VBUS_DMAD_KERNEL_DMA_SPACE, and L4VBUS_DMAD_L4RE_DMA_SPACE.

Here is the call graph for this function:



16.367.2.3 release_ioport()

```
int L4vbus::Vbus::release_ioport (
            l4vbus_resource_t * res) const  [inline]
```

Release the given IO port resource from the bus.

Parameters

in	*res*	The IO port resource to be released from the bus.

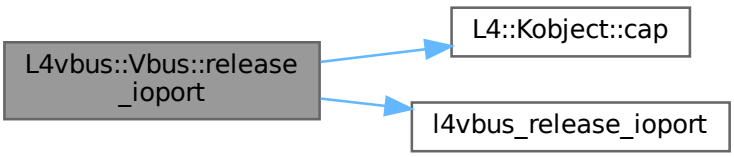
Returns

>=0 on success, <0 on error.

Definition at line 323 of file vbus.

References L4::Kobject::cap(), and l4vbus_release_ioport().

Here is the call graph for this function:



16.367.2.4 request_ioport()

```
int L4vbus::Vbus::request_ioport (
            l4vbus_resource_t * res) const  [inline]
```

Request the given IO port resource from the bus.

Parameters

in	*res*	The IO port resource to be requested from the bus.

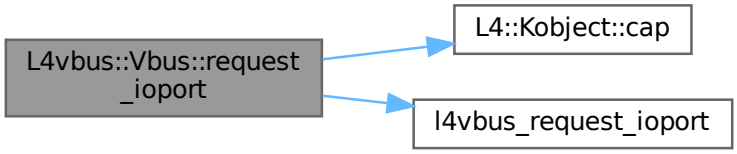
Return values

0	Success.
-L4_EINVAL	Resource is not an IO port resource.
-L4_ENOENT	No matching IO port resource found.

Definition at line 311 of file vbus.

References L4::Kobject::cap(), and l4vbus_request_ioport().

Here is the call graph for this function:



16.367.2.5 root()

```
Device L4vbus::Vbus::root () const  [inline]
```

Get the root device of the device tree of this bus.

The root device is usually the starting point for iterating the bus, see Device::next_device.

Returns

A Vbus device representing the root of the device tree.

Definition at line 336 of file vbus.

References L4::Kobject::cap(), and L4VBUS_ROOT_BUS.

Here is the call graph for this function:

The documentation for this class was generated from the following file:

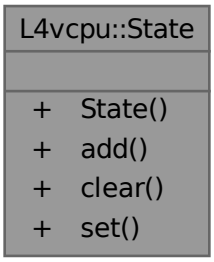
16.370 L4vcpu::State Class Reference

C++ implementation of state word in the vCPU area.

`#include <vcpu>`

Collaboration diagram for L4vcpu::State:



Public Member Functions

- State (unsigned v)
  Initialize state.
- void add (unsigned bits) throw ()
  Add flags.
- void clear (unsigned bits) throw ()
  Clear flags.
- void set (unsigned v) throw ()
  Set flags.

16.370.1 Detailed Description

C++ implementation of state word in the vCPU area.

Definition at line 24 of file vcpu.

16.370.2 Constructor & Destructor Documentation

16.370.2.1 State()

```
L4vcpu::State::State (
            unsigned v)  [inline], [explicit]
```

Initialize state.

Parameters

v	Initial state.

Definition at line 34 of file vcpu.

16.370.3 Member Function Documentation

16.370.3.1 add()

```
void L4vcpu::State::add (
            unsigned bits) throw ( )   [inline]
```

Add flags.

Parameters

bits	Bits to add to the word.

Definition at line 41 of file vcpu.

16.370.3.2 clear()

```
void L4vcpu::State::clear (
            unsigned bits) throw ( )   [inline]
```

Clear flags.

Parameters

bits	Bits to clear in the word.

Definition at line 48 of file vcpu.

16.370.3.3 set()

```
void L4vcpu::State::set (
            unsigned v) throw ( )   [inline]
```

Set flags.

Parameters

v	Set the word to the value of v.

Definition at line 55 of file vcpu.

The documentation for this class was generated from the following file:

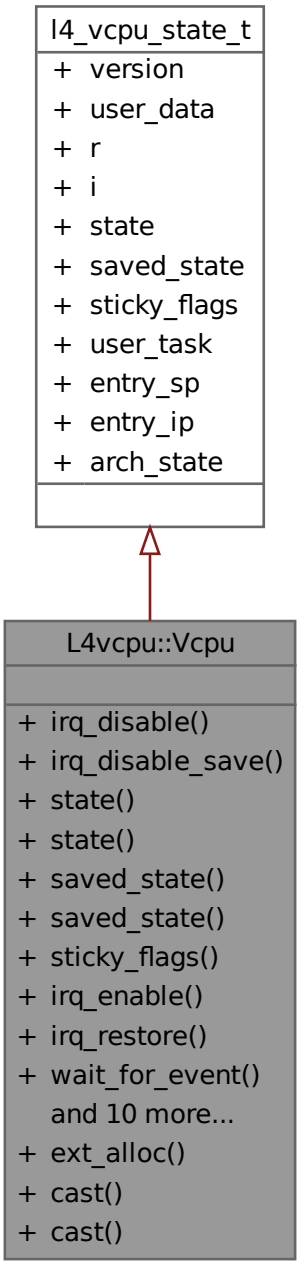
- l4/vcpu/vcpu

16.371 L4vcpu::Vcpu Class Reference

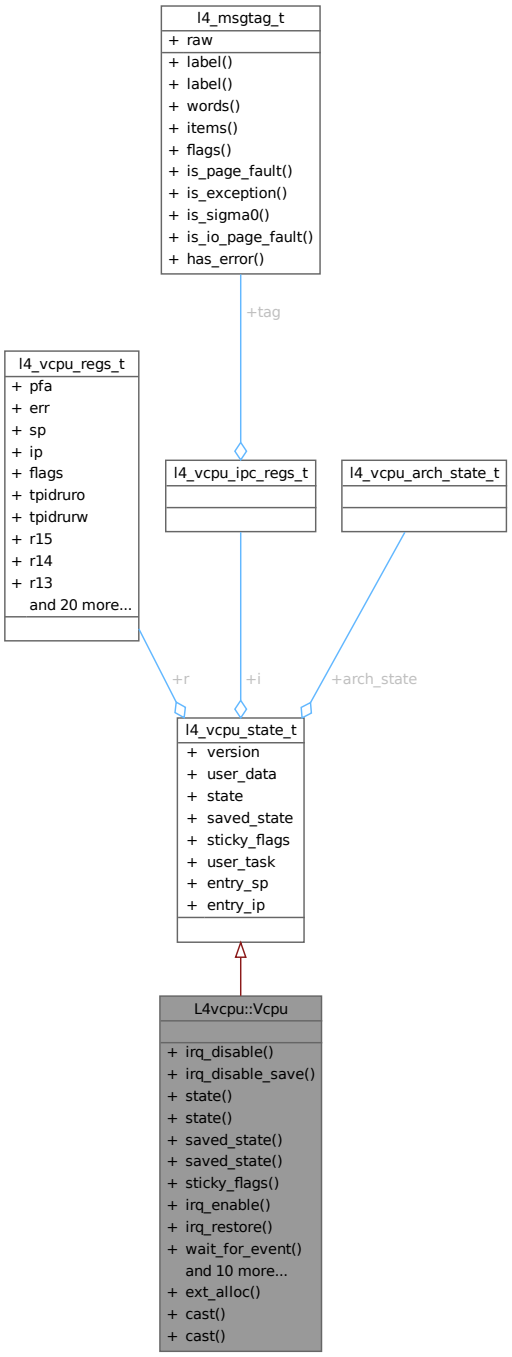
C++ implementation of the vCPU save state area.

`#include <vcpu>`

Inheritance diagram for L4vcpu::Vcpu:



Collaboration diagram for L4vcpu::Vcpu:



Public Member Functions

- void **irq_disable** () throw ()

  Disable the vCPU for event delivery.
- unsigned irq_disable_save () throw ()

  Disable the vCPU for event delivery and return previous state.
- State ∗ state () throw ()

Get state word.

- State state () const throw ()

  Get state word.

- State * saved_state () throw ()

  Get saved_state word.

- State saved_state () const throw ()

  Get saved_state word.

- l4_uint16_t **sticky_flags** () const throw ()

  Get sticky flags.

- void irq_enable (l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()

  Enable the vCPU for event delivery.

- void irq_restore (unsigned s, l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()

  Restore a previously saved IRQ/event state.

- void wait_for_event (l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) throw ()

  Wait for event.

- void task (L4::Cap< L4::Task > const task=L4::Cap< L4::Task >::Invalid) throw ()

  Set the task of the vCPU.

- int is_page_fault_entry () const

  Return whether the entry reason was a page fault.

- int is_irq_entry () const

  Return whether the entry reason was an IRQ/IPC message.

- l4_vcpu_regs_t * r () throw ()

  Return pointer to register state.

- l4_vcpu_regs_t const * r () const throw ()

  Return pointer to register state.

- l4_vcpu_ipc_regs_t * i () throw ()

  Return pointer to IPC state.

- l4_vcpu_ipc_regs_t const * i () const throw ()

  Return pointer to IPC state.

- void entry_sp (l4_umword_t sp)

  Set vCPU entry stack pointer.

- void entry_ip (l4_umword_t ip)

  Set vCPU entry instruction pointer.

- void **print_state** (const char *prefix="") const throw ()

  Print the state of the vCPU.

Static Public Member Functions

- static int ext_alloc (Vcpu **vcpu, l4_addr_t *ext_state, L4::Cap< L4::Task > task=L4Re::Env::env() ->task(), L4::Cap< L4Re::Rm > rm=L4Re::Env::env() ->rm()) throw ()

  Allocate state area for an extended vCPU.

- static Vcpu * cast (void *x) throw ()

  Cast a void pointer to a class pointer.

- static Vcpu * cast (l4_addr_t x) throw ()

  Cast an address to a class pointer.

16.371.1 Detailed Description

C++ implementation of the vCPU save state area.

Definition at line 65 of file vcpu.

16.371.2 Member Function Documentation

16.371.2.1 cast() [1/2]

```
Vcpu * L4vcpu::Vcpu::cast (
            l4_addr_t x) throw ( )   [inline], [static]
```

Cast an address to a class pointer.

Parameters

x	Pointer.

Returns

Pointer to Vcpu class.

Definition at line 269 of file vcpu.

16.371.2.2 cast() [2/2]

```
Vcpu * L4vcpu::Vcpu::cast (
            void * x) throw ( )   [inline], [static]
```

Cast a void pointer to a class pointer.

Parameters

x	Pointer.

Returns

Pointer to Vcpu class.

Definition at line 259 of file vcpu.

References cast().

Referenced by cast().

Here is the caller graph for this function:

16.371.2.3 entry_ip()

```
void L4vcpu::Vcpu::entry_ip (
             l4_umword_t ip)  [inline]
```

Set vCPU entry instruction pointer.

Parameters

ip	Instruction pointer address to set.

Definition at line 232 of file vcpu.

References l4_vcpu_state_t::entry_ip.

16.371.2.4 entry_sp()

```
void L4vcpu::Vcpu::entry_sp (
             l4_umword_t sp)  [inline]
```

Set vCPU entry stack pointer.

Parameters

sp	Stack pointer address to set.

Note

The value is only used when entering from a user-task.

Definition at line 225 of file vcpu.

References l4_vcpu_state_t::entry_sp.

16.371.2.5 ext_alloc()

```
int L4vcpu::Vcpu::ext_alloc (
            Vcpu ** vcpu,
            l4_addr_t * ext_state,
            L4::Cap< L4::Task > task = L4Re::Env::env() ->task(),
            L4::Cap< L4Re::Rm > rm = L4Re::Env::env() ->rm()) throw ( )   [static]
```

Allocate state area for an extended vCPU.

Parameters

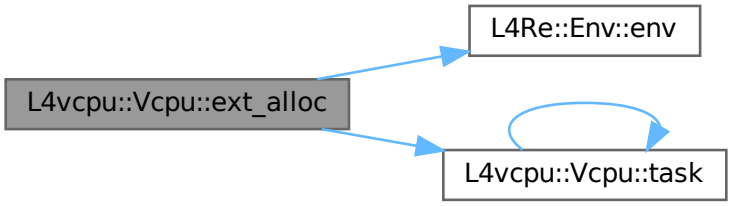
out	*vcpu*	Allocated vcpu-state area.
out	*ext_state*	Allocated extended vcpu-state area.
	task	Task to use for allocation, defaults to own task.
	rm	Region manager to use for allocation defaults to standard region manager.

Returns

0 for success, error code otherwise

References L4Re::Env::env(), and task().

Here is the call graph for this function:



16.371.2.6 i() [1/2]

```
l4_vcpu_ipc_regs_t * L4vcpu::Vcpu::i () throw ( )   [inline]
```

Return pointer to IPC state.

Returns

Pointer to IPC state.

Definition at line 209 of file vcpu.

References l4_vcpu_state_t::i.

16.371.2.7 i() [2/2]

```
l4_vcpu_ipc_regs_t const * L4vcpu::Vcpu::i () const throw ( )   [inline]
```

Return pointer to IPC state.

Returns

Pointer to IPC state.

Returns

Pointer to register state.

Definition at line 202 of file vcpu.

References l4_vcpu_state_t::r.

16.371.2.15 saved_state() [1/2]

```
State * L4vcpu::Vcpu::saved_state () throw ( )   [inline]
```

Get saved_state word.

Returns

Pointer to saved_state word in the vCPU

Definition at line 106 of file vcpu.

References l4_vcpu_state_t::saved_state.

16.371.2.16 saved_state() [2/2]

```
State L4vcpu::Vcpu::saved_state () const throw ( )   [inline]
```

Get saved_state word.

Returns

Pointer to saved_state word in the vCPU

Definition at line 116 of file vcpu.

References l4_vcpu_state_t::saved_state.

16.371.2.17 state() [1/2]

```
State * L4vcpu::Vcpu::state () throw ( )   [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 88 of file vcpu.

References l4_vcpu_state_t::state.

16.371.2.18 state() [2/2]

```
State L4vcpu::Vcpu::state () const throw ( )   [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 99 of file vcpu.

References l4_vcpu_state_t::state.

16.371.2.19 task()

```
void L4vcpu::Vcpu::task (
            L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid) throw ( )   [inline]
```

Set the task of the vCPU.

Parameters

task	Task to set, defaults to invalid task.

Definition at line 174 of file vcpu.

References L4::Cap_base::Invalid, task(), and l4_vcpu_state_t::user_task.

Referenced by ext_alloc(), and task().

16.371.2.20 wait_for_event()

```
void L4vcpu::Vcpu::wait_for_event (
             l4_utcb_t * utcb,
             l4vcpu_event_hndl_t do_event_work_cb,
             l4vcpu_setup_ipc_t setup_ipc) throw ( )   [inline]
```

Wait for event.

Parameters

utcb	The UTCB to use.
do_event_work_cb	Call-back function that is called in case an event (such as an interrupt) is pending.
setup_ipc	Call-back function that is called before an IPC operation is called.

Note that event delivery remains disabled after this function returns.

Definition at line 166 of file vcpu.

References l4vcpu_wait_for_event().

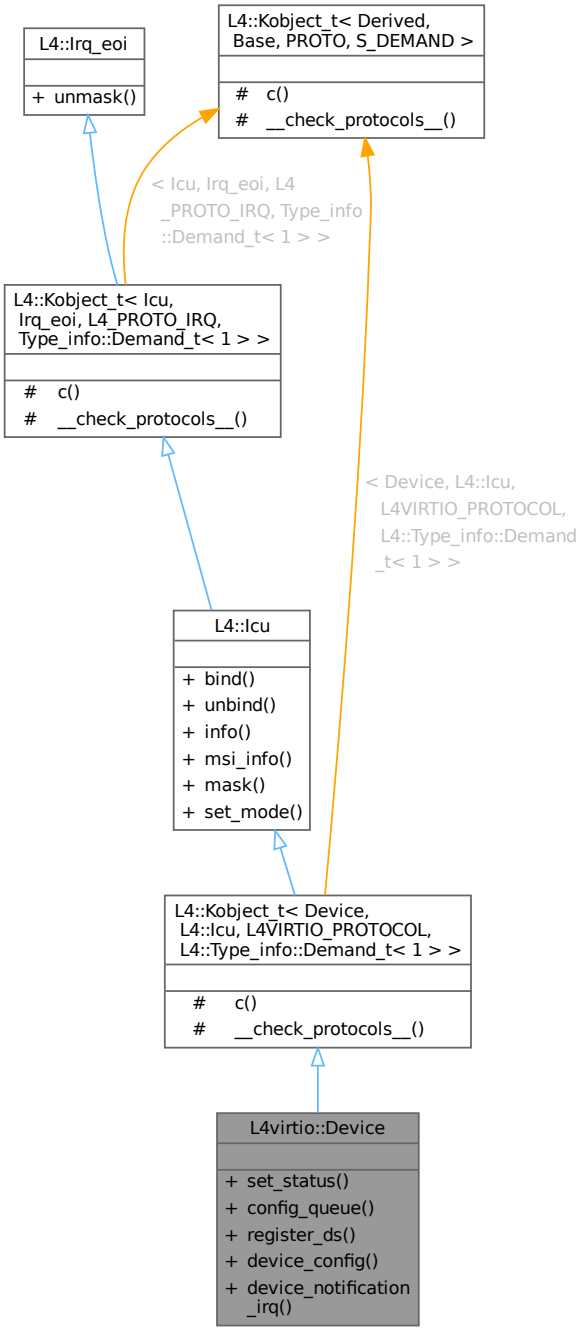
16.372 L4virtio::Device Class Reference

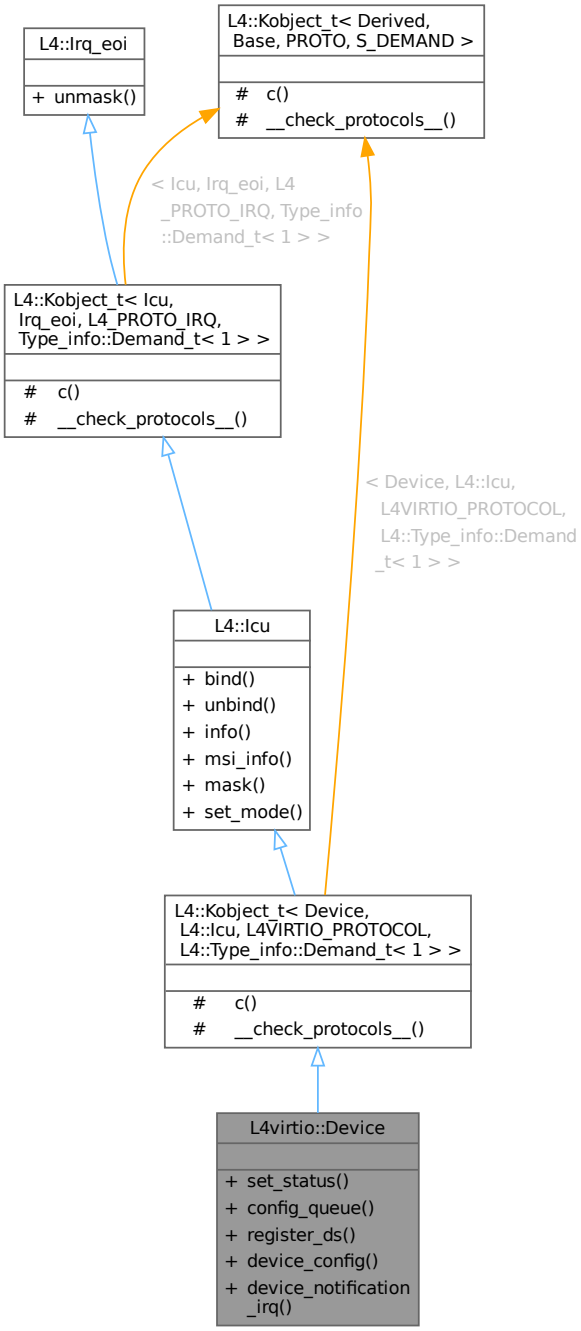
IPC interface for virtio over L4 IPC.

```
#include <l4virtio>
```

Inheritance diagram for L4virtio::Device:



Collaboration diagram for L4virtio::Device:



Public Member Functions

- long set_status (unsigned status)

  Write the VIRTIO status register.
- long config_queue (unsigned queue)

  Trigger queue configuration of the given queue.

- long register_ds (L4::Ipc::Cap< L4Re::Dataspace > ds_cap, l4_uint64_t base, l4_umword_t offset, l4_umword_t size)

  Register a shared data space with VIRTIO host.
- long device_config (L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > config_ds, l4_addr_t *ds_offset)

  Get the dataspace with the L4virtio configuration page.
- long device_notification_irq (unsigned index, L4::Ipc::Out< L4::Cap< L4::Triggerable > > irq)

  Get the notification interrupt corresponding to the given index.

Public Member Functions inherited from L4::Icu

- l4_msgtag_t bind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept

  Bind an interrupt line of an interrupt controller to an interrupt object.
- l4_msgtag_t unbind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept

  Remove binding of an interrupt line from the interrupt controller object.
- l4_msgtag_t info (l4_icu_info_t *info, l4_utcb_t *utcb=l4_utcb()) noexcept

  Get information about the ICU features.
- l4_msgtag_t msi_info (l4_umword_t irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info)

  Get MSI info about IRQ.
- l4_msgtag_t mask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept

  Mask an IRQ line.
- l4_msgtag_t set_mode (unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb=l4_utcb()) noexcept

  Set interrupt mode.

Public Member Functions inherited from L4::Irq_eoi

- l4_msgtag_t unmask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept

  Unmask the given interrupt line.

Additional Inherited Members

Protected Types inherited from L4::Kobject_t< Device, L4::Icu, L4VIRTIO_PROTOCOL, L4::Type_info::Demand_t< 1 > >

- typedef Device **Class**

  The target interface type (inheriting from Kobject_t).
- typedef Typeid::Iface< PROTO, Device > **__Iface**

  The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __Iface >, typename L4::Icu::__Iface_list > **__Iface_list**

  The list of all RPC interfaces provided directly or through inheritance.

Protected Types inherited from L4::Kobject_t< Icu, Irq_eoi, L4_PROTO_IRQ, Type_info::Demand_t< 1 > >

- typedef Icu **Class**

  The target interface type (inheriting from Kobject_t).

- static void **__check_protocols__** () noexcept
  Helper to check for protocol conflicts.

16.372.1 Detailed Description

IPC interface for virtio over L4 IPC.

The L4virtio protocol is an adaption of the mmio virtio transport 1.0(4). This interface allows to exchange the necessary resources: device configuration page, notification interrupts and dataspaces for payload.

Notification interrupts can be configured independently for changes to the configuration space and each queue through special L4virtio-specific notify_index fields in the config page and queue configuration. The interface distinguishes between device-to-driver and driver-to-device notification interrupts.

Device-to-driver interrupts are configured via the ICU interface. The device announces the maximum number of supported interrupts via Icu::info(). The driver can then bind interrupts using Icu::bind().

Driver-to-device interrupts must be requested from the device through device_notification_irq().

Definition at line 39 of file l4virtio.

16.372.2 Member Function Documentation

16.372.2.1 config_queue()

```
long L4virtio::Device::config_queue (
            unsigned queue)
```

Trigger queue configuration of the given queue.

Usually all queues are configured when the status is written to running. However, in some cases queues shall be disabled or enabled dynamically, in this case this function triggers a reconfiguration from the shared memory register of the queue config.

Parameters

queue	Queue index for the queue to be configured.

Return values

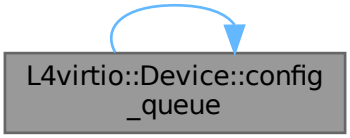
0	on success.
-L4_EIO	The queue's status is invalid.
-L4_ERANGE	The queue index exceeds the number of queues.
-L4_EINVAL	Otherwise.

References config_queue(), L4VIRTIO_OP_REGISTER_DS, and register_ds().

Referenced by config_queue().

Here is the call graph for this function:

Here is the caller graph for this function:



16.372.2.2 device_config()

```
long L4virtio::Device::device_config (
            L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > config_ds,
            l4_addr_t * ds_offset)
```

Get the dataspace with the L4virtio configuration page.

Parameters

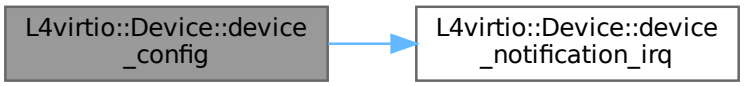
config_ds	Capability for receiving the dataspace capability for the shared L4-VIRTIO config data space.

ds_offset	Offset into the dataspace where the device configuration structure starts.

References device_notification_irq(), and L4VIRTIO_OP_GET_DEVICE_IRQ.

Referenced by register_ds().

Here is the call graph for this function:



Here is the caller graph for this function:

16.372.2.3 device_notification_irq()

```
long L4virtio::Device::device_notification_irq (
            unsigned index,
            L4::Ipc::Out< L4::Cap< L4::Triggerable > > irq)
```

Get the notification interrupt corresponding to the given index.

Parameters

	index	Index of the interrupt.
out	*irq*	Triggerable for the given index.

Return values

L4_EOK	Success.
L4_ENOSYS	IRQ notification not supported by device.
<0	Other error.

An index is only guaranteed to return an IRQ object when the index is set in one of the device notify index fields. The device must return the same interrupt for a given index as long as the index is in use. If an index disappears as a result of a configuration change and then is reused later, the interrupt is not guaranteed to be the same.

Interrupts must always be rerequested after a device reset.

Referenced by device_config().

Here is the caller graph for this function:

16.372.2.4 register_ds()

```
long L4virtio::Device::register_ds (
             L4::Ipc::Cap< L4Re::Dataspace > ds_cap,
             l4_uint64_t base,
             l4_umword_t offset,
             l4_umword_t size)
```

Register a shared data space with VIRTIO host.

Parameters

ds_cap	Dataspace capability to register. The lower 8 bits determine the rights mask with which the guest's rights are masked during the registration of the dataspace at the VIRTIO host.
base	VIRTIO guest physical start address of shared memory region
offset	Offset within the data space that is attached to the given `base` in the guest physical memory.
size	Size of the memory region in the guest

Return values

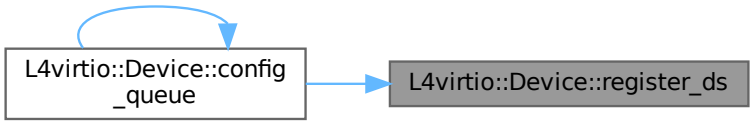
L4_EOK	Operation successful.
-L4_EINVAL	The `ds_cap` capability is invalid, does not refer to a valid dataspace, is not a trusted dataspace if trusted dataspace validation is enabled, or `size` and `offset` specify an invalid region.
-L4_ENOMEM	The limit of dataspaces that can be registered has been reached or no capability slot could be allocated.
-L4_ERANGE	`offset` is lager than the size of the dataspace.
<0	Any error returned by the dataspace when queried for information during setup or any error returned by the region manager from attaching the dataspace.

References device_config(), and L4VIRTIO_OP_DEVICE_CONFIG.

Referenced by config_queue().

Here is the call graph for this function:

Here is the caller graph for this function:



16.372.2.5 set_status()

```
long L4virtio::Device::set_status (
            unsigned status)
```

Write the VIRTIO status register.

Parameters

status	Status word to write to the VIRTIO status.

Return values

0	on success.

Note

All other registers are accessed via shared memory.

References L4VIRTIO_OP_CONFIG_QUEUE, and set_status().

Referenced by set_status().

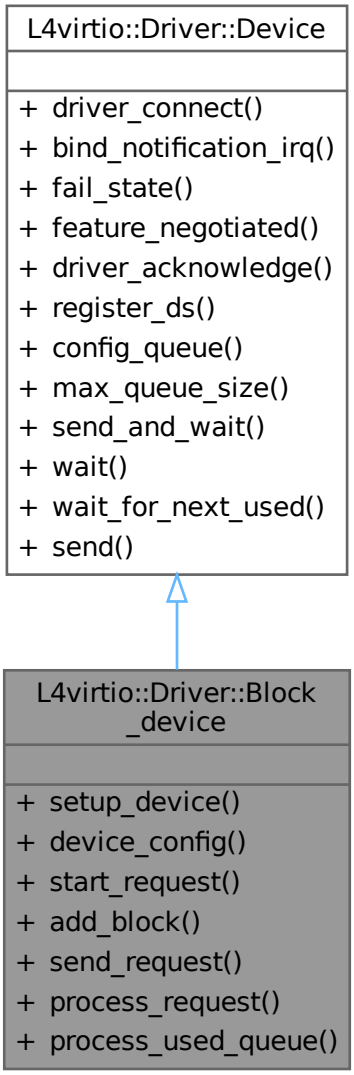
- l4/l4virtio/l4virtio

16.373 L4virtio::Driver::Block_device Class Reference

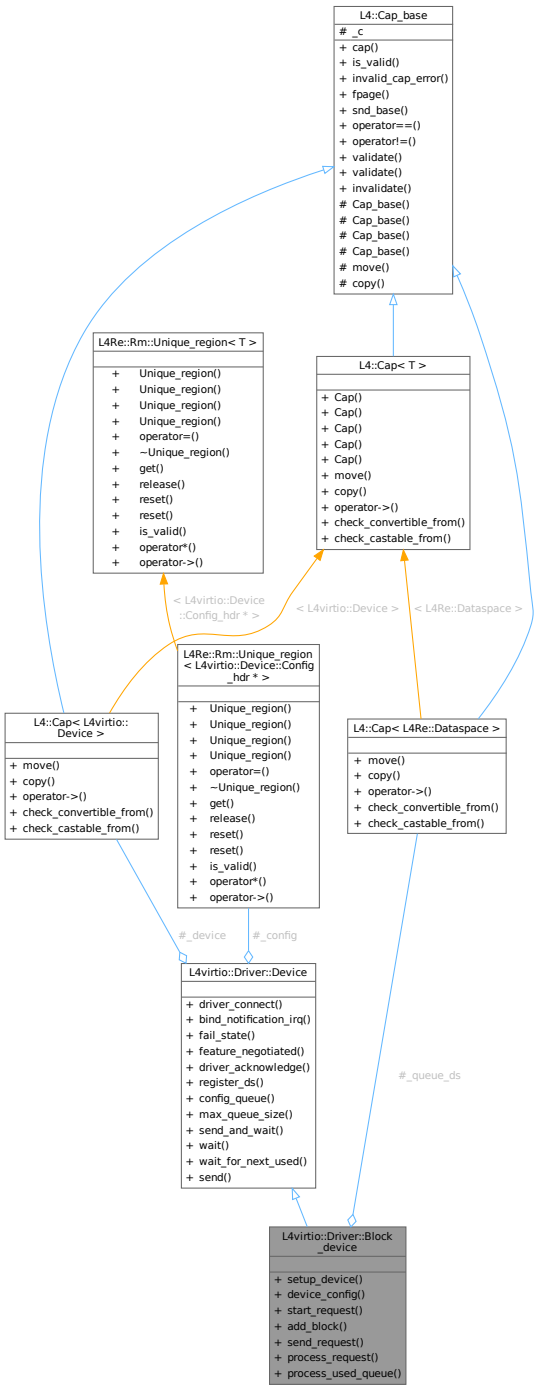
Simple class for accessing a virtio block device synchronously.

`#include <virtio-block>`

Inheritance diagram for L4virtio::Driver::Block_device:



Collaboration diagram for L4virtio::Driver::Block_device:



Data Structures

- class Handle

  Handle to an ongoing request.

Public Member Functions

- void setup_device (L4::Cap< L4virtio::Device > srvcap, l4_size_t usermem, void **userdata, Ptr< void > &user_devaddr, L4::Cap< L4Re::Dataspace > qds=L4::Cap< L4Re::Dataspace >(), l4_uint32_t fmask0=-1U, l4_uint32_t fmask1=-1U)

  Establish a connection to the device and set up shared memory.
- l4virtio_block_config_t const & **device_config** () const

  Return a reference to the device configuration.
- Handle start_request (l4_uint64_t sector, l4_uint32_t type, Callback callback)

  Start the setup of a new request.
- int add_block (Handle handle, Ptr< void > addr, l4_uint32_t size)

  Add a data block to a request that has already been set up.
- int send_request (Handle handle)

  Process request asynchronously.
- int process_request (Handle handle)

  Process request synchronously.
- void process_used_queue ()

  Process and free all items in the used queue.

Public Member Functions inherited from L4virtio::Driver::Device

- void driver_connect (L4::Cap< L4virtio::Device > srvcap, bool manage_notify=true)

  Contacts the device and starts the initial handshake.
- int bind_notification_irq (unsigned index, L4::Cap< L4::Triggerable > irq) const

  Register a triggerable to receive notifications from the device.
- bool **fail_state** () const

  Return true if the device is in a fail state.
- bool feature_negotiated (unsigned int feat) const

  Check if a particular feature bit was negotiated with the device.
- int driver_acknowledge ()

  Finalize handshake with the device.
- int register_ds (L4::Cap< L4Re::Dataspace > ds, l4_umword_t offset, l4_umword_t size, l4_uint64_t *devaddr)

  Share a dataspace with the device.
- int config_queue (int num, unsigned size, l4_uint64_t desc_addr, l4_uint64_t avail_addr, l4_uint64_t used_↩ addr)

  Send the virtqueue configuration to the device.
- int max_queue_size (int num) const

  Maximum queue size allowed by the device.
- int send_and_wait (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device and wait for it to be processed.
- int wait (int index) const

  Wait for a notification from the device.
- int wait_for_next_used (Virtqueue &queue, l4_uint32_t *len=nullptr) const

  Wait for the next item to arrive in the used queue and return it.
- void send (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device.

16.373.1 Detailed Description

Simple class for accessing a virtio block device synchronously.

Definition at line 36 of file virtio-block.

16.373.2 Member Function Documentation

16.373.2.1 add_block()

```
int L4virtio::Driver::Block_device::add_block (
            Handle handle,
            Ptr< void > addr,
            l4_uint32_t size)  [inline]
```

Add a data block to a request that has already been set up.

Parameters

handle	Handle to request previously set up with start_request().
addr	Address of data block in device address space.
size	Size of data block.

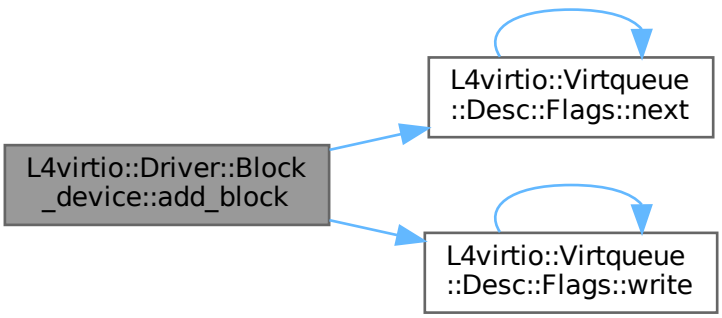
Return values

L4_OK	Block was successfully added.
-L4_EAGAIN	No descriptors available. Try again later.

Definition at line 229 of file virtio-block.

References L4virtio::Virtqueue::Desc::addr, L4virtio::Virtqueue::Desc::flags, L4_EAGAIN, L4_EOK, L4virtio::Virtqueue::Desc::len, L4virtio::Virtqueue::Desc::Flags::next(), L4virtio::Virtqueue::Desc::next, L4virtio::Virtqueue::Desc::Flags::raw, and L4virtio::Virtqueue::Desc::Flags::write().

Here is the call graph for this function:



16.373.2.2 process_request()

```
int L4virtio::Driver::Block_device::process_request (
            Handle handle)  [inline]
```

Process request synchronously.

Parameters

handle	Handle to request to process.

Return values

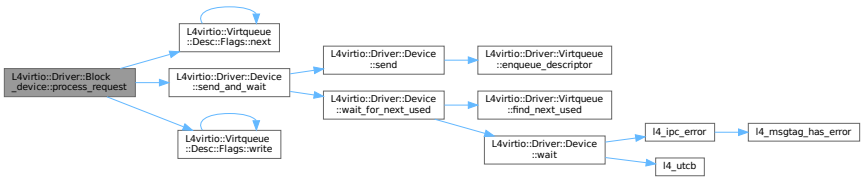
L4_EOK	Request processed successfully.
-L4_EAGAIN	No descriptors available. Try again later.
-L4_EIO	IO error during request processing.
-L4_ENOSYS	Unsupported request.
<0	Another unspecified error occurred.

Sends a request to the driver that was previously set up with start_request() and add_block() and wait for it to be executed.

Definition at line 306 of file virtio-block.

References L4virtio::Virtqueue::Desc::addr, L4virtio::Virtqueue::Desc::flags, L4_EAGAIN, L4_EINVAL, L4_EIO, L4_ENOSYS, L4_EOK, L4VIRTIO_BLOCK_S_IOERR, L4VIRTIO_BLOCK_S_OK, L4VIRTIO_BLOCK_S_UNSUPP, L4virtio::Virtqueue::Desc::len, L4virtio::Virtqueue::Desc::Flags::next(), L4virtio::Virtqueue::Desc::next, L4virtio::Virtqueue::Desc::Flags, L4virtio::Driver::Device::send_and_wait(), and L4virtio::Virtqueue::Desc::Flags::write().

Here is the call graph for this function:



16.373.2.3 process_used_queue()

```
void L4virtio::Driver::Block_device::process_used_queue ()  [inline]
```

Process and free all items in the used queue.

If the request has a callback registered it is called after the item has been removed from the queue.

Definition at line 357 of file virtio-block.

References L4Re::chksys(), and L4_ENOSYS.

Here is the call graph for this function:

16.373.2.4 send_request()

```
int L4virtio::Driver::Block_device::send_request (
            Handle handle)  [inline]
```

Process request asynchronously.

Parameters

handle	Handle to request to send to the device

Return values

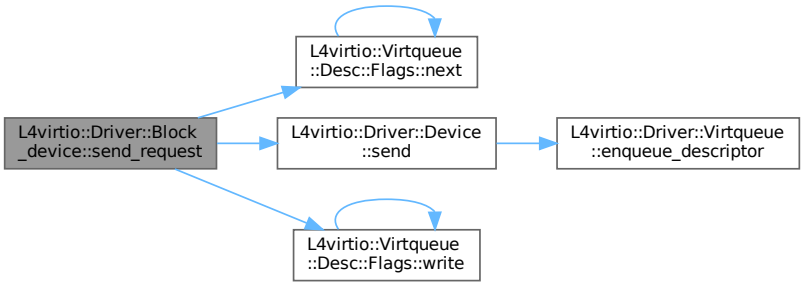
L4_OK	Request was successfully scheduled.
-L4_EAGAIN	No descriptors available. Try again later.

Sends a request to the driver that was previously set up with start_request() and add_block() and wait for it to be executed.

Definition at line 265 of file virtio-block.

References L4virtio::Virtqueue::Desc::addr, L4virtio::Virtqueue::Desc::flags, L4_EAGAIN, L4_EOK, L4virtio::Virtqueue::Desc::len, L4virtio::Virtqueue::Desc::Flags::next(), L4virtio::Virtqueue::Desc::next, L4virtio::Virtqueue::Desc::Flags::raw, L4virtio::Driver::Device::send(), and L4virtio::Virtqueue::Desc::Flags::write().

Here is the call graph for this function:



16.373.2.5 setup_device()

```
void L4virtio::Driver::Block_device::setup_device (
            L4::Cap< L4virtio::Device > srvcap,
            l4_size_t usermem,
            void ** userdata,
            Ptr< void > & user_devaddr,
            L4::Cap< L4Re::Dataspace > qds = L4::Cap<L4Re::Dataspace>(),
            l4_uint32_t fmask0 = -1U,
            l4_uint32_t fmask1 = -1U)  [inline]
```

Establish a connection to the device and set up shared memory.

Parameters

	srvcap	IPC capability of the channel to the server.
	usermem	Size of additional memory to share with device.
out	*userdata*	Pointer to the region of user-usable memory.
out	*user_devaddr*	Address of user-usable memory in device address space.
	qds	External queue dataspace. If this capability is invalid, the function will attempt to allocate a dataspace on its own. Note that the external queue dataspace must be large enough.
	fmask0	Feature bits 0..31 that the driver supports.
	fmask1	Feature bits 32..63 that the driver supports.

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the block device. It will also allocate and share additional memory that the caller then can use freely, i.e. normally this memory would be used as a reception buffer. The caller may also decide to not make use of this convenience function and request 0 bytes in usermem. Then it has to allocate the block buffers for sending/receiving payload manually and share them using register_ds().

Public Member Functions

- void driver_connect (L4::Cap< L4virtio::Device > srvcap, bool manage_notify=true)

  Contacts the device and starts the initial handshake.
- int bind_notification_irq (unsigned index, L4::Cap< L4::Triggerable > irq) const

  Register a triggerable to receive notifications from the device.
- bool **fail_state** () const

Return true if the device is in a fail state.

- bool feature_negotiated (unsigned int feat) const

  Check if a particular feature bit was negotiated with the device.

- int driver_acknowledge ()

  Finalize handshake with the device.

- int register_ds (L4::Cap< L4Re::Dataspace > ds, l4_umword_t offset, l4_umword_t size, l4_uint64_t *devaddr)

  Share a dataspace with the device.

- int config_queue (int num, unsigned size, l4_uint64_t desc_addr, l4_uint64_t avail_addr, l4_uint64_t used_addr)

  Send the virtqueue configuration to the device.

- int max_queue_size (int num) const

  Maximum queue size allowed by the device.

- int send_and_wait (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device and wait for it to be processed.

- int wait (int index) const

  Wait for a notification from the device.

- int wait_for_next_used (Virtqueue &queue, l4_uint32_t *len=nullptr) const

  Wait for the next item to arrive in the used queue and return it.

- void send (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device.

16.375.1 Detailed Description

Client-side implementation for a general virtio device.

Definition at line 31 of file l4virtio.

16.375.2 Member Function Documentation

16.375.2.1 bind_notification_irq()

```
int L4virtio::Driver::Device::bind_notification_irq (
            unsigned index,
            L4::Cap< L4::Triggerable > irq) const  [inline]
```

Register a triggerable to receive notifications from the device.

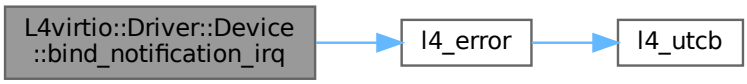
Parameters

	index	Index of the interrupt.
out	*irq*	Triggerable to register for notifications.

Definition at line 129 of file l4virtio.

References l4_error().

Here is the call graph for this function:



16.375.2.2 config_queue()

```
int L4virtio::Driver::Device::config_queue (
              int num,
              unsigned size,
              l4_uint64_t desc_addr,
              l4_uint64_t avail_addr,
              l4_uint64_t used_addr)  [inline]
```

Send the virtqueue configuration to the device.

Parameters

num	Number of queue to configure.
size	Size of rings in the queue, must be a power of 2)
desc_addr	Address of descriptor table (device address)
avail_addr	Address of available ring (device address)
used_addr	Address of used ring (device address)

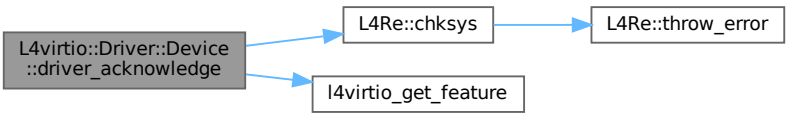
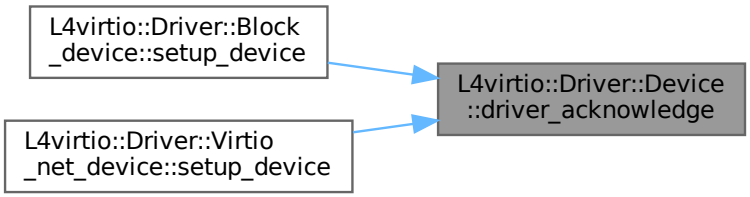
Here is the call graph for this function:



Here is the caller graph for this function:



16.375.2.4 driver_connect()

```
void L4virtio::Driver::Device::driver_connect (
            L4::Cap< L4virtio::Device > srvcap,
            bool manage_notify = true)  [inline]
```

Contacts the device and starts the initial handshake.

Parameters

srvcap	Capability for device communication.
manage_notify	Set up a semaphore for notifications from the device. See below.

Exceptions

L4::Runtime_error	if the initialisation fails

This function contacts the server, sets up the notification channels and the configuration dataspace. After this is done, the caller can set up any dataspaces it needs. The initialisation then needs to be finished by calling driver_acknowledge().

Per default this function creates and registers a semaphore for receiving notification from the device. This semaphore is used in the blocking functions send_and_wait(), wait() and next_used().

When `manage_notify` is false, then the caller may manually register and handle notification interrupts from the device. This is for example useful, when the client runs in an application with a server loop.

Definition at line 56 of file l4virtio.

References L4Re::chkcap(), L4Re::chksys(), L4Re::Env::env(), L4_EINVAL, L4_EIO, L4_ENODEV, l4_error(), L4_PAGEMASK, L4_PAGESHIFT, L4_PAGESIZE, L4_SUPERPAGESIZE, L4VIRTIO_STATUS_ACKNOWLEDGE, L4VIRTIO_STATUS_DRIVER, L4::Ipc::make_cap_rw(), L4Re::Util::make_unique_cap(), L4Re::Rm::F::RW, and L4Re::Rm::F::Search_addr.

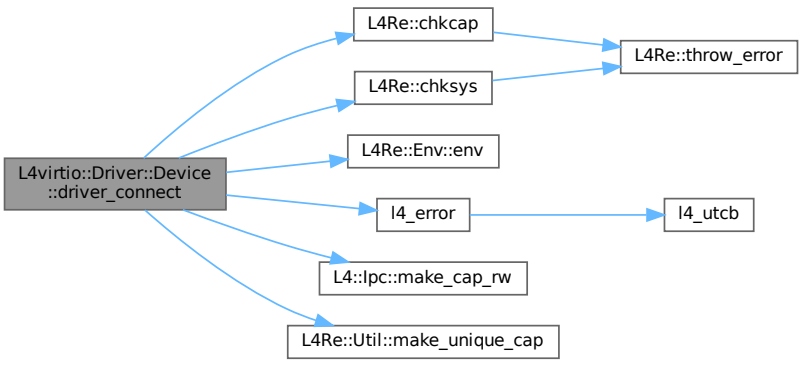
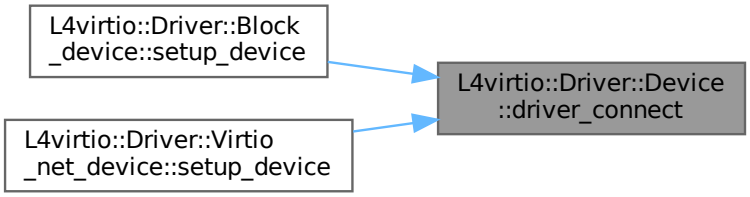
Here is the call graph for this function:



Here is the caller graph for this function:



16.375.2.5 feature_negotiated()

```
bool L4virtio::Driver::Device::feature_negotiated (
            unsigned int feat) const  [inline]
```

Check if a particular feature bit was negotiated with the device.

The result is only valid after driver_acknowledge() was called (when the handshake with the device was completed).

Parameters

feat	The feature bit.

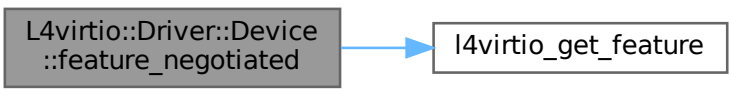
Return values

true	The feature is supported by both driver and device.
false	The feature is not supported by the driver and/or device.

Definition at line 145 of file l4virtio.

References l4virtio_get_feature().

Here is the call graph for this function:



16.375.2.6 max_queue_size()

```
int L4virtio::Driver::Device::max_queue_size (
            int num) const  [inline]
```

Maximum queue size allowed by the device.

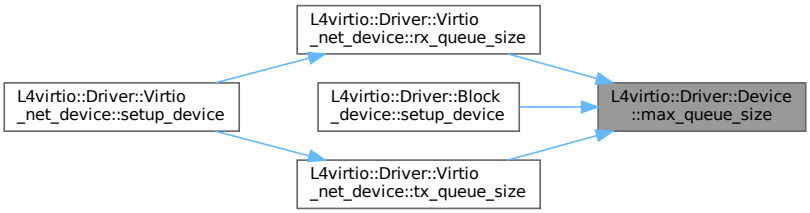
Parameters

num	Number of queue for which to determine the maximum size.

Definition at line 230 of file l4virtio.

Referenced by L4virtio::Driver::Virtio_net_device::rx_queue_size(), L4virtio::Driver::Block_device::setup_device(), and L4virtio::Driver::Virtio_net_device::tx_queue_size().

Here is the caller graph for this function:



16.375.2.7 register_ds()

```
int L4virtio::Driver::Device::register_ds (
            L4::Cap< L4Re::Dataspace > ds,
            l4_umword_t offset,
            l4_umword_t size,
            l4_uint64_t * devaddr)  [inline]
```

Share a dataspace with the device.

Parameters

ds	Dataspace to share with the device.
offset	Offset in dataspace where the shared part starts.
size	Total size in bytes of the shared space.
devaddr	Start of shared space in the device address space.

Although this function allows to share only a part of the given dataspace for convenience, the granularity of sharing is always the dataspace level. Thus, the remainder of the dataspace is not protected from the device.

When communicating with the device, addresses must be given with respect to the device address space. This is not the same as the virtual address space of the client in order to not leak information about the address space layout.

Definition at line 196 of file l4virtio.

References L4::Ipc::make_cap_rw().

Referenced by L4virtio::Driver::Block_device::setup_device(), and L4virtio::Driver::Virtio_net_device::setup_device().

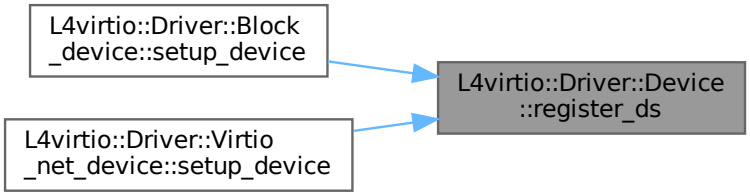
Here is the caller graph for this function:



16.375.2.8 send()

```
void L4virtio::Driver::Device::send (
            Virtqueue & queue,
            l4_uint16_t descno)  [inline]
```

Send a request to the device.

Parameters

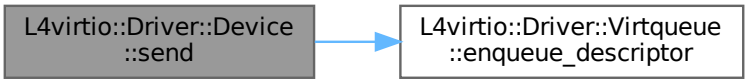
queue	Queue that contains the request in its descriptor table
descno	Index of first entry in descriptor table where

Definition at line 312 of file l4virtio.

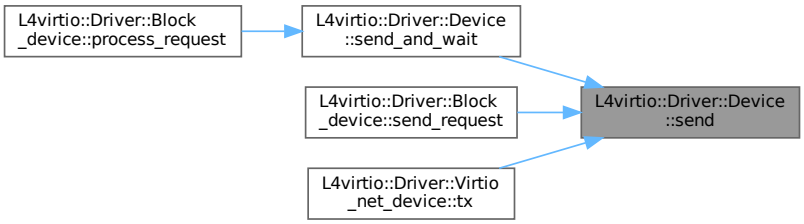
References L4virtio::Driver::Virtqueue::enqueue_descriptor().

Referenced by send_and_wait(), L4virtio::Driver::Block_device::send_request(), and L4virtio::Driver::Virtio_net_device::tx().

Here is the call graph for this function:



Here is the caller graph for this function:



16.375.2.9 send_and_wait()

```
int L4virtio::Driver::Device::send_and_wait (
            Virtqueue & queue,
            l4_uint16_t descno)  [inline]
```

Send a request to the device and wait for it to be processed.

Parameters

queue	Queue that contains the request in its descriptor table
descno	Index of first entry in descriptor table where

This function provides a simple mechanism to send requests synchronously. It must not be used with other requests at the same time as it directly waits for a notification on the device irq cap.

Precondition

driver_connect() was called with manage_notify.

Definition at line 247 of file l4virtio.

References L4_EINVAL, L4_EOK, send(), and wait_for_next_used().

Referenced by L4virtio::Driver::Block_device::process_request().

```
int L4virtio::Driver::Device::wait_for_next_used (
            Virtqueue & queue,
            l4_uint32_t * len = nullptr) const  [inline]
```

Wait for the next item to arrive in the used queue and return it.

Parameters

	queue	A queue.
out	*len*	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.

Return values

>=0	Descriptor number of item removed from used queue.
<0	IPC error while waiting for notification.

The call blocks until the next item is available in the used queue.

Precondition

driver_connect() was called with manage_notify.

Definition at line 291 of file l4virtio.

References L4virtio::Driver::Virtqueue::find_next_used(), and wait().

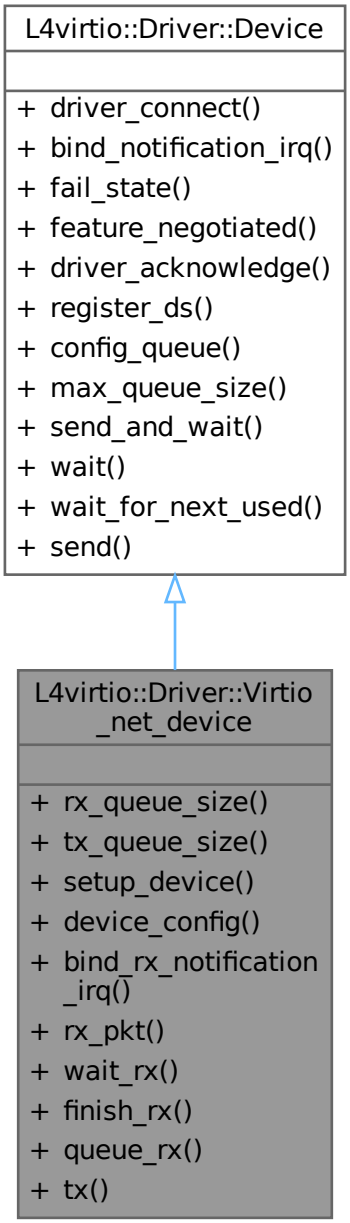
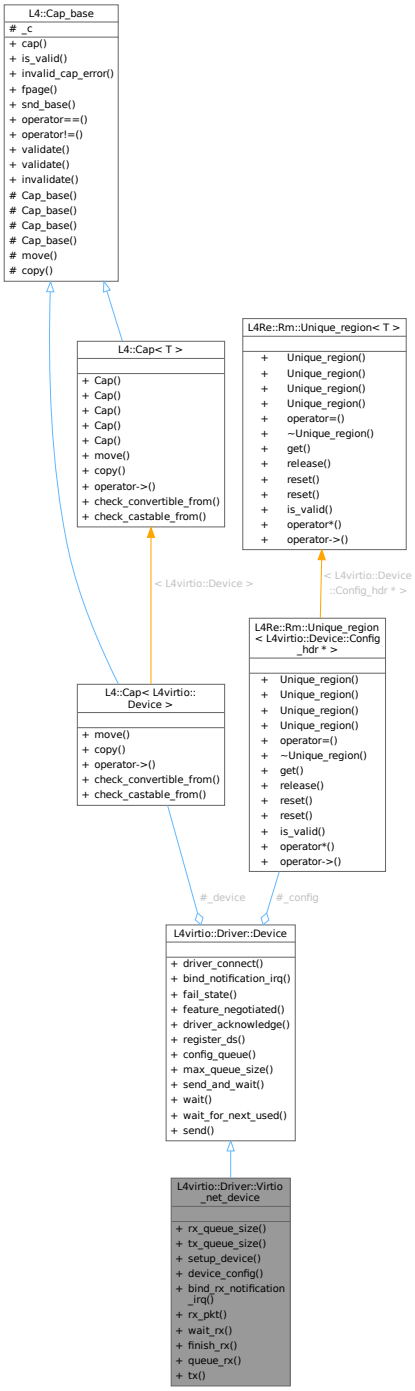
Simple class for accessing a virtio net device.

`#include <virtio-net>`

Inheritance diagram for L4virtio::Driver::Virtio_net_device:



Collaboration diagram for L4virtio::Driver::Virtio_net_device:



Data Structures

- struct Packet

  Structure for a network packet (header including data) with maximum size, assuming that no extra features have been negotiated.

Public Member Functions

- int rx_queue_size () const

  Return the maximum receive queue size allowed by the device.
- int tx_queue_size () const

  Return the maximum transmit queue size allowed by the device.
- void setup_device (L4::Cap< L4virtio::Device > srvcap)

  Establish a connection to the device and set up shared memory.
- l4virtio_net_config_t const & **device_config** () const

  Return a reference to the device configuration.
- int bind_rx_notification_irq (L4::Cap< L4::Thread > thread, l4_umword_t label)

  Bind the rx notification IRQ to the specified thread.
- Packet & rx_pkt (l4_uint16_t descno)

  Return a reference to the RX packet buffer of the specified descriptor, e.g.
- l4_uint16_t wait_rx (l4_uint32_t *len=nullptr)

  Block until a network packet has been received from the device and return the descriptor number.
- void finish_rx (l4_uint16_t descno)

  Free an RX descriptor number to make it available for the RX queue again.
- void **queue_rx** ()

  Queue new available descriptors in the RX queue.
- bool tx (std::function< l4_uint32_t(Packet &)> prepare)

  Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Public Member Functions inherited from L4virtio::Driver::Device

- void driver_connect (L4::Cap< L4virtio::Device > srvcap, bool manage_notify=true)

  Contacts the device and starts the initial handshake.
- int bind_notification_irq (unsigned index, L4::Cap< L4::Triggerable > irq) const

  Register a triggerable to receive notifications from the device.
- bool **fail_state** () const

  Return true if the device is in a fail state.
- bool feature_negotiated (unsigned int feat) const

  Check if a particular feature bit was negotiated with the device.
- int driver_acknowledge ()

  Finalize handshake with the device.
- int register_ds (L4::Cap< L4Re::Dataspace > ds, l4_umword_t offset, l4_umword_t size, l4_uint64_t *devaddr)

  Share a dataspace with the device.
- int config_queue (int num, unsigned size, l4_uint64_t desc_addr, l4_uint64_t avail_addr, l4_uint64_t used_addr)

  Send the virtqueue configuration to the device.
- int max_queue_size (int num) const

  Maximum queue size allowed by the device.
- int send_and_wait (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device and wait for it to be processed.
- int wait (int index) const

  Wait for a notification from the device.
- int wait_for_next_used (Virtqueue &queue, l4_uint32_t *len=nullptr) const

  Wait for the next item to arrive in the used queue and return it.
- void send (Virtqueue &queue, l4_uint16_t descno)

  Send a request to the device.

16.376.1 Detailed Description

Simple class for accessing a virtio net device.

Definition at line 30 of file virtio-net.

16.376.2 Member Function Documentation

16.376.2.1 bind_rx_notification_irq()

```
int L4virtio::Driver::Virtio_net_device::bind_rx_notification_irq (
            L4::Cap< L4::Thread > thread,
            l4_umword_t label)  [inline]
```

Bind the rx notification IRQ to the specified thread.

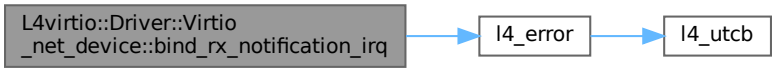
Parameters

thread	Thread to bind the notification IRQ to.
label	Label to assign to the IRQ.

Definition at line 169 of file virtio-net.

References l4_error().

Here is the call graph for this function:



16.376.2.2 finish_rx()

```
void L4virtio::Driver::Virtio_net_device::finish_rx (
            l4_uint16_t descno)  [inline]
```

Free an RX descriptor number to make it available for the RX queue again.

Parameters

descno	Descriptor number in the virtio queue.

Usually queue_rx() should be called afterwards to queue the freed descriptor(s).

Definition at line 230 of file virtio-net.

16.376.2.3 rx_pkt()

```
Packet & L4virtio::Driver::Virtio_net_device::rx_pkt (
            l4_uint16_t descno)  [inline]
```

Return a reference to the RX packet buffer of the specified descriptor, e.g.

from wait_rx().

Parameters

descno	Descriptor number in the virtio queue.

Definition at line 180 of file virtio-net.

16.376.2.4 rx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::rx_queue_size () const  [inline]
```

Return the maximum receive queue size allowed by the device.

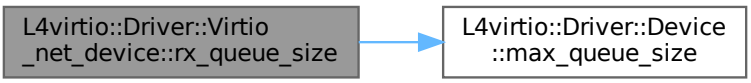
wait_rx() will return a descriptor number that is smaller than this size.

Definition at line 47 of file virtio-net.

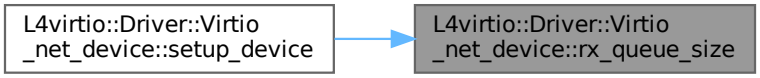
References L4virtio::Driver::Device::max_queue_size().

Referenced by setup_device().

Here is the call graph for this function:



Here is the caller graph for this function:



16.376.2.5 setup_device()

```
void L4virtio::Driver::Virtio_net_device::setup_device (
            L4::Cap< L4virtio::Device > srvcap)  [inline]
```

Establish a connection to the device and set up shared memory.

Parameters

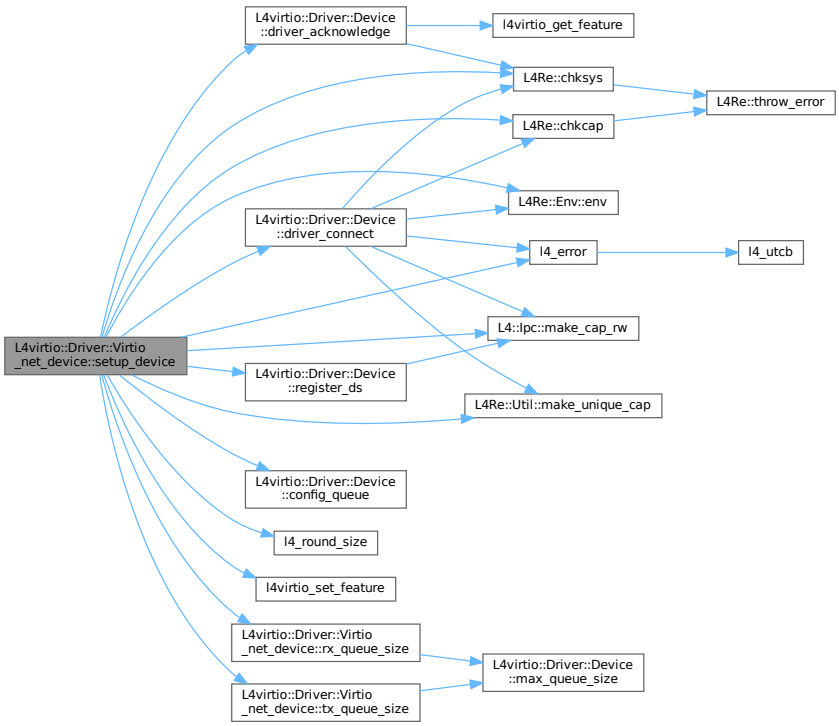
srvcap	IPC capability of the channel to the server.

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the network device.

Definition at line 66 of file virtio-net.

References L4Re::chkcap(), L4Re::chksys(), L4virtio::Driver::Device::config_queue(), L4Re::Mem_alloc::Continuous, L4virtio::Driver::Device::driver_acknowledge(), L4virtio::Driver::Device::driver_connect(), L4Re::Env::env(), L4_EINVAL, L4_ENODEV, l4_error(), L4_PAGESHIFT, l4_round_size(), L4VIRTIO_FEATURE_VERSION_1, L4VIRTIO_ID_NET, l4virtio_set_feature(), L4::Ipc::make_cap_rw(), L4Re::Util::make_unique_cap(), L4Re::Mem_alloc::Pinned, L4virtio::Driver::Device::register_ds(), L4Re::Rm::F::RW, rx_queue_size(), L4Re::Rm::F::Search_addr, and tx_queue_size().

Here is the call graph for this function:



16.376.2.6 tx()

```
bool L4virtio::Driver::Virtio_net_device::tx (
            std::function< l4_uint32_t(Packet &)> prepare)  [inline]
```

Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Parameters

prepare	Function that fills the packet with data, should return the length of the data copied to the packet.

Return values

true	The packet was queued.
false	TX queue is full.

The prepare callback should fill the packet with data and return the length of the packet data (without the size of the virtio-net packet header).

Definition at line 260 of file virtio-net.

References L4virtio::Driver::Device::send().

Here is the call graph for this function:

16.376.2.7 tx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::tx_queue_size () const  [inline]
```

Return the maximum transmit queue size allowed by the device.

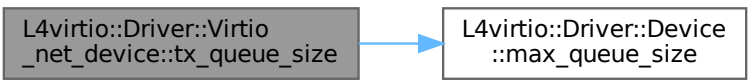
tx() will fail if the amount of queued packets exceeds this size.

Definition at line 54 of file virtio-net.

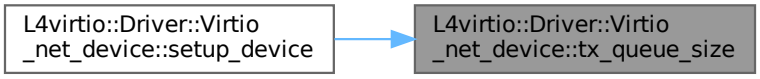
References L4virtio::Driver::Device::max_queue_size().

Referenced by setup_device().

Here is the call graph for this function:



Here is the caller graph for this function:



16.376.2.8 wait_rx()

```
l4_uint16_t L4virtio::Driver::Virtio_net_device::wait_rx (
            l4_uint32_t * len = nullptr)  [inline]
```

Block until a network packet has been received from the device and return the descriptor number.

Precondition

The calling thread must be bound to the rx notification IRQ via `bind_rx_notification_irq()`.

Parameters

out	*len*	(optional) Length of valid data in RX packet.

Returns

Descriptor number of received packet.

The packet data can be obtained with rx_pkt(). finish_rx() should be called after the packet buffer can be returned to the RX queue.

Definition at line 202 of file virtio-net.

References L4Re::chksys().

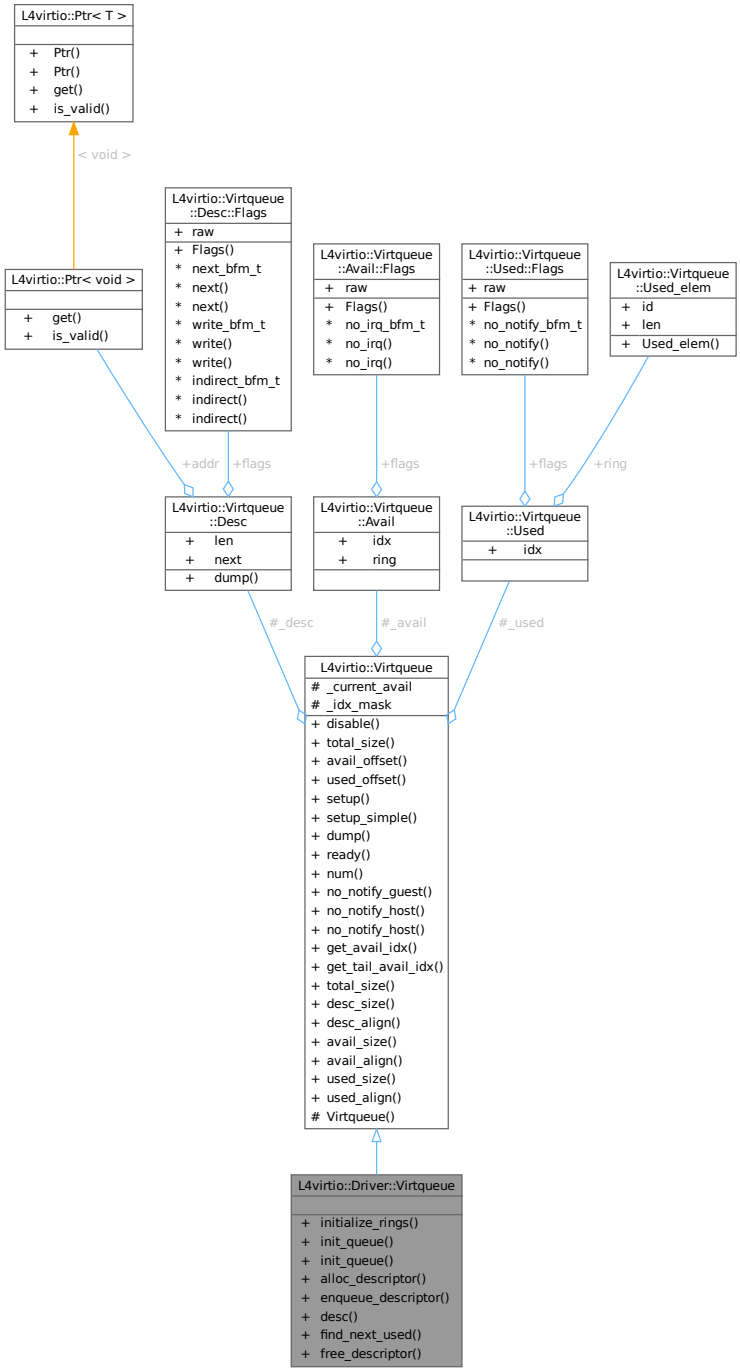
16.378 L4virtio::Driver::Virtqueue Class Reference

Driver-side implementation of a Virtqueue.

`#include <virtqueue>`

Inheritance diagram for L4virtio::Driver::Virtqueue:

Collaboration diagram for L4virtio::Driver::Virtqueue:



Public Member Functions

- void initialize_rings (unsigned num)

  Initialize the descriptor table and the index structures of this queue.
- void init_queue (unsigned num, void ∗desc, void ∗avail, void ∗used)

  Initialize this virtqueue.
- void init_queue (unsigned num, void ∗base)

Initialize this virtqueue.

- l4_uint16_t alloc_descriptor ()

  Allocate and return an unused descriptor from the descriptor table.
- void enqueue_descriptor (l4_uint16_t descno)

  Enqueue a descriptor in the available ring.
- Desc & desc (l4_uint16_t descno)

  Return a reference to a descriptor in the descriptor table.
- l4_uint16_t find_next_used (l4_uint32_t *len=nullptr)

  Return the next finished block.
- void free_descriptor (l4_uint16_t head, l4_uint16_t tail)

  Free a chained list of descriptors in the descriptor queue.

Public Member Functions inherited from L4virtio::Virtqueue

- void disable ()

  Completely disable the queue.
- unsigned long total_size () const

  Calculate the total size of this virtqueue.
- unsigned long **avail_offset** () const

  Get the offset of the available ring from the descriptor table.
- unsigned long **used_offset** () const

  Get the offset of the used ring from the descriptor table.
- void setup (unsigned num, void *desc, void *avail, void *used)

  Enable this queue.
- void setup_simple (unsigned num, void *ring)

  Enable this queue.
- void dump (Desc const *d) const

  Dump descriptors for this queue.
- bool ready () const

  Test if this queue is in working state.
- unsigned num () const
- bool no_notify_guest () const

  Get the no IRQ flag of this queue.
- bool no_notify_host () const

  Get the no notify flag of this queue.
- void no_notify_host (bool value)

  Set the no-notify flag for this queue.
- l4_uint16_t get_avail_idx () const

  Get available index from available ring (for debugging).
- l4_uint16_t get_tail_avail_idx () const

  Get tail-available index stored in local state (for debugging).

Additional Inherited Members

Public Types inherited from L4virtio::Virtqueue

- enum

  Fixed alignment values for different parts of a virtqueue.

Static Public Member Functions inherited from L4virtio::Virtqueue

- static unsigned long total_size (unsigned num)

  Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long desc_size (unsigned num)

  Calculate the size of the descriptor table for `num` *entries.*
- static unsigned long desc_align ()

  Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long avail_size (unsigned num)

  Calculate the size of the available ring for `num` *entries.*
- static unsigned long avail_align ()

  Get the alignment in zero LSBs needed for the available ring.
- static unsigned long used_size (unsigned num)

  Calculate the size of the used ring for `num` *entries.*
- static unsigned long used_align ()

  Get the alignment in zero LSBs needed for the used ring.

  Create a disabled virtqueue.

Protected Attributes inherited from L4virtio::Virtqueue

- Desc * **_desc** = nullptr

  pointer to descriptor table, NULL if queue is off.
- Avail * **_avail** = nullptr

  pointer to available ring.
- Used * **_used** = nullptr

  pointer to used ring.
- l4_uint16_t **_current_avail** = 0

  The life counter for the queue.
- l4_uint16_t **_idx_mask** = 0

  mask used for indexing into the descriptor table and the rings.

16.378.1 Detailed Description

Driver-side implementation of a Virtqueue.

Adds function for managing the descriptor list, enqueueing new and dequeueing finished requests.

Note

The Virtqueue implementation is not thread-safe.

Definition at line 470 of file virtqueue.

16.378.2 Member Function Documentation

16.378.2.1 alloc_descriptor()

```
l4_uint16_t L4virtio::Driver::Virtqueue::alloc_descriptor ()  [inline]
```

Allocate and return an unused descriptor from the descriptor table.

The descriptor will be removed from the free list, the content should be considered undefined. After use, it needs to be freed using free_descriptor().

Returns

The index of the reserved descriptor or Virtqueue::Eoq if no free descriptor is available.

Note: the implementation uses (2^16 - 1) as the end of queue marker. That means that the final entry in the queue can not be allocated iff the queue size is 2^16.

Definition at line 558 of file virtqueue.

References L4virtio::Virtqueue::_desc.

16.378.2.2 desc()

```
Desc & L4virtio::Driver::Virtqueue::desc (
            l4_uint16_t descno)  [inline]
```

Return a reference to a descriptor in the descriptor table.

Parameters

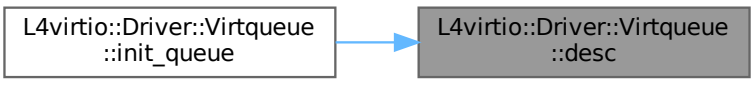
descno	Index of the descriptor, expected to be in correct range.

Definition at line 590 of file virtqueue.

References L4virtio::Virtqueue::_desc, and L4virtio::Virtqueue::_idx_mask.

Referenced by init_queue().

Here is the caller graph for this function:



16.378.2.3 enqueue_descriptor()

```
void L4virtio::Driver::Virtqueue::enqueue_descriptor (
            l4_uint16_t descno)  [inline]
```

Enqueue a descriptor in the available ring.

Parameters

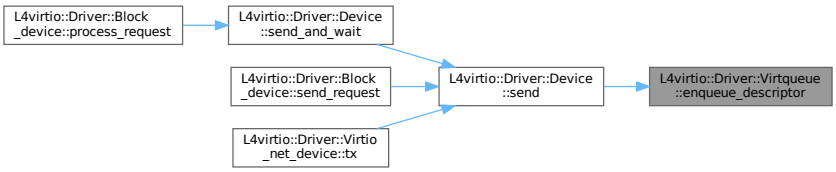
descno	Index of the head descriptor to enqueue.

Definition at line 574 of file virtqueue.

References L4virtio::Virtqueue::_avail, and L4virtio::Virtqueue::_idx_mask.

Referenced by L4virtio::Driver::Device::send().

Here is the caller graph for this function:



16.378.2.4 find_next_used()

```
l4_uint16_t L4virtio::Driver::Virtqueue::find_next_used (
            l4_uint32_t * len = nullptr)  [inline]
```

Return the next finished block.

Parameters

out	*len*	(optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size.

Returns

Index of the head or Virtqueue::Eoq if no used element is currently available.

Definition at line 609 of file virtqueue.

References L4virtio::Virtqueue::_current_avail, L4virtio::Virtqueue::_idx_mask, and L4virtio::Virtqueue::_used.

Referenced by L4virtio::Driver::Device::wait_for_next_used().

Here is the caller graph for this function:

16.378.2.5 free_descriptor()

```
void L4virtio::Driver::Virtqueue::free_descriptor (
             l4_uint16_t head,
             l4_uint16_t tail)  [inline]
```

Free a chained list of descriptors in the descriptor queue.

Parameters

head	Index of the first element in the descriptor chain.
tail	Index of the last element in the descriptor chain.

Simply takes the descriptor chain and prepends it to the beginning of the free list. Assumes that the list has been correctly chained.

Definition at line 631 of file virtqueue.

References L4virtio::Virtqueue::_desc, and L4virtio::Virtqueue::_idx_mask.

16.378.2.6 init_queue() [1/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
            unsigned num,
            void * base)  [inline]
```

Initialize this virtqueue.

Parameters

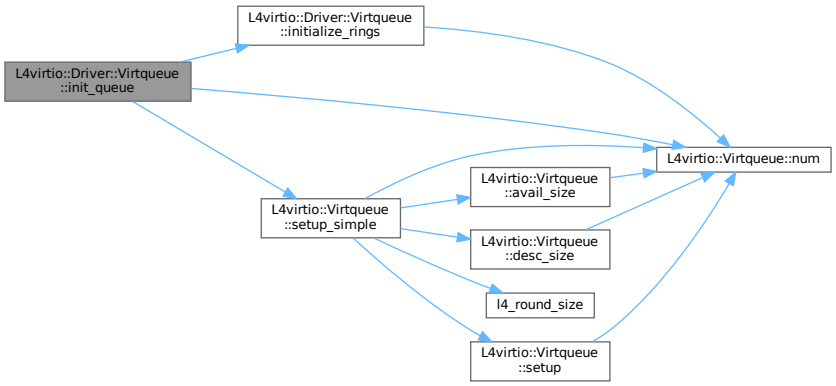
num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
base	The base address for the queue data structure.

This function sets up the memory and initializes the freelist.

Definition at line 537 of file virtqueue.

References initialize_rings(), L4virtio::Virtqueue::num(), and L4virtio::Virtqueue::setup_simple().

Here is the call graph for this function:



16.378.2.7 init_queue() [2/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
             unsigned num,
             void * desc,
             void * avail,
             void * used)  [inline]
```

Initialize this virtqueue.

Parameters

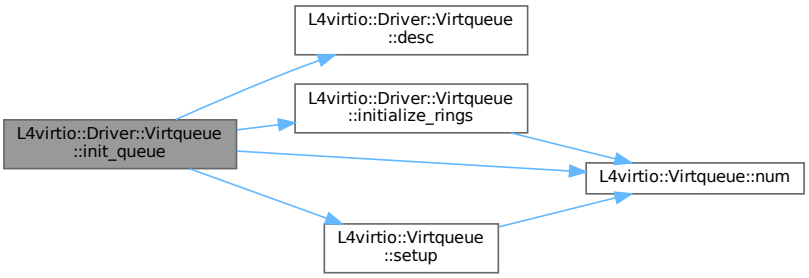
num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
desc	The address of the descriptor table. (Must be Desc_align aligned and at least `desc_size(num)` bytes in size.)
avail	The address of the available ring. (Must be Avail_align aligned and at least `avail_size(num)` bytes in size.)
used	The address of the used ring. (Must be Used_align aligned and at least `used_size(num)` bytes in size.)

This function sets up the memory and initializes the freelist.

Definition at line 522 of file virtqueue.

References desc(), initialize_rings(), L4virtio::Virtqueue::num(), and L4virtio::Virtqueue::setup().

Here is the call graph for this function:



16.378.2.8 initialize_rings()

```
void L4virtio::Driver::Virtqueue::initialize_rings (
            unsigned num)  [inline]
```

Initialize the descriptor table and the index structures of this queue.

Parameters

num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).

Precondition

The queue must be set up correctly with setup() or setup_simple().

Definition at line 494 of file virtqueue.

References L4virtio::Virtqueue::_avail, L4virtio::Virtqueue::_desc, L4virtio::Virtqueue::_used, and L4virtio::Virtqueue::num().

Referenced by init_queue(), and init_queue().

Here is the call graph for this function:

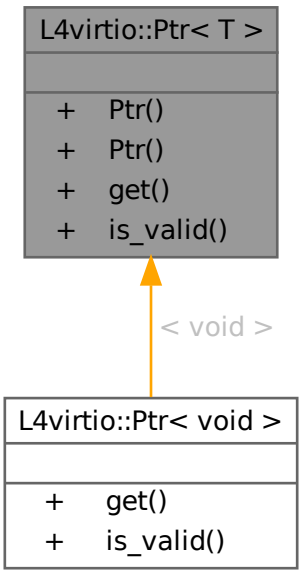
16.379 L4virtio::Ptr< T > Class Template Reference

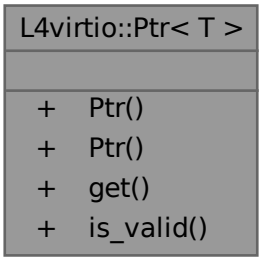
Pointer used in virtio descriptors.

`#include <virtqueue>`

Inheritance diagram for L4virtio::Ptr< T >:



Collaboration diagram for L4virtio::Ptr< T >:



Public Types

- enum Invalid_type { Invalid }

  Type for making an invalid (NULL) Ptr.

Public Member Functions

- **Ptr** (Invalid_type)

Make and invalid Ptr.

- **Ptr** (l4_uint64_t vm_addr)

  Make a Ptr from a raw 64bit address.
- l4_uint64_t get () const
- bool is_valid () const

16.379.1 Detailed Description

template<typename T>
class L4virtio::Ptr< T >

Pointer used in virtio descriptors.

As the descriptor contain guest addresses these pointers cannot be dereferenced directly.

Definition at line 47 of file virtqueue.

16.379.2 Member Enumeration Documentation

16.379.2.1 Invalid_type

```
template<typename T>
enum L4virtio::Ptr::Invalid_type
```

Type for making an invalid (NULL) Ptr.

Enumerator

Invalid	Use to set a Ptr to invalid (NULL).

Definition at line 51 of file virtqueue.

16.379.3 Member Function Documentation

16.379.3.1 get()

```
template<typename T>
l4_uint64_t L4virtio::Ptr< T >::get () const  [inline]
```

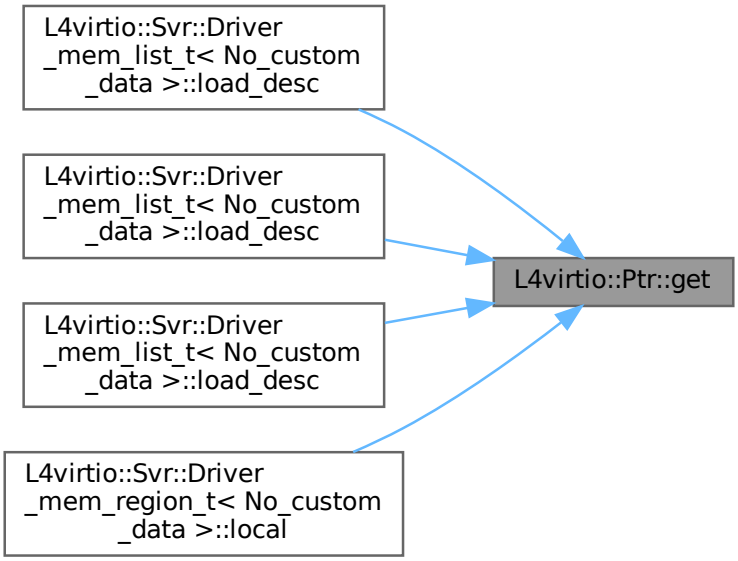
Returns

The raw 64bit address of the stored pointer.

Definition at line 62 of file virtqueue.

Referenced by L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc(), L4virtio::Svr::Driver_mem_list_t< No_custom_da
L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc(), and L4virtio::Svr::Driver_mem_region_t< No_custom_data >::lo

Here is the caller graph for this function:



16.379.3.2 is_valid()

```
template<typename T>
bool L4virtio::Ptr< T >::is_valid () const  [inline]
```

Returns

true if the stored pointer is valid (not NULL).

Definition at line 65 of file virtqueue.

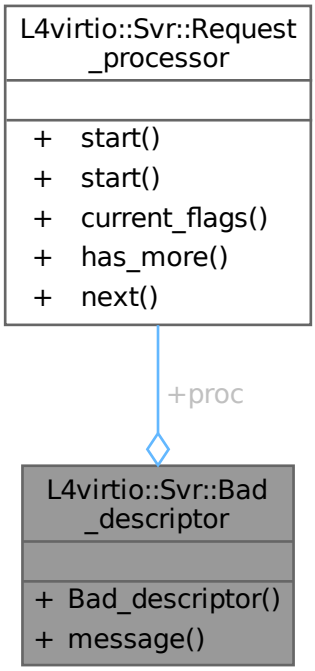
- l4/l4virtio/virtqueue

16.380 L4virtio::Svr::Bad_descriptor Struct Reference

Exception used by Queue to indicate descriptor errors.

`#include <virtio>`

Collaboration diagram for L4virtio::Svr::Bad_descriptor:



Public Types

- enum Error { Bad_address , Bad_rights , Bad_flags , Bad_next , Bad_size }

  The error code.

Public Member Functions

- Bad_descriptor (Request_processor const *proc, Error e)

  Make a bad descriptor exception.
- char const * message () const

  Get a human readable description of the error code.

Data Fields

- Request_processor const * **proc**

  The processor that triggered the exception.

16.380.1 Detailed Description

Exception used by Queue to indicate descriptor errors.

Definition at line 397 of file virtio.

16.380.2 Member Enumeration Documentation

16.380.2.1 Error

```
enum L4virtio::Svr::Bad_descriptor::Error
```

The error code.

Enumerator

Bad_address	Address cannot be translated.
Bad_rights	Missing access rights on memory.
Bad_flags	Invalid combination of descriptor flags.
Bad_next	Invalid next index.
Bad_size	Invalid size of memory block.

Definition at line 400 of file virtio.

16.380.3 Constructor & Destructor Documentation

16.380.3.1 Bad_descriptor()

```
L4virtio::Svr::Bad_descriptor::Bad_descriptor (
            Request_processor const * proc,
            Error e)  [inline]
```

Make a bad descriptor exception.

Parameters

proc	The request processor causing the exception
e	The error code.

Definition at line 421 of file virtio.

References proc.

16.380.4 Member Function Documentation

16.380.4.1 message()

```
char const * L4virtio::Svr::Bad_descriptor::message () const  [inline]
```

Get a human readable description of the error code.

Returns

Message describing the error.

Definition at line 430 of file virtio.

References Bad_address, Bad_flags, Bad_next, Bad_rights, and Bad_size.

Referenced by Virtio_switch::handle_l4virtio_port_tx().

Here is the caller graph for this function:

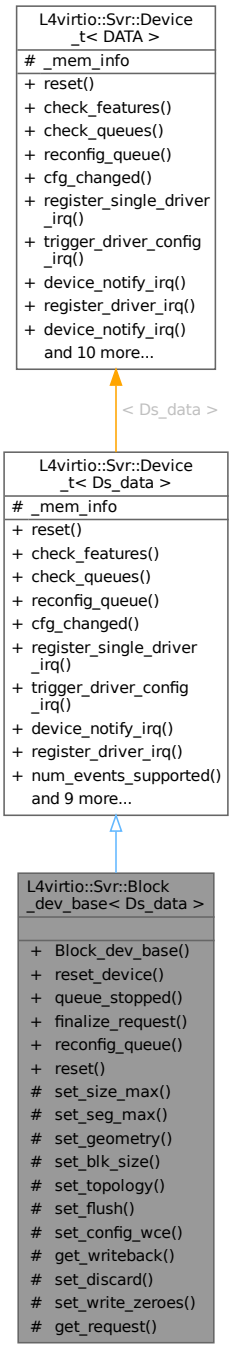
16.381 L4virtio::Svr::Block_dev_base< Ds_data > Class Template Reference

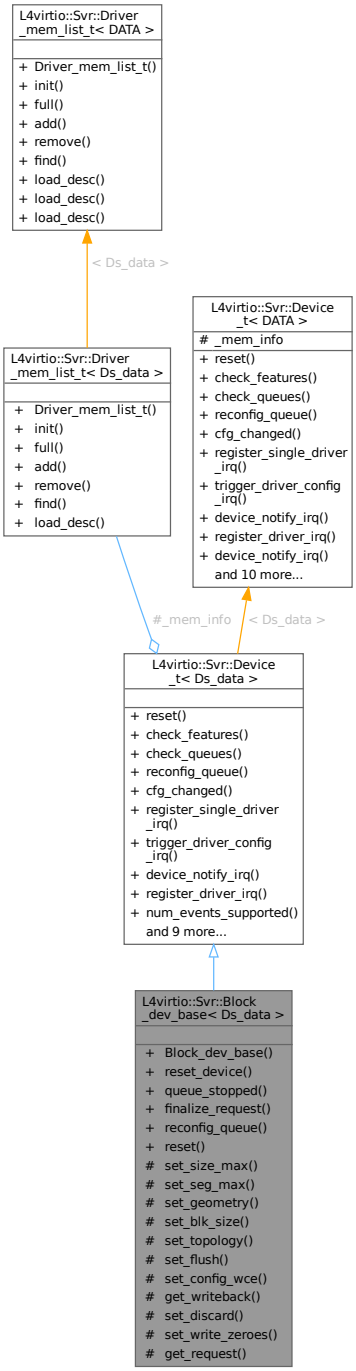
Base class for virtio block devices.

```
#include <virtio-block>
```

Inheritance diagram for L4virtio::Svr::Block_dev_base< Ds_data >:



Collaboration diagram for L4virtio::Svr::Block_dev_base< Ds_data >:



Public Member Functions

- Block_dev_base (l4_uint32_t vendor, unsigned queue_size, l4_uint64_t capacity, bool read_only)

  Create a new virtio block device.
- virtual void **reset_device** ()=0

  Reset the actual hardware device.
- virtual bool **queue_stopped** ()=0

Return true, if the queues should not be processed further.

- void finalize_request (cxx::unique_ptr< Request > req, unsigned sz, l4_uint8_t status=L4VIRTIO_BLOCK_S_OK)

  Releases resources related to a request and notifies the client.
- int **reconfig_queue** (unsigned idx) override

  callback for client queue-config request
- void **reset** () override

  reset callback, called for doing a device reset

Public Member Functions inherited from L4virtio::Svr::Device_t< Ds_data >

- virtual bool **check_features** ()

  callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const

  callback to gather the device notification IRQ (old-style)
- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.
- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.
- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.
- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.
- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- void set_size_max (l4_uint32_t sz)

  Sets the maximum size of any single segment reported to client.
- void **set_seg_max** (l4_uint32_t sz)

  Sets the maximum number of segments in a request that is reported to client.
- void **set_geometry** (l4_uint16_t cylinders, l4_uint8_t heads, l4_uint8_t sectors)

  Set disk geometry that is reported to the client.
- void set_blk_size (l4_uint32_t sz)

  Sets block disk size to be reported to the client.

- void set_topology (l4_uint8_t physical_block_exp, l4_uint8_t alignment_offset, l4_uint32_t min_io_size, l4_uint32_t opt_io_size)

  Sets the I/O alignment information reported back to the client.
- void **set_flush** ()

  Enables the flush command.
- void set_config_wce (l4_uint8_t writeback)

  Sets cache mode and enables the writeback toggle.
- l4_uint8_t get_writeback ()

  Get the writeback field from the configuration space.
- void set_discard (l4_uint32_t max_discard_sectors, l4_uint32_t max_discard_seg, l4_uint32_t discard_↩ sector_alignment)

  Sets constraints for and enables the discard command.
- void set_write_zeroes (l4_uint32_t max_write_zeroes_sectors, l4_uint32_t max_write_zeroes_seg, l4_uint8_t write_zeroes_may_unmap)

  Sets constraints for and enables the write zeroes command.
- cxx::unique_ptr< Request > **get_request** ()

  Return one request if available.

Additional Inherited Members

Protected Attributes inherited from L4virtio::Svr::Device_t< Ds_data >

- Mem_list **_mem_info**

  Memory region list.

16.381.1 Detailed Description

template<typename Ds_data>
class L4virtio::Svr::Block_dev_base< Ds_data >

Base class for virtio block devices.

Use this class as a base to implement your own specific block device.

Definition at line 259 of file virtio-block.

16.381.2 Constructor & Destructor Documentation

16.381.2.1 Block_dev_base()

```
template<typename Ds_data>
L4virtio::Svr::Block_dev_base< Ds_data >::Block_dev_base (
            l4_uint32_t vendor,
            unsigned queue_size,
            l4_uint64_t capacity,
            bool read_only)  [inline]
```

Create a new virtio block device.

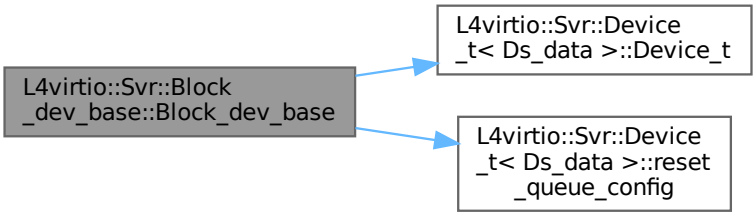
Parameters

vendor	Vendor ID
queue_size	Number of entries to provide in avail and used queue.
capacity	Size of the device in 512-byte sectors.
read_only	True, if the device should not be writable.

Definition at line 444 of file virtio-block.

References L4virtio::Svr::Device_t< Ds_data >::Device_t(), L4VIRTIO_FEATURE_VERSION_1, L4VIRTIO_ID_BLOCK, and L4virtio::Svr::Device_t< Ds_data >::reset_queue_config().

Here is the call graph for this function:



16.381.3 Member Function Documentation

16.381.3.1 finalize_request()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::finalize_request (
             cxx::unique_ptr< Request > req,
             unsigned sz,
             l4_uint8_t status = L4VIRTIO_BLOCK_S_OK)  [inline]
```

Releases resources related to a request and notifies the client.

Parameters

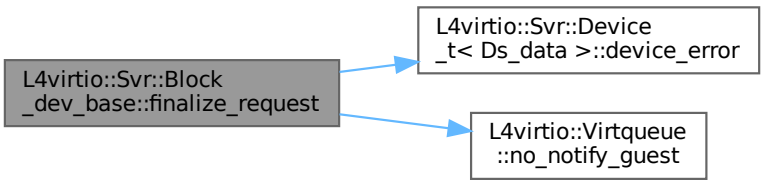
req	Pointer to request that has finished.
sz	Number of bytes consumed.
status	Status of request (see L4virtio_block_status).

This function must be called when an asynchronous request finishes, either successfully or with an error. The status byte in the request must have been set prior to calling it.

Definition at line 483 of file virtio-block.

References L4virtio::Svr::Device_t< Ds_data >::device_error(), L4VIRTIO_BLOCK_S_OK, L4VIRTIO_IRQ_STATUS_VRING, and L4virtio::Virtqueue::no_notify_guest().

Here is the call graph for this function:



16.381.3.2 get_writeback()

```
template<typename Ds_data>
l4_uint8_t L4virtio::Svr::Block_dev_base< Ds_data >::get_writeback ()  [inline], [protected]
```

Get the writeback field from the configuration space.

Returns

Value of the writeback field.

Definition at line 388 of file virtio-block.

16.381.3.3 set_blk_size()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_blk_size (
            l4_uint32_t sz)  [inline], [protected]
```

Sets block disk size to be reported to the client.

Setting this does not change the logical sector size used for addressing the device.

Definition at line 332 of file virtio-block.

16.381.3.4 set_config_wce()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_config_wce (
            l4_uint8_t writeback)  [inline], [protected]
```

Sets cache mode and enables the writeback toggle.

Parameters

writeback	Mode of the cache (0 for writethrough, 1 for writeback).

Definition at line 375 of file virtio-block.

16.381.3.5 set_discard()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_discard (
             l4_uint32_t max_discard_sectors,
             l4_uint32_t max_discard_seg,
             l4_uint32_t discard_sector_alignment)  [inline], [protected]
```

Sets constraints for and enables the discard command.

Parameters

max_discard_sectors	Maximum discard sectors size.
max_discard_seg	Maximum discard segment number.
discard_sector_alignment	Can be used by the driver when splitting a request based on alignment.

Definition at line 402 of file virtio-block.

16.381.3.6 set_size_max()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_size_max (
             l4_uint32_t sz)  [inline], [protected]
```

Sets the maximum size of any single segment reported to client.

The limit is also applied to any incoming requests. Requests with larger segments result in an IO error being reported to the client. That means that process_request() can safely make the assumption that all segments in the received request are smaller.

Definition at line 290 of file virtio-block.

16.381.3.7 set_topology()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_topology (
             l4_uint8_t physical_block_exp,
             l4_uint8_t alignment_offset,
             l4_uint32_t min_io_size,
             l4_uint32_t opt_io_size)  [inline], [protected]
```

Sets the I/O alignment information reported back to the client.

Parameters

physical_block_exp	Number of logical blocks per physical block(log2)
alignment_offset	Offset of the first aligned logical block
min_io_size	Suggested minimum I/O size in blocks
opt_io_size	Optimal I/O size in blocks

Definition at line 348 of file virtio-block.

16.381.3.8 set_write_zeroes()

```
template<typename Ds_data>
void L4virtio::Svr::Block_dev_base< Ds_data >::set_write_zeroes (
             l4_uint32_t max_write_zeroes_sectors,
             l4_uint32_t max_write_zeroes_seg,
             l4_uint8_t write_zeroes_may_unmap)  [inline], [protected]
```

Sets constraints for and enables the write zeroes command.

Parameters

max_write_zeroes_sectors	Maximum write zeroes sectors size.
max_write_zeroes_seg	maximum write zeroes segment number.
write_zeroes_may_unmap	Set if a write zeroes request can result in deallocating one or more sectors.

Definition at line 422 of file virtio-block.

The documentation for this class was generated from the following file:

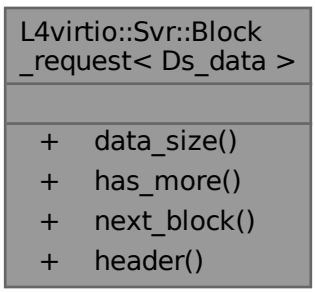
- l4/l4virtio/server/virtio-block

16.382 L4virtio::Svr::Block_request< Ds_data > Class Template Reference

A request to read or write data.

`#include <virtio-block>`

Collaboration diagram for L4virtio::Svr::Block_request< Ds_data >:



Public Member Functions

- unsigned data_size () const

  Compute the total size of the data in the request.
- bool **has_more** ()

  Check if the request contains more data blocks.
- Data_block next_block ()

  Return next block in scatter-gather list.
- l4virtio_block_header_t const & **header** () const

  Return the block request header.

16.382.1 Detailed Description

template<typename Ds_data>
class L4virtio::Svr::Block_request< Ds_data >

A request to read or write data.

Definition at line 28 of file virtio-block.

16.382.2 Member Function Documentation

16.382.2.1 data_size()

```
template<typename Ds_data>
unsigned L4virtio::Svr::Block_request< Ds_data >::data_size () const  [inline]
```

Compute the total size of the data in the request.

Return values

Size	in bytes or 0 if there was an error.

Exceptions

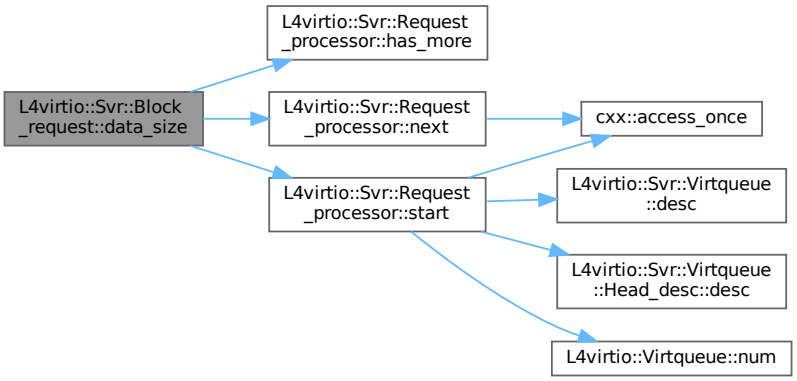
L4::Runtime_error(-L4_EIO)	Request has a bad format.

Note that this operation is relatively expensive as it has to iterate over the complete list of blocks.

Definition at line 63 of file virtio-block.

References L4virtio::Svr::Request_processor::has_more(), L4_EIO, L4virtio::Svr::Request_processor::next(), and L4virtio::Svr::Request_processor::start().

Here is the call graph for this function:



16.382.2.2 next_block()

```
template<typename Ds_data>
Data_block L4virtio::Svr::Block_request< Ds_data >::next_block ()  [inline]
```

Return next block in scatter-gather list.

Returns

Information about the next data block.

Exceptions

L4::Runtime_error	No more data block is available.
Bad_descriptor	Virtio request is corrupted.

Definition at line 113 of file virtio-block.

References L4virtio::Svr::Bad_descriptor::Bad_size, and L4_EEXIST.

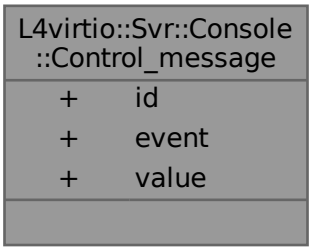
16.383 L4virtio::Svr::Console::Control_message Struct Reference

Virtio console control message.

`#include <virtio-console>`

Collaboration diagram for L4virtio::Svr::Console::Control_message:



Public Types

- enum Events {
  Device_ready = 0 , Device_add = 1 , Device_remove = 2 , Port_ready = 3 ,
  Console_port = 4 , Resize = 5 , Port_open = 6 , Port_name = 7 }
  Possible control events.

Data Fields

- l4_uint32_t **id**
  Port number.
- l4_uint16_t **event**
  Control event, see `Events`.
- l4_uint16_t **value**
  Extra information.

16.383.1 Detailed Description

Virtio console control message.

Definition at line 31 of file virtio-console.

16.383.2 Member Enumeration Documentation

16.383.2.1 Events

`enum L4virtio::Svr::Console::Control_message::Events`

Possible control events.

Enumerator

Device_ready	Sent by driver at initialization.
Device_add	Sent by device to create new ports.
Device_remove	Sent by device to remove added ports.
Port_ready	Sent by driver as response to `Device_add`.
Console_port	Sent by device to nominate port as console port.
Resize	Sent by device to indicate a console size change.
Port_open	Sent by device and driver to indicate whether a port is open.
Port_name	Sent by device to tag a port.

Definition at line 34 of file virtio-console.

  Create a new console device.
- Device (cxx::static_vector< unsigned > const &vq_max_nums)

Create a new console Device.

- void **register_single_driver_irq** () override
  callback for registering a single guest IRQ for all queues (old-style)
- L4::Cap< L4::Irq > **device_notify_irq** () const override
  callback to gather the device notification IRQ (old-style)
- void notify_queue (Virtqueue *queue) override
  Notify queue of available data.
- virtual void **rx_data_available** (unsigned port)=0
  Callback to notify that new data is available to be read from port.
- virtual void **tx_space_available** (unsigned port)=0
  Callback to notify that data can be written to port.
- virtual bool **queues_stopped** ()
  Return true, if the queues should not be processed further.
- void **trigger_driver_config_irq** () override
  callback for triggering configuration change notification IRQ
- unsigned port_read (char *buf, unsigned len, unsigned port=0)
  Read data from port.
- unsigned port_write (char const *buf, unsigned len, unsigned port=0)
  Write data to port.
- void process_device_ready (l4_uint16_t value) override
  Callback called on DEVICE_READY event.
- void process_port_ready (l4_uint32_t id, l4_uint16_t value) override
  Callback called on PORT_READY event.
- virtual void process_port_open (l4_uint32_t id, l4_uint16_t value)
  Callback called on PORT_OPEN event.

Public Member Functions inherited from L4virtio::Svr::Console::Virtio_con

- Virtio_con (unsigned max_ports, bool enable_multiport)
  Create a new multiport console device.
- int **reconfig_queue** (unsigned index) override
  callback for client queue-config request
- bool **multiport_enabled** () const
  Return true if the multiport feature is enabled and control queues are available.
- bool **check_features** (void) override
  callback for checking the subset of accepted features
- bool **check_queues** () override
  callback for checking if the queues at DRIVER_OK transition
- int port_add (unsigned idx)
  Send a DEVICE_ADD message and update the internal state.
- int port_remove (unsigned idx)
  Send a DEVICE_REMOVE message and update the internal state.
- int port_open (unsigned idx, bool open)
  Send a PORT_OPEN message and update the internal state.
- int port_name (unsigned idx, char const *name)
  Send a PORT_NAME message to announce the port name.
- int send_control_message (l4_uint32_t idx, l4_uint16_t event, l4_uint16_t value=0, const char *name=0)
  Send control message to driver.
- int handle_control_message ()
  Handle control message received from the driver.
- void **reset** () override
  reset callback, called for doing a device reset
- virtual void reset_device ()
  Reset the state of the actual console device.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes
- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.
- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.
- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.
- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.
- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- Port * port (unsigned idx) override

  Return the specified port.

Additional Inherited Members

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.385.1 Detailed Description

Base class implementing a virtio console device with L4Re-based notification handling.

This console device is derived from Virtio_con and already includes functionality to handle interrupts and notify drivers. If an interrupt is received, all the necessary interaction with the virtqueues is performed and only the actual data processing has to be done by the derived class. By default all available ports are added and an "open"-request of a port by the driver is automatically acknowledged. The derived class can optionally change this behaviour by overriding `process_device_ready()`, `process_port_ready()` and `process_port_open()`.

This class provides a stream-based interface to access the port data with edge-triggered notification callbacks. If a port receives data from the driver the derived class is notified with the `rx_data_available()` callback. The actual data can be retrieved by `port_read()`. If there was not enough data to be read, the call will return the available partial data. Only then will the `rx_data_available()` callback be triggered again.

Data on a port may be transmitted by `port_write()`. If there were not enough buffers available, only a part of the data will be transmitted. Once there are new buffers available, the `tx_space_available()` callback will be invoked. This callback will be called again only after a previous `port_write()` was not able to send all requested data.

Use this class as a base to provide your own high-level console device. You must derive from this class as well as L4::Epiface_t<..., L4virtio::Device>. For a working device the irq_iface() must be registered too. A typical implementation might look like the following:

```
class My_console
: public L4virtio::Svr::Console::Device,
  public L4::Epiface_t<My_console, L4virtio::Device>
{
public:
  My_console(L4Re::Util::Object_registry *r)
  : L4virtio::Svr::Console::Device(0x100)
  {
    init_mem_info(4);
    L4Re::chkcap(r->register_irq_obj(irq_iface()), "virtio notification IRQ");
  }

  void rx_data_available(unsigned port) override
  {
    // call port_read() to fetch available data
  }

  void tx_space_available(unsigned port) override
  {
    // can call port_write() to send (pending) data
  }
};

My_console console(registry);
registry->register_obj(&console, ...);
```

The maximum number of memory regions (init_mem_info()) should correlate with the number of supported ports.

Definition at line 118 of file virtio-console-device.

16.385.2 Constructor & Destructor Documentation

16.385.2.1 Device() [1/3]

```
L4virtio::Svr::Console::Device::Device (
            unsigned vq_max)  [inline], [explicit]
```

Create a new console device.

Parameters

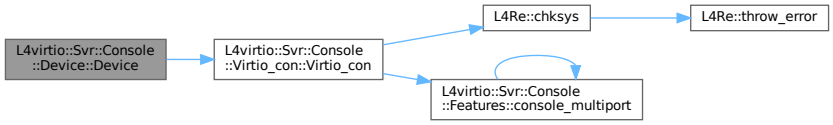
vq_max	Maximum number of buffers in data queues.

Create a console device with no multiport support, i.e. control queues are disabled.

Definition at line 145 of file virtio-console-device.

References L4virtio::Svr::Console::Virtio_con::Virtio_con().

Here is the call graph for this function:



16.385.2.2 Device() [2/3]

```
L4virtio::Svr::Console::Device::Device (
            unsigned vq_max,
            unsigned ports)  [inline], [explicit]
```

Create a new console device.

Parameters

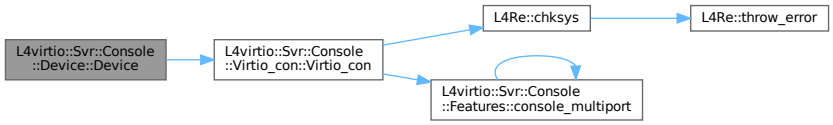
vq_max	Maximum number of buffers in data queues.
ports	Number of ports (maximum 32).

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 163 of file virtio-console-device.

References L4virtio::Svr::Console::Virtio_con::Virtio_con().

Here is the call graph for this function:



16.385.2.3 Device() [3/3]

```
L4virtio::Svr::Console::Device::Device (
            cxx::static_vector< unsigned > const & vq_max_nums)  [inline], [explicit]
```

Create a new console Device.

Parameters

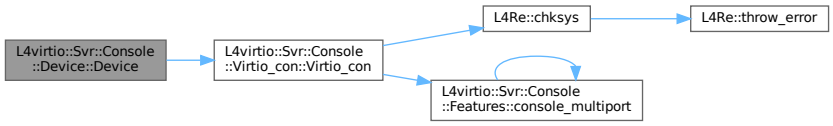
vq_max_nums	Maximum number of buffers in data queues, given as a cxx::static_vector with one entry per port.

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 182 of file virtio-console-device.

References L4virtio::Svr::Console::Virtio_con::Virtio_con().

Here is the call graph for this function:



16.385.3 Member Function Documentation

16.385.3.1 notify_queue()

```
void L4virtio::Svr::Console::Device::notify_queue (
            Virtqueue * queue)  [inline], [override], [virtual]
```

Notify queue of available data.

Parameters

queue	Virtqueue to notify.

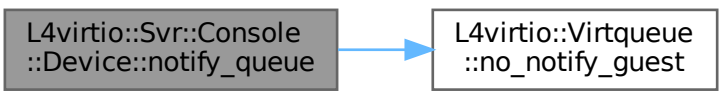
This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implements L4virtio::Svr::Console::Virtio_con.

Definition at line 202 of file virtio-console-device.

References L4VIRTIO_IRQ_STATUS_VRING, and L4virtio::Virtqueue::no_notify_guest().

Here is the call graph for this function:



16.385.3.2 port()

```
Port * L4virtio::Svr::Console::Device::port (
            unsigned port)  [inline], [override], [protected], [virtual]
```

Return the specified port.

Parameters

port	Port number.

Precondition

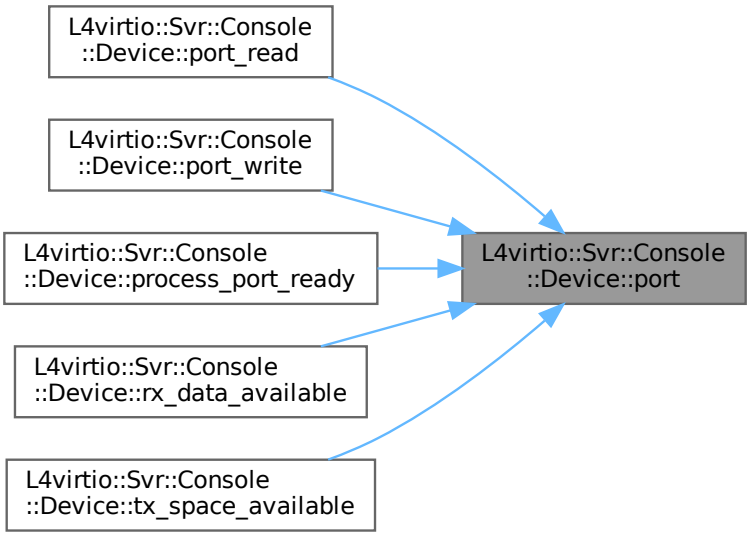
Port number must be lower than the configured maximum number of ports.

Implements L4virtio::Svr::Console::Virtio_con.

Definition at line 450 of file virtio-console-device.

Referenced by port_read(), port_write(), process_port_ready(), rx_data_available(), and tx_space_available().

Here is the caller graph for this function:



16.385.3.3 port_read()

```
unsigned L4virtio::Svr::Console::Device::port_read (
             char * buf,
             unsigned len,
             unsigned port = 0)  [inline]
```

Read data from port.

Will read up to *len* bytes from *port* into *buf*. Returns the number of bytes read, which may be less if not enough data was available. If all data was read, the rx_data_available() callback will be invoked the next time the driver queues new data for the port. The callback won't be called again until all data was consumed again.

Parameters

buf	The destination buffer
len	Size of the buffer
port	Port index to read data from

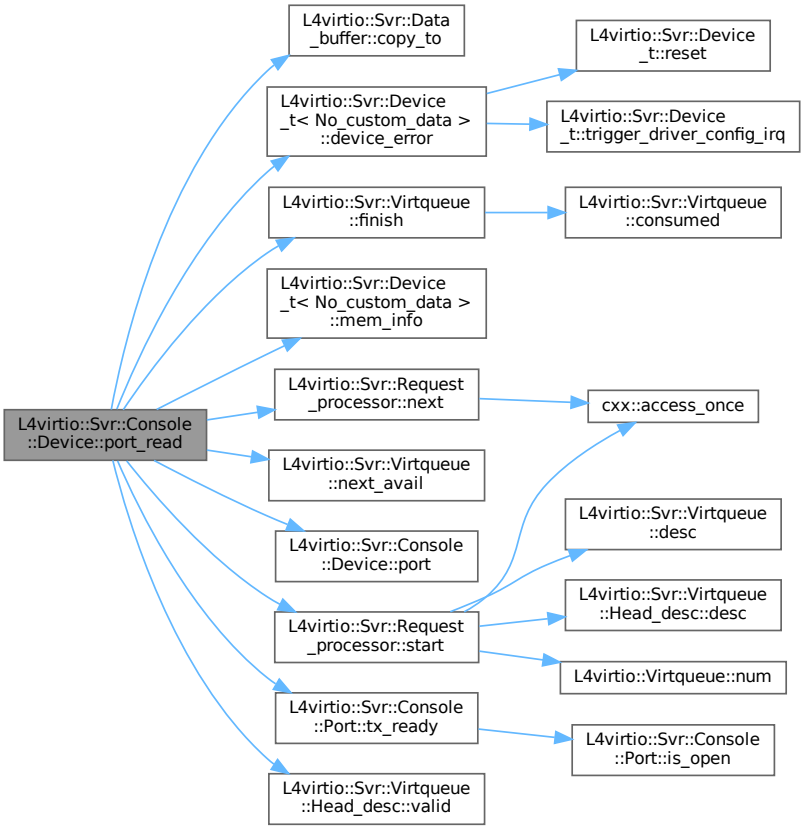
Returns

Number of bytes read

Definition at line 272 of file virtio-console-device.

References L4virtio::Svr::Data_buffer::copy_to(), L4virtio::Svr::Device_t< No_custom_data >::device_error(), L4virtio::Svr::Virtqueue::finish(), L4virtio::Svr::Data_buffer::left, L4virtio::Svr::Device_t< No_custom_data >::mem_info(), L4virtio::Svr::Request_processor::next(), L4virtio::Svr::Virtqueue::next_avail(), port(), L4virtio::Svr::Data_buffer::pos, L4virtio::Svr::Console::Device_port::request, L4virtio::Svr::Console::Device_port::rp, L4virtio::Svr::Console::Device_port::src, L4virtio::Svr::Request_processor::start(), L4virtio::Svr::Console::Port::tx, L4virtio::Svr::Console::Port::tx_ready(), and L4virtio::Svr::Virtqueue::Head_desc::valid().

Here is the call graph for this function:



16.385.3.4 port_write()

```
unsigned L4virtio::Svr::Console::Device::port_write (
             char const * buf,
             unsigned len,
             unsigned port = 0)  [inline]
```

Write data to port.

Will write up to *len* bytes to *port* from *buf*. Returns the number of bytes written, which may be less if not enough virtio buffers were available. If not all data could be written, the tx_space_available() callback will be invoked the next time the driver queues new receive buffers for the port. The callback won't be called again until all receive buffers were filled again.

Parameters

buf	The souce buffer
len	Size of the buffer
port	Port index to write data to

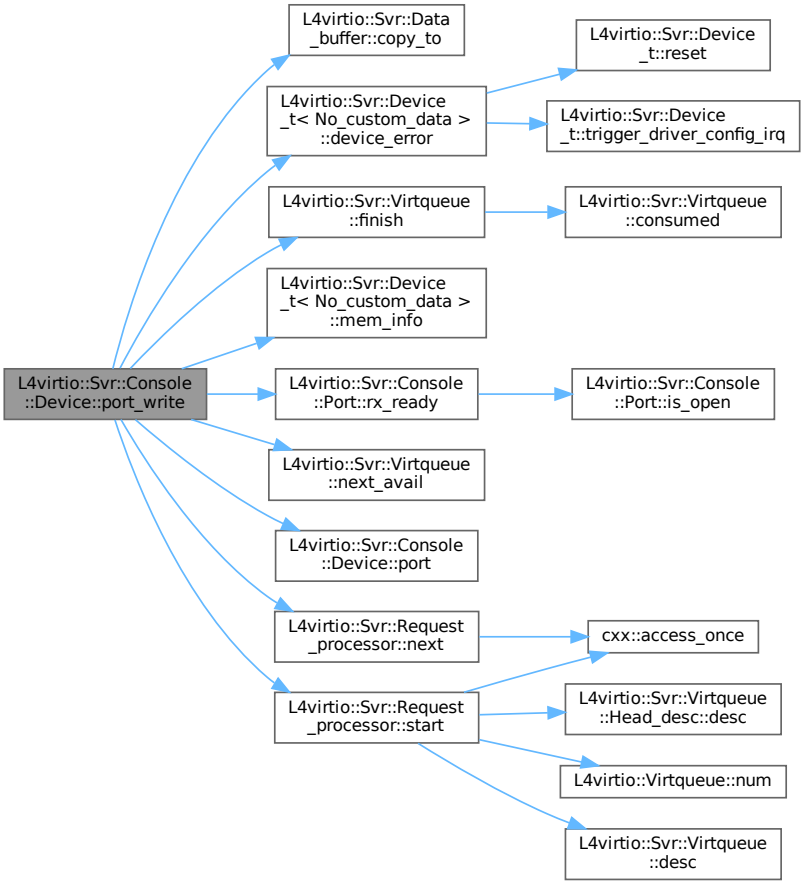
Returns

Number of bytes written

Definition at line 341 of file virtio-console-device.

References L4virtio::Svr::Data_buffer::copy_to(), L4virtio::Svr::Device_t< No_custom_data >::device_error(), L4virtio::Svr::Virtqueue::finish(), L4virtio::Svr::Data_buffer::left, L4virtio::Svr::Device_t< No_custom_data >::mem_info(), L4virtio::Svr::Request_processor::next(), L4virtio::Svr::Virtqueue::next_avail(), port(), L4virtio::Svr::Data_buffer::pos, L4virtio::Svr::Console::Port::rx, L4virtio::Svr::Console::Port::rx_ready(), and L4virtio::Svr::Request_processor::start().

Here is the call graph for this function:



16.385.3.5 process_device_ready()

```
void L4virtio::Svr::Console::Device::process_device_ready (
            l4_uint16_t value)  [inline], [override], [virtual]
```

Callback called on DEVICE_READY event.

Parameters

value	The value field of the control message, indicating if the initialization was successful.

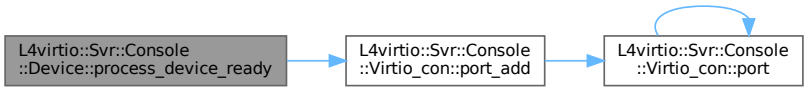
By default, this function adds all ports if the driver indicates successful initialization. Override this function to perform custom actions for a DEVICE_READY event. It is then your responsibility to inform the driver about usable ports, see `port_add()`.

Implements L4virtio::Svr::Console::Virtio_con.

Definition at line 399 of file virtio-console-device.

References L4virtio::Svr::Console::Virtio_con::port_add().

Here is the call graph for this function:



16.385.3.6 process_port_open()

```
virtual void L4virtio::Svr::Console::Device::process_port_open (
             l4_uint32_t id,
             l4_uint16_t value)  [inline], [virtual]
```

Callback called on PORT_OPEN event.

Parameters

id	The id field of the control message, i.e. the port number.
value	The value field of the control message, indicating if the port was opened or closed.

The default implementation does nothing. Override it to implement some custom logic to respond to open/close events of the driver.

Implements L4virtio::Svr::Console::Virtio_con.

Definition at line 443 of file virtio-console-device.

16.385.3.7 process_port_ready()

```
void L4virtio::Svr::Console::Device::process_port_ready (
             l4_uint32_t id,
             l4_uint16_t value)  [inline], [override], [virtual]
```

Callback called on PORT_READY event.

Parameters

id	The id field of the control message, i.e. the port number.
value	The value field of the control message, indicating if the initialization was successful.

By default, this function opens the port if the driver is ready. Otherwise, the port is removed if the driver failed to set it up correctly. Override this function to perform custom actions for a PORT_READY event, *after* the generic management of the base class. It is then your responsibility to inform the driver about connected or unusable ports. See `port_open()` and `port_remove()`.

Reimplemented from L4virtio::Svr::Console::Virtio_con.

Definition at line 422 of file virtio-console-device.

References port(), L4virtio::Svr::Console::Port::Port_failed, L4virtio::Svr::Console::Virtio_con::port_open(), L4virtio::Svr::Console::Port::Port_ready, L4virtio::Svr::Console::Virtio_con::port_remove(), L4virtio::Svr::Console::Virtio_con::process_ and L4virtio::Svr::Console::Port::status.

  State transition table from last report state to current state.

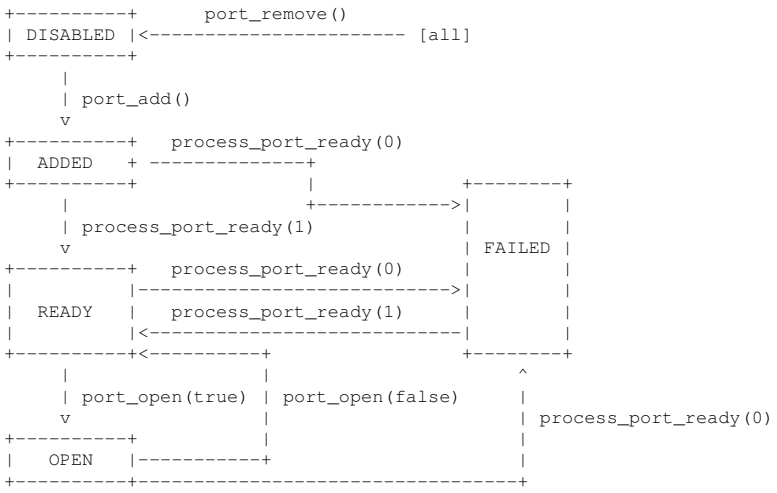
16.388.1 Detailed Description

Representation of a Virtio console port.

Each port consists of a pair of queues for sending and receiving.

A port may be added and removed at runtime when the multi-port feature is enabled. The states are as follows:



Definition at line 109 of file virtio-console.

16.388.2 Member Enumeration Documentation

16.388.2.1 Port_status

enum L4virtio::Svr::Console::Port::Port_status

Possible states of a virtio console port.

Enumerator

Port_disabled	Reset state, waiting for port to be added.
Port_added	Port has been added by device, waiting for ready message.
Port_ready	Port is ready but still closed.
Port_open	Port is in a working state.
Port_failed	Device failure, port unusable.
Port_num_states	Number of port states. Must be last.

Definition at line 114 of file virtio-console.

16.388.3 Field Documentation

16.388.3.1 state_transitions

```
Transition L4virtio::Svr::Console::Port::state_transitions[Port_num_states][Port_num_states]
[static], [constexpr]
```

State transition table from last report state to current state.

Not all transitions can be made directly. For example, if the last reported state was `Port_disabled` and the current state is `Port_open`, the device has to send two messages: `Control_message::Device_add` and `Control_message::Port_open`. This is expressed by going through an intermediate state (`Port_ready`) on the reporting side.

For the purpose of the driver there are only three coarse states:

1. The port does not exist (Port_disabled).
2. The port exists but is closed on the device side (Port_added, Port_ready, Port_failed).
3. The port exists and is open on the device side (Port_open).

The state transition table with Port_added, Port_ready and Port_failed as current state are thus identical.

Definition at line 195 of file virtio-console.

- bool **check_queues** () override

  callback for checking if the queues at DRIVER_OK transition
- int port_add (unsigned idx)

  Send a DEVICE_ADD message and update the internal state.
- int port_remove (unsigned idx)

  Send a DEVICE_REMOVE message and update the internal state.
- int port_open (unsigned idx, bool open)

  Send a PORT_OPEN message and update the internal state.
- int port_name (unsigned idx, char const *name)

  Send a PORT_NAME message to announce the port name.
- int send_control_message (l4_uint32_t idx, l4_uint16_t event, l4_uint16_t value=0, const char *name=0)

  Send control message to driver.
- int handle_control_message ()

  Handle control message received from the driver.
- void **reset** () override

  reset callback, called for doing a device reset
- virtual void reset_device ()

  Reset the state of the actual console device.
- virtual void notify_queue (Virtqueue *queue)=0

  Notify queue of available data.
- virtual Port * port (unsigned port)=0

  Return the specified port.
- virtual void process_device_ready (l4_uint16_t value)=0

  Callback called on DEVICE_READY event.
- virtual void process_port_ready (l4_uint32_t id, l4_uint16_t value)

  Callback called on PORT_READY event.
- virtual void process_port_open (l4_uint32_t id, l4_uint16_t value)=0

  Callback called on PORT_OPEN event.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes
- virtual void **register_single_driver_irq** ()

  callback for registering a single guest IRQ for all queues (old-style)
- virtual void **trigger_driver_config_irq** ()=0

  callback for triggering configuration change notification IRQ
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const

  callback to gather the device notification IRQ (old-style)
- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.

- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.
- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.
- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.
- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Additional Inherited Members

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.390.1 Detailed Description

Base class implementing a virtio console functionality.

It is possible to activate the MULTIPORT feature, in which case incoming control messages need to be dispatched by calling `handle_control_message()`. The derived class must additionally override `process_device_ready()`, `process_port_ready()` and `process_port_open()` to implement the actual behaviour. The derived class has the following responsibilities:

- inform the driver about usable ports once the device is ready as signaled in process_device_ready(), see the wrapper `port_add()`.
- inform the driver about unusable ports, see the wrapper `port_remove()`.
- react to open/close events, see the wrapper `port_open()`.

This implementation provides no means to handle interrupts or notify guests, therefore derived classes have to provide this functionality, see `notify_queue()` and `handle_control_message()`. Similarly, all interaction with data queues has to be implemented. Memory for port structures must be managed by the implementor as well.

Use this class as a base to implement your own specific console device.

Definition at line 267 of file virtio-console.

16.390.2 Constructor & Destructor Documentation

16.390.2.1 Virtio_con()

```
L4virtio::Svr::Console::Virtio_con::Virtio_con (
            unsigned max_ports,
            bool enable_multiport)  [inline], [explicit]
```

Create a new multiport console device.

Parameters

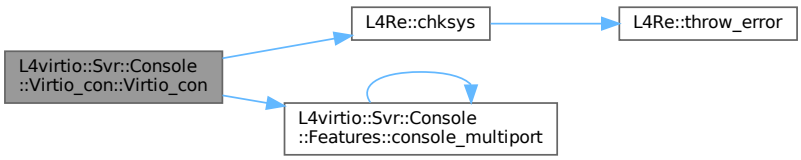
max_ports	Maximum number of ports the device should be able to handle (ignored when `enable_multiport` is false).
enable_multiport	Enable the control queue for dynamic handling of ports.

Definition at line 293 of file virtio-console.

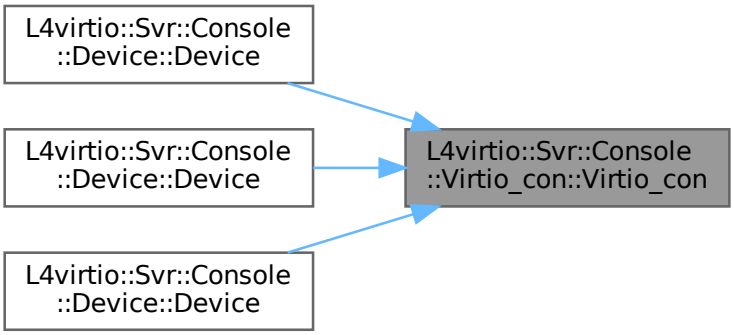
References L4Re::chksys(), L4virtio::Svr::Console::Features::console_multiport(), L4_EINVAL, L4VIRTIO_ID_CONSOLE, and L4virtio::Svr::Dev_features::raw.

Referenced by L4virtio::Svr::Console::Device::Device(), L4virtio::Svr::Console::Device::Device(), and L4virtio::Svr::Console::Device::D

Here is the call graph for this function:



Here is the caller graph for this function:



16.390.3 Member Function Documentation

16.390.3.1 handle_control_message()

```
int L4virtio::Svr::Console::Virtio_con::handle_control_message ()  [inline]
```

Handle control message received from the driver.

Return values

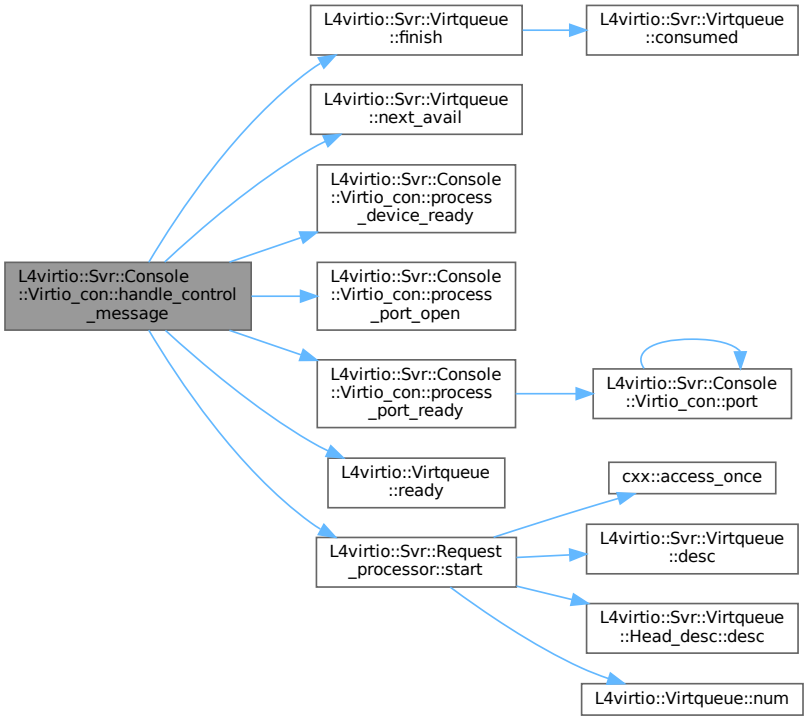
L4_EOK	Message has been handled.
-L4_ENODEV	Control queue is not ready.
-L4_EINVAL	Received an unexpected control event.

This function performs the basic handling of control messages from the driver. It does all necessary work with the control queues and performs some sanity checks. All other work is deferred to the derived class, see `process_device_ready()`, `process_port_ready()` and `process_port_open()`.

Definition at line 536 of file virtio-console.

References L4virtio::Svr::Console::Control_message::Device_ready, L4virtio::Svr::Console::Control_message::event, L4virtio::Svr::Virtqueue::finish(), L4virtio::Svr::Console::Control_message::id, L4_EINVAL, L4_ENODEV, L4_EOK, L4virtio::Svr::Console::Control_request::len, L4virtio::Svr::Console::Control_request::msg, L4virtio::Svr::Virtqueue::next_avail(), L4virtio::Svr::Console::Port::Port_disabled, L4virtio::Svr::Console::Control_message::Port_open, L4virtio::Svr::Console::Port::Port_op L4virtio::Svr::Console::Control_message::Port_ready, process_device_ready(), process_port_open(), process_port_ready(), L4virtio::Virtqueue::ready(), L4virtio::Svr::Request_processor::start(), and L4virtio::Svr::Console::Control_message::value.

Here is the call graph for this function:



16.390.3.2 notify_queue()

```
virtual void L4virtio::Svr::Console::Virtio_con::notify_queue (
            Virtqueue * queue)  [pure virtual]
```

Notify queue of available data.

Parameters

queue	Virtqueue to notify.

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implemented in L4virtio::Svr::Console::Device.

16.390.3.3 port()

```
virtual Port * L4virtio::Svr::Console::Virtio_con::port (
            unsigned port)  [pure virtual]
```

Return the specified port.

Parameters

port	Port number.

Precondition

Port number must be lower than the configured maximum number of ports.

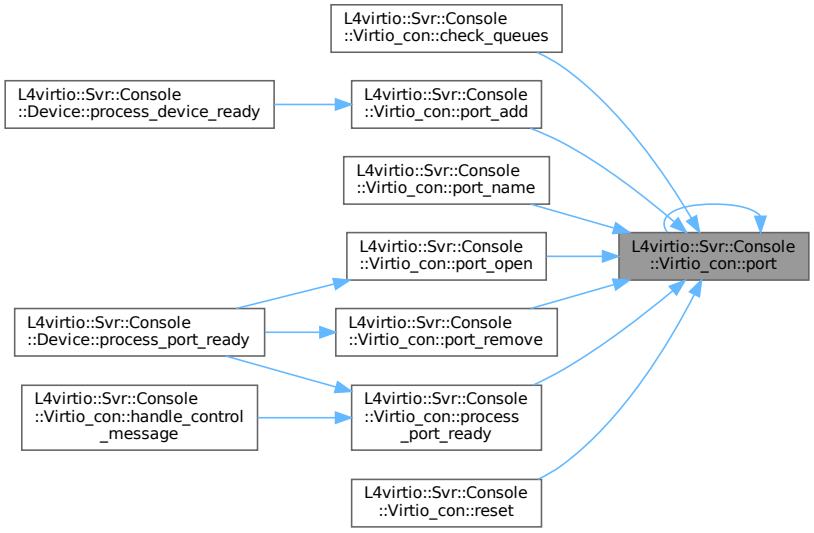
Implemented in L4virtio::Svr::Console::Device.

References port().

Referenced by check_queues(), port(), port_add(), port_name(), port_open(), port_remove(), process_port_ready(), and reset().

Here is the call graph for this function:

Here is the caller graph for this function:



16.390.3.4 port_add()

```
int L4virtio::Svr::Console::Virtio_con::port_add (
            unsigned idx)  [inline]
```

Send a DEVICE_ADD message and update the internal state.

Parameters

idx	Port that should be added.

Return values

L4_EOK	Message has been sent.
-L4_EPERM	Invalid state transition.

Precondition

`idx` must be smaller than the configured number of ports.

Port must not already exist.

Definition at line 379 of file virtio-console.

References L4_EOK, L4_EPERM, port(), L4virtio::Svr::Console::Port::Port_added, L4virtio::Svr::Console::Port::Port_disabled, and L4virtio::Svr::Console::Port::status.

16.390.3.5 port_name()

```
int L4virtio::Svr::Console::Virtio_con::port_name (
            unsigned idx,
            char const * name)  [inline]
```

Send a PORT_NAME message to announce the port name.

Parameters

idx	Port that should be opened or closed.
name	The port name

Return values

L4_EOK	Message has been sent.
-L4_EPERM	Control message is not allowed in the current state.

Returns

Errors from send_control_message()

Precondition

`idx` must be smaller than the configured number of ports.

Port must already exist.

Definition at line 455 of file virtio-console.

References L4_EPERM, port(), L4virtio::Svr::Console::Port::Port_disabled, L4virtio::Svr::Console::Control_message::Port_name, send_control_message(), and L4virtio::Svr::Console::Port::status.

16.390.3.6 port_open()

```
int L4virtio::Svr::Console::Virtio_con::port_open (
            unsigned idx,
            bool open)  [inline]
```

Send a PORT_OPEN message and update the internal state.

Parameters

idx	Port that should be opened or closed.
open	Open or close port.

Return values

L4_EOK	Message has been sent.
-L4_EPERM	Invalid state transition.

Precondition

`idx` must be smaller than the configured number of ports.

Port must be ready when opening or open when closing.

Definition at line 428 of file virtio-console.

References L4_EOK, L4_EPERM, port(), L4virtio::Svr::Console::Port::Port_open, L4virtio::Svr::Console::Port::Port_ready, and L4virtio::Svr::Console::Port::status.

16.390.3.7 port_remove()

```
int L4virtio::Svr::Console::Virtio_con::port_remove (
            unsigned idx)  [inline]
```

Send a DEVICE_REMOVE message and update the internal state.

Parameters

idx	Port that should be removed.

Return values

L4_EOK	Message has been sent.
-L4_EPERM	Invalid state transition.

Precondition

`idx` must be smaller than the configured number of ports.

Port must already exist.

Definition at line 403 of file virtio-console.

References L4_EOK, L4_EPERM, port(), L4virtio::Svr::Console::Port::Port_disabled, and L4virtio::Svr::Console::Port::status.

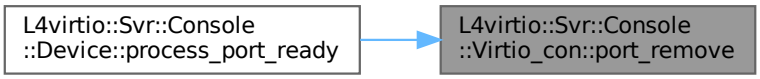
Here is the caller graph for this function:



16.390.3.8 process_device_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_device_ready (
            l4_uint16_t value)  [pure virtual]
```

Callback called on DEVICE_READY event.

Parameters

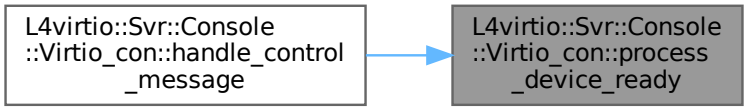
value	The value field of the control message, indicating if the initialization was successful.

Needs to be overridden by the derived class if the MULTIPORT feature is enabled. Control messages may be sent only after the driver has successfully initialized the device.

Implemented in L4virtio::Svr::Console::Device.

Referenced by handle_control_message().

Here is the caller graph for this function:



16.390.3.9 process_port_open()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_open (
             l4_uint32_t id,
             l4_uint16_t value)  [pure virtual]
```

Callback called on PORT_OPEN event.

Parameters

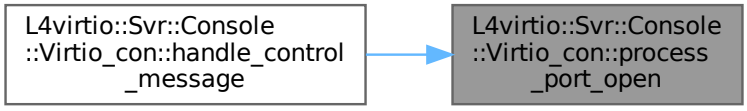
id	The id field of the control message, i.e. the port number.
value	The value field of the control message, indicating if the port was opened or closed.

Signal that an application has opened the port. Can to be overridden by the derived class if the MULTIPORT feature is enabled.

Implemented in L4virtio::Svr::Console::Device.

Referenced by handle_control_message().

Here is the caller graph for this function:



16.390.3.10 process_port_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_ready (
            l4_uint32_t id,
            l4_uint16_t value)  [inline], [virtual]
```

Callback called on PORT_READY event.

Parameters

id	The id field of the control message, i.e. the port number.
value	The value field of the control message, indicating if the initialization was successful.

May be overridden by the derived class if the MULTIPORT feature is enabled. This default implementation just sets the status of the port according to the driver message.

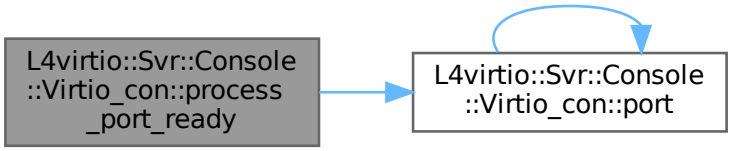
Reimplemented in L4virtio::Svr::Console::Device.

Definition at line 698 of file virtio-console.

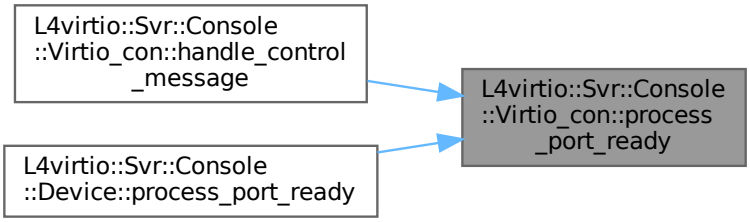
References port(), L4virtio::Svr::Console::Port::Port_added, L4virtio::Svr::Console::Port::Port_failed, L4virtio::Svr::Console::Port::Port_
L4virtio::Svr::Console::Port::Port_ready, and L4virtio::Svr::Console::Port::status.

Referenced by handle_control_message(), and L4virtio::Svr::Console::Device::process_port_ready().

Here is the call graph for this function:



Here is the caller graph for this function:



16.390.3.11 reset_device()

```
virtual void L4virtio::Svr::Console::Virtio_con::reset_device ()  [inline], [virtual]
```

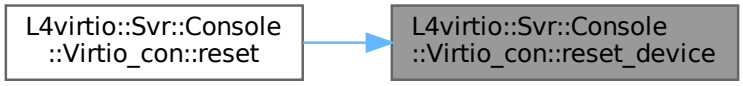
Reset the state of the actual console device.

This callback is called at the end of `reset()`, allowing the derived class to reset internal state.

Definition at line 652 of file virtio-console.

Referenced by reset().

Here is the caller graph for this function:



16.390.3.12 send_control_message()

```
int L4virtio::Svr::Console::Virtio_con::send_control_message (
              l4_uint32_t idx,
              l4_uint16_t event,
              l4_uint16_t value = 0,
              const char * name = 0)  [inline]
```

Send control message to driver.

Parameters

idx	Port number.
event	Kind of control event.
value	Extra information for the event.
name	Name to be used for Port_name message

Return values

L4_EOK	Message has been sent.
-L4_ENODEV	Control queue is not ready.
-L4_EBUSY	Currently no descriptor available in the control queue.
-L4_ENOMEM	Client-issued descriptor too small. Device will be set to failed state.

Precondition

`port` must be smaller than the configured number of ports.

The convenience functions `port_add()`, `port_remove()` and `port_open()` should cover the most use cases and are the preferred way of communication with the driver. If you use this function directly, it is your responsibility to guarantee no invalid control messages are sent to the driver.

Definition at line 487 of file virtio-console.

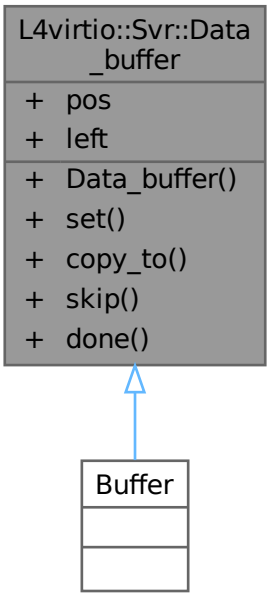
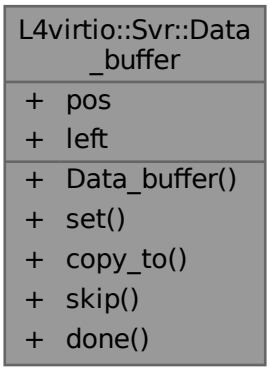
Inheritance diagram for L4virtio::Svr::Data_buffer:



Collaboration diagram for L4virtio::Svr::Data_buffer:



Public Member Functions

- template<typename T>
  Data_buffer (T *p)

  Create buffer for object p.
- template<typename T>
  void set (T *p)

  Set buffer for object p.
- l4_uint32_t copy_to (Data_buffer *dst, l4_uint32_t max=UINT_MAX)

  Copy contents from this buffer to the destination buffer.
- l4_uint32_t skip (l4_uint32_t bytes)

  Skip given number of bytes in this buffer.
- bool done () const

  Check if there are no more bytes left in the buffer.

Data Fields

- char * **pos**

  Current buffer position.
- l4_uint32_t **left**

  Bytes left in buffer.

16.391.1 Detailed Description

Abstract data buffer.

Definition at line 306 of file virtio.

16.391.2 Constructor & Destructor Documentation

16.391.2.1 Data_buffer()

```
template<typename T>
L4virtio::Svr::Data_buffer::Data_buffer (
            T * p)  [inline], [explicit]
```

Create buffer for object p.

Template Parameters

T	Type of object (implicit)

Parameters

p	Pointer to object.

The buffer shall point to the start of the object p and the size left is sizeof(T).

Definition at line 323 of file virtio.

References left, and pos.

16.391.3 Member Function Documentation

16.391.3.1 copy_to()

```
l4_uint32_t L4virtio::Svr::Data_buffer::copy_to (
             Data_buffer * dst,
             l4_uint32_t max = UINT_MAX)  [inline]
```

Copy contents from this buffer to the destination buffer.

Parameters

dst	Destination buffer.
max	(optional) Maximum number of bytes to copy.

Returns

the number of bytes copied.

This function copies at most `max` bytes from this to `dst`. If `max` is omitted, copies the maximum number of bytes available that fit `dst`.

Definition at line 354 of file virtio.

References left, and pos.

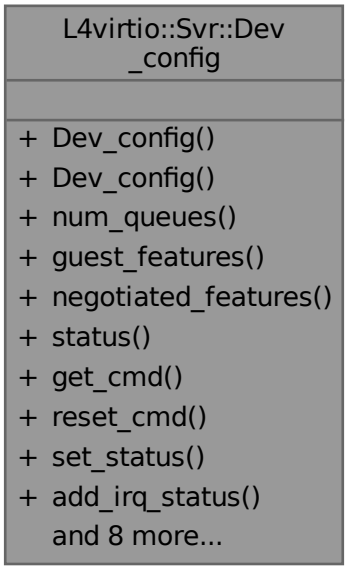
16.392 L4virtio::Svr::Dev_config Class Reference

Abstraction for L4-Virtio device config memory.

`#include <l4virtio>`

Collaboration diagram for L4virtio::Svr::Dev_config:



Public Member Functions

- Dev_config (l4_uint32_t vendor, l4_uint32_t device, unsigned cfg_size, l4_uint32_t num_queues=0)

  Create a L4-Virtio config data space.
- Dev_config (Cfg_cap const &cfg, l4_addr_t cfg_offset, l4_uint32_t vendor, l4_uint32_t device, unsigned cfg↩ _size, l4_uint32_t num_queues=0)

  Setup an L4-Virtio config space in an existing data space.
- l4_uint32_t **num_queues** () const

  Return the number of queues currently usable.
- l4_uint32_t guest_features (unsigned idx) const

  Return a specific set of guest features.
- l4_uint32_t negotiated_features (unsigned idx) const

  Compute a specific set of negotiated features.
- Status status () const

  Get current device status (trusted).
- l4_uint32_t get_cmd () const

  Get the value from the `cmd` register.
- void reset_cmd ()

  Reset the `cmd` register after execution of a command.
- void set_status (Status status)

  Set device status register.
- void add_irq_status (l4_uint32_t status)

  Adds irq status bit.
- void set_device_needs_reset ()

  Set DEVICE_NEEDS_RESET bit in device status register.

- bool change_queue_config (l4_uint32_t num_queues)

  Setup new queue configuration.
- l4virtio_config_queue_t volatile const * qconfig (unsigned index) const

  Get queue read-only config data for queue with the given index.
- void **reset_hdr** (bool inc_generation=false) const

  Reset the config header to the initial contents.
- bool reset_queue (unsigned index, unsigned num_max, bool inc_generation=false) const

  Reset queue config for the given queue.
- l4virtio_config_hdr_t const volatile * hdr () const

  Get a read-only pointer to the config header.
- L4::Cap< L4Re::Dataspace > ds () const

  Get data-space capability for the shared config data space.
- l4_addr_t **ds_offset** () const

  Return the offset into the config dataspace where the device configuration starts.

16.392.1 Detailed Description

Abstraction for L4-Virtio device config memory.

Virtio defines a device configuration mechanism, L4-Virtio implements this mechanism based on shared memory a set_status() and a config_queue() call. This class provides an abstraction for L4-Virtio host implementations to establish such a shared memory data space and providing the necessary contents and access functions.

Definition at line 52 of file l4virtio.

16.392.2 Constructor & Destructor Documentation

16.392.2.1 Dev_config() [1/2]

```
L4virtio::Svr::Dev_config::Dev_config (
            l4_uint32_t vendor,
            l4_uint32_t device,
            unsigned cfg_size,
            l4_uint32_t num_queues = 0)  [inline]
```

Create a L4-Virtio config data space.

Parameters

vendor	The vendor ID to store in config header.
device	The device ID to store in config header.
cfg_size	The size of the device-specific config data in bytes.
num_queues	The number of queues provided by the device.

This constructor allocates a data space used for L4-virtio config attaches the data space to the local address space and writes the initial contents to the config header.

Definition at line 112 of file l4virtio.

References L4Re::chkcap(), L4Re::chksys(), L4Re::Env::env(), L4_PAGESIZE, L4Re::Util::make_shared_cap(), and num_queues().

16.392.2.2 Dev_config() [2/2]

```
L4virtio::Svr::Dev_config::Dev_config (
            Cfg_cap const & cfg,
            l4_addr_t cfg_offset,
            l4_uint32_t vendor,
            l4_uint32_t device,
            unsigned cfg_size,
            l4_uint32_t num_queues = 0)  [inline]
```

Setup an L4-Virtio config space in an existing data space.

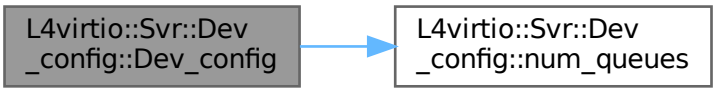
Parameters

cfg	Dataspace that should hold the L4-Virtio configuration.
cfg_offset	Offset into the dataspace where the configuration starts.
vendor	The vendor ID to store in config header.
device	The device ID to store in config header.
cfg_size	The size of the device-specific config data in bytes.
num_queues	The number of queues provided by the device.

Definition at line 146 of file l4virtio.

References L4_PAGESIZE, and num_queues().

Here is the call graph for this function:



16.392.3 Member Function Documentation

16.392.3.1 add_irq_status()

```
void L4virtio::Svr::Dev_config::add_irq_status (
            l4_uint32_t status)  [inline]
```

Adds irq status bit.

Parameters

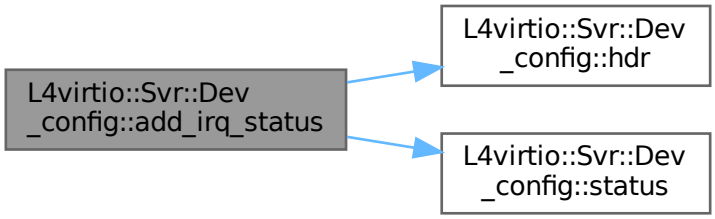
status	The value to add to the irq status register.

This function adds the status bit to the irq status register.

Definition at line 265 of file l4virtio.

References hdr(), and status().

Here is the call graph for this function:



16.392.3.2 change_queue_config()

```
bool L4virtio::Svr::Dev_config::change_queue_config (
            l4_uint32_t num_queues)  [inline]
```

Setup new queue configuration.

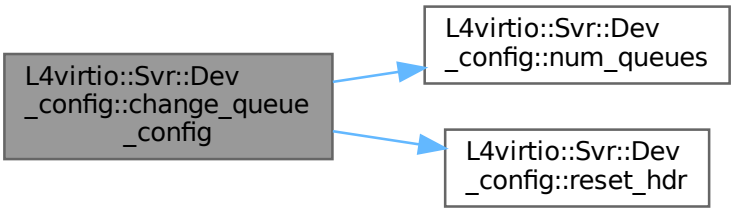
Parameters

num_queues	The number of queues provided by the device.

Definition at line 286 of file l4virtio.

References L4_PAGESIZE, num_queues(), and reset_hdr().

Here is the call graph for this function:



16.392.3.3 ds()

```
L4::Cap< L4Re::Dataspace > L4virtio::Svr::Dev_config::ds () const  [inline]
```

Get data-space capability for the shared config data space.

Returns

Capability for the shared config data space.

Definition at line 375 of file l4virtio.

16.392.3.4 get_cmd()

```
l4_uint32_t L4virtio::Svr::Dev_config::get_cmd () const  [inline]
```

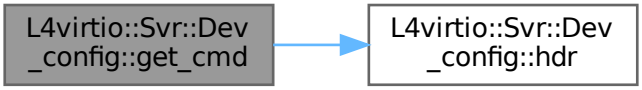
Get the value from the `cmd` register.

Note, the most significant eight bits are the command (0 is nothing to do). The upper eight bit are reset to zero after the command was handled.

Definition at line 230 of file l4virtio.

References hdr().

Here is the call graph for this function:



16.392.3.5 guest_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::guest_features (
            unsigned idx) const  [inline]
```

Return a specific set of guest features.

Parameters

idx	Index into the guest features array.

Return values

The	selected set of guest features.

This function returns a specific 32bit set of features enabled by the guest/driver. `idx` is the index in the guest features array, resp. the 32 bit set to return.

Definition at line 198 of file l4virtio.

16.392.3.6 hdr()

```
l4virtio_config_hdr_t const volatile * L4virtio::Svr::Dev_config::hdr () const  [inline]
```

Get a read-only pointer to the config header.

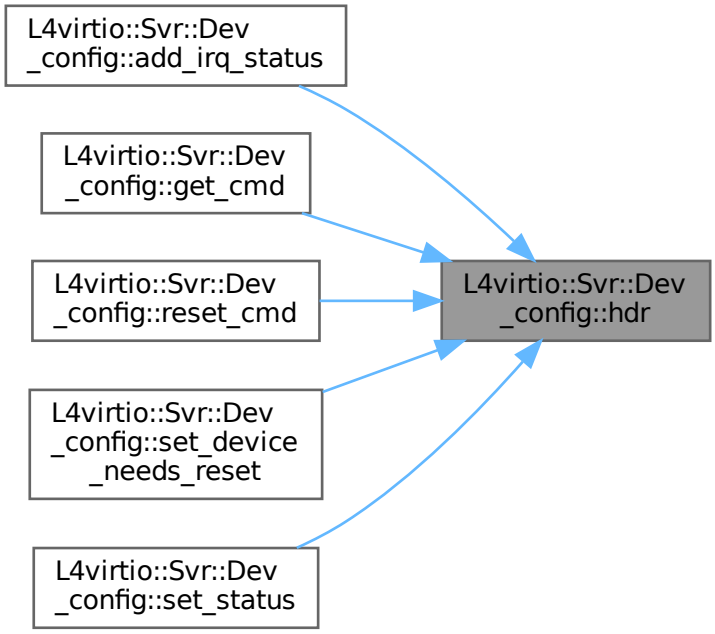
Returns

Read-only pointer to the shared config header.

Definition at line 368 of file l4virtio.

Referenced by add_irq_status(), get_cmd(), reset_cmd(), set_device_needs_reset(), and set_status().

Here is the caller graph for this function:



16.392.3.7 negotiated_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::negotiated_features (
            unsigned idx) const  [inline]
```

Compute a specific set of negotiated features.

Parameters

idx	Index into the guest/host features array.

Return values

The	selected set of negotiated features.

This function returns a specific 32-bit set of features negotiated by the guest/driver and host/device. `idx` is the index in the guest/host features array, resp. the 32-bit set to return.

Definition at line 212 of file l4virtio.

16.392.3.8 qconfig()

```
l4virtio_config_queue_t volatile const * L4virtio::Svr::Dev_config::qconfig (
            unsigned index) const  [inline]
```

Get queue read-only config data for queue with the given *index*.

Parameters

index	The index of the queue.

Returns

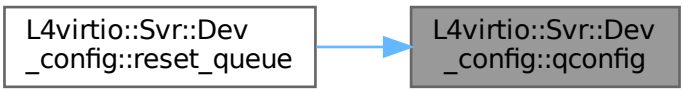
Read-only pointer to the config of the queue with the given *index*, or NULL if *index* is out of range.

Definition at line 303 of file l4virtio.

References L4_UNLIKELY.

Referenced by reset_queue().

Here is the caller graph for this function:



16.392.3.9 reset_cmd()

```
void L4virtio::Svr::Dev_config::reset_cmd ()  [inline]
```

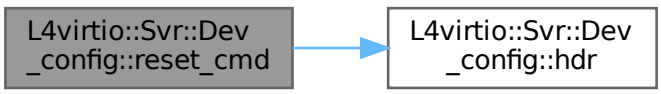
Reset the `cmd` register after execution of a command.

This function resets the `cmd` register in order for the client to detect that the command was executed by the device.

Definition at line 241 of file l4virtio.

References hdr().

Here is the call graph for this function:



16.392.3.10 reset_queue()

```
bool L4virtio::Svr::Dev_config::reset_queue (
             unsigned index,
             unsigned num_max,
             bool inc_generation = false) const  [inline]
```

Reset queue config for the given queue.

Parameters

index	The index of the queue to reset.
num_max	The maximum number of descriptors supported by this queue.
inc_generation	The config generation will be incremented when this is true.

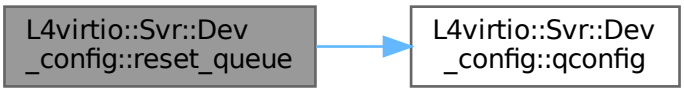
Returns

true on success, or false when *index* is out of range.

Definition at line 345 of file l4virtio.

References L4_UNLIKELY, l4virtio_config_queue_t::num, l4virtio_config_queue_t::num_max, qconfig(), and l4virtio_config_queue_t::ready.

Here is the call graph for this function:



16.392.3.11 set_device_needs_reset()

```
void L4virtio::Svr::Dev_config::set_device_needs_reset ()  [inline]
```

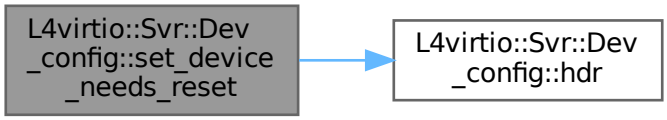
Set DEVICE_NEEDS_RESET bit in device status register.

This function sets the internal status register and also the status register in the shared memory to DEVICE_↩ NEEDS_RESET.

Definition at line 276 of file l4virtio.

References hdr().

Here is the call graph for this function:



16.392.3.12 set_status()

```
void L4virtio::Svr::Dev_config::set_status (
            Status status)  [inline]
```

Set device status register.

Parameters

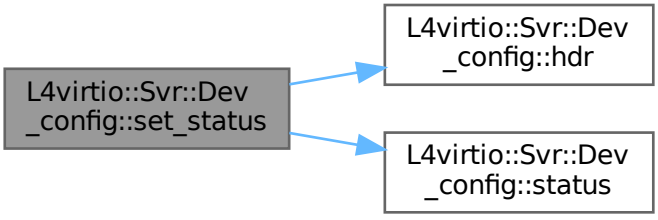
status	The new value for the device status register.

This function sets the internal status register and also the status register in the shared memory to *status*.

Definition at line 253 of file l4virtio.

References hdr(), and status().

Here is the call graph for this function:



16.392.3.13 status()

```
Status L4virtio::Svr::Dev_config::status () const  [inline]
```

Get current device status (trusted).

Returns

Current device status register (trusted).

The status returned by this function is value stored internally and cannot be written by the guest (i.e., the value can be taken as trusted.)

Definition at line 222 of file l4virtio.

Referenced by add_irq_status(), and set_status().

Here is the caller graph for this function:

  Memory region list.

16.395.1 Detailed Description

template<typename DATA>
class L4virtio::Svr::Device_t< DATA >

Server-side L4-VIRTIO device stub.

This stub supports new-style multi-event registration (using get_device_config(), bind() and get_device_↩ notification_irq()).

Definition at line 801 of file l4virtio.

16.395.2 Member Function Documentation

16.395.2.1 add_trusted_dataspaces()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::add_trusted_dataspaces (
            std::shared_ptr< Ds_vector const > ds)  [inline]
```

Provide a list of trusted dataspaces that can be used for validation.

Parameters

ds	list of trusted dataspaces.

Definition at line 1198 of file l4virtio.

16.395.2.2 device_error()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::device_error ()  [inline]
```

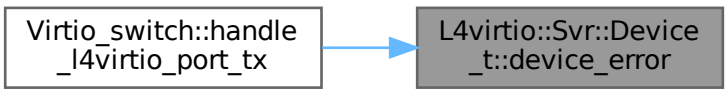
Transition device into DEVICE_NEEDS_RESET state.

This function does a full reset, sets the DEVICE_NEEDS_RESET bit in the device status register, triggering a guest config IRQ if necessary. The driver still needs to perform its own reset and initialization sequence.

Definition at line 1024 of file l4virtio.

Referenced by Virtio_switch::handle_l4virtio_port_tx().

Here is the caller graph for this function:



16.395.2.3 device_notify_irq()

```
template<typename DATA>
virtual L4::Cap< L4::Irq > L4virtio::Svr::Device_t< DATA >::device_notify_irq (
            unsigned idx)  [inline], [virtual]
```

Callback to gather the device notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 874 of file l4virtio.

16.395.2.4 handle_mem_cmd_write()

```
template<typename DATA>
bool L4virtio::Svr::Device_t< DATA >::handle_mem_cmd_write ()  [inline]
```

Check for a value in the cmd register and handle a write.

This function checks for a value in the cmd register and executes the command if there is any, or returns false if there was no command.

Execution of the command is signaled by a zero in the cmd register.

Definition at line 1154 of file l4virtio.

16.395.2.5 init_mem_info()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::init_mem_info (
             unsigned num)  [inline]
```

Initialize the memory region list to the given maximum.

Parameters

num	Maximum number of memory regions that can be managed.

Definition at line 1012 of file l4virtio.

16.395.2.6 register_driver_irq()

```
template<typename DATA>
virtual void L4virtio::Svr::Device_t< DATA >::register_driver_irq (
             unsigned idx)  [inline], [virtual]
```

Callback for registering an notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 860 of file l4virtio.

16.395.2.7 reset_queue_config()

```
template<typename DATA>
void L4virtio::Svr::Device_t< DATA >::reset_queue_config (
             unsigned idx,
             unsigned num_max,
             bool inc_generation = false)  [inline]
```

Trigger reset for the configuration space for queue *idx*.

Parameters

idx	The queue index to reset.
num_max	Maximum number of entries in this queue.
inc_generation	The config generation will be incremented when this is true.

This function resets the driver-readable configuration space for the queue with the given index. The queue configuration is reset to all 0, and the maximum number of entries in the queue is set to *num_max*.

Definition at line 1002 of file l4virtio.

16.395.2.8 setup_queue()

```
template<typename DATA>
bool L4virtio::Svr::Device_t< DATA >::setup_queue (
             Virtqueue * q,
             unsigned qn,
             unsigned num_max)  [inline]
```

Enable/disable the specified queue.

Parameters

q	Pointer to the ring that represents the virtqueue internally.
qn	Index of the queue.
num_max	Maximum number of supported entries in this queue.

Returns

true for success.

- This function calculates the parameters of the virtqueue from the clients configuration space values, checks the accessibility of the queue data structures and initializes *q* to ready state when all checks succeeded.

Definition at line 1047 of file l4virtio.

  Default implementation returning generic information.

16.396.1 Detailed Description

template<typename DATA>
class L4virtio::Svr::Driver_mem_list_t< DATA >

List of driver memory regions assigned to a single L4-VIRTIO transport instance.

Note

The regions added to this list *must* never overlap.

Definition at line 629 of file l4virtio.

16.396.2 Member Function Documentation

16.396.2.1 add()

```
template<typename DATA>
Mem_region const * L4virtio::Svr::Driver_mem_list_t< DATA >::add (
             l4_uint64_t drv_base,
             l4_umword_t size,
             l4_addr_t offset,
             Ds_cap && ds)  [inline]
```

Add a new region to the list.

Parameters

drv_base	Driver base address of the region.
size	Size of the region in bytes.
offset	Offset within the data space attached to drv_base.
ds	Data space backing the driver memory.

Returns

A pointer to the new region.

Definition at line 669 of file l4virtio.

16.396.2.2 find()

```
template<typename DATA>
Mem_region * L4virtio::Svr::Driver_mem_list_t< DATA >::find (
             l4_uint64_t base,
             l4_umword_t size) const  [inline]
```

Find memory region containing the given driver address region.

Parameters

base	Driver base address.
size	Size of the region.

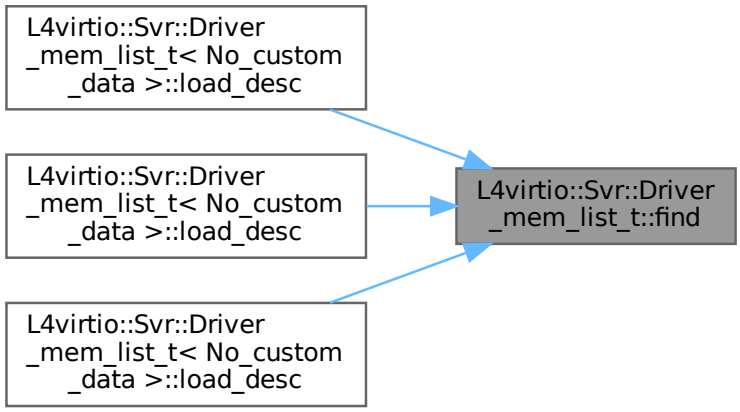
Returns

Pointer to the region containing the given region, NULL if none is found.

Definition at line 703 of file l4virtio.

Referenced by L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc(), L4virtio::Svr::Driver_mem_list_t< No_custom_da
and L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc().

Here is the caller graph for this function:



16.396.2.3 full()

```
template<typename DATA>
bool L4virtio::Svr::Driver_mem_list_t< DATA >::full () const  [inline]
```

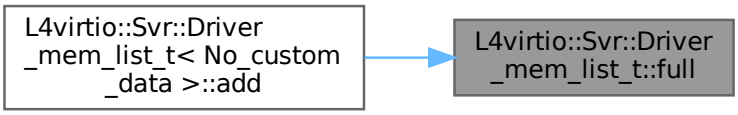
Returns

True if the remaining capacity is 0.

Definition at line 658 of file l4virtio.

Referenced by L4virtio::Svr::Driver_mem_list_t< No_custom_data >::add().

Here is the caller graph for this function:



16.396.2.4 init()

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::init (
             unsigned max)  [inline]
```

Make a fresh list with capacity *max*.

Parameters

max	The capacity of this vector.

Definition at line 650 of file l4virtio.

16.396.2.5 load_desc() [1/3]

```
template<typename DATA>
template<typename ARG>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
             Virtqueue::Desc const & desc,
             Request_processor const * p,
             ARG * data) const  [inline]
```

Default implementation returning generic information.

Template Parameters

ARG	Abstract argument type used with Request_processor::start() and Request_processor::next() to deliver the result of loading a descriptor. This type must provide a constructor taking three arguments: (1) pointer to a Driver_mem_region, (2) the Virtqueue::Desc descriptor, and (3) a pointer to the calling Request_processor.

Parameters

	desc	The descriptor to load

	p	The request processor calling us
out	*data*	Shall be assigned to ARG(mem, desc, p)

Exceptions

Bad_descriptor	The descriptor address could not be translated.

Definition at line 764 of file l4virtio.

16.396.2.6 load_desc() [2/3]

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
             Virtqueue::Desc const & desc,
             Request_processor const * p,
             Mem_region const ** data) const  [inline]
```

Default implementation returning the Driver_mem_region.

Parameters

	desc	The descriptor to load
	p	The request processor calling us
out	*data*	Shall be set to a pointer to the Driver_mem_region that covers the descriptor.

Exceptions

Bad_descriptor	The descriptor address could not be translated.

Definition at line 737 of file l4virtio.

16.396.2.7 load_desc() [3/3]

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
             Virtqueue::Desc const & desc,
             Request_processor const * p,
             Virtqueue::Desc const ** table) const  [inline]
```

Default implementation for loading an indirect descriptor.

Parameters

	desc	The descriptor to load

	p	The request processor calling us
out	*table*	Shall be set to the loaded descriptor table

Exceptions

Bad_descriptor	The descriptor address could not be translated.

Definition at line 717 of file l4virtio.

16.396.2.8 remove()

```
template<typename DATA>
void L4virtio::Svr::Driver_mem_list_t< DATA >::remove (
            Mem_region const * r)  [inline]
```

Remove the given region from the list.

Parameters

r	The region to remove (result from add(), or find()).

Definition at line 683 of file l4virtio.

L4virtio::Svr::Driver_mem_region_t< DATA >::Driver_mem_region_t (
            l4_uint64_t drv_base,
            l4_umword_t size,
            l4_addr_t offset,
            Ds_cap && ds)  [inline]
```

Make a local memory region for the given driver values.

Parameters

drv_base	Base address of the memory region used by the driver.
size	Size of the memory region.
offset	Offset within the data space that is mapped to *drv_base* within the driver.
ds	Data space capability backing the memory.

This constructor attaches the region of given data space to the local address space and stores the corresponding data for later reference.

Definition at line 498 of file l4virtio.

16.397.3 Member Function Documentation

16.397.3.1 contains()

```
template<typename DATA>
bool L4virtio::Svr::Driver_mem_region_t< DATA >::contains (
            l4_uint64_t base,
            l4_umword_t size) const  [inline]
```

Test if the given driver address range is within this region.

Parameters

base	The driver base address.
size	The size of the region to lookup.

Returns

true if the given driver address region is contained in this region, false else.

Definition at line 592 of file l4virtio.

16.397.3.2 drv_base()

```
template<typename DATA>
l4_uint64_t L4virtio::Svr::Driver_mem_region_t< DATA >::drv_base () const  [inline]
```

Returns

The base address used by the driver.

Definition at line 571 of file l4virtio.

16.397.3.3 ds()

```
template<typename DATA>
L4::Cap< L4Re::Dataspace > L4virtio::Svr::Driver_mem_region_t< DATA >::ds () const  [inline]
```

Returns

The data space capability for this region.

Definition at line 583 of file l4virtio.

16.397.3.4 ds_offset()

```
template<typename DATA>
l4_addr_t L4virtio::Svr::Driver_mem_region_t< DATA >::ds_offset () const  [inline]
```

Returns

The offset within the data space.

Definition at line 580 of file l4virtio.

16.397.3.5 empty()

```
template<typename DATA>
bool L4virtio::Svr::Driver_mem_region_t< DATA >::empty () const  [inline]
```

Returns

True if the region is empty (size == 0), false otherwise.

Definition at line 567 of file l4virtio.

16.397.3.6 flags()

```
template<typename DATA>
Flags L4virtio::Svr::Driver_mem_region_t< DATA >::flags () const  [inline]
```

Returns

The flags for this region.

Definition at line 564 of file l4virtio.

16.397.3.7 is_writable()

```
template<typename DATA>
bool L4virtio::Svr::Driver_mem_region_t< DATA >::is_writable () const  [inline]
```

Returns

True if the region is writable, false otherwise.

Definition at line 561 of file l4virtio.

16.397.3.8 local()

```
template<typename DATA>
template<typename T>
T * L4virtio::Svr::Driver_mem_region_t< DATA >::local (
            Ptr< T > p) const  [inline]
```

Get the local address for driver address *p*.

Parameters

p	Driver address to translate.

Precondition

p must be contained in this region.

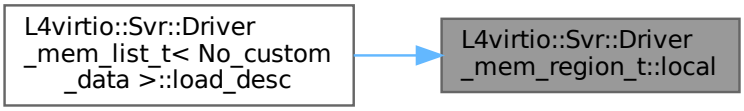
Returns

Local address for the given driver address *p*.

Definition at line 616 of file l4virtio.

Referenced by L4virtio::Svr::Driver_mem_list_t< No_custom_data >::load_desc().

Here is the caller graph for this function:



16.397.3.9 local_base()

```
template<typename DATA>
l4_addr_t L4virtio::Svr::Driver_mem_region_t< DATA >::local_base () const  [inline]
```

Returns

The local base address.

Definition at line 574 of file l4virtio.

16.397.3.10 size()

```
template<typename DATA>
l4_umword_t L4virtio::Svr::Driver_mem_region_t< DATA >::size () const  [inline]
```

Returns

The size of the region in bytes.

Definition at line 577 of file l4virtio.

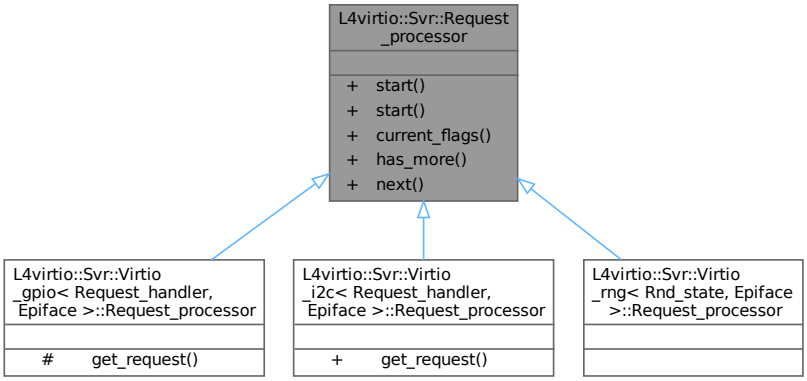
16.398 L4virtio::Svr::Request_processor Class Reference

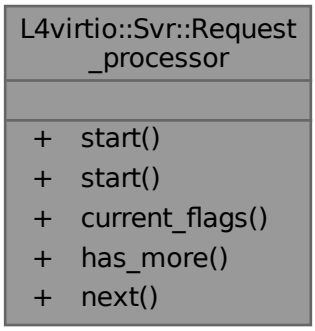
Encapsulate the state for processing a VIRTIO request.

```
#include <virtio>
```

Inheritance diagram for L4virtio::Svr::Request_processor:



Collaboration diagram for L4virtio::Svr::Request_processor:



Public Member Functions

- template<typename DESC_MAN, typename ... ARGS>
  void start (DESC_MAN *dm, Virtqueue *ring, Virtqueue::Head_desc const &request, ARGS... args)

  Start processing a new request.
- template<typename DESC_MAN, typename ... ARGS>
  Virtqueue::Request const & start (DESC_MAN *dm, Virtqueue::Request const &request, ARGS... args)

  Start processing a new request.
- Virtqueue::Desc::Flags current_flags () const

  Get the flags of the currently processed descriptor.
- bool has_more () const

  Are there more chained descriptors?
- template<typename DESC_MAN, typename ... ARGS>
  bool next (DESC_MAN *dm, ARGS... args)

  Switch to the next descriptor in a descriptor chain.

16.398.1 Detailed Description

Encapsulate the state for processing a VIRTIO request.

A VIRTIO request is a possibly chained list of descriptors retrieved from the available ring of a virtqueue, using Virtqueue::next_avail().

The descriptor processing depends on helper (DESC_MAN) for interpreting the descriptors in the context of the device implementation.

DESC_MAN has to provide the functionality to safely dereference a descriptor from a descriptor list.

The following methods must be provided by DESC_MAN:

- ```
  DESC_MAN::load_desc(Virtqueue::Desc const &desc,
                      Request_processor const *proc,
                      Virtqueue::Desc const **table)
  ```

  This function is used to dereference `desc` as an indirect descriptor table, and must return a pointer to an indirect descriptor table.
  ```

- `DESC_MAN::load_desc(Virtqueue::Desc const &desc, Request_processor const *proc, ...)`

  This function is used to dereference a descriptor as a normal data buffer, and '...' are the arguments that are passed to start() and next().

Definition at line 472 of file virtio.

16.398.2 Member Function Documentation

16.398.2.1 current_flags()

`Virtqueue::Desc::Flags L4virtio::Svr::Request_processor::current_flags () const [inline]`

Get the flags of the currently processed descriptor.

Returns

The flags of the currently processed descriptor.

Definition at line 545 of file virtio.

Referenced by L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor::get_request().

16.398.2.2 has_more()

`bool L4virtio::Svr::Request_processor::has_more () const [inline]`

Are there more chained descriptors?

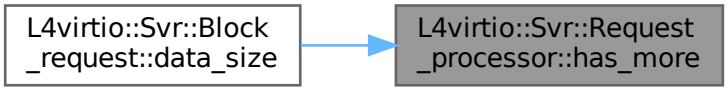
Returns

true if there are more chained descriptors in the current request.

Definition at line 553 of file virtio.

Referenced by L4virtio::Svr::Block_request< Ds_data >::data_size().

Here is the caller graph for this function:



16.398.2.3 next()

```
template<typename DESC_MAN, typename ...  ARGS>
bool L4virtio::Svr::Request_processor::next (
             DESC_MAN * dm,
             ARGS...  args)  [inline]
```

Switch to the next descriptor in a descriptor chain.

Template Parameters

DESC_MAN	Type of descriptor manager (implicit).

Parameters

dm	Descriptor manager that is used to translate VIRTIO descriptor addresses.
args	Extra arguments passed to dm->load_desc()

Return values

true	A next descriptor is available.
false	No descriptor available.

Exceptions

Bad_descriptor	The `next` index of this descriptor is invalid.

Definition at line 570 of file virtio.

Public Member Functions

- void **add_proto** (l4_uint32_t id, Proto< Scmi_dev > *proto)

  Add an actual protocol implementation with the given id to the server.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual bool **check_features** ()

callback for checking the subset of accepted features

- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes
- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.
- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.
- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.
- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.
- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Additional Inherited Members

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.407.1 Detailed Description

A server implementation of the virtio-scmi protocol.

Use this class as a base to implement your own specific SCMI device.

SCMI defines multiple protocols which can be optionally handled. This server implementation is flexible enough to handle any combination of them. The user of this server has to deviate from the provided Proto classes (for the protocols he want to handle) and needs to implement the required callbacks.

Right now, support for the base and the performance protocol is provided.

The base protocol is mandatory.

If you want to use this from a Uvmm Linux guest, the device tree needs to look something like this:

```
firmware {
  scmi {
    compatible = "arm,scmi-virtio";

    #address-cells = <1>;
    #size-cells = <0>;

    // ... supported protocols ...
  };
};
```

Definition at line 336 of file virtio-scmi-device.

  Get a reference to the `protocol_id` bits (10 to 17) of `hdr_raw`.

- typedef cxx::Bitfield< decltype(hdr_raw), 8, 9 > **message_type_bfm_t**

  Type to access the `message_type` bits (8 to 9) of `hdr_raw`.
- constexpr message_type_bfm_t::Val **message_type** () const

  Get the `message_type` bits (8 to 9) of `hdr_raw`.
- constexpr message_type_bfm_t::Ref **message_type** ()

  Get a reference to the `message_type` bits (8 to 9) of `hdr_raw`.

- typedef cxx::Bitfield< decltype(hdr_raw), 0, 7 > **message_id_bfm_t**

  Type to access the `message_id` bits (0 to 7) of `hdr_raw`.
- constexpr message_id_bfm_t::Val **message_id** () const

  Get the `message_id` bits (0 to 7) of `hdr_raw`.
- constexpr message_id_bfm_t::Ref **message_id** ()

  Get a reference to the `message_id` bits (0 to 7) of `hdr_raw`.

16.408.1 Detailed Description

SCMI header.

Definition at line 45 of file virtio-scmi-device.

The documentation for this struct was generated from the following file:

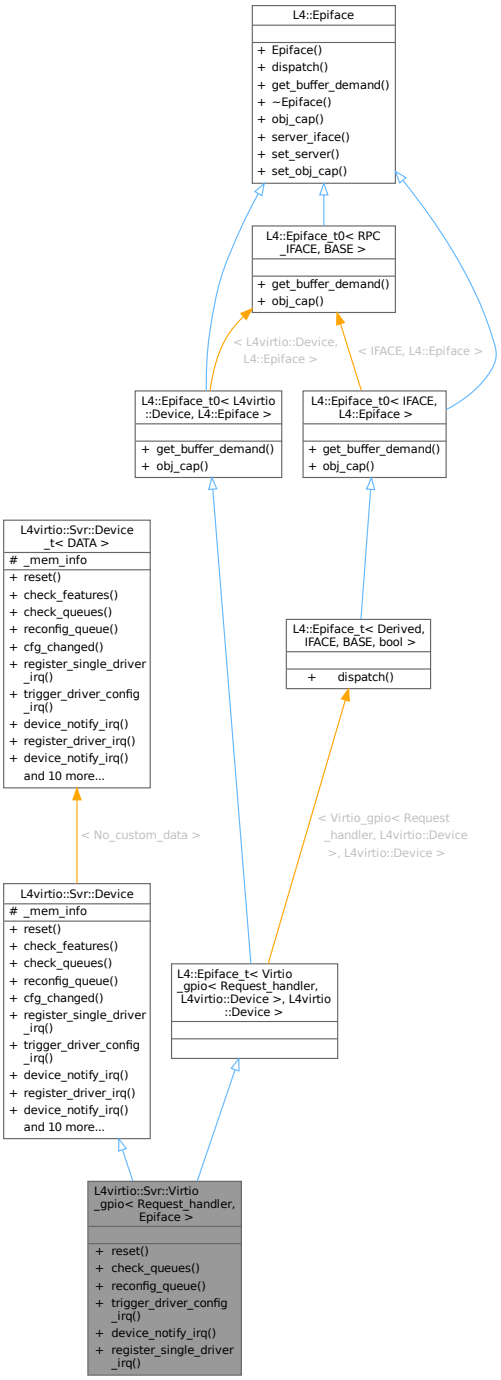
- l4/l4virtio/server/virtio-scmi-device

16.409 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface > Class Template Reference

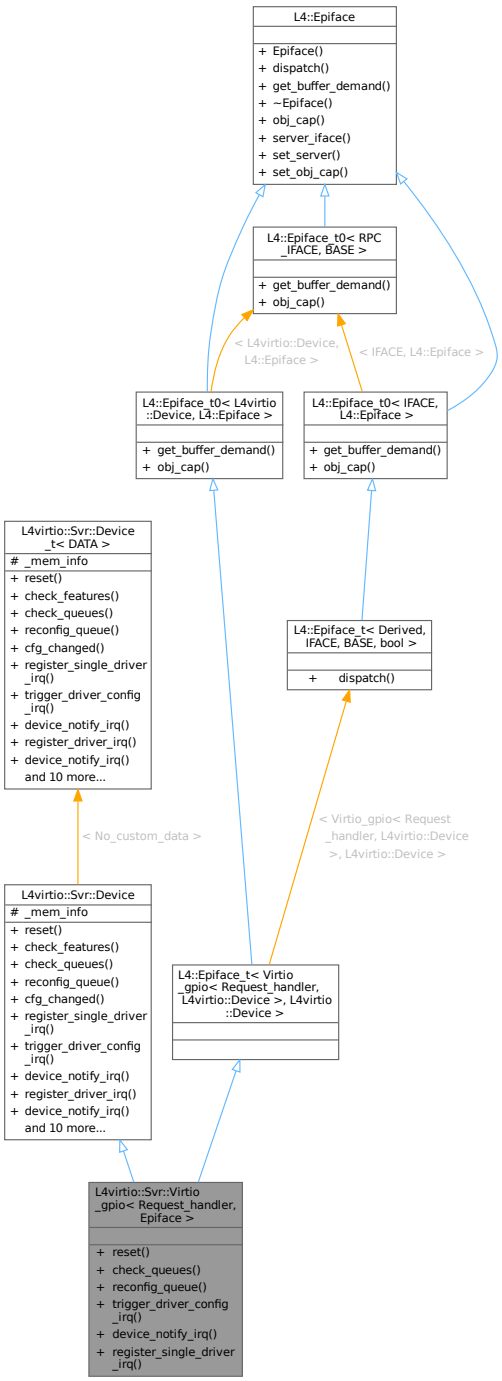
A server implementation of the virtio-gpio protocol.

`#include <virtio-gpio-device>`

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >:



Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >:



Data Structures

- struct Irq_handler

  Handler for an gpio pin irq.
- struct Host_irq

  Handler for the host irq.
- struct Request_processor

  Generic handler for the Virtio requests.

Public Member Functions

- void **reset** () override

  reset callback, called for doing a device reset
- bool **check_queues** () override

  callback for checking if the queues at DRIVER_OK transition
- int **reconfig_queue** (unsigned idx) override

  callback for client queue-config request
- void **trigger_driver_config_irq** () override

  callback for triggering configuration change notification IRQ
- L4::Cap< L4::Irq > **device_notify_irq** () const override

  callback to gather the device notification IRQ (old-style)
- void **register_single_driver_irq** () override

  callback for registering a single guest IRQ for all queues (old-style)

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual bool **check_features** ()

  callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes
- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.
- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.
- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.
- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.
- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- Type_info::Demand **get_buffer_demand** () const

  Get the server-side buffer demand based in IFACE.
- Cap< L4virtio::Device > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()

  Make a server object.
- virtual ~**Epiface** ()=0

  Destroy the object.
- Stored_cap obj_cap () const

  Get the capability to the kernel object belonging to this object.
- Server_iface * server_iface () const

  Get pointer to server interface at which the object is currently registered.
- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)

  Set server registration info for the object.
- void **set_obj_cap** (Cap< void > const &cap)

  Deprecated server registration function.

Additional Inherited Members

Public Types inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- typedef L4virtio::Device **Interface**

  Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef Ipc_svr::Server_iface **Server_iface**

  Type for abstract server interface.
- typedef Ipc_svr::Server_iface::Demand **Demand**

  Type for server-side receive buffer demand.

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.409.1 Detailed Description

template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >

A server implementation of the virtio-gpio protocol.

Template Parameters

Request_handler	The type that is used to handle incomming requests. Needs to have: • bool get_direction(l4_uint16_t gpio, l4_uint8_t *dir) • bool set_direction(l4_uint16_t gpio, l4_uint8_t dir) • bool get_value(l4_uint16_t gpio, l4_uint8_t *val) • bool set_value(l4_uint16_t gpio, l4_uint8_t val) • bool set_irq_type(l4_uint16_t gpio, l4_uint8_t mode) • bool enable_irq(l4_uint16_t gpio, std::shared_ptr<Virtio_gpio::Irq_handler> const &hdl) functions.
Epiface	The Epiface to derive from. Defaults to `L4virtio::Device`.

Definition at line 142 of file virtio-gpio-device.

The documentation for this class was generated from the following file:

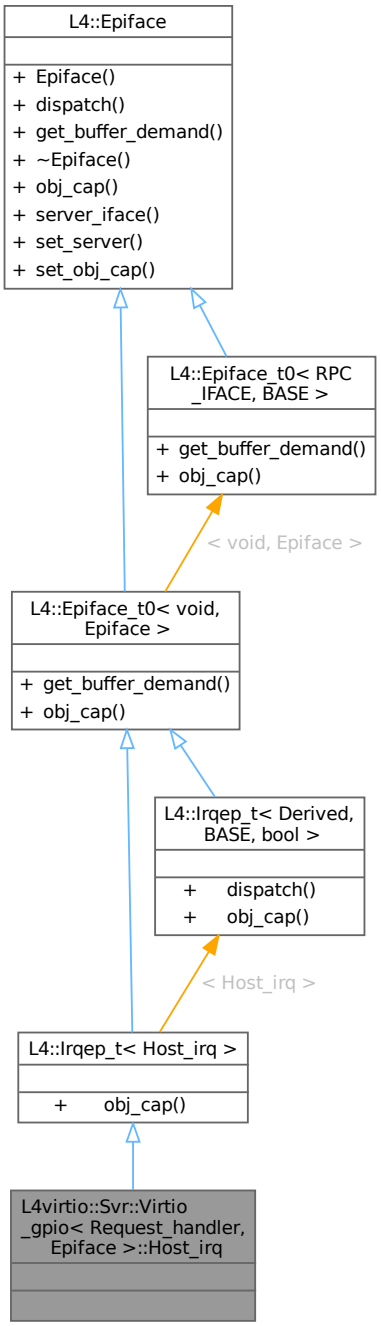
- l4/l4virtio/server/virtio-gpio-device

16.410 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq Struct Reference

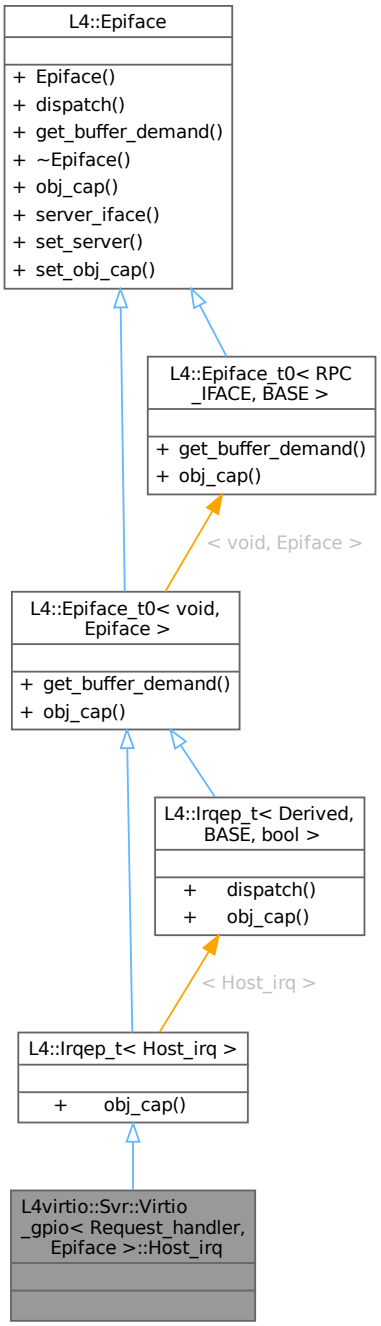
Handler for the host irq.

`#include <virtio-gpio-device>`

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq:



Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq:



Additional Inherited Members

Public Types inherited from L4::Epiface_t0< void, Epiface >

- typedef void **Interface**

  Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef Ipc_svr::Server_iface **Server_iface**

  Type for abstract server interface.
- typedef Ipc_svr::Server_iface::Demand **Demand**

  Type for server-side receive buffer demand.

Public Member Functions inherited from L4::Irqep_t< Host_irq >

- Cap< L4::Irq > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface_t0< void, Epiface >

- Type_info::Demand **get_buffer_demand** () const

  Get the server-side buffer demand based in IFACE.
- Cap< void > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()

  Make a server object.
- virtual ~**Epiface** ()=0

  Destroy the object.
- Stored_cap obj_cap () const

  Get the capability to the kernel object belonging to this object.
- Server_iface * server_iface () const

  Get pointer to server interface at which the object is currently registered.
- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)

  Set server registration info for the object.
- void **set_obj_cap** (Cap< void > const &cap)

  Deprecated server registration function.

16.410.1 Detailed Description

template<typename Request_handler, typename Epiface = L4virtio::Device>
struct L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Host_irq

Handler for the host irq.

An `L4::Irqep_t` to handle irqs send to the server.

Definition at line 198 of file virtio-gpio-device.

The documentation for this struct was generated from the following file:

- l4/l4virtio/server/virtio-gpio-device

16.411 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler Struct Reference

Handler for an gpio pin irq.

`#include <virtio-gpio-device>`

Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler:

16.411.1 Detailed Description

template<typename Request_handler, typename Epiface = L4virtio::Device>
struct L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Irq_handler

Handler for an gpio pin irq.

This notifies the virtio client that an gpio pin irq happened or the operation was canceled.

This needs to be called by any server implementation of the Virtio_gpio class, after an irq was enabled with the enable method of the Gpio_request_handler.

Definition at line 166 of file virtio-gpio-device.

The documentation for this struct was generated from the following file:

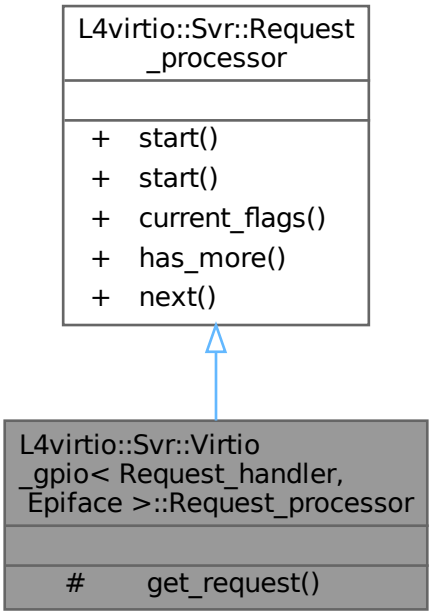
- l4/l4virtio/server/virtio-gpio-device

16.412 L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor Struct Reference

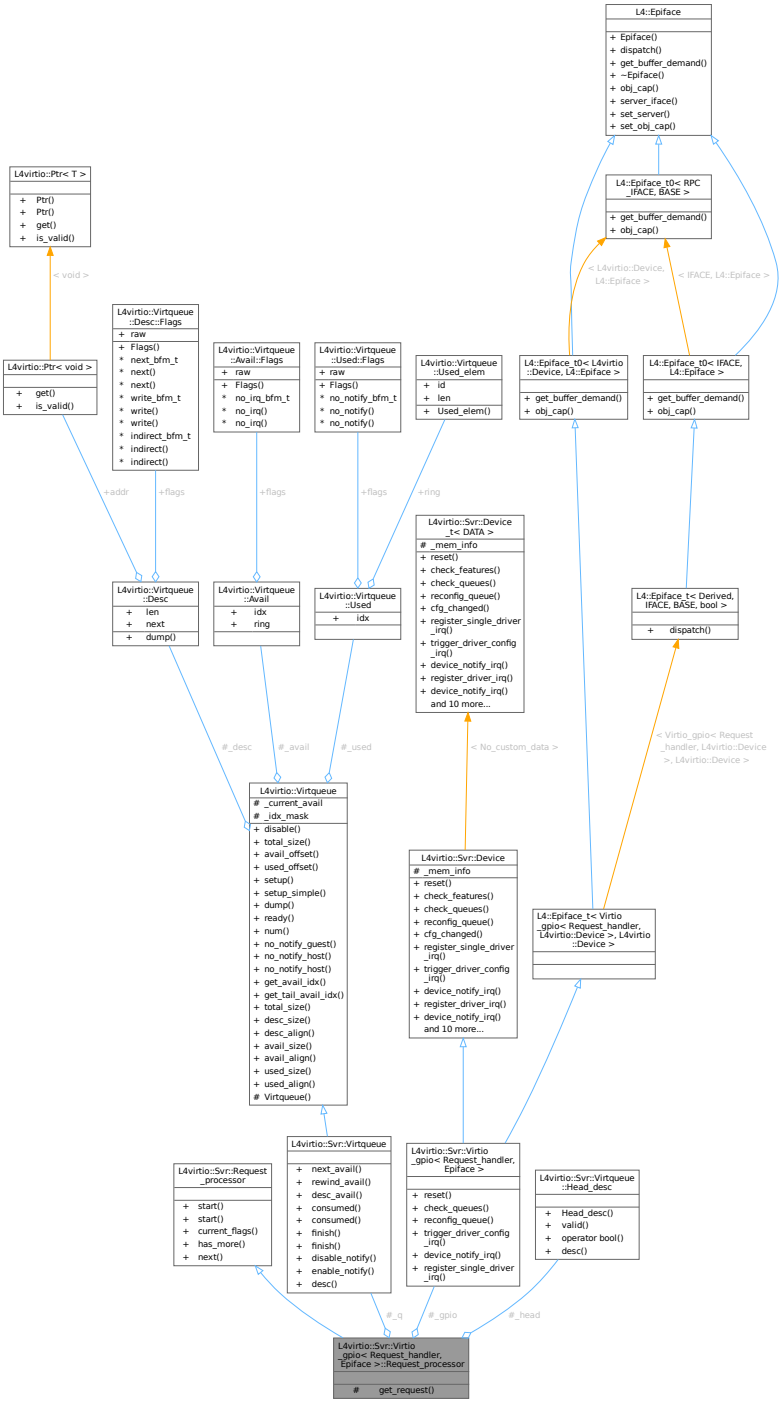
Generic handler for the Virtio requests.

`#include <virtio-gpio-device>`

Inheritance diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor:



Collaboration diagram for L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor:



Protected Member Functions

- template<typename T>
  T get_request ()

  The driver prepares the GPIO request in two data parts: 1st: in_hdr 2rd: out_hdr.

Additional Inherited Members

Public Member Functions inherited from L4virtio::Svr::Request_processor

- template<typename DESC_MAN, typename ... ARGS>
  void start (DESC_MAN *dm, Virtqueue *ring, Virtqueue::Head_desc const &request, ARGS... args)
  Start processing a new request.
- template<typename DESC_MAN, typename ... ARGS>
  Virtqueue::Request const & start (DESC_MAN *dm, Virtqueue::Request const &request, ARGS... args)
  Start processing a new request.
- Virtqueue::Desc::Flags current_flags () const
  Get the flags of the currently processed descriptor.
- bool has_more () const
  Are there more chained descriptors?
- template<typename DESC_MAN, typename ... ARGS>
  bool next (DESC_MAN *dm, ARGS... args)
  Switch to the next descriptor in a descriptor chain.

16.412.1 Detailed Description

template<typename Request_handler, typename Epiface = L4virtio::Device>
struct L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor

Generic handler for the Virtio requests.

Definition at line 213 of file virtio-gpio-device.

16.412.2 Member Function Documentation

16.412.2.1 get_request()

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
template<typename T>
T L4virtio::Svr::Virtio_gpio< Request_handler, Epiface >::Request_processor::get_request ()
[inline], [protected]
```

The driver prepares the GPIO request in two data parts: 1st: in_hdr 2rd: out_hdr.

This parses the two Data_buffers and create the Gpio_* structure.

Definition at line 241 of file virtio-gpio-device.

References L4virtio::Svr::Request_processor::current_flags(), and L4virtio::Svr::Request_processor::next().

Here is the call graph for this function:

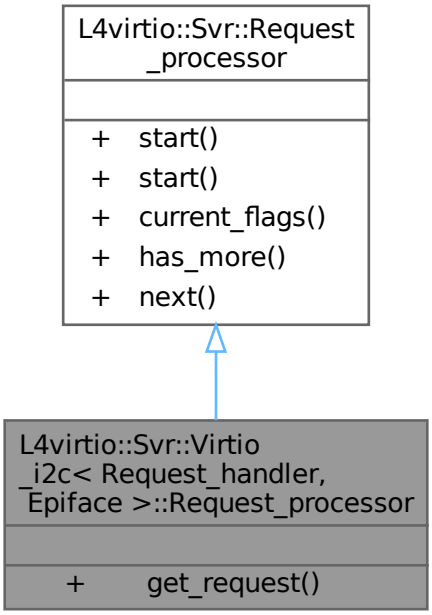
Collaboration diagram for L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor:



Public Member Functions

- l2c_req get_request ()

  Linux prepares the I2C request in three data parts: 1st: out_hdr 2nd: buffer (optional) 3rd: in_hdr.

Public Member Functions inherited from L4virtio::Svr::Request_processor

- template<typename DESC_MAN, typename ... ARGS>
  void start (DESC_MAN *dm, Virtqueue *ring, Virtqueue::Head_desc const &request, ARGS... args)

  Start processing a new request.
- template<typename DESC_MAN, typename ... ARGS>
  Virtqueue::Request const & start (DESC_MAN *dm, Virtqueue::Request const &request, ARGS... args)

  Start processing a new request.
- Virtqueue::Desc::Flags current_flags () const

  Get the flags of the currently processed descriptor.
- bool has_more () const

  Are there more chained descriptors?
- template<typename DESC_MAN, typename ... ARGS>
  bool next (DESC_MAN *dm, ARGS... args)

  Switch to the next descriptor in a descriptor chain.

16.415.1 Detailed Description

template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor

Handler for the Virtio requests.

Definition at line 123 of file virtio-i2c-device.

16.415.2 Member Function Documentation

16.415.2.1 get_request()

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
I2c_req L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor::get_request
() [inline]
```

Linux prepares the I2C request in three data parts: 1st: out_hdr 2nd: buffer (optional) 3rd: in_hdr.

This parses the three Data_buffers and recreate the virtio_i2c_req structure.

Definition at line 172 of file virtio-i2c-device.

16.416.1 Detailed Description

template<typename Rnd_state, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >

A server implementation of the virtio-rng protocol.

Template Parameters

Rnd_state	The type that implements the random data generation. `Rnd_state::get_random(int len, unsigned char *buf)` is called to get len random bytes written into buf TODO: virtio-rng supports providing less random bytes then requested. This API currently does not support that, as I do not have a test case.
Epiface	The Epiface to derive from. Defaults to `L4virtio::Device`.

Definition at line 33 of file virtio-rng-device.

The documentation for this class was generated from the following file:

- l4/l4virtio/server/virtio-rng-device

  Destroy the object.
- Stored_cap obj_cap () const
  Get the capability to the kernel object belonging to this object.
- Server_iface * server_iface () const
  Get pointer to server interface at which the object is currently registered.
- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)
  Set server registration info for the object.
- void **set_obj_cap** (Cap< void > const &cap)
  Deprecated server registration function.

16.417.1 Detailed Description

template<typename Rnd_state, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >::Host_irq

Handler for the host irq.

An `L4::Irqep_t` to handle irqs send to the server.

Definition at line 51 of file virtio-rng-device.

The documentation for this class was generated from the following file:

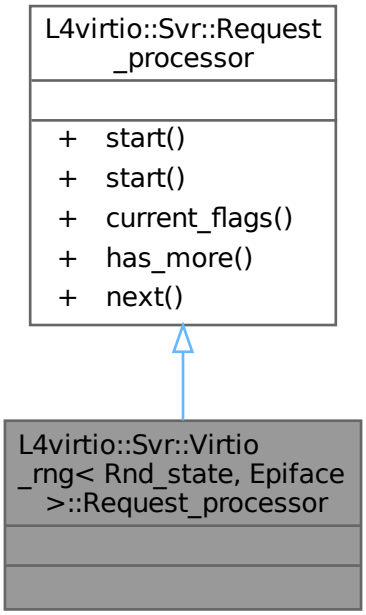
- l4/l4virtio/server/virtio-rng-device

16.418 L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >::Request_processor Class Reference

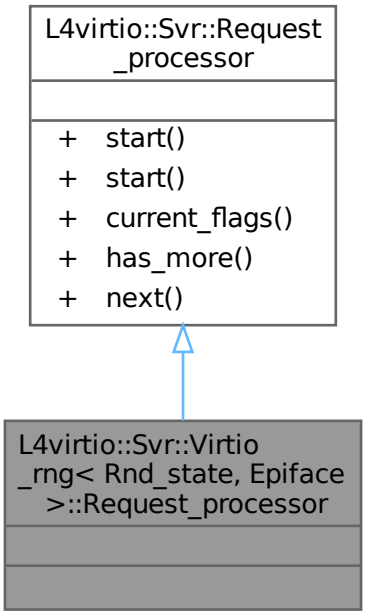
Handler for the Virtio requests.

`#include <virtio-rng-device>`

Inheritance diagram for L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >::Request_processor:



Collaboration diagram for L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >::Request_processor:



Additional Inherited Members

Public Member Functions inherited from L4virtio::Svr::Request_processor

- template<typename DESC_MAN, typename ... ARGS>
  void start (DESC_MAN *dm, Virtqueue *ring, Virtqueue::Head_desc const &request, ARGS... args)

  Start processing a new request.
- template<typename DESC_MAN, typename ... ARGS>
  Virtqueue::Request const & start (DESC_MAN *dm, Virtqueue::Request const &request, ARGS... args)

  Start processing a new request.
- Virtqueue::Desc::Flags current_flags () const

  Get the flags of the currently processed descriptor.
- bool has_more () const

  Are there more chained descriptors?
- template<typename DESC_MAN, typename ... ARGS>
  bool next (DESC_MAN *dm, ARGS... args)

  Switch to the next descriptor in a descriptor chain.

16.418.1 Detailed Description

template<typename Rnd_state, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >::Request_processor

Handler for the Virtio requests.

Definition at line 68 of file virtio-rng-device.

The documentation for this class was generated from the following file:

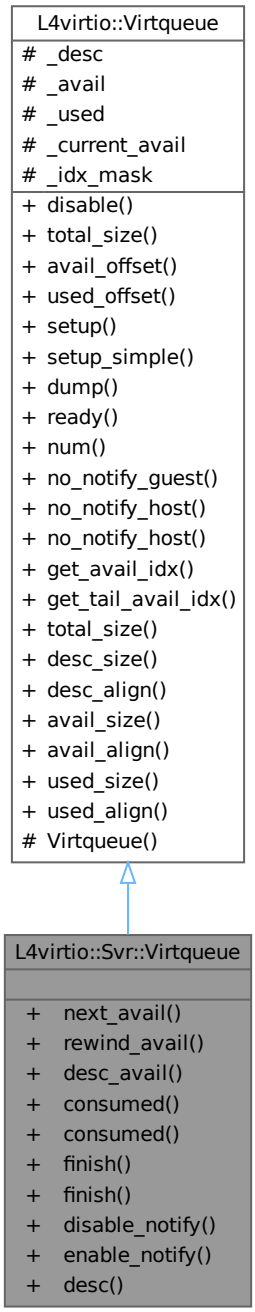
16.419 L4virtio::Svr::Virtqueue Class Reference

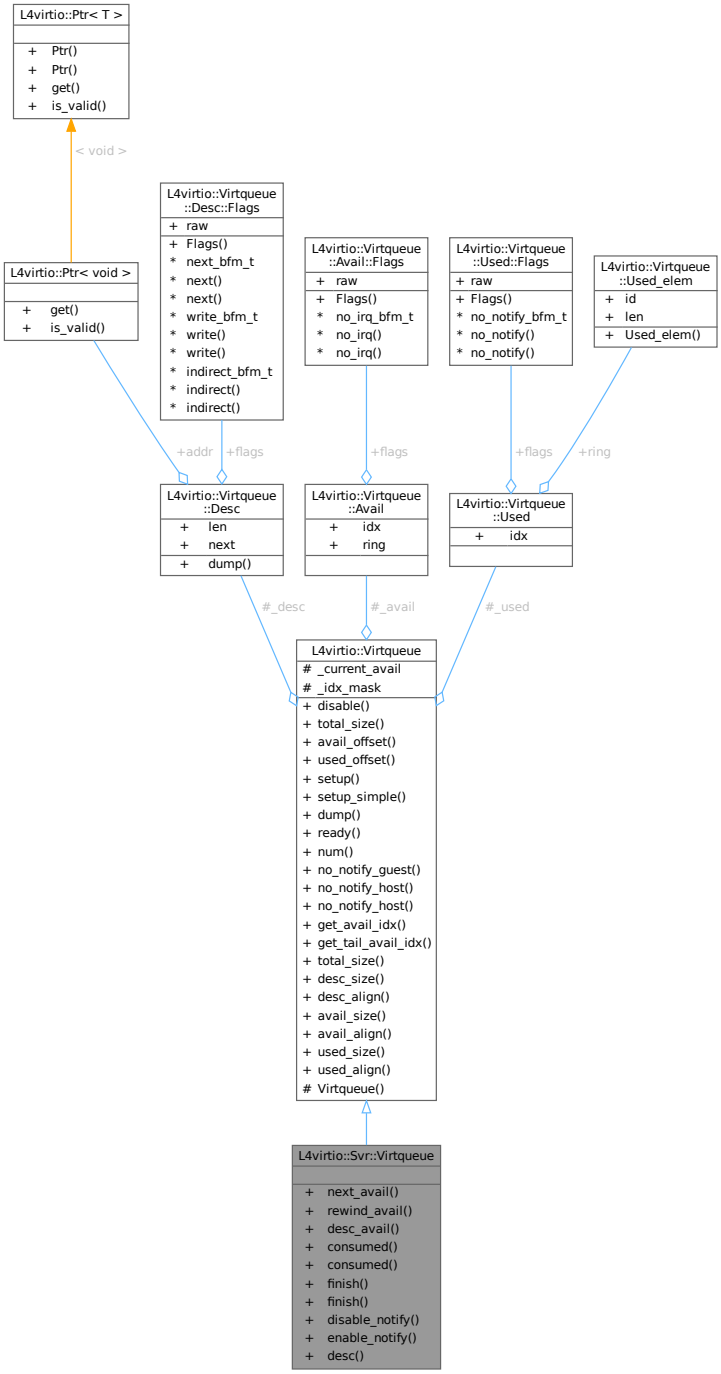
Virtqueue implementation for the device.

`#include <virtio>`

Inheritance diagram for L4virtio::Svr::Virtqueue:



Collaboration diagram for L4virtio::Svr::Virtqueue:



Data Structures

- class Head_desc

  VIRTIO request, essentially a descriptor from the available ring.

Public Member Functions

- Request next_avail ()

Get the next available descriptor from the available ring.

- void rewind_avail (Head_desc const &d)

  Return unfinished descriptors to the available ring, i.e.
- bool desc_avail () const

  Test for available descriptors.
- void consumed (Head_desc const &r, l4_uint32_t len=0)

  Put the given descriptor into the used ring.
- template<typename ITER>
  void consumed (ITER const &begin, ITER const &end)

  Put multiple descriptors into the used ring.
- template<typename QUEUE_OBSERVER>
  void finish (Head_desc &d, QUEUE_OBSERVER *o, l4_uint32_t len=0)

  Add a descriptor to the used ring, and notify an observer.
- template<typename ITER, typename QUEUE_OBSERVER>
  void finish (ITER const &begin, ITER const &end, QUEUE_OBSERVER *o)

  Add a range of descriptors to the used ring, and notify an observer once.
- void disable_notify ()

  Set the 'no notify' flag for this queue.
- void enable_notify ()

  Clear the 'no notify' flag for this queue.
- Desc const * desc (unsigned idx) const

  Get a descriptor from the descriptor list.

Public Member Functions inherited from L4virtio::Virtqueue

- void disable ()

  Completely disable the queue.
- unsigned long total_size () const

  Calculate the total size of this virtqueue.
- unsigned long **avail_offset** () const

  Get the offset of the available ring from the descriptor table.
- unsigned long **used_offset** () const

  Get the offset of the used ring from the descriptor table.
- void setup (unsigned num, void *desc, void *avail, void *used)

  Enable this queue.
- void setup_simple (unsigned num, void *ring)

  Enable this queue.
- void dump (Desc const *d) const

  Dump descriptors for this queue.
- bool ready () const

  Test if this queue is in working state.
- unsigned num () const
- bool no_notify_guest () const

  Get the no IRQ flag of this queue.
- bool no_notify_host () const

  Get the no notify flag of this queue.
- void no_notify_host (bool value)

  Set the no-notify flag for this queue.
- l4_uint16_t get_avail_idx () const

  Get available index from available ring (for debugging).
- l4_uint16_t get_tail_avail_idx () const

  Get tail-available index stored in local state (for debugging).

Additional Inherited Members

Public Types inherited from L4virtio::Virtqueue

- enum

  Fixed alignment values for different parts of a virtqueue.

Static Public Member Functions inherited from L4virtio::Virtqueue

- static unsigned long total_size (unsigned num)

  Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long desc_size (unsigned num)

  Calculate the size of the descriptor table for `num` entries.
- static unsigned long desc_align ()

  Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long avail_size (unsigned num)

  Calculate the size of the available ring for `num` entries.
- static unsigned long avail_align ()

  Get the alignment in zero LSBs needed for the available ring.
- static unsigned long used_size (unsigned num)

  Calculate the size of the used ring for `num` entries.
- static unsigned long used_align ()

  Get the alignment in zero LSBs needed for the used ring.

Protected Member Functions inherited from L4virtio::Virtqueue

- **Virtqueue** ()=default

  Create a disabled virtqueue.

Protected Attributes inherited from L4virtio::Virtqueue

- Desc * **_desc** = nullptr

  pointer to descriptor table, NULL if queue is off.
- Avail * **_avail** = nullptr

  pointer to available ring.
- Used * **_used** = nullptr

  pointer to used ring.
- l4_uint16_t **_current_avail** = 0

  The life counter for the queue.
- l4_uint16_t **_idx_mask** = 0

  mask used for indexing into the descriptor table and the rings.

16.419.1 Detailed Description

Virtqueue implementation for the device.

This class represents a single virtqueue, with a local running available index.

Note

The Virtqueue implementation is not thread-safe.

Definition at line 87 of file virtio.

16.419.2 Member Function Documentation

16.419.2.1 consumed() [1/2]

```
void L4virtio::Svr::Virtqueue::consumed (
            Head_desc const & r,
            l4_uint32_t len = 0)  [inline]
```

Put the given descriptor into the used ring.

Parameters

r	Request that shall be marked as finished.
len	The total number of bytes written.

Precondition

queue must be in working state.

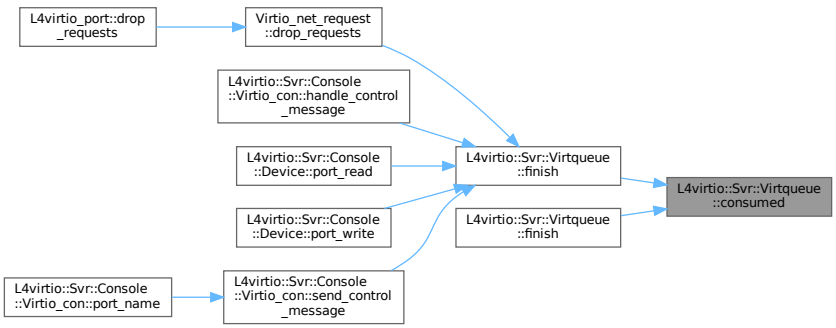
`r` must be a valid request from this queue.

Definition at line 190 of file virtio.

References L4virtio::Virtqueue::_desc, L4virtio::Virtqueue::_idx_mask, and L4virtio::Virtqueue::_used.

Referenced by finish(), and finish().

Here is the caller graph for this function:



16.419.2.2 consumed() [2/2]

```
template<typename ITER>
void L4virtio::Svr::Virtqueue::consumed (
            ITER const & begin,
            ITER const & end)  [inline]
```

Put multiple descriptors into the used ring.

A range of descriptors, specified by `begin` and `end` iterators is added. Each iterator points to a struct that has a `first` member that is a `Head_desc` and a `second` member that is the corresponding number of bytes written.

Template Parameters

ITER	The type of the iterator (inferred).

Parameters

begin	Iterator pointing to first new descriptor.
end	Iterator pointing to one past last entry.

Precondition

queue must be in working state.

Definition at line 213 of file virtio.

References L4virtio::Virtqueue::_desc, L4virtio::Virtqueue::_idx_mask, and L4virtio::Virtqueue::_used.

16.419.2.3 desc()

```
Desc const * L4virtio::Svr::Virtqueue::desc (
             unsigned idx) const  [inline]
```

Get a descriptor from the descriptor list.

Parameters

idx	The index of the descriptor.

Precondition

`idx` < `num`

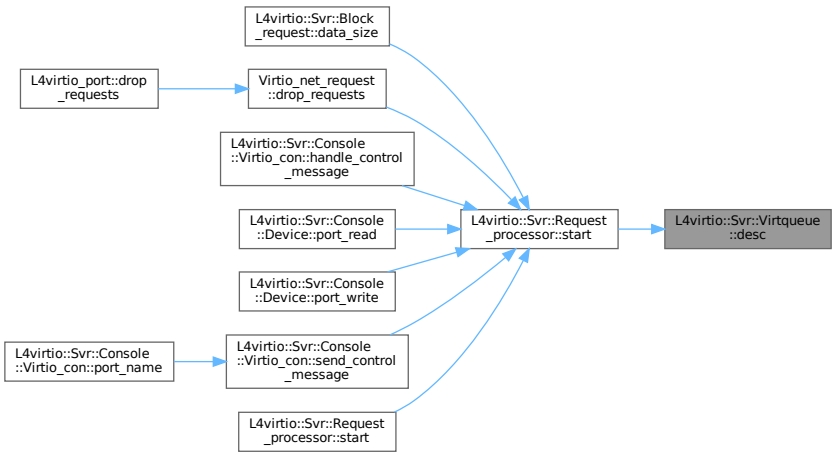
queue must be in working state

Definition at line 298 of file virtio.

References L4virtio::Virtqueue::_desc.

Referenced by L4virtio::Svr::Request_processor::start().

Here is the caller graph for this function:



16.419.2.4 desc_avail()

```
bool L4virtio::Svr::Virtqueue::desc_avail () const  [inline]
```

Test for available descriptors.

Returns

true if there are descriptors available, false if not.

Precondition

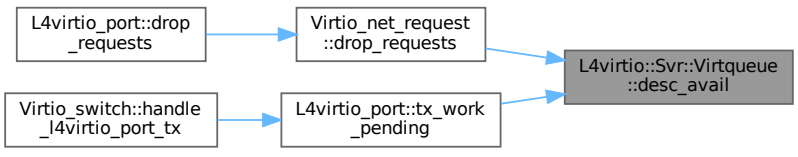
The queue must be in working state.

Definition at line 175 of file virtio.

References L4virtio::Virtqueue::_avail, and L4virtio::Virtqueue::_current_avail.

Referenced by Virtio_net_request::drop_requests(), and L4virtio_port::tx_work_pending().

Here is the caller graph for this function:



16.419.2.5 disable_notify()

```
void L4virtio::Svr::Virtqueue::disable_notify ()  [inline]
```

Set the 'no notify' flag for this queue.

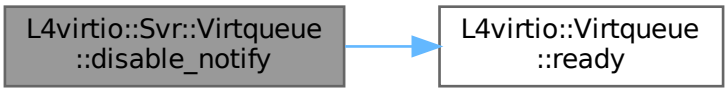
This function may be called on a disabled queue.

Definition at line 273 of file virtio.

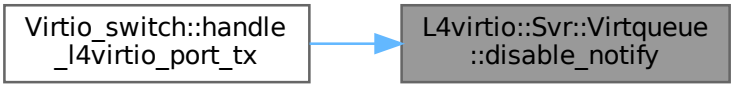
References L4virtio::Virtqueue::_used, L4_LIKELY, and L4virtio::Virtqueue::ready().

Referenced by Virtio_switch::handle_l4virtio_port_tx().

Here is the call graph for this function:



Here is the caller graph for this function:



16.419.2.6 enable_notify()

```
void L4virtio::Svr::Virtqueue::enable_notify ()  [inline]
```

Clear the 'no notify' flag for this queue.

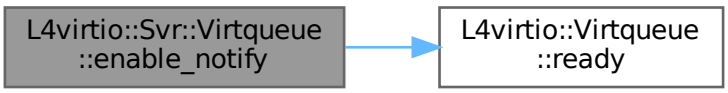
This function may be called on a disabled queue.

Definition at line 284 of file virtio.

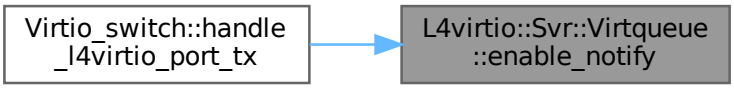
References L4virtio::Virtqueue::_used, L4_LIKELY, and L4virtio::Virtqueue::ready().

Referenced by Virtio_switch::handle_l4virtio_port_tx().

Here is the call graph for this function:



Here is the caller graph for this function:



16.419.2.7 finish() [1/2]

```
template<typename QUEUE_OBSERVER>
void L4virtio::Svr::Virtqueue::finish (
              Head_desc & d,
              QUEUE_OBSERVER * o,
              l4_uint32_t len = 0)  [inline]
```

Add a descriptor to the used ring, and notify an observer.

Template Parameters

QUEUE_OBSERVER	The type of the observer (inferred).

Parameters

d	descriptor of the request that is to be marked as finished.
o	Pointer to the observer that is notified.
len	Number of bytes written for this request.

Precondition

queue must be in working state.

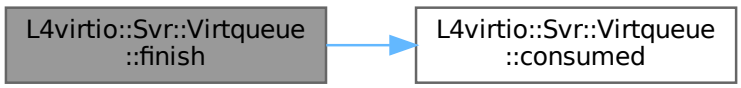
`d` must be a valid request from this queue.

Definition at line 240 of file virtio.

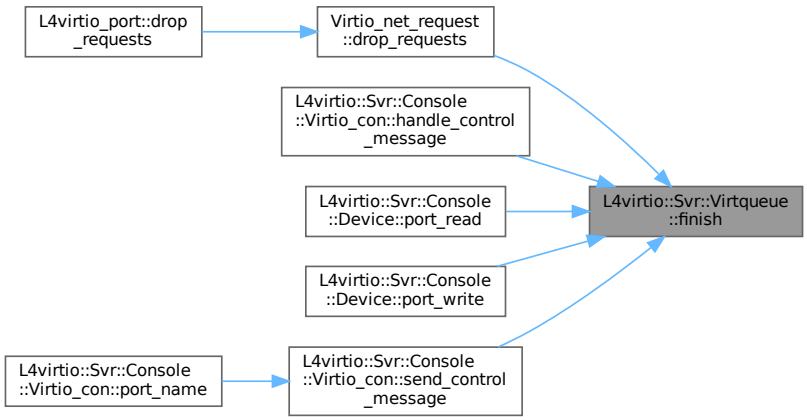
References consumed().

Referenced by Virtio_net_request::drop_requests(), L4virtio::Svr::Console::Virtio_con::handle_control_message(), L4virtio::Svr::Console::Device::port_read(), L4virtio::Svr::Console::Device::port_write(), and L4virtio::Svr::Console::Virtio_con::send_c

Here is the call graph for this function:



Here is the caller graph for this function:



16.419.2.8 finish() [2/2]

```
template<typename ITER, typename QUEUE_OBSERVER>
void L4virtio::Svr::Virtqueue::finish (
            ITER const & begin,
            ITER const & end,
            QUEUE_OBSERVER * o)  [inline]
```

Add a range of descriptors to the used ring, and notify an observer once.

The iterators are passed to consumed<ITER>(ITER const &, ITER const &), and the requirements detailed there apply.

Template Parameters

ITER	type of the iterator (inferred)
QUEUE_OBSERVER	the type of the observer (inferred).

Parameters

begin	iterator pointing to first element.
end	iterator pointing to one past last element.
o	pointer to the observer that is notified.

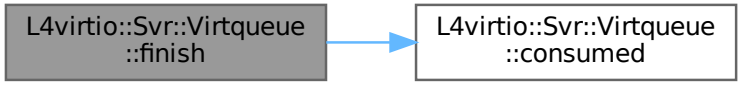
Precondition

queue must be in working state.

Definition at line 262 of file virtio.

References consumed().

Here is the call graph for this function:



16.419.2.9 next_avail()

```
Request L4virtio::Svr::Virtqueue::next_avail ()  [inline]
```

Get the next available descriptor from the available ring.

Precondition

The queue must be in working state.

Returns

A Request for the next available descriptor, the Request is invalid if there are no descriptors in the available ring.

Note

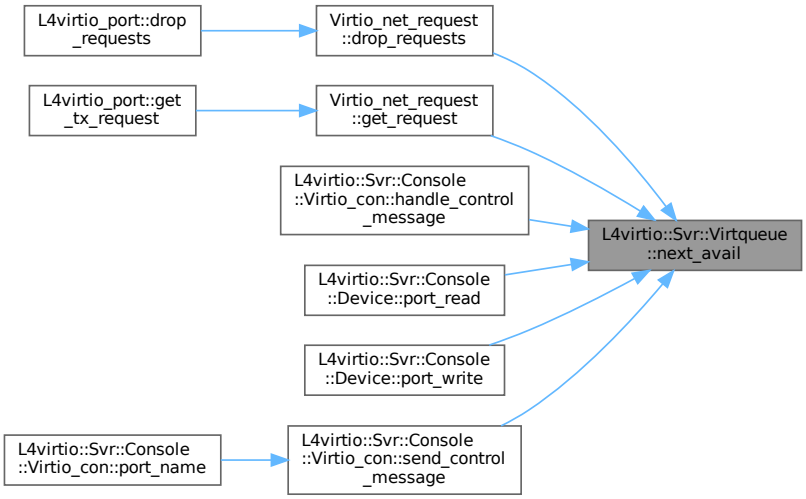
The return value must be checked even when a previous desc_avail() returned true.

Definition at line 136 of file virtio.

References L4virtio::Virtqueue::_avail, L4virtio::Virtqueue::_current_avail, L4virtio::Virtqueue::_idx_mask, and L4_LIKELY.

Referenced by Virtio_net_request::drop_requests(), Virtio_net_request::get_request(), L4virtio::Svr::Console::Virtio_con::handle_cont L4virtio::Svr::Console::Device::port_read(), L4virtio::Svr::Console::Device::port_write(), and L4virtio::Svr::Console::Virtio_con::send_c

Here is the caller graph for this function:



16.419.2.10 rewind_avail()

```
void L4virtio::Svr::Virtqueue::rewind_avail (
            Head_desc const & d)  [inline]
```

Return unfinished descriptors to the available ring, i.e.

reset the local next index of the available ring to the given descriptor.

Parameters

d	descriptor of the request that is to be marked as finished.

Precondition

queue must be in working state.

`d` must be a valid request from this queue, obtained via next_avail(), that has not yet been finished, and in addition, no descriptors following it have been finished.

Definition at line 160 of file virtio.

References L4virtio::Virtqueue::_current_avail, L4virtio::Virtqueue::_desc, and L4virtio::Virtqueue::_idx_mask.

The documentation for this class was generated from the following file:

```

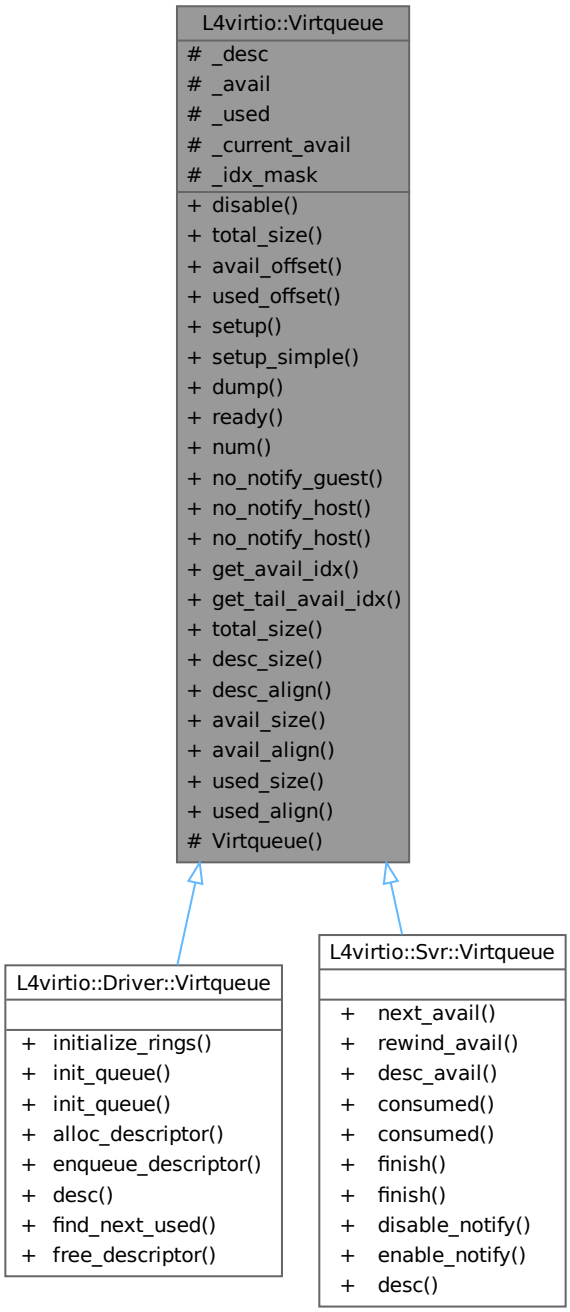
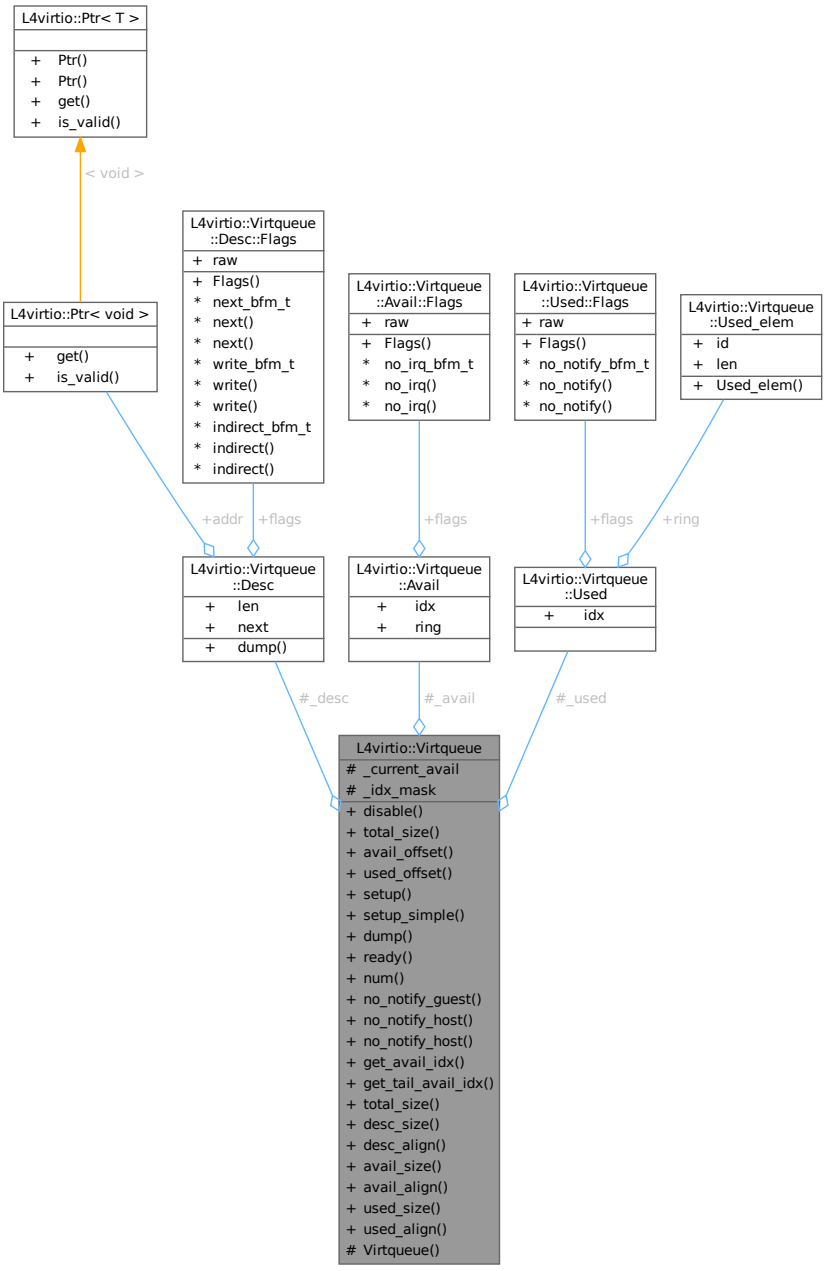
Inheritance diagram for L4virtio::Virtqueue:



Collaboration diagram for L4virtio::Virtqueue:



Data Structures

- class Desc

  Descriptor in the descriptor table.
- class Avail

  Type of available ring, this is read-only for the host.
- struct Used_elem

  Type of an element of the used ring.
- class Used

  Used ring.

Public Types

- enum

  Fixed alignment values for different parts of a virtqueue.

Public Member Functions

- void disable ()

  Completely disable the queue.
- unsigned long total_size () const

  Calculate the total size of this virtqueue.
- unsigned long **avail_offset** () const

  Get the offset of the available ring from the descriptor table.
- unsigned long **used_offset** () const

  Get the offset of the used ring from the descriptor table.
- void setup (unsigned num, void ∗desc, void ∗avail, void ∗used)

  Enable this queue.
- void setup_simple (unsigned num, void ∗ring)

  Enable this queue.
- void dump (Desc const ∗d) const

  Dump descriptors for this queue.
- bool ready () const

  Test if this queue is in working state.
- unsigned num () const
- bool no_notify_guest () const

  Get the no IRQ flag of this queue.
- bool no_notify_host () const

  Get the no notify flag of this queue.
- void no_notify_host (bool value)

  Set the no-notify flag for this queue.
- l4_uint16_t get_avail_idx () const

  Get available index from available ring (for debugging).

16.421.1 Detailed Description

Low-level Virtqueue.

This class represents a single virtqueue, with a local running available index.

Note

The Virtqueue implementation is not thread-safe.

Definition at line 80 of file virtqueue.

16.421.2 Member Function Documentation

16.421.2.1 avail_align()

```
unsigned long L4virtio::Virtqueue::avail_align ()  [inline], [static]
```

Get the alignment in zero LSBs needed for the available ring.

Returns

The alignment in zero LSBs needed for an available ring.

Definition at line 287 of file virtqueue.

16.421.2.2 avail_size()

```
unsigned long L4virtio::Virtqueue::avail_size (
            unsigned num)  [inline], [static]
```

Calculate the size of the available ring for `num` entries.

Parameters

num	The number of entries in the available ring.

Returns

The size in bytes needed for an available ring with `num` entries.

Definition at line 279 of file virtqueue.

References num().

Referenced by L4virtio::Svr::Device_t< No_custom_data >::setup_queue(), setup_simple(), and total_size().

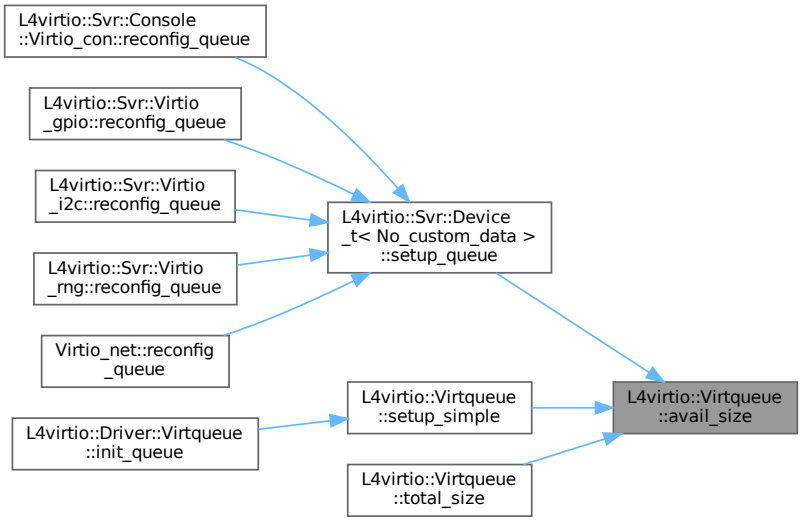
Here is the caller graph for this function:



16.421.2.3 desc_align()

```
unsigned long L4virtio::Virtqueue::desc_align ()  [inline], [static]
```

Get the alignment in zero LSBs needed for the descriptor table.

Returns

The alignment in zero LSBs needed for a descriptor table.

Definition at line 269 of file virtqueue.

16.421.2.4 desc_size()

```
unsigned long L4virtio::Virtqueue::desc_size (
            unsigned num)  [inline], [static]
```

Calculate the size of the descriptor table for num entries.

Parameters

num	The number of entries in the descriptor table.

Returns

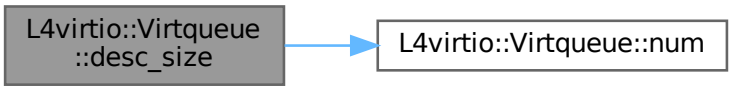
The size in bytes needed for a descriptor table with num entries.

Definition at line 261 of file virtqueue.

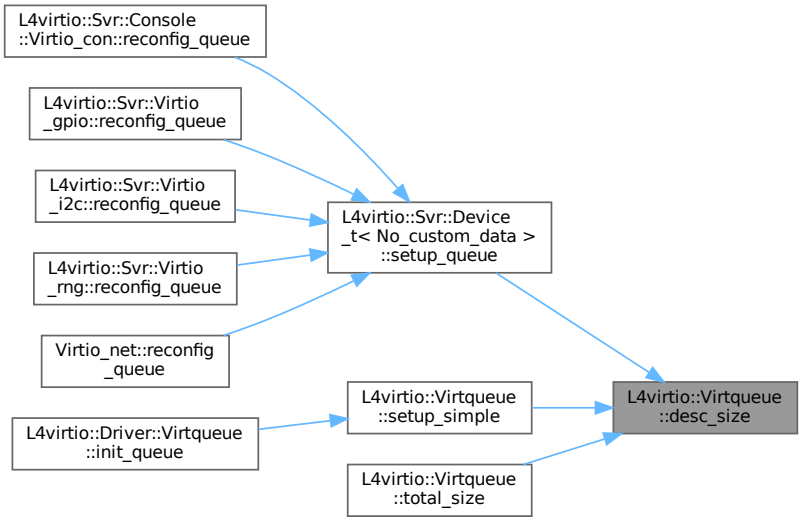
References num().

Referenced by L4virtio::Svr::Device_t< No_custom_data >::setup_queue(), setup_simple(), and total_size().

Here is the call graph for this function:



Here is the caller graph for this function:



16.421.2.5 disable()

```
void L4virtio::Virtqueue::disable ()  [inline]
```

Completely disable the queue.

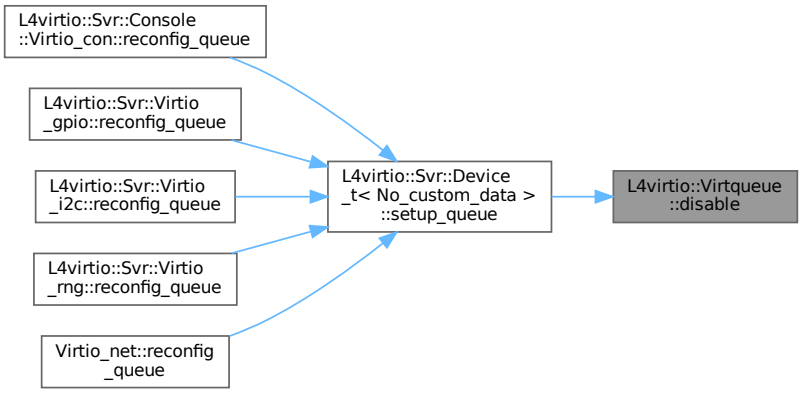
setup() must be used to enable the queue again.

Definition at line 224 of file virtqueue.

References _desc.

Referenced by L4virtio::Svr::Device_t< No_custom_data >::setup_queue().

Here is the caller graph for this function:



16.421.2.6 dump()

```
void L4virtio::Virtqueue::dump (
            Desc const * d) const  [inline]
```

Dump descriptors for this queue.

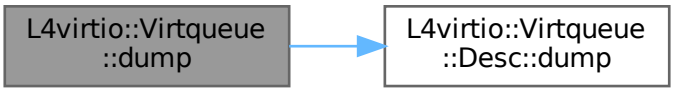
Precondition

the queue must be in working state.

Definition at line 392 of file virtqueue.

References _desc, and L4virtio::Virtqueue::Desc::dump().

Here is the call graph for this function:



16.421.2.7 get_avail_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_avail_idx () const  [inline]
```

Get available index from available ring (for debugging).

Precondition

Queue must be in a working state.

Returns

current index in the available ring (shared between device model and device driver).

Definition at line 449 of file virtqueue.

References _avail.

16.421.2.8 get_tail_avail_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_tail_avail_idx () const  [inline]
```

Get tail-available index stored in local state (for debugging).

Returns

current tail index for the the available ring.

Definition at line 456 of file virtqueue.

References _current_avail.

16.421.2.9 no_notify_guest()

```
bool L4virtio::Virtqueue::no_notify_guest () const  [inline]
```

Get the no IRQ flag of this queue.

Precondition

queue must be in working state.

Returns

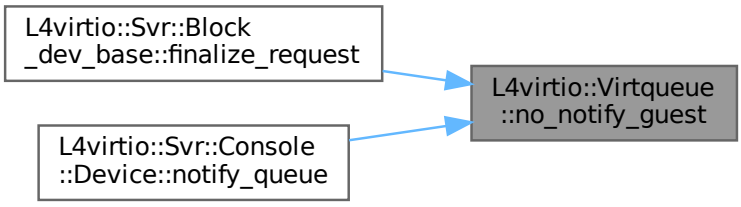
true if the guest does not want to get IRQs (currently).

Definition at line 414 of file virtqueue.

References _avail.

Referenced by L4virtio::Svr::Block_dev_base< Ds_data >::finalize_request(), and L4virtio::Svr::Console::Device::notify_queue().

Here is the caller graph for this function:



16.421.2.10 no_notify_host() [1/2]

```
bool L4virtio::Virtqueue::no_notify_host () const  [inline]
```

Get the no notify flag of this queue.

Precondition

queue must be in working state.

Returns

true if the host does not want to get IRQs (currently).

Definition at line 426 of file virtqueue.

References _used.

16.421.2.11 no_notify_host() [2/2]

```
void L4virtio::Virtqueue::no_notify_host (
            bool value)  [inline]
```

Set the no-notify flag for this queue.

Precondition

Queue must be in a working state.

Definition at line 436 of file virtqueue.

References _used.

16.421.2.12 num()

```
unsigned L4virtio::Virtqueue::num () const  [inline]
```

Returns

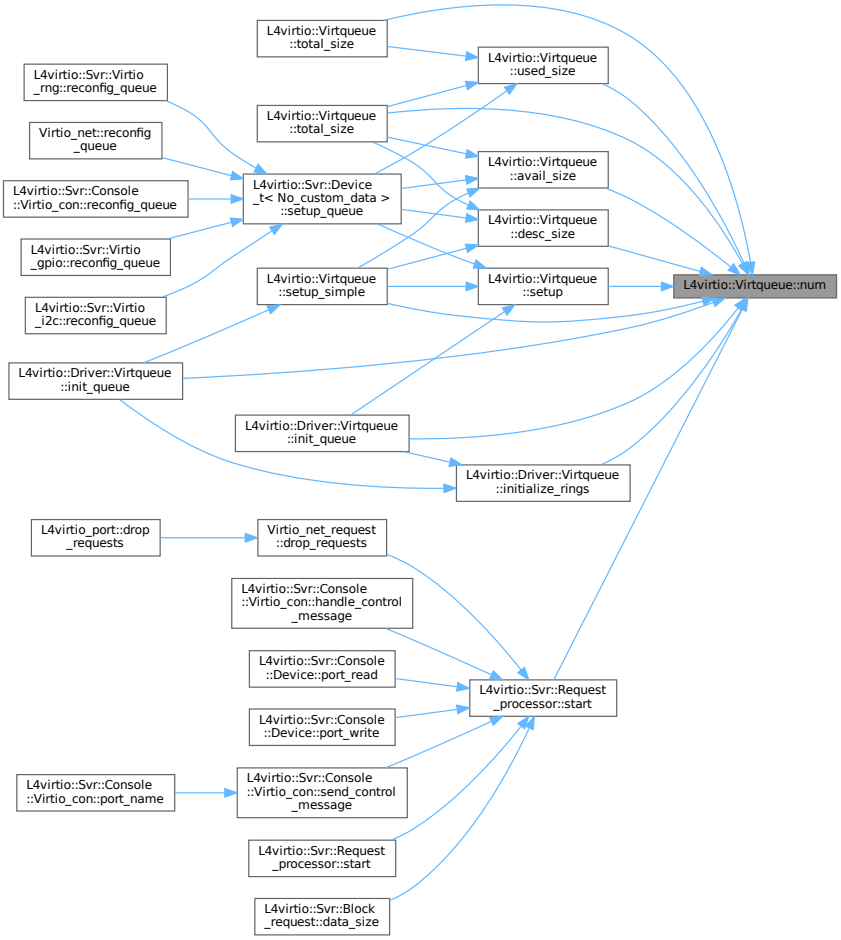
The number of entries in the ring.

Definition at line 404 of file virtqueue.

References _idx_mask.

Referenced by avail_size(), desc_size(), L4virtio::Driver::Virtqueue::init_queue(), L4virtio::Driver::Virtqueue::init_queue(), L4virtio::Driver::Virtqueue::initialize_rings(), setup(), setup_simple(), L4virtio::Svr::Request_processor::start(), total_size(), total_size(), and used_size().

Here is the caller graph for this function:



16.421.2.13 ready()

```
bool L4virtio::Virtqueue::ready () const  [inline]
```

Test if this queue is in working state.

Returns

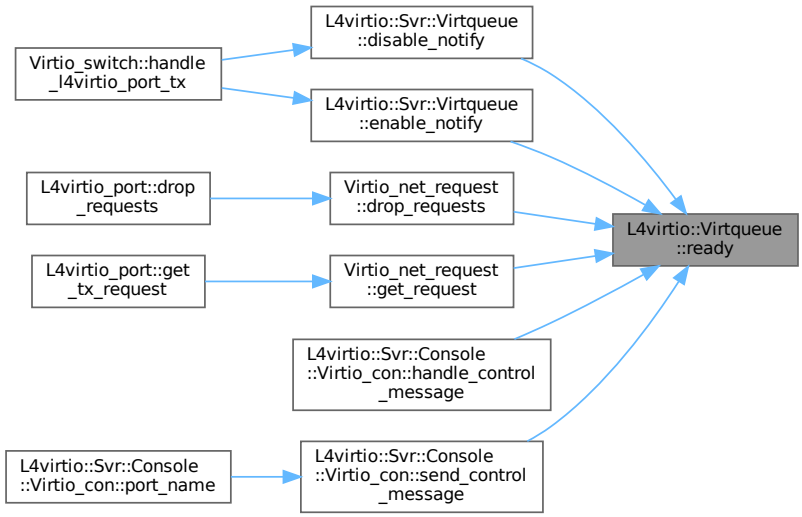
true when the queue is in working state, false else.

Definition at line 400 of file virtqueue.

References _desc, and L4_LIKELY.

Referenced by L4virtio::Svr::Virtqueue::disable_notify(), Virtio_net_request::drop_requests(), L4virtio::Svr::Virtqueue::enable_notify(), Virtio_net_request::get_request(), L4virtio::Svr::Console::Virtio_con::handle_control_message(), and L4virtio::Svr::Console::Virtio_co

Here is the caller graph for this function:



16.421.2.14 setup()

```
void L4virtio::Virtqueue::setup (
             unsigned num,
             void * desc,
             void * avail,
             void * used)  [inline]
```

Enable this queue.

Parameters

num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
desc	The address of the descriptor table. (Must be Desc_align aligned and at least `desc_size(num)` bytes in size.)
avail	The address of the available ring. (Must be Avail_align aligned and at least `avail_size(num)` bytes in size.)

used	The address of the used ring. (Must be Used_align aligned and at least `used_size(num)` bytes in size.)

Due to the data type of the descriptors, the queue can have a maximum size of 2^16.

Definition at line 349 of file virtqueue.

References _avail, _current_avail, _desc, _idx_mask, _used, L4_EINVAL, and num().

Referenced by L4virtio::Driver::Virtqueue::init_queue(), L4virtio::Svr::Device_t< No_custom_data >::setup_queue(), and setup_simple().

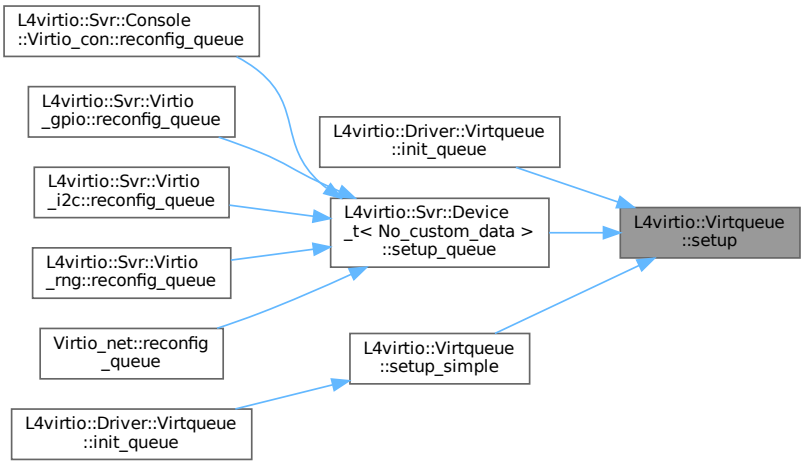
Here is the caller graph for this function:



16.421.2.15 setup_simple()

```
void L4virtio::Virtqueue::setup_simple (
            unsigned num,
            void * ring)  [inline]
```

Enable this queue.

Parameters

num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).
ring	The base address for the queue data structure. The memory block at `ring` must be at least `total_size(num)` bytes in size and have an alignment of Desc_align (desc_align()) bits.

Due to the data type of the descriptors, the queue can have a maximum size of 2^16.

Definition at line 378 of file virtqueue.

References avail_size(), desc_size(), l4_round_size(), num(), and setup().

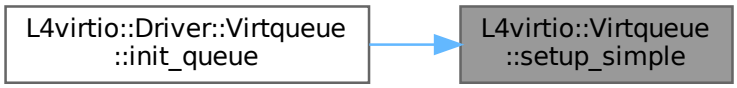
Here is the caller graph for this function:



16.421.2.16 total_size() [1/2]

```
unsigned long L4virtio::Virtqueue::total_size () const  [inline]
```

Calculate the total size of this virtqueue.

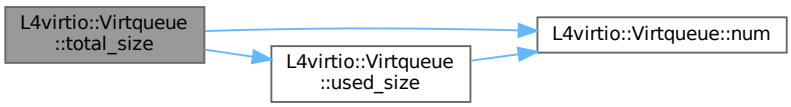
Precondition

The queue has been set up.

Definition at line 314 of file virtqueue.

References _desc, _used, num(), and used_size().

Here is the call graph for this function:



16.421.2.17 total_size() [2/2]

```
unsigned long L4virtio::Virtqueue::total_size (
            unsigned num)  [inline], [static]
```

Calculate the total size for a virtqueue of the given dimensions.

Parameters

num	The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2).

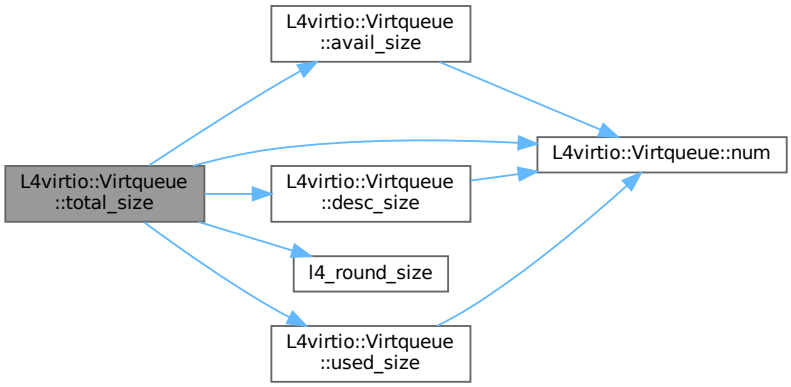
Returns

The total size in bytes of the queue data structures.

Definition at line 245 of file virtqueue.

References avail_size(), desc_size(), l4_round_size(), num(), and used_size().

Here is the call graph for this function:



16.421.2.18 used_align()

```
unsigned long L4virtio::Virtqueue::used_align ()  [inline], [static]
```

Get the alignment in zero LSBs needed for the used ring.

Returns

The alignment in zero LSBs needed for an used ring.

Definition at line 306 of file virtqueue.

16.421.2.19 used_size()

```
unsigned long L4virtio::Virtqueue::used_size (
            unsigned num)  [inline], [static]
```

Calculate the size of the used ring for num entries.

Parameters

num	The number of entries in the used ring.

Returns

The size in bytes needed for an used ring with num entries.

Definition at line 298 of file virtqueue.

References num().

Referenced by L4virtio::Svr::Device_t< No_custom_data >::setup_queue(), total_size(), and total_size().

The documentation for this class was generated from the following file:

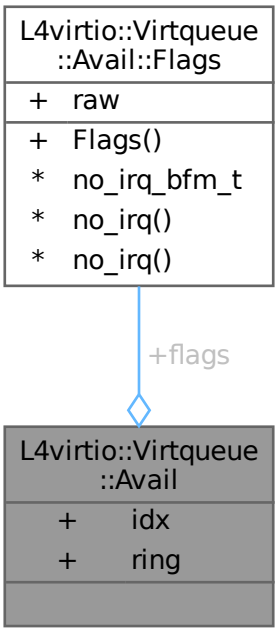
- l4/l4virtio/virtqueue

16.422 L4virtio::Virtqueue::Avail Class Reference

Type of available ring, this is read-only for the host.

`#include <virtqueue>`

Collaboration diagram for L4virtio::Virtqueue::Avail:



Data Structures

- struct Flags

  Flags of the available ring.

Data Fields

- Flags **flags**

  flags of available ring
- l4_uint16_t **idx**

  available index written by guest
- l4_uint16_t **ring** [ ]

  array of available descriptor indexes.

16.422.1 Detailed Description

Type of available ring, this is read-only for the host.

Definition at line 128 of file virtqueue.

The documentation for this class was generated from the following file:

- l4/l4virtio/virtqueue

16.423 L4virtio::Virtqueue::Avail::Flags Struct Reference

Flags of the available ring.

`#include <virtqueue>`

Collaboration diagram for L4virtio::Virtqueue::Avail::Flags:

Public Member Functions

- **Flags** (l4_uint16_t v)

  Make Flags from the raw value.

Data Fields

- l4_uint16_t **raw**

  raw 16bit flags value of the available ring.

- typedef cxx::Bitfield< decltype(raw), 0, 0 > no_irq_bfm_t

  Guest does not want to receive interrupts when requests are finished.
- constexpr no_irq_bfm_t::Val **no_irq** () const

  Get the `no_irq` bits (0 to 0) of `raw`.
- constexpr no_irq_bfm_t::Ref **no_irq** ()

  Get a reference to the `no_irq` bits (0 to 0) of `raw`.

16.423.1 Detailed Description

Flags of the available ring.

Definition at line 134 of file virtqueue.

16.423.2 Member Typedef Documentation

16.423.2.1 no_irq_bfm_t

```
typedef cxx::Bitfield<decltype(raw), 0, 0> L4virtio::Virtqueue::Avail::Flags::no_irq_bfm_t
```

Guest does not want to receive interrupts when requests are finished.

Type to access the `no_irq` bits (0 to 0) of `raw`.

Definition at line 143 of file virtqueue.

The documentation for this struct was generated from the following file:

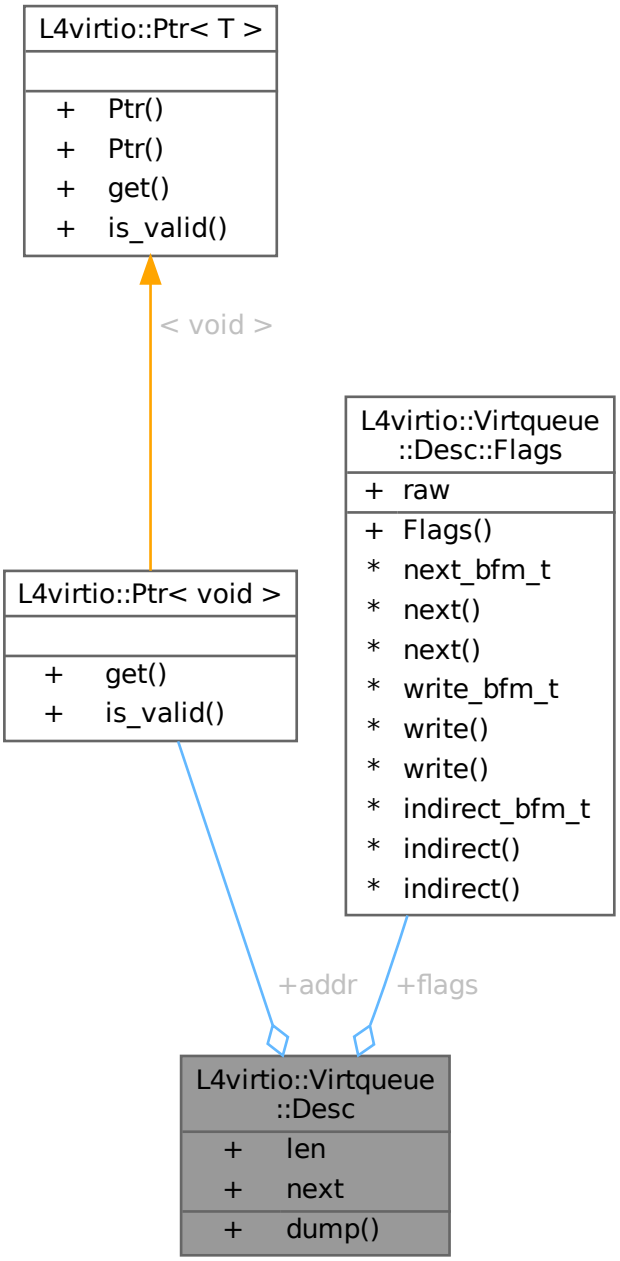
- l4/l4virtio/virtqueue

16.424 L4virtio::Virtqueue::Desc Class Reference

Descriptor in the descriptor table.

```
#include <virtqueue>
```

Collaboration diagram for L4virtio::Virtqueue::Desc:



Data Structures

- struct Flags

  Type for descriptor flags.

Public Member Functions

- void **dump** (unsigned idx) const

Dump a single descriptor.

Data Fields

- Ptr< void > **addr**
  Address stored in descriptor.
- l4_uint32_t **len**
  Length of described buffer.
- Flags **flags**
  Descriptor flags.
- l4_uint16_t **next**
  Index of the next chained descriptor.

16.424.1 Detailed Description

Descriptor in the descriptor table.

Definition at line 86 of file virtqueue.

The documentation for this class was generated from the following file:

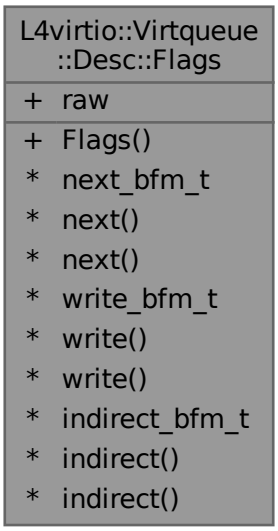
- l4/l4virtio/virtqueue

16.425 L4virtio::Virtqueue::Desc::Flags Struct Reference

Type for descriptor flags.

`#include <virtqueue>`

Collaboration diagram for L4virtio::Virtqueue::Desc::Flags:



Public Member Functions

- **Flags** (l4_uint16_t v)

  Make Flags from raw 16bit value.

Data Fields

- l4_uint16_t **raw**

  raw flags value of a virtio descriptor.

- typedef cxx::Bitfield< decltype(raw), 0, 0 > next_bfm_t

  Part of a descriptor chain which is continued with the next field.
- constexpr next_bfm_t::Val **next** () const

  Get the `next` bits (0 to 0) of `raw`.
- constexpr next_bfm_t::Ref **next** ()

  Get a reference to the `next` bits (0 to 0) of `raw`.

- typedef cxx::Bitfield< decltype(raw), 1, 1 > write_bfm_t

  Block described by this descriptor is writeable.
- constexpr write_bfm_t::Val **write** () const

  Get the `write` bits (1 to 1) of `raw`.
- constexpr write_bfm_t::Ref **write** ()

  Get a reference to the `write` bits (1 to 1) of `raw`.

- typedef cxx::Bitfield< decltype(raw), 2, 2 > indirect_bfm_t

  Indirect descriptor, block contains a list of descriptors.
- constexpr indirect_bfm_t::Val **indirect** () const

  Get the `indirect` bits (2 to 2) of `raw`.
- constexpr indirect_bfm_t::Ref **indirect** ()

  Get a reference to the `indirect` bits (2 to 2) of `raw`.

16.425.1 Detailed Description

Type for descriptor flags.

Definition at line 92 of file virtqueue.

16.425.2 Member Typedef Documentation

16.425.2.1 indirect_bfm_t

```
typedef cxx::Bitfield<decltype(raw), 2, 2> L4virtio::Virtqueue::Desc::Flags::indirect_bfm_t
```

Indirect descriptor, block contains a list of descriptors.

Type to access the `indirect` bits (2 to 2) of `raw`.

Definition at line 105 of file virtqueue.

16.425.2.2 next_bfm_t

```
typedef cxx::Bitfield<decltype(raw), 0, 0> L4virtio::Virtqueue::Desc::Flags::next_bfm_t
```

Part of a descriptor chain which is continued with the next field.

Type to access the `next` bits (0 to 0) of `raw`.

Definition at line 101 of file virtqueue.

16.425.2.3 write_bfm_t

```
typedef cxx::Bitfield<decltype(raw), 1, 1> L4virtio::Virtqueue::Desc::Flags::write_bfm_t
```

Block described by this descriptor is writeable.

Type to access the `write` bits (1 to 1) of `raw`.

Definition at line 103 of file virtqueue.

The documentation for this struct was generated from the following file:

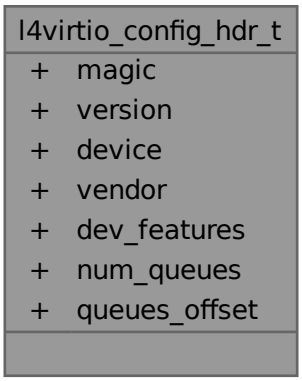
16.432 l4virtio_config_hdr_t Struct Reference

L4-VIRTIO config header, provided in shared data space.

`#include <virtio.h>`

Collaboration diagram for l4virtio_config_hdr_t:



Data Fields

- l4_uint32_t **magic**
  magic value (must be 'virt').
- l4_uint32_t **version**
  VIRTIO version.
- l4_uint32_t **device**
  device ID
- l4_uint32_t **vendor**
  vendor ID
- l4_uint32_t **dev_features**
  device features windows selected by device_feature_sel
- l4_uint32_t **num_queues**
  number of virtqueues
- l4_uint32_t **queues_offset**
  offset of virtqueue config array

16.432.1 Detailed Description

L4-VIRTIO config header, provided in shared data space.

Definition at line 132 of file virtio.h.

The documentation for this struct was generated from the following file:

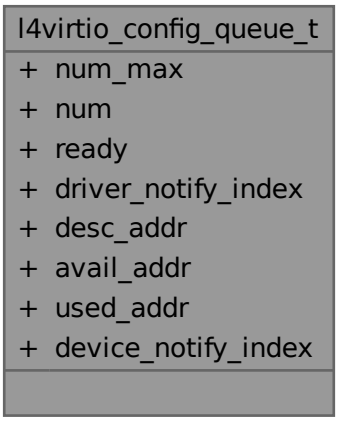
- l4/l4virtio/virtio.h

16.433 l4virtio_config_queue_t Struct Reference

Queue configuration entry.

`#include <virtio.h>`

Collaboration diagram for l4virtio_config_queue_t:



Data Fields

- l4_uint16_t **num_max**

  R: maximum number of descriptors supported by this queue.
- l4_uint16_t **num**

  RW: number of descriptors configured for this queue.
- l4_uint16_t **ready**

  RW: queue ready flag (read-write).
- l4_uint16_t **driver_notify_index**

  W: Event index to be used for device notifications (device to driver).
- l4_uint64_t **desc_addr**

  W: address of descriptor table.
- l4_uint64_t **avail_addr**

  W: address of available ring.
- l4_uint64_t **used_addr**

  W: address of used ring.
- l4_uint16_t **device_notify_index**

  R: Event index to be used by the driver (driver to device).

16.433.1 Detailed Description

Queue configuration entry.

An array of such entries is available at the l4virtio_config_hdr_t::queues_offset in the config data space.

Consistency rules for the queue config are:

- A driver might read `num_max` at any time.
- A driver must write to `num`, `desc_addr`, `avail_addr`, and `used_addr` only when `ready` is zero (0). Values in these fields are validated and used by the device only after successfully setting `ready` to one (1), either by the IPC or by L4VIRTIO_CMD_CFG_QUEUE.
- The value of `device_notify_index` is valid only when `ready` is one.
- The driver might write to `device_notify_index` at any time, however the change is guaranteed to take effect after a successful L4VIRTIO_CMD_CFG_QUEUE or after a config_queue IPC. Note, the change might also have immediate effect, depending on the device implementation.

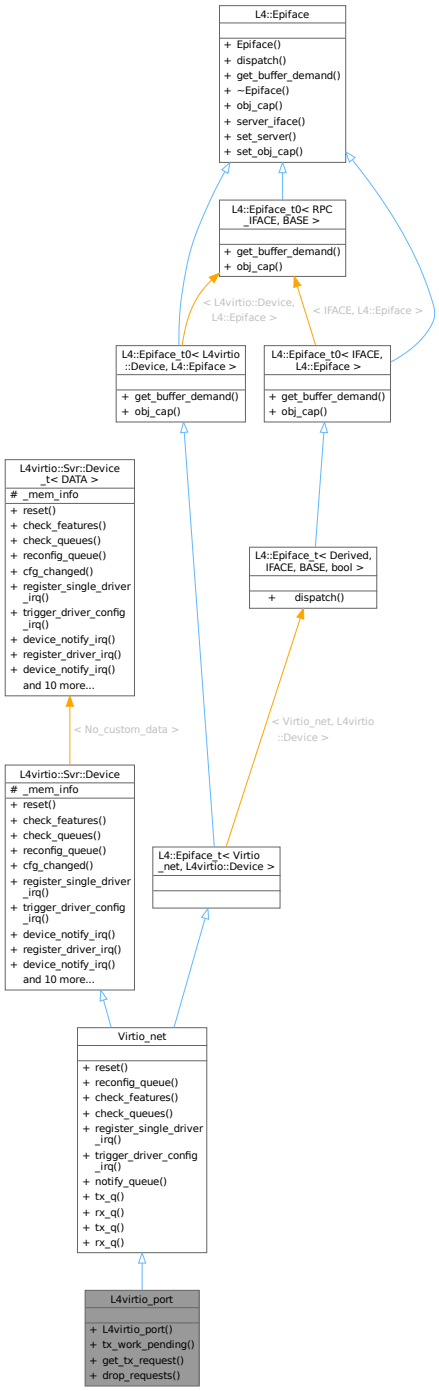
16.440 L4virtio_port Class Reference

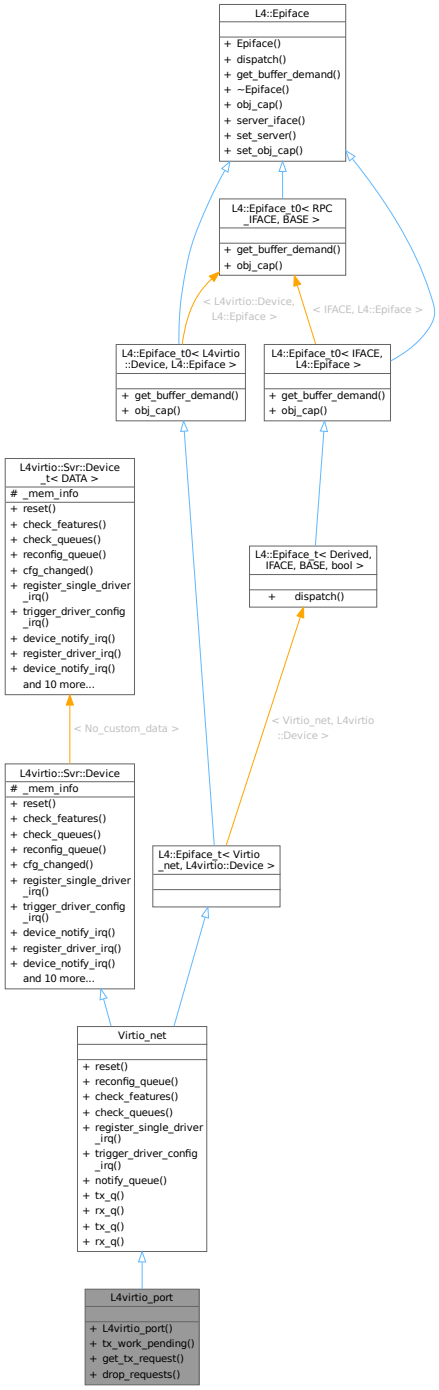
A Port on the Virtio Net Switch.

`#include <port_l4virtio.h>`

Inheritance diagram for L4virtio_port:



Collaboration diagram for L4virtio_port:



Public Member Functions

- **L4virtio_port** (unsigned vq_max, unsigned num_ds, char const ∗name, l4_uint8_t const ∗mac)

  Create a Virtio net port object.
- bool **tx_work_pending** () const

  Check whether there is any work pending on the transmission queue.
- std::optional< Virtio_net_request > **get_tx_request** ()

Get one request from the transmission queue.

- void drop_requests ()

  Drop all requests pending in the transmission queue.

Public Member Functions inherited from Virtio_net

- void **reset** () override

  reset callback, called for doing a device reset

- int **reconfig_queue** (unsigned index) override

  callback for client queue-config request

- bool **check_features** () override

  callback for checking the subset of accepted features

- bool **check_queues** () override

  Check whether both virtqueues are ready.

- void **register_single_driver_irq** () override

  Save the `_kick_guest_irq` that the client sent via `device_notification_irq()`.

- void **trigger_driver_config_irq** () override

  callback for triggering configuration change notification IRQ

- void notify_queue (L4virtio::Svr::Virtqueue *queue)

  Trigger the `_kick_guest_irq` IRQ.

- Virtqueue * **tx_q** ()

  Getter for the transmission queue.

- Virtqueue * **rx_q** ()

  Getter for the receive queue.

- Virtqueue const * **tx_q** () const

  Getter for the transmission queue.

- Virtqueue const * **rx_q** () const

  Getter for the receive queue.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes

- virtual L4::Cap< L4::Irq > **device_notify_irq** () const

  callback to gather the device notification IRQ (old-style)

- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).

- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).

- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.

- **Device_t** (Dev_config *dev_config)

  Make a device for the given config.

- Mem_list const * **mem_info** () const

  Get the memory region list used for this device.

- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.

- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.

- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.
- bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.
- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.
- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- Type_info::Demand **get_buffer_demand** () const

  Get the server-side buffer demand based in IFACE.
- Cap< L4virtio::Device > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()

  Make a server object.
- virtual ~**Epiface** ()=0

  Destroy the object.
- Stored_cap obj_cap () const

  Get the capability to the kernel object belonging to this object.
- Server_iface * server_iface () const

  Get pointer to server interface at which the object is currently registered.
- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)

  Set server registration info for the object.
- void **set_obj_cap** (Cap< void > const &cap)

  Deprecated server registration function.

Additional Inherited Members

Public Types inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- typedef L4virtio::Device **Interface**

  Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef Ipc_svr::Server_iface **Server_iface**

  Type for abstract server interface.
- typedef Ipc_svr::Server_iface::Demand **Demand**

  Type for server-side receive buffer demand.

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.440.1 Detailed Description

A Port on the Virtio Net Switch.

A Port object gets created by `Virtio_factory::op_create()`. This function actually only instantiates objects of the types `Switch_port` and `Monitor_port`. The created Port registers itself at the switch's server. Usually, the IPC call for port creation comes from ned. To finalize the setup, the client has to initialize the port during the virtio initialization phase. To do this, the client registers a dataspace for queues and buffers and provides an IRQ to notify the client on incoming network requests.

Definition at line 36 of file port_l4virtio.h.

16.440.2 Member Function Documentation

16.440.2.1 drop_requests()

```
void L4virtio_port::drop_requests ()  [inline]
```

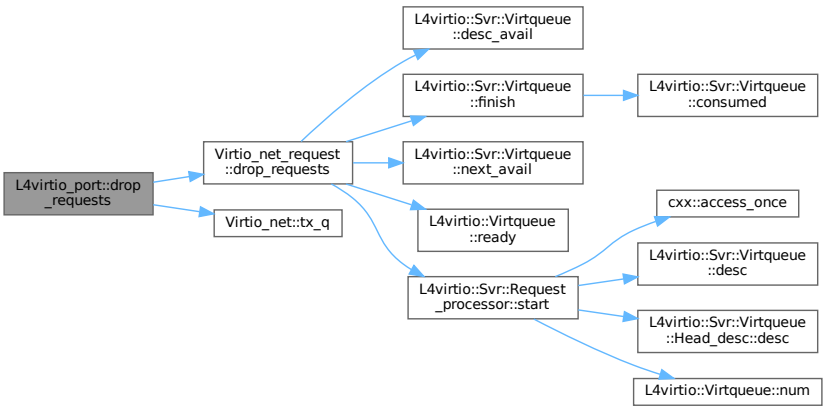
Drop all requests pending in the transmission queue.

This is used for monitor ports, which are not allowed to send packets.

Definition at line 103 of file port_l4virtio.h.

References Virtio_net_request::drop_requests(), and Virtio_net::tx_q().

Here is the call graph for this function:



The documentation for this class was generated from the following file:

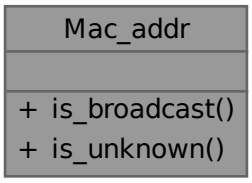
16.441 Mac_addr Class Reference

A wrapper class around the value of a MAC address.

`#include <mac_addr.h>`

Collaboration diagram for Mac_addr:



Public Member Functions

- bool **is_broadcast** () const

  Check if MAC address is a broadcast or multicast address.
- bool **is_unknown** () const

  Check if the MAC address is not yet known.

16.441.1 Detailed Description

A wrapper class around the value of a MAC address.

Definition at line 19 of file mac_addr.h.

The documentation for this class was generated from the following file:

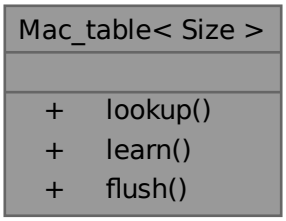
- pkg/virtio-net-switch/server/switch/mac_addr.h

16.442 Mac_table< Size > Class Template Reference

Mac_table manages a 1:n association between ports and MAC addresses.

`#include <mac_table.h>`

Collaboration diagram for Mac_table< Size >:



Public Member Functions

- Port_iface * lookup (Mac_addr dst, l4_uint16_t vlan_id) const
  Find the destination port for a MAC address and VLAN id.
- void learn (Mac_addr src, Port_iface *port, l4_uint16_t vlan_id)
  Learn a MAC address (add it to the MAC table).
- void flush (Port_iface *port)
  Flush all associations with a given port.

16.442.1 Detailed Description

template<std::size_t Size = 1024U>
class Mac_table< Size >

Mac_table manages a 1:n association between ports and MAC addresses.

There are different types of devices which might be attached to a port. For a normal device the switch sees exactly one MAC address per port - the MAC address of the device attached to it. But there might be other devices like software bridges attached to the port sending packets with different MAC addresses to the port. Therefore the switch has to manage a 1:n association between ports and MAC addresses. The MAC table manages this association.

When a packet comes in we need to find the destination port for the packet and therefore perform a lookup based on the MAC address.

To prevent unbounded growth of the lookup table, the number of entries is limited. Replacement is done on a round-robin basis. If the capacity was reached, the oldest entry is evicted.

Definition at line 40 of file mac_table.h.

16.442.2 Member Function Documentation

16.442.2.1 flush()

```
template<std::size_t Size = 1024U>
void Mac_table< Size >::flush (
            Port_iface * port)  [inline]
```

Flush all associations with a given port.

Parameters

port	Pointer to port that is to be flushed

This function removes all references to a given port from the MAC table. Since we manage a 1:n association between ports and MAC addresses there might be more than one entry for a given port and we have to iterate over the whole array to delete every reference to the port.

Definition at line 129 of file mac_table.h.

16.442.2.2 learn()

```
template<std::size_t Size = 1024U>
void Mac_table< Size >::learn (
             Mac_addr src,
             Port_iface * port,
             l4_uint16_t vlan_id)  [inline]
```

Learn a MAC address (add it to the MAC table).

Parameters

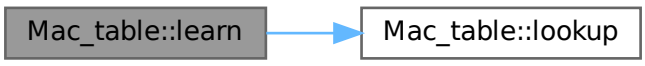
src	MAC address
port	Pointer to the port object that can be used to reach MAC address src
vlan↩ _id	VLAN id of the packet destination.

Will evict the oldest learned address from the table if the maximum capacity was reached and if the MAC address was not known yet. The source port of the table entry is always updated to cope with clients that move between ports.

Definition at line 78 of file mac_table.h.

References L4_UNLIKELY, and lookup().

Here is the call graph for this function:



16.442.2.3 lookup()

```
template<std::size_t Size = 1024U>
Port_iface * Mac_table< Size >::lookup (
             Mac_addr dst,
             l4_uint16_t vlan_id) const  [inline]
```

Find the destination port for a MAC address and VLAN id.

Parameters

dst	MAC address
vlan↩ _id	VLAN id

Return values

nullptr	The MAC address is not known (yet)
other	Pointer to the destination port

Definition at line 58 of file mac_table.h.

Referenced by learn().

Here is the caller graph for this function:

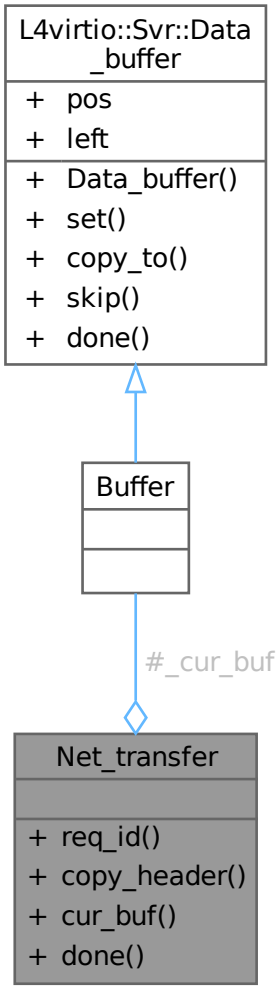
16.443 Net_transfer Class Reference

A network request to only a single destination.

`#include <request.h>`

Collaboration diagram for Net_transfer:



Public Member Functions

- void const ∗ **req_id** () const

  Identifier for the underlying `Net_request`*, used for logging purposes.*
- virtual void **copy_header** (Virtio_net::Hdr ∗dst_header) const =0

  Populate the virtio-net header for the destination.
- Buffer & cur_buf ()

  Buffer containing (a part of) the packet data.
- virtual bool done ()=0

  Check whether the transfer has been completed, i.e.

16.443.1 Detailed Description

A network request to only a single destination.

A Net_request can have multiple destinations (being a broadcast request, for example). That is why it is processed by multiple Net_transfers, each representing the delivery to a single destination port.

Port_iface::handle_request uses the Net_transfer to move one packet to the destination of the request.

Definition at line 33 of file request.h.

16.443.2 Member Function Documentation

16.443.2.1 cur_buf()

```
Buffer & Net_transfer::cur_buf ()  [inline]
```

Buffer containing (a part of) the packet data.

Once emptied, a call to done() might replenish the buffer, in case the net request consisted of multiple chained buffers.

Definition at line 54 of file request.h.

16.443.2.2 done()

```
virtual bool Net_transfer::done ()  [pure virtual]
```

Check whether the transfer has been completed, i.e.

the entire packet data has been copied.

Return values

false	There is remaining packet data that needs to be copied.
true	The entire packet data has been copied.

Exceptions

L4virtio::Svr::Bad_descriptor	Exception raised in SRC port queue.

The documentation for this class was generated from the following file:

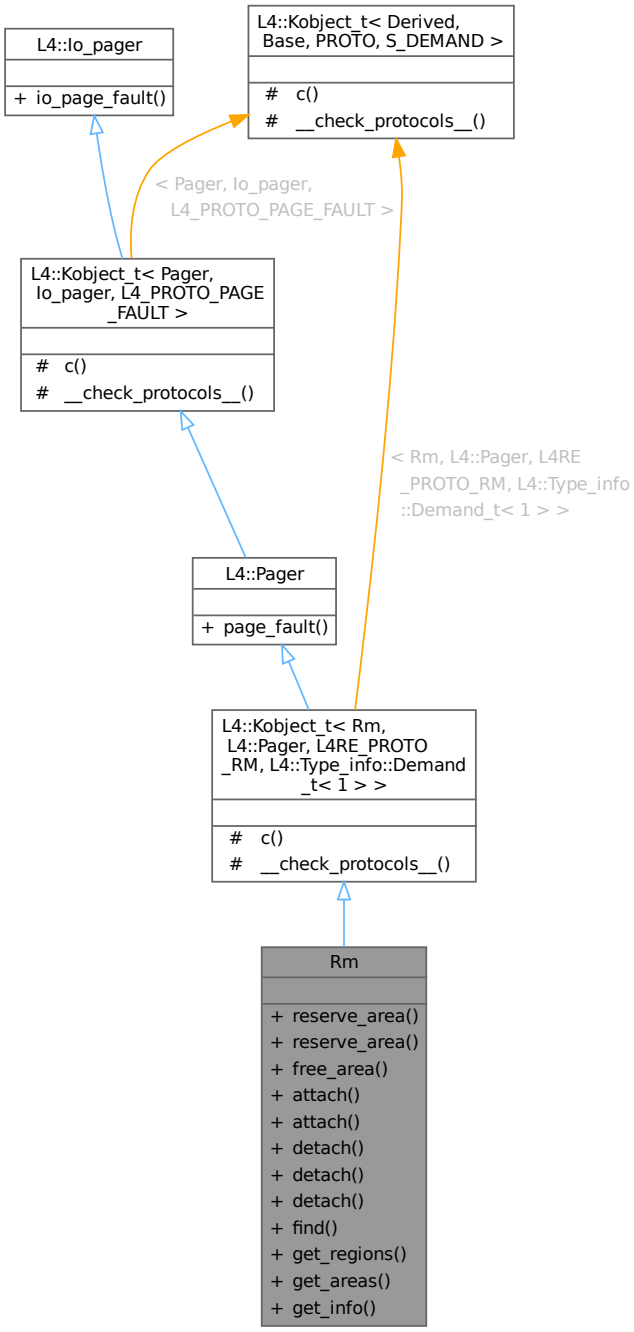
- pkg/virtio-net-switch/server/switch/request.h

16.444 Rm Class Reference

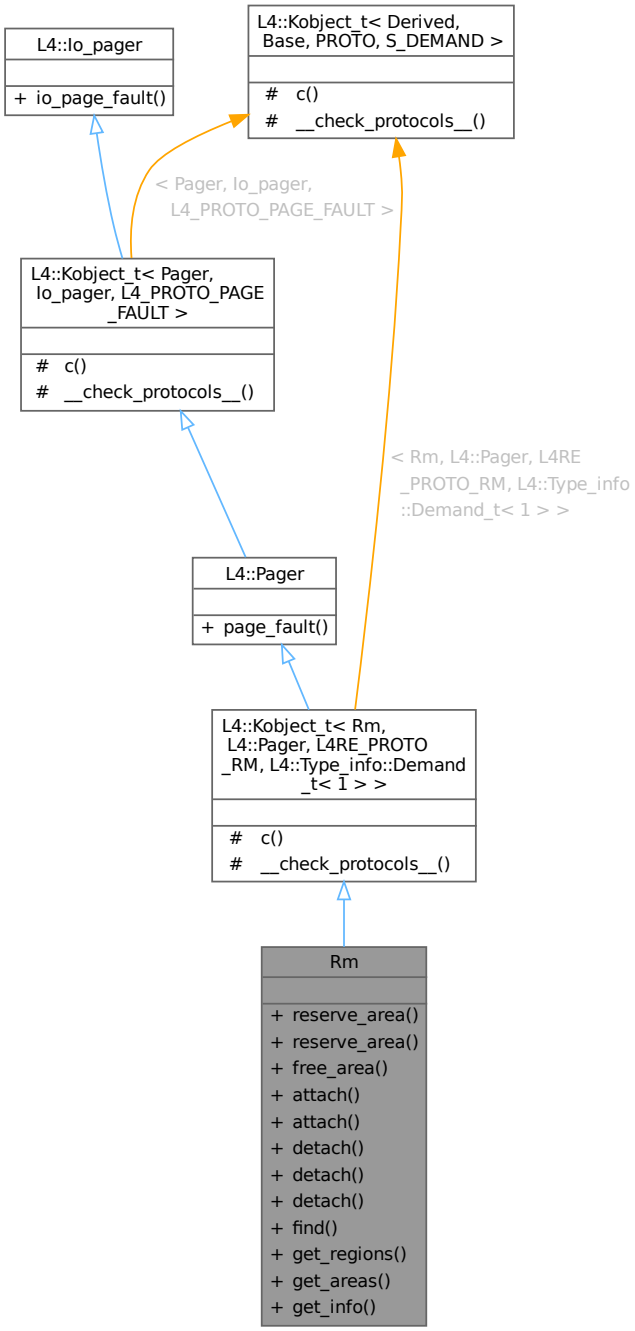
Region map.

`#include <l4/re/rm>`

Inheritance diagram for Rm:



Collaboration diagram for Rm:



Data Structures

- struct F

  Rm flags definitions.
- class Unique_region

  Unique region.
- struct Region

A region is a range of virtual addresses which is backed by content.

- struct Area

  An area is a range of virtual addresses which is reserved, see L4Re::Rm::reserve_area().

Public Types

- enum Detach_result { Detached_ds = 0 , Kept_ds = 1 , Split_ds = 2 , **Detach_result_mask** = 3 , Detach_again = 4 }

  Result values for detach operation.
- enum Region_flag_shifts { Caching_shift = Dataspace::F::Caching_shift }

  Region flag shifts.
- enum Detach_flags { Detach_exact = 1 , Detach_overlap = 2 , Detach_keep = 4 }

  Flags for detach operation.

Public Member Functions

- long reserve_area (l4_addr_t *start, unsigned long size, Flags flags=Flags(0), unsigned char align=L4_PAGESHIFT) const noexcept

  Reserve the given area in the region map.
- template<typename T>
  long reserve_area (T **start, unsigned long size, Flags flags=Flags(0), unsigned char align=L4_PAGESHIFT) const noexcept

  Reserve the given area in the region map.
- long free_area (l4_addr_t addr)

  Free an area from the region map.
- long attach (l4_addr_t *start, unsigned long size, Flags flags, L4::Ipc::Cap< Dataspace > mem, Offset offs=0, unsigned char align=L4_PAGESHIFT, L4::Cap< L4::Task > const task=L4::Cap< L4::Task >::↩ Invalid, char const *name=nullptr, Offset backing_offset=0) const noexcept

  Attach a data space to a region.
- template<typename T>
  long attach (T **start, unsigned long size, Flags flags, L4::Ipc::Cap< Dataspace > mem, Offset offs=0, unsigned char align=L4_PAGESHIFT, L4::Cap< L4::Task > const task=L4::Cap< L4::Task >::Invalid, char const *name=nullptr, Offset backing_offset=0) const noexcept

  Attach a data space to a region.
- int detach (l4_addr_t addr, L4::Cap< Dataspace > *mem, L4::Cap< L4::Task > const &task=This_task) const noexcept

  Detach and unmap a region from the address space.
- int detach (void *addr, L4::Cap< Dataspace > *mem, L4::Cap< L4::Task > const &task=This_task) const noexcept

  Detach and unmap a region from the address space.
- int detach (l4_addr_t start, unsigned long size, L4::Cap< Dataspace > *mem, L4::Cap< L4::Task > const &task) const noexcept

  Detach and unmap all parts of the regions within the specified interval.
- long find (l4_addr_t *addr, unsigned long *size, Offset *offset, L4Re::Rm::Flags *flags, L4::Cap< Dataspace > *m) noexcept

  Find a region given an address and size.
- long get_regions (l4_addr_t start, L4::Ipc::Ret_array< Region > regions)

  Return the list of regions whose starting addresses are higher or equal to `start` in the address space managed by this region map.
- long get_areas (l4_addr_t start, L4::Ipc::Ret_array< Area > areas)

  Return the list of areas whose starting addresses are higher or equal to `start` in the address space managed by this region map.
- long get_info (l4_addr_t addr, L4::Ipc::String< char > &name, Offset &backing_offset)

  Return auxiliary information of a region.

Public Member Functions inherited from L4::Pager

- l4_msgtag_t page_fault (l4_umword_t pfa, l4_umword_t pc, L4::Ipc::Rcv_fpage rwin, L4::Ipc::Opt< L4::Ipc::Snd_fpage & > fp)

  Page-fault protocol message.

Public Member Functions inherited from L4::Io_pager

- l4_msgtag_t io_page_fault (l4_fpage_t io_pfa, l4_umword_t pc, L4::Ipc::Rcv_fpage rwin, L4::Ipc::Opt< L4::Ipc::Snd_fpage & > fp)

  IO page fault protocol message.

Additional Inherited Members

16.444.2 Member Enumeration Documentation

16.444.2.1 Detach_flags

`enum L4Re::Rm::Detach_flags`

Flags for detach operation.

Enumerator

Detach_exact	Do an unmap of the exact region given.
Detach_overlap	Do an unmap of all overlapping regions.
Detach_keep	Do not free the detached data space, ignore the F::Detach_free.

Definition at line 221 of file rm.

16.444.2.2 Detach_result

`enum L4Re::Rm::Detach_result`

Result values for detach operation.

Enumerator

Detached_ds	Detached data sapce.
Kept_ds	Kept data space.
Split_ds	Splitted data space, and done.
Detach_again	Detached data space, more to do.

Definition at line 89 of file rm.

16.444.2.3 Region_flag_shifts

```
enum L4Re::Rm::Region_flag_shifts
```

Region flag shifts.

Enumerator

Caching_shift	Start of Rm cache bits.

Definition at line 101 of file rm.

16.444.3 Member Function Documentation

16.444.3.1 attach() [1/2]

```
long L4Re::Rm::attach (
             l4_addr_t * start,
             unsigned long size,
             Rm::Flags flags,
             L4::Ipc::Cap< Dataspace > mem,
             Rm::Offset offs = 0,
             unsigned char align = L4_PAGESHIFT,
             L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid,
             char const * name = nullptr,
             Rm::Offset backing_offset = 0) const  [noexcept]
```

Attach a data space to a region.

Parameters

in,out	*start*	Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If L4Re::Rm::F::Search_addr is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If L4Re::Rm::F::In_area is given the value is used as a selector for the area (see L4Re::Rm::reserve_area) to attach the data space to.
	size	Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.

	flags	The flags control how and with which rights the dataspace is attached to the region. See L4Re::Rm::F::Attach_flags and L4Re::Rm::F::Region_flags. The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the `F::Eager_map` flag is set this function may also return L4Re::Dataspace::map error codes if the mapping fails.
	mem	Data space.
	offs	Offset into the data space to use.
	align	Alignment of the virtual region, log2-size, default: a page (L4_PAGESHIFT). This is only meaningful if the L4Re::Rm::F::Search_addr flag is used.
	task	Optional destination task of mapping if `F::Eager_map` flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.
	name	Optional name of the region.
	backing_offset	Optional value describing an offset into the backing store of this region.

Return values

0	Success
-L4_ENOENT	No area could be found (see L4Re::Rm::F::In_area)
-L4_EPERM	Operation not allowed.
-L4_EINVAL	
-L4_EADDRNOTAVAIL	The given address is not available.
<0	IPC errors

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see L4Re::Rm::find).

Definition at line 34 of file rm_impl.h.

16.444.3.2 attach() [2/2]

```
template<typename T>
long L4Re::Rm::attach (
             T ** start,
             unsigned long size,
             Flags flags,
             L4::Ipc::Cap< Dataspace > mem,
             Offset offs = 0,
             unsigned char align = L4_PAGESHIFT,
             L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid,
```

```
char const * name = nullptr,
Offset backing_offset = 0) const  [inline], [noexcept]
```

Attach a data space to a region.

Parameters

in,out	*start*	Virtual start address where the region manager shall attach the data space. Will be rounded down to the nearest start of a page. If L4Re::Rm::F::Search_addr is given this value is used as the start address to search for a free virtual memory region and the resulting address is returned here. If L4Re::Rm::F::In_area is given the value is used as a selector for the area (see L4Re::Rm::reserve_area) to attach the data space to.
	size	Size of the data space to attach (in bytes). Will be rounded up to the nearest multiple of the page size.
	flags	The flags control how and with which rights the dataspace is attached to the region. See L4Re::Rm::F::Attach_flags and L4Re::Rm::F::Region_flags. The caller must specify the desired rights of the attached region explicitly. The default set of rights is empty. If the `F::Eager_map` flag is set this function may also return L4Re::Dataspace::map error codes if the mapping fails.
	mem	Data space.
	offs	Offset into the data space to use.
	align	Alignment of the virtual region, log2-size, default: a page (L4_PAGESHIFT). This is only meaningful if the L4Re::Rm::F::Search_addr flag is used.
	task	Optional destination task of mapping if `F::Eager_map` flag was passed. If invalid, the mapping is established in the current task. This parameter is only useful if the region manager is for a foreign task.
	name	Optional name of the region.
	backing_offset	Optional value describing an offset into the backing store of this region.

Return values

0	Success
-L4_ENOENT	No area could be found (see L4Re::Rm::F::In_area)
-L4_EPERM	Operation not allowed.
-L4_EINVAL	
-L4_EADDRNOTAVAIL	The given address is not available.
<0	IPC errors

Makes the whole or parts of a data space visible in the virtual memory of the corresponding task. The corresponding region in the virtual address space is backed with the contents of the dataspace.

Note

When searching for a free place in the virtual address space, the space between *start* and the end of the virtual address space is searched.

There is no region object created, instead the region is defined by a virtual address within this range (see L4Re::Rm::find).

Definition at line 409 of file rm.

16.444.3.3 detach() [1/3]

```
int L4Re::Rm::detach (
            l4_addr_t addr,
```

```
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task = This_task) const  [inline], [noexcept]
```

Detach and unmap a region from the address space.

Parameters

	addr	Virtual address of region, any address within the region is valid.
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 765 of file rm.

16.444.3.4 detach() [2/3]

```
int L4Re::Rm::detach (
            l4_addr_t start,
            unsigned long size,
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task) const  [inline], [noexcept]
```

Detach and unmap all parts of the regions within the specified interval.

Parameters

	start	Start of area to detach, must be within region.
	size	Size of of area to detach (in bytes).
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees all regions within the interval given by start and size. If a region overlaps the start or the end of the interval this region is only detached partly. If the interval is within one region the original region is split up into two separate regions.

Definition at line 778 of file rm.

16.444.3.5 detach() [3/3]

```
int L4Re::Rm::detach (
            void * addr,
            L4::Cap< Dataspace > * mem,
            L4::Cap< L4::Task > const & task = This_task) const  [inline], [noexcept]
```

Detach and unmap a region from the address space.

Parameters

	addr	Virtual address of region, any address within the region is valid.
out	*mem*	Dataspace that is affected. Give 0 if not interested.
	task	This argument specifies the task where the pages are unmapped. Provide L4::Cap<L4::Task>::Invalid for none. The default is the current task.

Return values

L4Re::Rm::Detach_result	On success.
-L4_ENOENT	No region found.
<0	IPC errors

Frees a region in the virtual address space given by addr (address type). The corresponding part of the address space is now available again.

Definition at line 770 of file rm.

16.444.3.6 find()

```
long L4Re::Rm::find (
            l4_addr_t * addr,
            unsigned long * size,
            Offset * offset,
            L4Re::Rm::Flags * flags,
            L4::Cap< Dataspace > * m)  [inline], [noexcept]
```

Find a region given an address and size.

Parameters

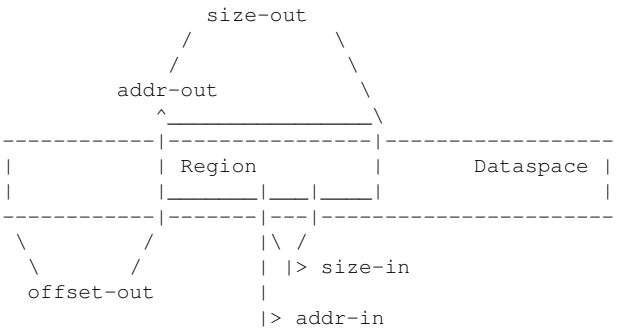
in,out	*addr*	Address to look for. Returns the start address of the found region.

in,out	*size*	Size of the area to look for (in bytes). Returns the size of the found region (in bytes).
out	*offset*	Offset at the beginning of the region within the associated dataspace.
out	*flags*	Region flags, see F::Region_flags (and F::In_area).
out	*m*	Associated dataspace or paging service.

Return values

0	Success
-L4_EPERM	Operation not allowed.
-L4_ENOENT	No region found.
<0	IPC errors

This function returns the properties of the region that contains the area described by the addr and size parameter. If no such region is found but a reserved area, the area is returned and F::In_area is set in `flags`. Note, in the case of an area the `offset` and `m` return values are invalid.



Note

The value of the size input parameter should be 1 to assure that a region can be determined unambiguously.

Definition at line 672 of file rm.

16.444.3.7 free_area()

```
long L4Re::Rm::free_area (
             l4_addr_t addr)
```

Free an area from the region map.

Parameters

addr	An address within the area to free.

Return values

0	Success
-L4_ENOENT	No area found.
<0	IPC errors

Note

The data spaces that are attached to that area are not detached by this operation.

See also

reserve_area() for more information about areas.

16.444.3.8 get_areas()

```
long L4Re::Rm::get_areas (
             l4_addr_t start,
             L4::Ipc::Ret_array< Area > areas)
```

Return the list of areas whose starting addresses are higher or equal to `start` in the address space managed by this region map.

Parameters

	start	Virtual address from where to start searching.
`out`	*areas*	List of areas found in this region map.

Return values

>=0	Number of returned areas in the `areas` array.
<0	IPC errors

Note

The returned list of areas might not be complete and the caller shall use the function repeatedly with a start address one larger than the end address of the last area from the previous call.

16.444.3.9 get_info()

```
long L4Re::Rm::get_info (
             l4_addr_t addr,
             L4::Ipc::String< char > & name,
             Offset & backing_offset)
```

Return auxiliary information of a region.

This is a debugging feature and might not be available.

Parameters

	addr	Virtual address of the region.
out	*name*	Name of the region.
out	*backing_offset*	Backing offset information.

Return values

0	Success
-L4_ENOENT	Region not found.
-L4_ENOSYS	Function not available.
<0	IPC errors

16.444.3.10 get_regions()

```
long L4Re::Rm::get_regions (
             l4_addr_t start,
             L4::Ipc::Ret_array< Region > regions)
```

Return the list of regions whose starting addresses are higher or equal to `start` in the address space managed by this region map.

Parameters

	start	Virtual address from where to start searching.
out	*regions*	List of regions found in this region map.

Return values

>=0	Number of returned regions in the `regions` array.
<0	IPC errors

Note

The returned list of regions might not be complete and the caller shall use the function repeatedly with a start address one larger that the end address of the last region from the previous call.

16.444.3.11 reserve_area() [1/2]

```
long L4Re::Rm::reserve_area (
             l4_addr_t * start,
             unsigned long size,
             Flags flags = Flags(0),
             unsigned char align = L4_PAGESHIFT) const  [inline], [noexcept]
```

Reserve the given area in the region map.

Parameters

in,out	*start*	The virtual start address of the area to reserve. Returns the start address of the area.
	size	The size of the area to reserve (in bytes).
	flags	Flags for the reserved area (see L4Re::Rm::F::Region_flags and L4Re::Rm::F::Attach_flags).
	align	Alignment of area if searched as bits (log2 value).

Return values

0	Success
-L4_EADDRNOTAVAIL	The given area cannot be reserved.
<0	IPC errors

This function reserves an area within the virtual address space managed by the region map. There are two kinds of areas available:

- Reserved areas (*flags* = L4Re::Rm::F::Reserved), where no data spaces can be attached
- Special purpose areas (*flags* = 0), where data spaces can be attached to the area via the L4Re::Rm::F::In_area flag and a start address within the area itself.

Note

When searching for a free place in the virtual address space (with *flags* = L4Re::Rm::F::Search_addr), the space between *start* and the end of the virtual address space is searched.

Definition at line 280 of file rm.

16.444.3.12 reserve_area() [2/2]

```
template<typename T>
long L4Re::Rm::reserve_area (
             T ** start,
             unsigned long size,
             Flags flags = Flags(0),
             unsigned char align = L4_PAGESHIFT) const  [inline], [noexcept]
```

Reserve the given area in the region map.

Parameters

in,out	*start*	The virtual start address of the area to reserve. Returns the start address of the area.
	size	The size of the area to reserve (in bytes).
	flags	Flags for the reserved area (see F::Region_flags and F::Attach_flags).
	align	Alignment of area if searched as bits (log2 value).

Return values

0	Success
-L4_EADDRNOTAVAIL	The given area cannot be reserved.
<0	IPC errors

For more information, please refer to the analogous function

16.446.2 Member Enumeration Documentation

16.446.2.1 Attach_flags

```
enum L4Re::Rm::F::Attach_flags :  l4_uint32_t
```

Flags for attach operation.

Enumerator

Search_addr	Search for a suitable address range.
In_area	Search only in area, or map into area.
Eager_map	Eagerly map the attached data space in.
No_eager_map	Prevent eager mapping of the attached data space.
Attach_mask	Mask of all attach flags.

Definition at line 111 of file rm.

16.446.2.2 Region_flags

```
enum L4Re::Rm::F::Region_flags : l4_uint16_t
```

Region flags (permissions, cacheability, special).

Enumerator

Rights_mask	Region rights.
R	Readable region.
W	Writable region.
X	Executable region.
RW	Readable and writable region.
RX	Readable and executable region.
RWX	Readable, writable and executable region.
Kernel	Kernel-provided memory (KUMEM).
Detach_free	Free the portion of the data space after detach.
Pager	Region has a pager.
Reserved	Region is reserved (blocked).
Caching_mask	Mask of all Rm cache bits.
Cache_normal	Cache bits for normal cacheable memory. This is the default if no other cache-related flag was specified.
Cache_buffered	Cache bits for buffered (write combining) memory.
Cache_uncached	Cache bits for uncached memory.
Ds_map_mask	Mask for all bits for cache options and rights.
Region_flags_mask	Mask of all region flags.

16.448.1 Detailed Description

template<typename T>
class Rm::Unique_region< T >

Unique region.

Capture a single region with automatic detach on destruction and unique ownership. Stores the start address and the region-mapper capability internally. A unique region is valid precisely if the internal region-mapper capability is valid. The features for unique ownership and automatic detach are only active for valid unique regions.

Definition at line 435 of file rm.

16.448.2 Constructor & Destructor Documentation

16.448.2.1 Unique_region() [1/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
            T addr)  [inline], [explicit], [noexcept]
```

Construct a `Unique_region` from an address.

No region manager is set.

Parameters

addr	The new address

Definition at line 456 of file rm.

16.448.2.2 Unique_region() [2/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
            T addr,
            L4::Cap< Rm > const & rm)  [inline], [noexcept]
```

Construct a valid Unique_region from an address and a region manager.

Parameters

addr	The address
rm	The region manager

Definition at line 465 of file rm.

16.448.2.3 Unique_region() [3/3]

```
template<typename T>
L4Re::Rm::Unique_region< T >::Unique_region (
            Unique_region< T > && o)  [inline], [noexcept]
```

Move-Construct a Unique_region.

Parameters

o	L-value reference to other region.

Definition at line 473 of file rm.

16.448.2.4 ~Unique_region()

```
template<typename T>
L4Re::Rm::Unique_region< T >::~Unique_region ()  [inline], [noexcept]
```

Destructor.

If the region is valid, call detach.

16.448.3.1 get()

```
template<typename T>
T L4Re::Rm::Unique_region< T >::get () const  [inline], [noexcept]
```

Return the address.

Returns

the address

Definition at line 509 of file rm.

16.448.3.2 is_valid()

```
template<typename T>
bool L4Re::Rm::Unique_region< T >::is_valid () const  [inline], [noexcept]
```

Check if the Unique_region is valid.

Returns

true iff the Unique_region is valid

Definition at line 549 of file rm.

16.448.3.3 operator=()

```
template<typename T>
Unique_region & L4Re::Rm::Unique_region< T >::operator= (
             Unique_region< T > && o)  [inline], [noexcept]
```

Move-assign a Unique_region.

Parameters

o	L-value reference to region to assign from

Definition at line 481 of file rm.

16.448.3.4 release()

```
template<typename T>
T L4Re::Rm::Unique_region< T >::release ()  [inline], [noexcept]
```

Return the address and invalidate the Unique_region.

Returns

the address

Definition at line 517 of file rm.

16.448.3.5 reset()

```
template<typename T>
void L4Re::Rm::Unique_region< T >::reset (
             T addr,
             L4::Cap< Rm > const & rm)  [inline], [noexcept]
```

Set new address and region manager.

Parameters

addr	The new address
rm	The new region manager

Definition at line 529 of file rm.

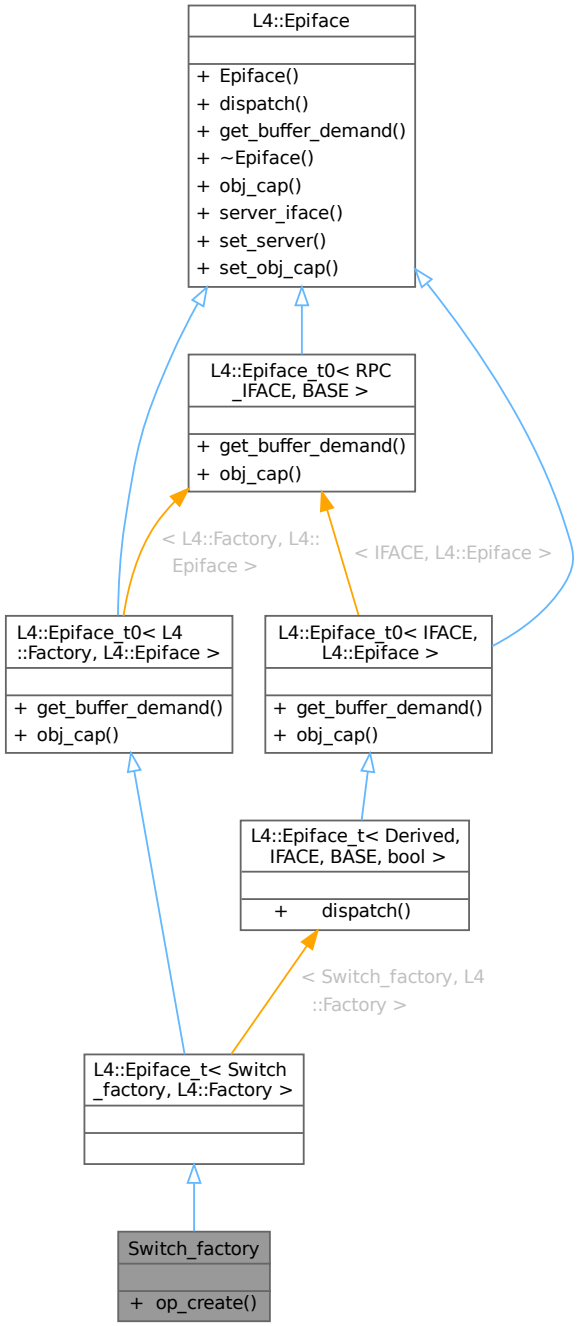
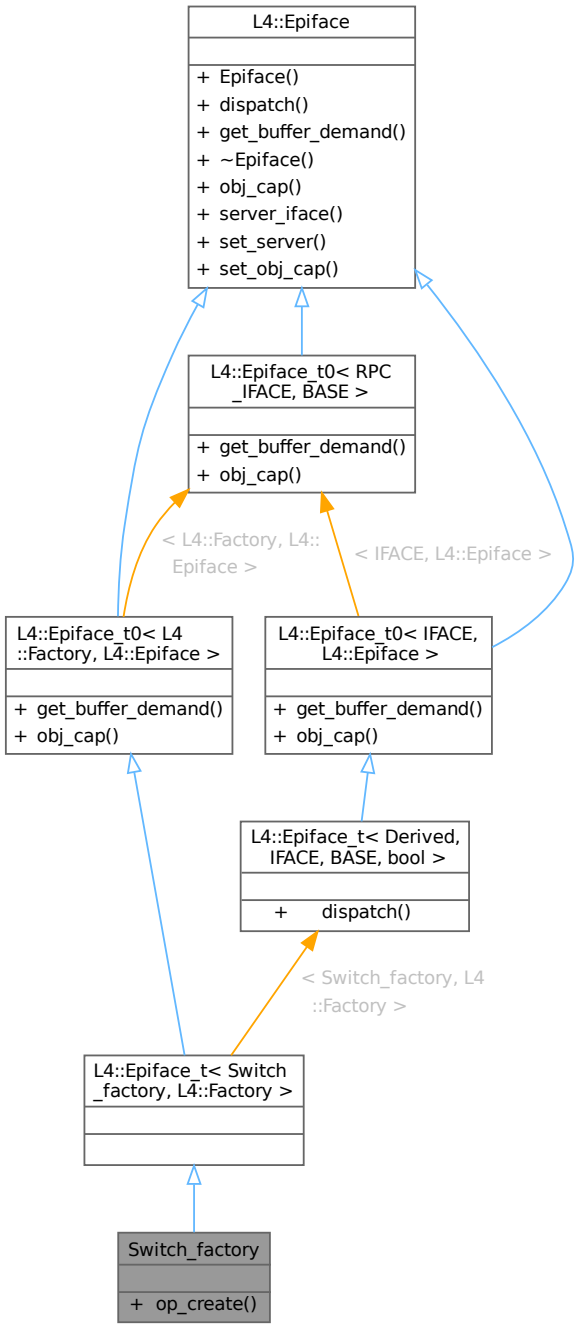
16.449 Switch_factory Class Reference

The IPC interface for creating ports.

Inheritance diagram for Switch_factory:



Collaboration diagram for Switch_factory:



Public Member Functions

- long op_create (L4::Factory::Rights, L4::Ipc::Cap< void > &res, l4_umword_t type, L4::Ipc::Varg_list_ref va)

  Handle factory protocol.

Public Member Functions inherited from L4::Epiface_t0< L4::Factory, L4::Epiface >

- Type_info::Demand **get_buffer_demand** () const

Get the server-side buffer demand based in IFACE.

- Cap< L4::Factory > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()

  Make a server object.

- virtual ~**Epiface** ()=0

  Destroy the object.

- Stored_cap obj_cap () const

  Get the capability to the kernel object belonging to this object.

- Server_iface * server_iface () const

  Get pointer to server interface at which the object is currently registered.

- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)

  Set server registration info for the object.

- void **set_obj_cap** (Cap< void > const &cap)

  Deprecated server registration function.

Additional Inherited Members

Public Types inherited from L4::Epiface_t0< L4::Factory, L4::Epiface >

- typedef L4::Factory **Interface**

  Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef Ipc_svr::Server_iface **Server_iface**

  Type for abstract server interface.

- typedef Ipc_svr::Server_iface::Demand **Demand**

  Type for server-side receive buffer demand.

16.449.1 Detailed Description

The IPC interface for creating ports.

The Switch factory provides an IPC interface to create ports. Ports are the only option for a client to communicate with the switch and, thus, with other network devices.

The `Switch_factory` gets constructed when the net switch application gets started. It thereafter gets registered on the switch's server to serve IPC `create` calls.

Definition at line 114 of file main.cc.

16.449.2 Member Function Documentation

16.449.2.1 op_create()

```
long Switch_factory::op_create (
             L4::Factory::Rights ,
             L4::Ipc::Cap< void > & res,
             l4_umword_t type,
             L4::Ipc::Varg_list_ref va)  [inline]
```

Handle factory protocol.

This function is invoked after an incoming factory::create request and creates a new port or statistics interface if possible.

Definition at line 528 of file main.cc.

References L4_EINVAL.

```

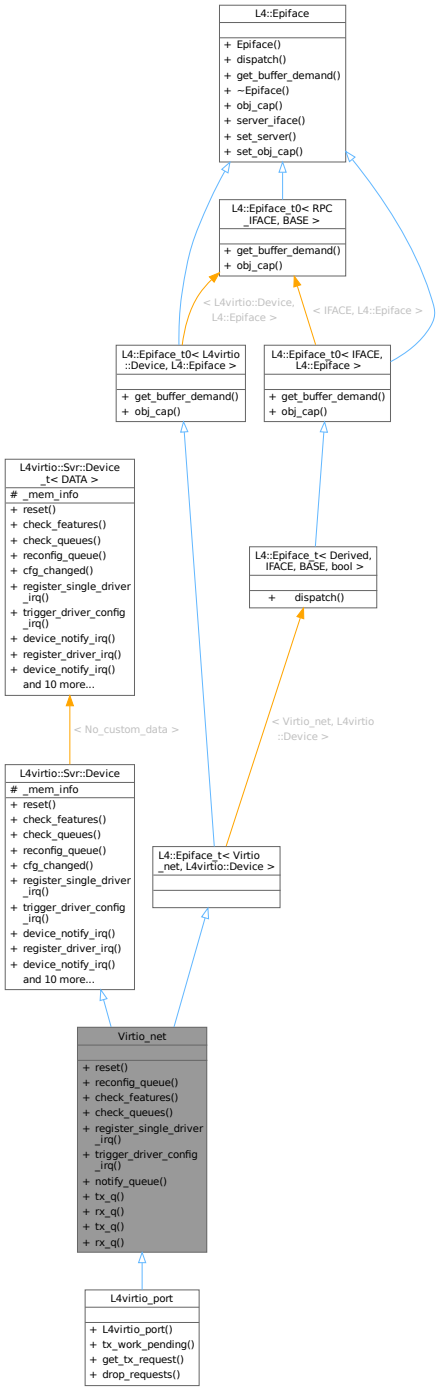
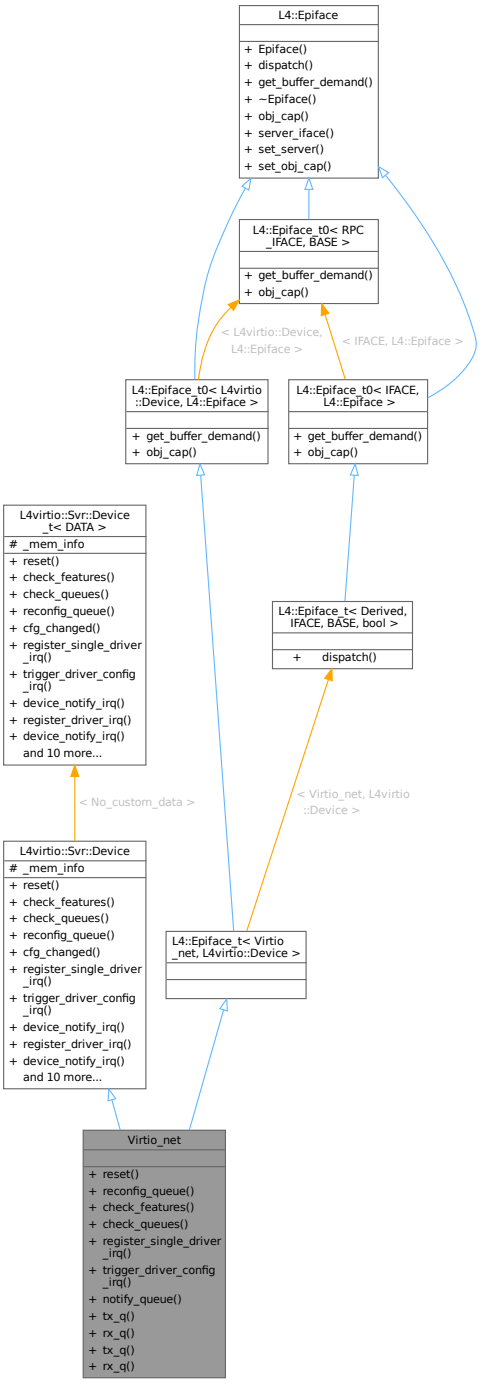
Inheritance diagram for Virtio_net:



Collaboration diagram for Virtio_net:



Public Member Functions

- void **reset** () override

  reset callback, called for doing a device reset
- int **reconfig_queue** (unsigned index) override

  callback for client queue-config request
- bool **check_features** () override

callback for checking the subset of accepted features

- bool **check_queues** () override

  Check whether both virtqueues are ready.

- void **register_single_driver_irq** () override

  Save the `_kick_guest_irq` that the client sent via `device_notification_irq()`.

- void **trigger_driver_config_irq** () override

  callback for triggering configuration change notification IRQ

- void notify_queue (L4virtio::Svr::Virtqueue ∗queue)

  Trigger the `_kick_guest_irq` IRQ.

- Virtqueue ∗ **tx_q** ()

  Getter for the transmission queue.

- Virtqueue ∗ **rx_q** ()

  Getter for the receive queue.

- Virtqueue const ∗ **tx_q** () const

  Getter for the transmission queue.

- Virtqueue const ∗ **rx_q** () const

  Getter for the receive queue.

Public Member Functions inherited from L4virtio::Svr::Device_t< No_custom_data >

- virtual void **cfg_changed** (unsigned)

  callback for client device configuration changes

- virtual L4::Cap< L4::Irq > **device_notify_irq** () const

  callback to gather the device notification IRQ (old-style)

- virtual void register_driver_irq (unsigned idx)

  Callback for registering an notification IRQ (multi IRQ).

- virtual L4::Cap< L4::Irq > device_notify_irq (unsigned idx)

  Callback to gather the device notification IRQ (multi IRQ).

- virtual unsigned **num_events_supported** () const

  Return the highest notification index supported.

- **Device_t** (Dev_config ∗dev_config)

  Make a device for the given config.

- Mem_list const ∗ **mem_info** () const

  Get the memory region list used for this device.

- void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)

  Trigger reset for the configuration space for queue idx.

- void init_mem_info (unsigned num)

  Initialize the memory region list to the given maximum.

- void device_error ()

  Transition device into DEVICE_NEEDS_RESET state.

- bool setup_queue (Virtqueue ∗q, unsigned qn, unsigned num_max)

  Enable/disable the specified queue.

- bool handle_mem_cmd_write ()

  Check for a value in the `cmd` register and handle a write.

- void **enable_trusted_ds_validation** ()

  Enable trusted dataspace validation.

- void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)

  Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- Type_info::Demand **get_buffer_demand** () const

  Get the server-side buffer demand based in IFACE.
- Cap< L4virtio::Device > obj_cap () const

  Get the (typed) capability to this object.

Public Member Functions inherited from L4::Epiface

- **Epiface** ()

  Make a server object.
- virtual ~**Epiface** ()=0

  Destroy the object.
- Stored_cap obj_cap () const

  Get the capability to the kernel object belonging to this object.
- Server_iface * server_iface () const

  Get pointer to server interface at which the object is currently registered.
- int set_server (Server_iface *srv, Cap< void > cap, bool managed=false)

  Set server registration info for the object.
- void **set_obj_cap** (Cap< void > const &cap)

  Deprecated server registration function.

Additional Inherited Members

Public Types inherited from L4::Epiface_t0< L4virtio::Device, L4::Epiface >

- typedef L4virtio::Device **Interface**

  Data type of the IPC interface definition.

Public Types inherited from L4::Epiface

- typedef Ipc_svr::Server_iface **Server_iface**

  Type for abstract server interface.
- typedef Ipc_svr::Server_iface::Demand **Demand**

  Type for server-side receive buffer demand.

Protected Attributes inherited from L4virtio::Svr::Device_t< No_custom_data >

- Mem_list **_mem_info**

  Memory region list.

16.450.1 Detailed Description

The Base class of a Port.

This class provides the Virtio network protocol specific implementation aspects of a port.

`Virtio_net` comprises the virtqueues for both, the incoming and the outgoing network requests:

- The transmission queue, containing requests to be transmitted to other ports. The transmission queue is filled by the client, this port relates to.
- The receive queue, containing requests that have been transmitted from other ports. The receive queue is filled by the switch.

Definition at line 71 of file virtio_net.h.

16.450.2 Member Function Documentation

16.450.2.1 notify_queue()

```
void Virtio_net::notify_queue (
            L4virtio::Svr::Virtqueue * queue)  [inline]
```

Trigger the `_kick_guest_irq` IRQ.

This function gets called on the receiving port, when a request was successfully transmitted by the switch.

Definition at line 269 of file virtio_net.h.

References L4VIRTIO_IRQ_STATUS_VRING.

The documentation for this class was generated from the following file:

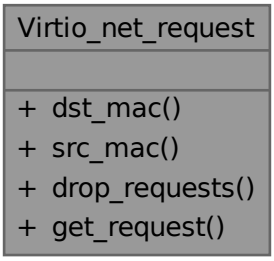
- pkg/virtio-net-switch/server/switch/virtio_net.h

16.451 Virtio_net_request Class Reference

Abstraction for a network request.

`#include <request_l4virtio.h>`

Collaboration diagram for Virtio_net_request:



Public Member Functions

- Mac_addr **dst_mac** () const

  Get the Mac address of the destination port.
- Mac_addr **src_mac** () const

  Get the Mac address of the source port.

Static Public Member Functions

- static void drop_requests (Virtio_net *dev, L4virtio::Svr::Virtqueue *queue)

  Drop all requests of a specific queue.
- static std::optional< Virtio_net_request > get_request (Virtio_net *dev, L4virtio::Svr::Virtqueue *queue)

  Construct a request from the next entry of a provided queue.

16.451.1 Detailed Description

Abstraction for a network request.

A `Virtio_net_request` is constructed by the source port, using the static function `get_request()` as part of `Port_iface::get_tx_request()`.

On destruction, `finish()` will be called, which, will trigger the client IRQ of the source client.

Definition at line 35 of file request_l4virtio.h.

16.451.2 Member Function Documentation

16.451.2.1 drop_requests()

```
void Virtio_net_request::drop_requests (
            Virtio_net * dev,
            L4virtio::Svr::Virtqueue * queue)  [inline], [static]
```

Drop all requests of a specific queue.

This function is used for example to drop all requests in the transmission queue of a monitor port, since monitor ports are not allowed to transmit data.

Parameters

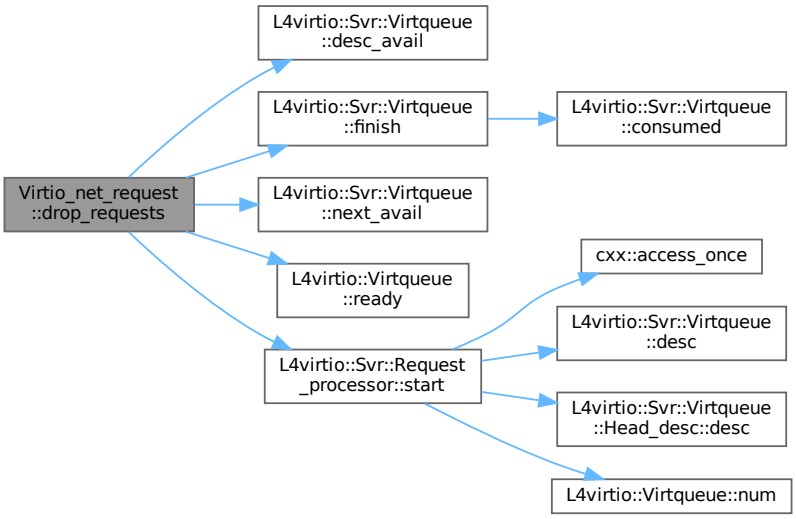
dev	Port of the provided virtqueue.
queue	Virtqueue to drop all requests of.

Definition at line 172 of file request_l4virtio.h.

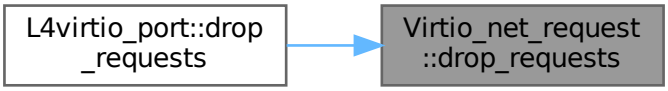
References L4virtio::Svr::Virtqueue::desc_avail(), L4virtio::Svr::Virtqueue::finish(), L4_UNLIKELY, L4virtio::Svr::Virtqueue::next_avail(), L4virtio::Virtqueue::ready(), and L4virtio::Svr::Request_processor::start().

Referenced by L4virtio_port::drop_requests().

Here is the call graph for this function:



Here is the caller graph for this function:



16.451.2.2 get_request()

```
std::optional< Virtio_net_request > Virtio_net_request::get_request (
            Virtio_net * dev,
            L4virtio::Svr::Virtqueue * queue)  [inline], [static]
```

Construct a request from the next entry of a provided queue.

Parameters

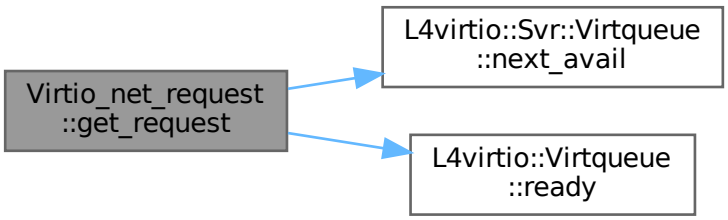
dev	Port of the provided virtqueue.
queue	Virtqueue to extract next entry from.

Definition at line 199 of file request_l4virtio.h.

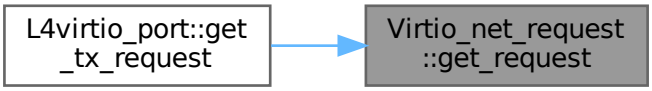
References L4_UNLIKELY, L4virtio::Svr::Virtqueue::next_avail(), and L4virtio::Virtqueue::ready().

Referenced by L4virtio_port::get_tx_request().

Here is the call graph for this function:



Here is the caller graph for this function:



The documentation for this class was generated from the following file:

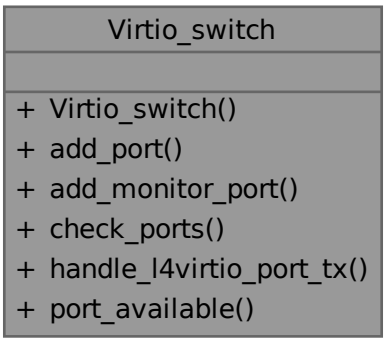
- pkg/virtio-net-switch/server/switch/request_l4virtio.h

16.452 Virtio_switch Class Reference

The Virtio switch contains all ports and processes network requests.

`#include <switch.h>`

Collaboration diagram for Virtio_switch:



Public Member Functions

- Virtio_switch (unsigned max_ports)
  Create a switch with n ports.
- bool add_port (Port_iface *port)
  Add a port to the switch.
- bool add_monitor_port (Port_iface *port)
  Add a monitor port to the switch.
- void check_ports ()
  Check validity of ports.
- bool handle_l4virtio_port_tx (L4virtio_port *port)
  Handle TX queue of the given port.
- int port_available (bool monitor)
  Is there still a free port on this switch available?

16.452.1 Detailed Description

The Virtio switch contains all ports and processes network requests.

A Port on its own is not capable to process an incoming network request because it has no knowledge about other ports. The processing of an incoming request therefore gets delegated to the switch.

The `Virtio_switch` is constructed at the start of the Virtio Net Switch application. The factory saves a reference to it to pass it to the `Kick_irq` on port creation.

Definition at line 33 of file switch.h.

16.452.2 Constructor & Destructor Documentation

16.452.2.1 Virtio_switch()

```
Virtio_switch::Virtio_switch (
            unsigned max_ports)  [explicit]
```

Create a switch with n ports.

Parameters

max_ports	maximal number of provided ports

Definition at line 12 of file switch.cc.

16.452.3 Member Function Documentation

16.452.3.1 add_monitor_port()

```
bool Virtio_switch::add_monitor_port (
             Port_iface * port)
```

Add a monitor port to the switch.

Parameters

port	A pointer to an already constructed Port_iface object.

Return values

true	Port was added successfully.
false	Switch was not able to add the port.

Definition at line 54 of file switch.cc.

16.452.3.2 add_port()

```
bool Virtio_switch::add_port (
             Port_iface * port)
```

Add a port to the switch.

Parameters

port	A pointer to an already constructed Port_iface object.

Return values

true	Port was added successfully.
false	Switch was not able to add the port.

Definition at line 29 of file switch.cc.

References Mac_addr::is_unknown().

Here is the call graph for this function:

16.452.3.3 check_ports()

```
void Virtio_switch::check_ports ()
```

Check validity of ports.

Check whether all ports are still used and remove any unused (unreferenced) ports. Shall be invoked after an incoming cap deletion irq to remove ports without clients.

Definition at line 69 of file switch.cc.

16.452.3.4 handle_l4virtio_port_tx()

```
bool Virtio_switch::handle_l4virtio_port_tx (
            L4virtio_port * port)
```

Handle TX queue of the given port.

Parameters

port	L4virtio_port to handle pending TX work for.

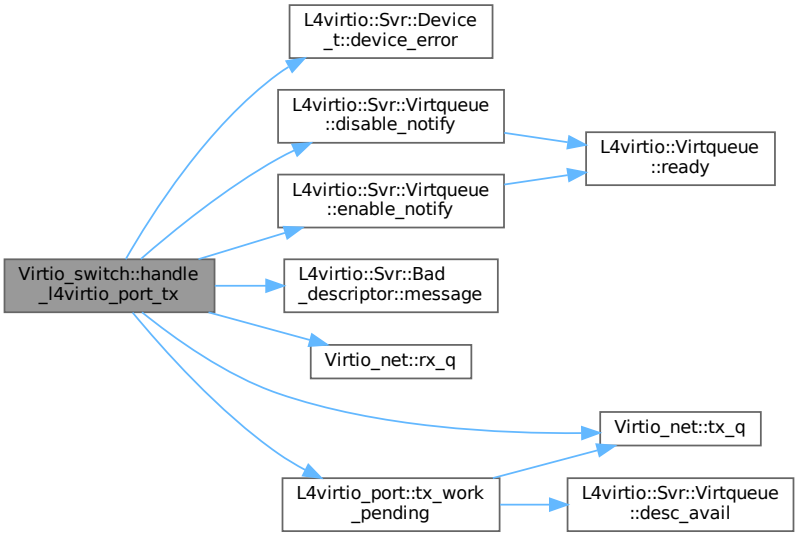
Return values

false	Port hit its TX burst limit, and thus a TX pending reschedule notification was queued.
true	Port's entire TX queue was processed.

Definition at line 194 of file switch.cc.

References L4virtio::Svr::Device_t< DATA >::device_error(), L4virtio::Svr::Virtqueue::disable_notify(), L4virtio::Svr::Virtqueue::enable
L4virtio::Svr::Bad_descriptor::message(), Virtio_net::rx_q(), Virtio_net::tx_q(), and L4virtio_port::tx_work_pending().

Here is the call graph for this function:



16.452.3.5 port_available()

```
int Virtio_switch::port_available (
            bool monitor)  [inline]
```

Is there still a free port on this switch available?

Parameters

monitor	True if we look for a monitor slot.

Return values

>=0	The next available port index.
-1	No port available.

Definition at line 148 of file switch.h.

The documentation for this class was generated from the following files:

- pkg/virtio-net-switch/server/switch/switch.h
- pkg/virtio-net-switch/server/switch/switch.cc

16.453 Virtio_vlan_mangle Class Reference

Class for VLAN packet rewriting.

`#include <vlan.h>`

Collaboration diagram for Virtio_vlan_mangle:

Public Member Functions

- Virtio_vlan_mangle ()
  Default constructor.
- l4_uint32_t copy_pkt (Buffer &dst, Buffer &src)
  Copy packet from src to dst.
- void rewrite_hdr (Virtio_net::Hdr *hdr)
  Rewrite the virtio network header.

Static Public Member Functions

- static constexpr Virtio_vlan_mangle add (l4_uint16_t tci)
  Construct an object that adds a VLAN tag.
- static constexpr Virtio_vlan_mangle remove ()
  Construct an object that removes the VLAN tag.

16.453.1 Detailed Description

Class for VLAN packet rewriting.

Definition at line 36 of file vlan.h.

16.453.2 Constructor & Destructor Documentation

16.453.2.1 Virtio_vlan_mangle()

```
Virtio_vlan_mangle::Virtio_vlan_mangle ()  [inline]
```

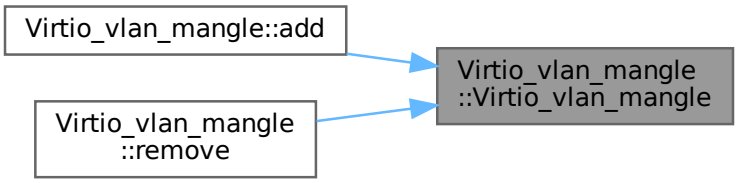
Default constructor.

The packet is not touched in any way.

Definition at line 52 of file vlan.h.

Referenced by add(), and remove().

Here is the caller graph for this function:



16.453.3 Member Function Documentation

16.453.3.1 add()

```
constexpr Virtio_vlan_mangle Virtio_vlan_mangle::add (
            l4_uint16_t tci)  [inline], [static], [constexpr]
```

Construct an object that adds a VLAN tag.

Parameters

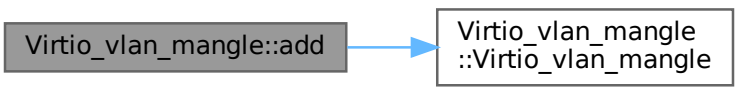
tci	The TCI field of the VLAN tag to add.

It is the callers responsibility to ensure that the packet is not already tagged.

Definition at line 64 of file vlan.h.

References Virtio_vlan_mangle().

Here is the call graph for this function:



16.453.3.2 copy_pkt()

```
l4_uint32_t Virtio_vlan_mangle::copy_pkt (
            Buffer & dst,
            Buffer & src)  [inline]
```

Copy packet from *src* to *dst*.

Parameters

src	Source packet buffer
dst	Destination packet buffer

Returns

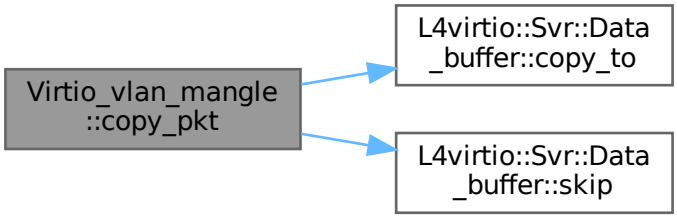
The number of bytes copied

Copy the data from *src* to *dst*, possibly rewriting parts of the packet. The method is expected to be called repeatedly until the source packet is finished. Partial copies are allowed (including reading nothing from the source buffer) as long as progress is made, i.e. repeatedly calling this function eventually consumes the source buffer.

Definition at line 93 of file vlan.h.

References L4virtio::Svr::Data_buffer::copy_to(), L4_LIKELY, L4virtio::Svr::Data_buffer::left, L4virtio::Svr::Data_buffer::pos, and L4virtio::Svr::Data_buffer::skip().

Here is the call graph for this function:



16.453.3.3 remove()

```
constexpr Virtio_vlan_mangle Virtio_vlan_mangle::remove ()  [inline], [static], [constexpr]
```

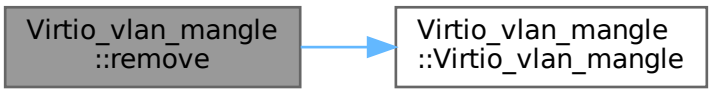
Construct an object that removes the VLAN tag.

This object assumes that the Ethernet packet has a VLAN tag and will slavishly remove the necessary bytes from the packet.

Definition at line 75 of file vlan.h.

References Virtio_vlan_mangle().

Here is the call graph for this function:



16.453.3.4 rewrite_hdr()

```
void Virtio_vlan_mangle::rewrite_hdr (
             Virtio_net::Hdr * hdr)  [inline]
```

Rewrite the virtio network header.

Parameters

hdr	The virtio header of the packet

This method is called exactly once for every virtio network packet. Any necessary changes to the header are done in-place.

Definition at line 142 of file vlan.h.

References L4_UNLIKELY.

00002
00003 Tutorial lua script for Ned
00004 ===========================
00005
00006 Firstly we have a set of definitions available. Some come from 'ned.lua'
00007 embedded script and others from the C++ bindings within Ned. The whole L4
00008 functionality is in the lua module "L4" (use 'local L4 = require("L4");').
00009 The L4 module classes and functions cope with L4 capabilities and
00010 their invocations, provide a set of constants and access to the L4Re environment of
00011 the running program.  Finally, of course it can also start L4 applications.
00012
00013 L4 Capabilities
00014 ===============
00015
00016 The L4 module defines a user data type for capabilities.  A capability in lua
00017 carries a typed L4 capability and is accompanied with a set of type specific
00018 methods that may be called on the object behind the capability.  There also
00019 exists a way to cast a capability to a capability to a different type of
00020 object using L4.cast(type, cap).
00021
00022 L4.cast(type, cap)
00023
00024 Returns a cap transformed to a capability of the given type, whereas type
00025 is either the fully qualified C++ name of the class encapsulating the object
00026 or the L4 protocol ID assigned to all L4Re and L4 system objects.
00027 If the type is unknown then nil is returned.
00028
00029 Generic capabilities provide the following methods:
00030
00031 is_valid()
00032
00033   Returns true if the capability is not the invalid cap (L4_INVALID_CAP), and
00034   false if it is the invalid cap.
00035
00036
00037 L4Re::Namespace object
00038 ======================
00039
00040 There is a lua type for name spaces that has the following methods:
00041
00042 query(name), or q(name)
00043
00044   Returns a closure (function) that initiates a query for the given name
00045   within the name space.  The function takes no arguments and returns
00046   a capability if successful or nil if name is not found.
00047
00048
00049 link(name), or l(name)
00050
00051   Returns a function that can create a link to the given object in the name
00052   space if put into another name space. The function takes two parameters
00053   the target name space and the name in the target name space.
00054   Loader:create_namespace and Loader.fill_namespace calls this function
00055   when things are really put into an L4Re::Namespace.
00056
00057
00058 register(name, cap), or r(name, cap)
00059
00060   Registers the given object capability under the given name. cap can
```

```
00061   be either a real capability (note query returns a function), a string, or
00062   nil.  If it is a capability it is just put into the name space.
00063   In the case cap is a string a placeholder will be put into the name space
00064   that will be replaced with a real capability later by some program.
00065   And if nil is use the name will be deleted from the name space.
00066
00067
00068 L4::Factory object
00069 ==================
00070
00071 The factory object provides an interface to the generic create method of a
00072 factory.
00073
00074 create(proto, ...)
00075
00076   This method calls the factory to create an object of the given type,
00077   via the L4 protocol number (see L4.Proto table for more) all further
00078   arguments are passed to the factory.
00079
00080
00081 Access to the L4Re Env capabilities
00082 ===================================
00083
00084 The L4 module defines a table L4.Env that contains the capabilities
00085 of the L4Re::Env::env() environment. Namely:
00086
00087 factory      The kernel factory of Ned
00088 log          The log object of Ned
00089 user_factory The factory provided to Ned, including memory
00090 parent       The parent of Ned
00091 rm           The region map of Ned
00092 scheduler    The scheduler of Ned
00093
00094
00095 Some useful constants
00096 =====================
00097
00098 L4.Proto table contains the most important protocol values for
00099 L4 and L4Re objects.
00100
00101   Namespace
00102   Goos
00103   Rm
00104   Irq
00105   Sigma0
00106   Factory
00107   Log
00108   Scheduler
00109
00110 The L4.Info table contains the following functions:
00111
00112   Kip.str()    The banner string found in the kernel info page
00113   arch()       Architecture name, such as: x86, amd64, arm, ppc32
00114   platform()   Platform name, such as: pc, ux, realview, beagleboard
00115   mword_bits() Number of native machine word bits (32, 64)
00116
00117
00118 Support for starting L4 programs
00119 ================================
00120
00121 The L4 module defines two classes that are useful for starting L4 applications.
00122 The class L4.Loader that encapsulates a fairly high level policy
00123 that is useful for starting a whole set of processes. And the class L4.App_env
00124 that encapsulates a more fine-grained policy.
00125
00126 L4.Loader
00127 ---------
00128
00129 The class L4.Loader encapsulates the policy for starting programs with the
00130 basic building blocks for the application coming from a dedicated loader,
00131 such as Moe or a Loader instance. These building blocks are a region map (Rm),
00132 a scheduler, a memory allocator, and a logging facility.
00133 A L4.Loader object is typically used to start multiple applications. There
00134 is a L4.default_loader instance of L4.Loader that uses the L4.Env.mem_alloc
00135 factory of the current Ned instance to create the objects for a new program.
00136 However you may also use a more restricted factory for applications and
00137 instantiate a loader for them.  The L4.Loader objects can already be used
00138 to start a program with L4.Loader:start(app_spec, cmd, ...). Where app_spec
00139 is a table containing parameters for the new application. cmd is the
00140 command to run and the remaining arguments are the command-line options for
00141 the application.
00142
00143 ]==]
00144
00145 L4.default_loader:start({}, "rom/hello");
00146
00147 local _doc = [==[
```

```
00148
00149 This statement does the following:
00150  1. Create a new environment for the application
00151  2. Add the rom name-space into the new environment (thus shares Ned's
00152     'rom' directory with the new program).
00153  3. Creates all the building blocks for the new process and starts the
00154     'l4re' support kernel in the new process which in turn starts 'rom/hello'
00155     in the new process.
00156
00157 Using the app_spec parameter you can modify the behavior in two ways. There are
00158 two supported options 'caps' for providing more capabilities for the
00159 application. And 'log' for modifying the logger tag and color.
00160
00161 ]==]
00162
00163 local my_caps = {
00164   fb = L4.Env.vesa;
00165 };
00166
00167 L4.default_loader:start({caps = my_caps, log = {"APP", "blue"}}, "rom/hello");
00168
00169 local _doc = [==[
00170
00171 This snippet creates a caps template (my_caps) and uses it for the
00172 new process and also sets user-defined log tags.  The L4.Loader:start method,
00173 however, automatically adds the 'rom' directory to the caps environment if
00174 not already specified in the template.
00175
00176 Environment variables may be given as a table in the third argument to
00177 start. Argument to the program are given space separated after the program
00178 name within a single string.
00179
00180 ]==]
00181
00182 L4.default_loader:start({}, "rom/program arg1 " .. arg2, { LD_DEBUG = 1 });
00183
00184 local _doc = [==[
00185
00186 L4.default_loader:startv is a variant of the start function that takes the
00187 arguments of the program as a single argument each. If the last argument to
00188 startv is a table it is interpreted as environment variables for the program.
00189 The above example would translate to:
00190
00191 ]==]
00192
00193 L4.default_loader:startv({}, "rom/program", "arg1", arg2, { LD_DEBUG = 1 });
00194
00195 local _doc = [==[
00196
00197 To create a new L4.Loader instance you may use a generic factory for all
00198 building blocks or set individual factories.
00199
00200 ]==]
00201
00202 l = L4.Loader.new({
00203   mem = L4.Env.user_factory:create(L4.Proto.Factory, 512*1024):m("rs")
00204 });
00205
00206 local _doc = [==[
00207
00208 Creates a loader instance that uses the newly created 512 KB factory for
00209 all building blocks. To set individual factories use the options:
00210   'mem'       as memory allocator for the new processes and as
00211               default factory for all objects not explicitely set to a
00212               different factory
00213   'log_fab'   for creating log objects.
00214   'ns_fab'    for creating name-space objects.
00215   'rm_fab'    for creating region-map objects.
00216
00217
00218
00219 L4.App_env
00220 ----------
00221
00222 L4.App_env provides a more fine-grained control for a single process or for a
00223 limited number of processes. L4.App_env uses an L4.Loader object as basic
00224 facility. However you can override the memory allocator 'mem' for for the new
00225 process as well as the kernel factory 'factory', the log capability etc.
00226
00227 ]==]
00228
00229 local e = L4.App_env.new({
00230   loader = l,
00231   mem = L4.Env.user_factory:create(L4.Proto.Factory, 128*1024):m("rs")
00232 });
00233
00234 e:start("rom/hello");
```

00195                * We just copy the original header from source to
00196                * destination and have to consider three different
00197                * cases:
00198                * - no flags are set
00199                *   - we got a packet that is completely checksummed
00200                *     and correctly fragmented, there is nothing to
00201                *     do other then copying.
00202                * - virtio_net_hdr_f_needs_csum set
00203                *   - the packet is partially checksummed; if we would
00204                *     send the packet out on the wire we would have
00205                *     to calculate checksums now. But here we rely on
00206                *     the ability of our guest to handle partially
00207                *     checksummed packets and simply delegate the
00208                *     checksum calculation to them.
00209                * - gso_type != gso_none
00210                *   - the packet needs to be segmented; if we would
00211                *     send it out on the wire we would have to
00212                *     segment it now. But again we rely on the
00213                *     ability of our guest to handle gso
00214                *
00215                * We currently assume that our guests negotiated
00216                * virtio_net_f_guest_*, this needs to be checked in
00217                * the future.
00218                *
00219                * We also discussed the usage of
00220                * virtio_net_hdr_f_data_valid to remove the need to
00221                * checksum packets at all. But since our clients send
00222                * partially checksummed packets anyway the only
00223                * interesting case would be a packet without
00224                * net_hdr_f_needs_checksum set. In that case we would
00225                * signal that we checked the checksum and the
00226                * checksum is actually correct. Since we do not know
00227                * the origin of the packet (it could have been send
00228                * by an external node and could have been routed to
00229                * u) we can not signal this without actually
00230                * verifying the checksum. Otherwise a packet with an
00231                * invalid checksum could be successfully delivered.

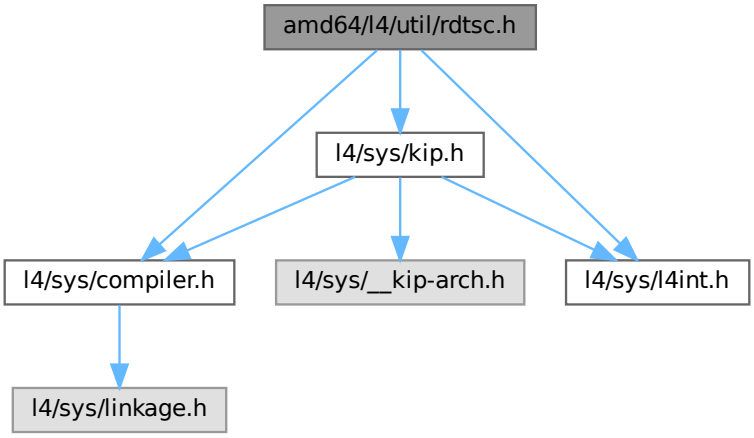
17.71 amd64/l4/util/rdtsc.h File Reference

Timestamp counter related functions.

```
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
```

```
#include <l4/sys/kip.h>
```

Include dependency graph for rdtsc.h:



Functions

- l4_cpu_time_t l4_rdtsc (void)

  Read current value of CPU-internal timestamp counter.
- l4_uint32_t l4_rdtsc_32 (void)

  Read the lest significant 32 bit of the TSC.
- l4_uint64_t l4_rdpmc (int ecx)

  Return current value of CPU-internal performance measurement counter.
- l4_uint32_t l4_rdpmc_32 (int ecx)

  Return the least significant 32 bit of a performance counter.
- l4_uint64_t l4_tsc_to_ns (l4_cpu_time_t tsc)

  Convert timestamp to ns value.
- l4_uint64_t l4_tsc_to_us (l4_cpu_time_t tsc)

  Convert timestamp into micro seconds value.
- void l4_tsc_to_s_and_ns (l4_cpu_time_t tsc, l4_uint32_t *s, l4_uint32_t *ns)

  Convert timestamp to s.ns value.
- l4_cpu_time_t l4_ns_to_tsc (l4_uint64_t ns)

  Convert nano seconds into CPU ticks.
- void l4_busy_wait_ns (l4_uint64_t ns)

  Wait busy for a small amount of time.
- void l4_busy_wait_us (l4_uint64_t us)

  Wait busy for a small amount of time.
- l4_uint32_t l4_calibrate_tsc (l4_kernel_info_t const *kip)

  Determine scalers for timestamp calculations.
- l4_uint32_t l4_tsc_init (l4_kernel_info_t const *kip)

  Initialize scaler for TSC calibrations from the kernel.
- l4_uint32_t l4_get_hz (void)

  Get CPU frequency in Hz.

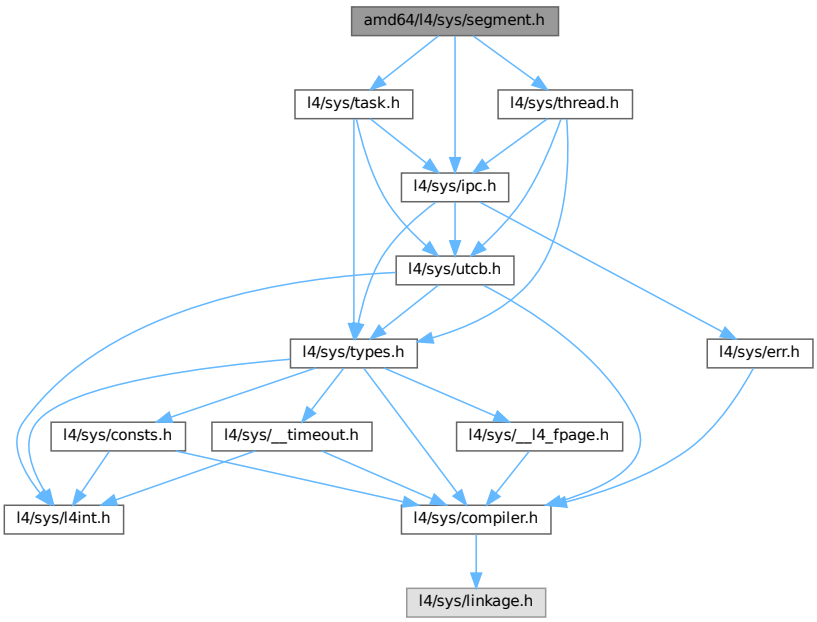
17.79 amd64/l4/sys/segment.h File Reference

Segment handling (AMD64).

```
#include <l4/sys/ipc.h>
#include <l4/sys/task.h>
#include <l4/sys/thread.h>
```

Include dependency graph for segment.h:



Enumerations

- enum L4_task_ldt_x86_consts { L4_TASK_LDT_X86_ENTRY_SIZE = 8 , L4_TASK_LDT_X86_MAX_ENTRIES }

  Contants for LDT handling.
- enum L4_sys_segment { L4_AMD64_SEGMENT_FS = 0 , L4_AMD64_SEGMENT_GS = 1 }

  Constants for identifying segments.

Functions

- long fiasco_ldt_set (l4_cap_idx_t task, void *ldt, unsigned int num_desc, unsigned int entry_number_start, l4_utcb_t *utcb)

  Set LDT segments descriptors.
- long fiasco_gdt_set (l4_cap_idx_t thread, void *desc, unsigned int size, unsigned int entry_number_start, l4_utcb_t *utcb)

  Set GDT segment descriptors.
- unsigned fiasco_gdt_get_entry_offset (l4_cap_idx_t thread, l4_utcb_t *utcb)

  Return the offset of the entry in the GDT.
- long fiasco_amd64_set_fs (l4_cap_idx_t thread, l4_umword_t base, l4_utcb_t *utcb)

  Set the base address for the FS segment.
- long fiasco_amd64_set_segment_base (l4_cap_idx_t thread, enum L4_sys_segment segr, l4_umword_t base, l4_utcb_t *utcb)

  Set the base address for a segment.
- long fiasco_amd64_segment_info (l4_cap_idx_t thread, unsigned *user_ds, unsigned *user_cs, unsigned *user32_cs, l4_utcb_t *utcb)

  Get segment information.

17.79.1 Detailed Description

Segment handling (AMD64).

Definition in file segment.h.

17.79.2 Enumeration Type Documentation

17.79.2.1 L4_sys_segment

```
enum L4_sys_segment
```

Constants for identifying segments.

Enumerator

L4_AMD64_SEGMENT_FS	Constant identifying the FS segment.
L4_AMD64_SEGMENT_GS	Constant identifying the GS segment.

Definition at line 106 of file segment.h.

17.79.2.2 L4_task_ldt_x86_consts

```
enum L4_task_ldt_x86_consts
```

Contants for LDT handling.

Enumerator

L4_TASK_LDT_X86_ENTRY_SIZE	Size of an LDT entry.
L4_TASK_LDT_X86_MAX_ENTRIES	Maximum number of LDT entries that can be written with one call.

Definition at line 75 of file segment.h.

17.79.3 Function Documentation

17.79.3.1 fiasco_amd64_segment_info()

```
long fiasco_amd64_segment_info (
            l4_cap_idx_t thread,
            unsigned * user_ds,
            unsigned * user_cs,
            unsigned * user32_cs,
            l4_utcb_t * utcb)  [inline]
```

Get segment information.

Parameters

in	*thread*	Thread to get info from.
out	*user_ds*	DS segment selector.
out	*user_cs*	64-bit CS segment selector.
out	*user32_cs*	32-bit CS segment selector.
	utcb	UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb.

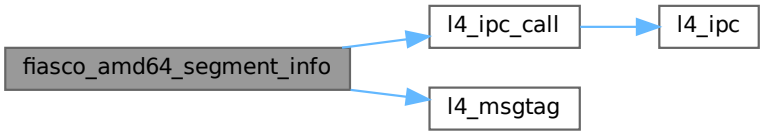
Returns

System call error

Definition at line 175 of file segment.h.

References l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_PROTO_THREAD, L4_THREAD_AMD64_GET_SEGMENT_INFO_OP, and l4_msg_regs_t::mr.

Here is the call graph for this function:



17.79.3.2 fiasco_amd64_set_fs()

```
long fiasco_amd64_set_fs (
            l4_cap_idx_t thread,
            l4_umword_t base,
            l4_utcb_t * utcb)  [inline]
```

Set the base address for the FS segment.

Parameters

thread	Thread for which the FS base address shall be modified.
base	Base address.
utcb	UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb.

Return values

L4_EOK	Success.

-L4_EINVAL	Invalid base address (`base`).
-L4_ENOSYS	Operation not supported with current kernel configuration.

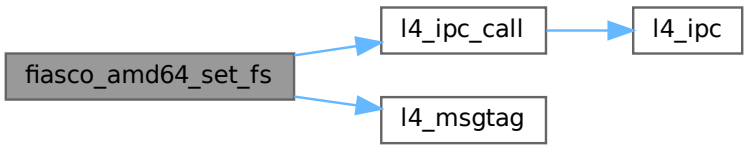
Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↩ AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 24 of file segment.h.

References L4_AMD64_SEGMENT_FS, l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_PROTO_THREAD, and L4_THREAD_AMD64_SET_SEGMENT_BASE_OP.

Here is the call graph for this function:



17.79.3.3 fiasco_amd64_set_segment_base()

```
long fiasco_amd64_set_segment_base (
              l4_cap_idx_t thread,
              enum L4_sys_segment segr,
              l4_umword_t base,
              l4_utcb_t * utcb)  [inline]
```

Set the base address for a segment.

Parameters

thread	Thread for which the base address of the selected segment shall be modified.
segr	Segment to modify (one of L4_sys_segment).
base	Base address.
utcb	UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb.

Return values

L4_EOK	Success.

-L4_EINVAL	Invalid segment (`segr`) or base address (`base`).
-L4_ENOSYS	Operation not supported with current kernel configuration.

Definition at line 32 of file segment.h.

References l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_PROTO_THREAD, and L4_THREAD_AMD64_SET_SEGMENT_BASE_

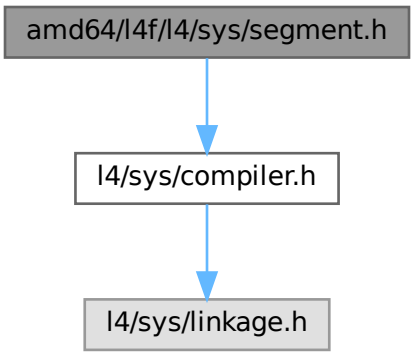
l4f-specific fs/gs manipulation (AMD64).

```
#include <l4/sys/compiler.h>
```
Include dependency graph for segment.h:



Functions

- long fiasco_amd64_set_fs (l4_cap_idx_t thread, l4_umword_t base, l4_utcb_t ∗utcb)

  Set the base address for the FS segment.
- long fiasco_amd64_set_segment_base (l4_cap_idx_t thread, enum L4_sys_segment segr, l4_umword_t base, l4_utcb_t ∗utcb)

  Set the base address for a segment.
- long fiasco_gdt_set (l4_cap_idx_t thread, void ∗desc, unsigned int size, unsigned int entry_number_start, l4_utcb_t ∗utcb)

  Set GDT segment descriptors.

17.81.1 Detailed Description

l4f-specific fs/gs manipulation (AMD64).

Definition in file segment.h.

17.81.2 Function Documentation

17.81.2.1 fiasco_amd64_set_fs()

```
long fiasco_amd64_set_fs (
             l4_cap_idx_t thread,
             l4_umword_t base,
             l4_utcb_t * utcb)  [inline]
```

Set the base address for the FS segment.

Parameters

thread	Thread for which the FS base address shall be modified.
base	Base address.
utcb	UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb.

Return values

L4_EOK	Success.
-L4_EINVAL	Invalid base address (`base`).
-L4_ENOSYS	Operation not supported with current kernel configuration.

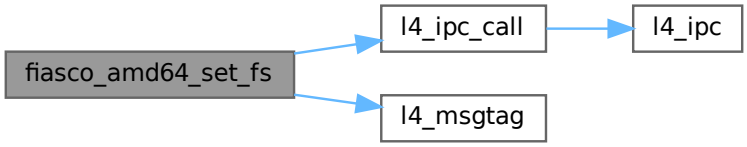
Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↩ AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 24 of file segment.h.

References L4_AMD64_SEGMENT_FS, l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_PROTO_THREAD, and L4_THREAD_AMD64_SET_SEGMENT_BASE_OP.

Here is the call graph for this function:



17.81.2.2 fiasco_amd64_set_segment_base()

```
long fiasco_amd64_set_segment_base (
             l4_cap_idx_t thread,
             enum L4_sys_segment segr,
             l4_umword_t base,
             l4_utcb_t * utcb)  [inline]
```

Set the base address for a segment.

Parameters

thread	Thread for which the base address of the selected segment shall be modified.

segr	Segment to modify (one of L4_sys_segment).
base	Base address.
utcb	UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb.

Return values

L4_EOK	Success.
-L4_EINVAL	Invalid segment (`segr`) or base address (`base`).
-L4_ENOSYS	Operation not supported with current kernel configuration.

Definition at line 32 of file segment.h.

References l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_PROTO_THREAD, and L4_THREAD_AMD64_SET_SEGMENT_BASE_

```

Include dependency graph for port_io.h:

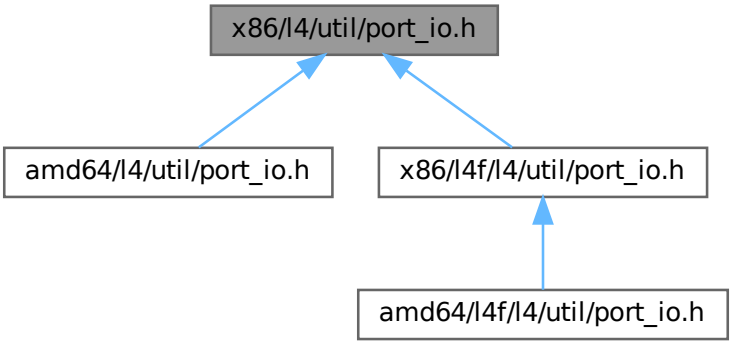
This graph shows which files directly or indirectly include this file:



Functions

- l4_uint8_t l4util_in8 (l4_uint16_t port)

  Read byte from I/O port.
- l4_uint16_t l4util_in16 (l4_uint16_t port)

  Read 16-bit-value from I/O port.
- l4_uint32_t l4util_in32 (l4_uint16_t port)

  Read 32-bit-value from I/O port.
- void l4util_ins8 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Read a block of 8-bit-values from I/O ports.

- void l4util_ins16 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Read a block of 16-bit-values from I/O ports.
- void l4util_ins32 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Read a block of 32-bit-values from I/O ports.
- void l4util_out8 (l4_uint8_t value, l4_uint16_t port)

  Write byte to I/O port.
- void l4util_out16 (l4_uint16_t value, l4_uint16_t port)

  Write 16-bit-value to I/O port.
- void l4util_out32 (l4_uint32_t value, l4_uint16_t port)

  Write 32-bit-value to I/O port.
- void l4util_outs8 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Write a block of bytes to I/O port.
- void l4util_outs16 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Write a block of 16-bit-values to I/O port.
- void l4util_outs32 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)

  Write block of 32-bit-values to I/O port.
- void **l4util_iodelay** (void)

  delay I/O port access by writing to port 0x80

  Offsets for vCPU state layouts.
- enum L4_vcpu_e_field_ids { }
  IDs for extended vCPU state fields.

17.101.1 Detailed Description

ARM-specific vCPU interface.

Definition in file __vcpu-arch.h.

17.101.2 Enumeration Type Documentation

17.101.2.1 anonymous enum

```
anonymous enum
```

Enumerator

L4_VCPU_STATE_VERSION	Architecture-specific version ID. This ID must match the version field in the l4_vcpu_state_t structure after enabling vCPU mode or extended vCPU mode for a thread.

Definition at line 17 of file __vcpu-arch.h.

17.101.2.2 L4_vcpu_e_field_ids

enum L4_vcpu_e_field_ids

IDs for extended vCPU state fields.

Bits 14..15: are the field size:

- 0 = 32bit field
- 1 = register width field
- 2 = 64bit field

Enumerator

L4_VCPU_E_VTMR_CFG	vtimer irq configuration

Definition at line 99 of file __vcpu-arch.h.

00020
00021 /*
00022  * Note: The following Assembler statement may produce wrong code:
00023  *   asm volatile ("btsl %1, %2" : "=@ccc"(r) : "Jr"(63), "m"(m) : "memory");
00024  *
00025  * The compiler might chose the first variant because the bit number is smaller
00026  * than 64. However, 'bts' is encoded as 32-bit variant ('btsl') and thus only
00027  * supports immediate bit values up to 31. Some assemblers support immediate
00028  * offsets > 31 by adapting the memory address accordingly but GAS does not.
00029  * With GAS, the instruction will encode an immediate value of 63 but the CPU
00030  * will set bit 31 instead of bit 63!
00031  *
00032  * Therefore, if we would use 'btsl' instead of 'btsq', the correct constraint
00033  * for the bit number parameter would be "Ir" instead of "Jr".
00034  */

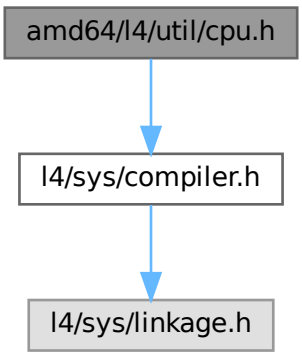
17.131 amd64/l4/util/cpu.h File Reference

CPU related functions.

`#include <l4/sys/compiler.h>`
Include dependency graph for cpu.h:



Functions

- int l4util_cpu_has_cpuid (void)

  Check whether the CPU supports the "cpuid" instruction.
- unsigned int l4util_cpu_capabilities (void)

  Returns the CPU capabilities if the "cpuid" instruction is available.
- unsigned int l4util_cpu_capabilities_nocheck (void)

  Returns the CPU capabilities.
- void **l4util_cpu_cpuid** (unsigned long mode, unsigned long *eax, unsigned long *ebx, unsigned long *ecx, unsigned long *edx)

  Generic CPUID access function.

```

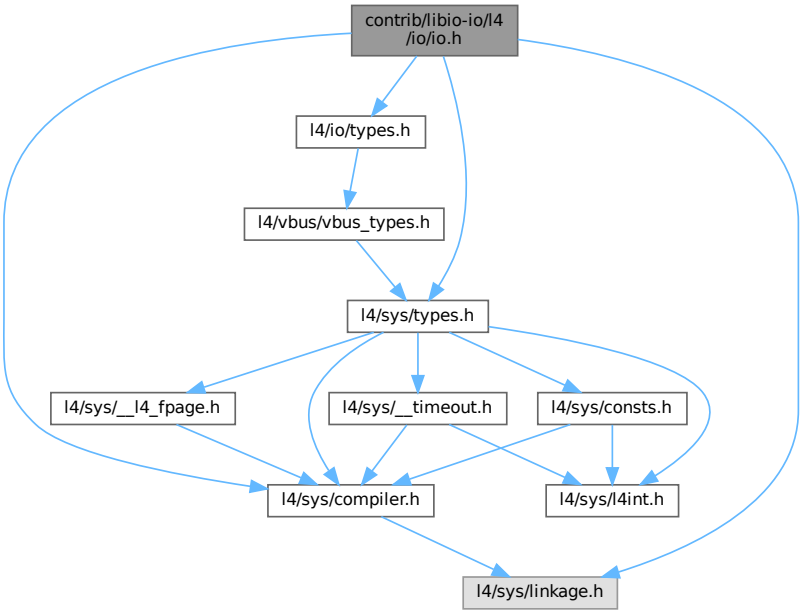
Include dependency graph for io.h:



Functions

- l4_cap_idx_t l4io_request_icu (void)

  Request the ICU object of the client.
- long l4io_request_iomem (l4_addr_t phys, unsigned long size, int flags, l4_addr_t *virt)

  Request an IO memory region.
- long l4io_request_iomem_region (l4_addr_t phys, l4_addr_t virt, unsigned long size, int flags)

  Request an IO memory region and map it to a specified region.
- long l4io_release_iomem (l4_addr_t virt, unsigned long size)

  Release an IO memory region.
- long l4io_request_ioport (unsigned portnum, unsigned len)

  Request an IO port region.
- long l4io_release_ioport (unsigned portnum, unsigned len)

  Release an IO port region.
- l4io_device_handle_t l4io_get_root_device (void)

  Get root device handle of the device bus.
- int l4io_iterate_devices (l4io_device_handle_t *devhandle, l4io_device_t *dev, l4io_resource_handle_t *reshandle)

  Iterate over the device bus.
- int l4io_lookup_device (const char *devname, l4io_device_handle_t *dev_handle, l4io_device_t *dev, l4io_resource_handle_t *res_handle)

  Find a device by name.
- int l4io_lookup_resource (l4io_device_handle_t devhandle, enum l4io_resource_types_t type, l4io_resource_handle_t *reshandle, l4io_resource_t *res)

  Request a specific resource from a device description.

- l4_addr_t l4io_request_resource_iomem (l4io_device_handle_t devhandle, l4io_resource_handle_t *reshandle)

  Request IO memory.
- void l4io_request_all_ioports (void(*res_cb)(l4vbus_resource_t const *res))

  Request all available IO-port resources.
- int l4io_has_resource (enum l4io_resource_types_t type, l4vbus_paddr_t start, l4vbus_paddr_t end)

  Check if a resource is available.

17.153.1 Function Documentation

17.153.1.1 l4io_get_root_device()

```
l4io_device_handle_t l4io_get_root_device (
            void )  [inline]
```

Get root device handle of the device bus.

Returns

root device handle

Definition at line 257 of file io.h.

17.153.1.2 l4io_iterate_devices()

```
int l4io_iterate_devices (
            l4io_device_handle_t * devhandle,
            l4io_device_t * dev,
            l4io_resource_handle_t * reshandle)
```

Iterate over the device bus.

Parameters

in,out	*devhandle*	Device handle to start iterating at. The next device handle is returned here.
out	*dev*	Device information, may be NULL.
out	*reshandle*	Resource handle.

Returns

0 on success, error code otherwise

References L4_CV, and L4_EXPORT.

17.153.1.3 l4io_request_all_ioports()

```
void l4io_request_all_ioports (
            void(* res_cb )(l4vbus_resource_t const *res))
```

Request all available IO-port resources.

Parameters

res_cb	Callback function called for every port resource found, give NULL for no callback.

References L4_CV, and L4_EXPORT.

17.153.1.4 l4io_request_icu()

```
l4_cap_idx_t l4io_request_icu (
             void )
```

Request the ICU object of the client.

Returns

Client ICU object, an invalid capability selector is returned if no ICU is available.

References L4_CV, and L4_EXPORT.

17.154 io.h

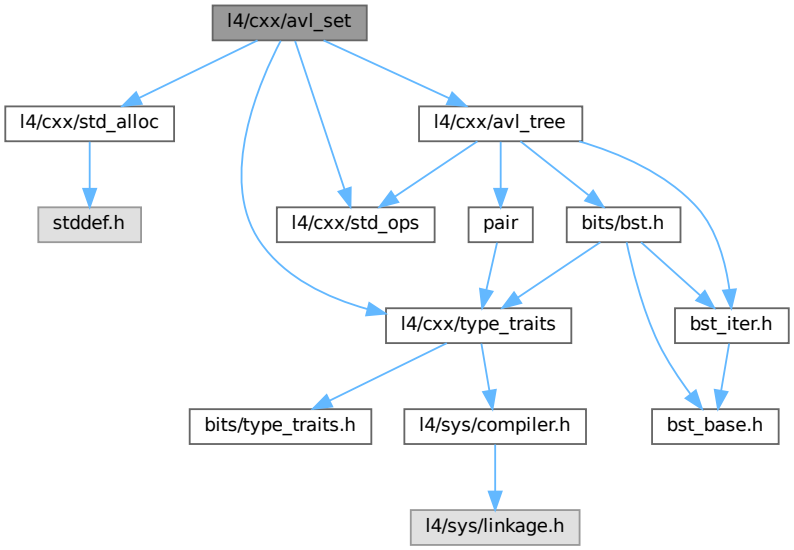
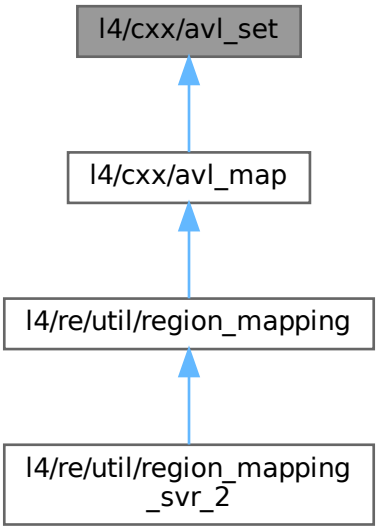
#include <l4/cxx/avl_tree>
```

Include dependency graph for avl_set:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct cxx::Bits::Avl_set_get_key< KEY_TYPE >

  Internal, key-getter for Avl_set nodes.
- class cxx::Bits::Base_avl_set< ITEM_TYPE, COMPARE, ALLOC, GET_KEY >

  Internal: AVL set with internally managed nodes.
- class cxx::Bits::Base_avl_set< ITEM_TYPE, COMPARE, ALLOC, GET_KEY >::Node

  A smart pointer to a tree item.
- class cxx::Avl_set< ITEM_TYPE, COMPARE, ALLOC >

  AVL set for simple comparable items.

Namespaces

- namespace cxx

  Our C++ library.
- namespace cxx::Bits

  Internal helpers for the cxx package.

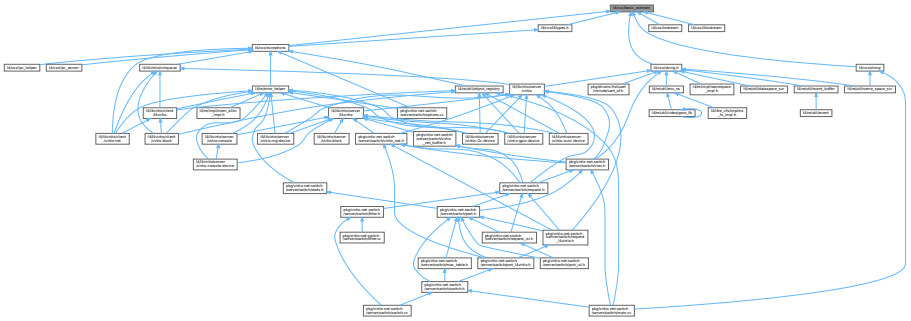
17.164 l4/cxx/basic_ostream File Reference

Basic IO stream.

This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::IOModifier

  Modifier class for the IO stream.

Namespaces

- namespace L4

  L4 low-level kernel interface.

Variables

- IOModifier const **L4::hex**

  Modifies the stream to print numbers as hexadecimal values.
- IOModifier const **L4::dec**

  Modifies the stream to print numbers as decimal values.

17.164.1 Detailed Description

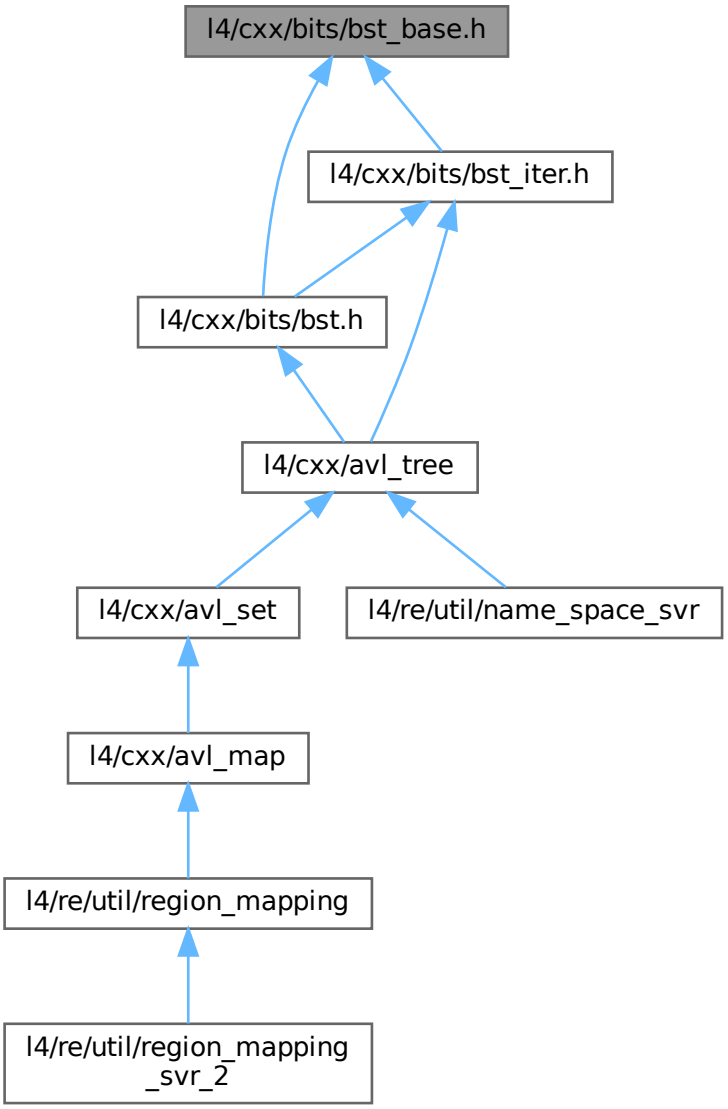
17.172 l4/cxx/bits/bst_base.h File Reference

AVL tree.

This graph shows which files directly or indirectly include this file:



Data Structures

- struct cxx::Bits::Direction

  The direction to go in a binary search tree.
- class cxx::Bits::Bst_node

  Basic type of a node in a binary search tree (BST).

Namespaces

- namespace cxx

  Our C++ library.
- namespace cxx::Bits

  Internal helpers for the cxx package.

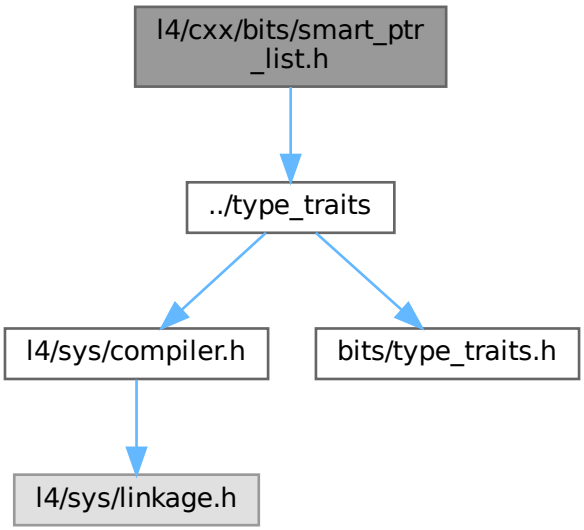
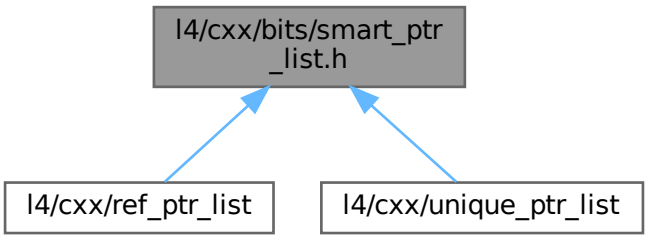
17.177 l4/cxx/bits/smart_ptr_list.h File Reference

Implementation of a list of smart-pointer-managed objects.

`#include "../type_traits"`
Include dependency graph for smart_ptr_list.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- class cxx::Bits::Smart_ptr_list_item< T, STORE_T >

  List item for an arbitrary item in a Smart_ptr_list.
- class cxx::Bits::Smart_ptr_list< ITEM >

  List of smart-pointer-managed objects.

Namespaces

- namespace cxx

  Our C++ library.
- namespace cxx::Bits

  Internal helpers for the cxx package.

17.177.1 Detailed Description

Implementation of a list of smart-pointer-managed objects.

Definition in file smart_ptr_list.h.

17.178 smart_ptr_list.h

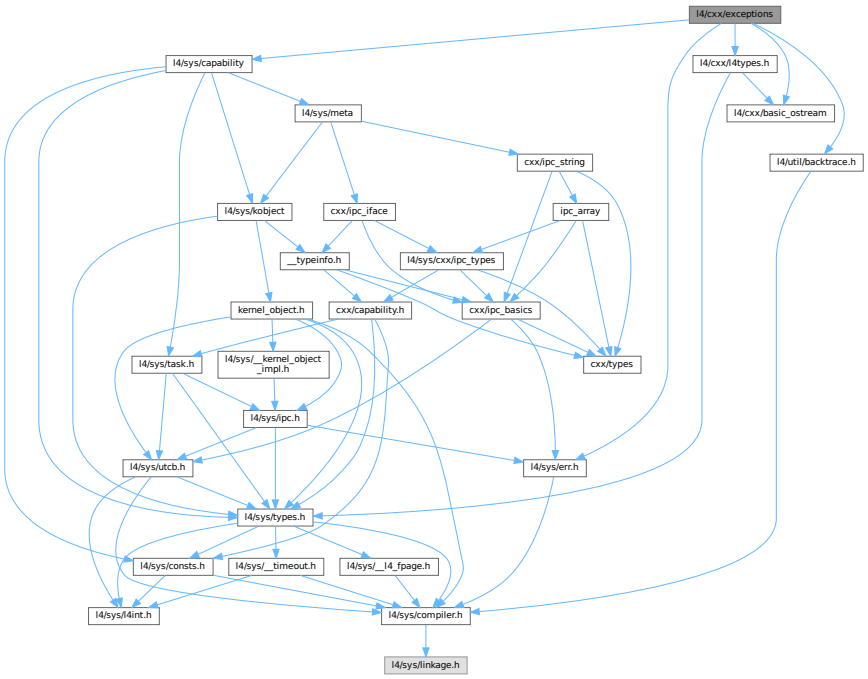
17.181 l4/cxx/exceptions File Reference

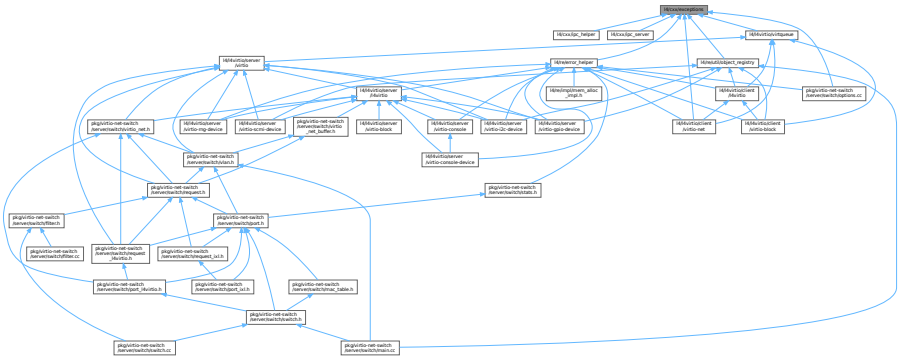
Base exceptions.

```
#include <l4/cxx/l4types.h>
#include <l4/cxx/basic_ostream>
#include <l4/sys/err.h>
#include <l4/sys/capability>
#include <l4/util/backtrace.h>
```

Include dependency graph for exceptions:



This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::Exception_tracer

  Back-trace support for exceptions.
- class L4::Base_exception

  Base class for all exceptions, thrown by the L4Re framework.
- class L4::Runtime_error

  Exception for an abstract runtime error.
- class L4::Out_of_memory

  Exception signalling insufficient memory.
- class L4::Element_already_exists

  Exception for duplicate element insertions.
- class L4::Unknown_error

  Exception for an unknown condition.
- class L4::Element_not_found

  Exception for a failed lookup (element not found).
- class L4::Invalid_capability

  Indicates that an invalid object was invoked.
- class L4::Com_error

  Error conditions during IPC.
- class L4::Bounds_error

  Access out of bounds.

Namespaces

- namespace L4

  L4 low-level kernel interface.

Macros

- #define **L4_CXX_EXCEPTION_BACKTRACE** 20

  Number of instruction pointers in backtrace.

17.181.1 Detailed Description

Base exceptions.

Definition in file exceptions.

17.182 exceptions

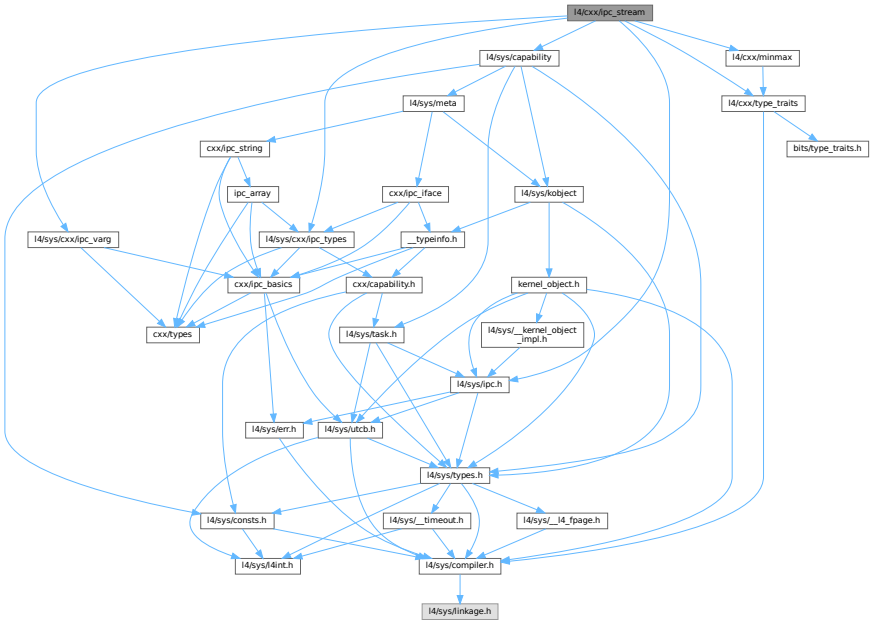
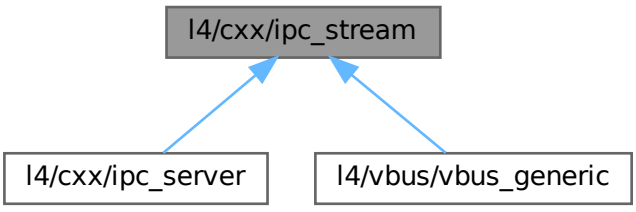
Include dependency graph for ipc_stream:



This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::Ipc::Str_cp_in< T >

Abstraction for extracting a zero-terminated string from an lpc::Istream.

- class L4::Ipc::Msg_ptr< T >

  Pointer to an element of type T in an lpc::Istream.
- class L4::Ipc::Istream

  Input stream for IPC unmarshalling.
- class L4::Ipc::Ostream

  Output stream for IPC marshalling.
- class L4::Ipc::Iostream

  Input/Output stream for IPC [un]marshalling.

Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Ipc

  IPC related functionality.

Functions

- template<typename T>
  Internal::Buf_cp_out< T > L4::Ipc::buf_cp_out (T const *v, unsigned long size)

  Insert an array into an lpc::Ostream.
- template<typename T>
  Internal::Buf_cp_in< T > L4::Ipc::buf_cp_in (T *v, unsigned long &size)

  Extract an array from an lpc::Istream.
- template<typename T>
  Str_cp_in< T > L4::Ipc::str_cp_in (T *v, unsigned long &size)

  Create a Str_cp_in for the given values.
- template<typename T>
  Msg_ptr< T > L4::Ipc::msg_ptr (T *&p)

  Create an Msg_ptr to adjust the given pointer.
- template<typename T>
  Internal::Buf_in< T > L4::Ipc::buf_in (T *&v, unsigned long &size)

  Return a pointer to stream array data.
- L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, bool &v)

  Extract one element of type `T` from the stream `s`.
- L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, l4_msgtag_t &v)

  Extract the L4 message tag from the stream `s`.
- template<typename T>
  L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, L4::Ipc::Internal::Buf_in< T > const &v)

  Extract an array of `T` elements from the stream `s`.
- template<typename T>
  L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, L4::Ipc::Msg_ptr< T > const &v)

  Extract an element of type `T` from the stream `s`.
- template<typename T>
  L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, L4::Ipc::Internal::Buf_cp_in< T > const &v)

  Extract an array of `T` elements from the stream `s`.
- template<typename T>
  L4::Ipc::Istream & operator>> (L4::Ipc::Istream &s, L4::Ipc::Str_cp_in< T > const &v)

  Extract a zero-terminated string from the stream.
- L4::Ipc::Ostream & operator<< (L4::Ipc::Ostream &s, bool v)

Insert an element to type `T` into the stream `s`.

- L4::Ipc::Ostream & operator<< (L4::Ipc::Ostream &s, l4_msgtag_t const &v)

  Insert the L4 message tag into the stream `s`.

- template<typename T>
  L4::Ipc::Ostream & operator<< (L4::Ipc::Ostream &s, L4::Ipc::Internal::Buf_cp_out< T > const &v)

  Insert an array with elements of type `T` into the stream `s`.

- L4::Ipc::Ostream & operator<< (L4::Ipc::Ostream &s, char const *v)

  Insert a zero terminated character string into the stream `s`.

- template<typename T>
  T L4::Ipc::read (Istream &s)

  Read a value out of a stream.

17.188.1 Detailed Description

IPC stream.

Definition in file ipc_stream.

17.188.2 Function Documentation

17.188.2.1 operator<<() [1/4]

```
L4::Ipc::Ostream & operator<< (
            L4::Ipc::Ostream & s,
            bool v)  [inline]
```

Insert an element to type `T` into the stream `s`.

Parameters

s	The stream to insert the element `v`.
v	The element to insert.

Returns

The stream `s`.

Definition at line 1197 of file ipc_stream.

References L4::Ipc::Ostream::put().

Here is the call graph for this function:

17.188.2.2 operator<<() [2/4]

```
L4::Ipc::Ostream & operator<< (
            L4::Ipc::Ostream & s,
            char const * v)  [inline]
```

Insert a zero terminated character string into the stream `s`.

Parameters

s	The stream to insert the string `v`.
v	The string to insert.

Returns

The stream `s`.

This operator produces basically the same content as the array insertion, however the length of the array is calculated using `strlen(v) + 1` The string is copied into the message including the trailing zero.

Definition at line 1269 of file ipc_stream.

References L4::Ipc::Ostream::put().

Here is the call graph for this function:

17.188.2.3 operator<<() [3/4]

```
template<typename T>
L4::Ipc::Ostream & operator<< (
            L4::Ipc::Ostream & s,
            L4::Ipc::Internal::Buf_cp_out< T > const & v)  [inline]
```

Insert an array with elements of type `T` into the stream `s`.

Parameters

s	The stream to insert the array `v`.
v	The array to insert (see Ipc::Buf_cp_out()).

Returns

The stream `s`.

Definition at line 1248 of file ipc_stream.

References L4::Ipc::Ostream::put().

Here is the call graph for this function:

17.188.2.4 operator<<() [4/4]

```
L4::Ipc::Ostream & operator<< (
            L4::Ipc::Ostream & s,
            l4_msgtag_t const & v)  [inline]
```

Insert the L4 message tag into the stream `s`.

Parameters

s	The stream to insert the tag `v`.
v	The L4 message tag to insert.

Returns

The stream `s`.

Note

Only one message tag can be inserted into a stream. Multiple insertions simply overwrite previous insertions.

Definition at line 1232 of file ipc_stream.

References L4::Ipc::Ostream::tag().

Here is the call graph for this function:

17.188.2.5 operator>>() [1/6]

```
L4::Ipc::Istream & operator>> (
            L4::Ipc::Istream & s,
            bool & v)  [inline]
```

Extract one element of type `T` from the stream `s`.

Parameters

	s	The stream to extract from.
out	*v*	Extracted value.

Returns

The stream `s`.

Definition at line 1044 of file ipc_stream.

References L4::Ipc::Istream::get().

Here is the call graph for this function:

17.188.2.6 operator>>() [2/6]

```
template<typename T>
L4::Ipc::Istream & operator>> (
            L4::Ipc::Istream & s,
            L4::Ipc::Internal::Buf_cp_in< T > const & v)  [inline]
```

Extract an array of `T` elements from the stream `s`.

Parameters

	s	The stream to extract from.
out	*v*	Buffer description to copy the array to (Ipc::Buf_cp_out()).

Returns

The stream `s`.

This operator does a copy out of the data into the given buffer.

See Ipc::Buf_in, Ipc::Buf_cp_in, and Ipc::Buf_cp_out.

Definition at line 1151 of file ipc_stream.

References L4::Ipc::Istream::get().

Here is the call graph for this function:

17.188.2.7 operator>>() [3/6]

```
template<typename T>
L4::Ipc::Istream & operator>> (
            L4::Ipc::Istream & s,
            L4::Ipc::Internal::Buf_in< T > const & v)  [inline]
```

Extract an array of `T` elements from the stream `s`.

Parameters

	s	The stream to extract from.
out	*v*	Pointer to the extracted array (ipc_buf_in()).

Returns

The stream `s`.

This operator actually does not copy out the data in the array, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

Note

If array does not fit into transmitted words size will be set to zero. Client has to implement check against zero.

See Ipc::Buf_in, Ipc::Buf_cp_in, and Ipc::Buf_cp_out.

Definition at line 1103 of file ipc_stream.

References L4::Ipc::Istream::get(), and L4::Ipc::Istream::has_more().

17.188.2.8 operator>>() [4/6]

```
template<typename T>
L4::Ipc::Istream & operator>> (
            L4::Ipc::Istream & s,
            L4::Ipc::Msg_ptr< T > const & v)  [inline]
```

Extract an element of type `T` from the stream `s`.

Parameters

	s	The stream to extract from.
out	*v*	Pointer to the extracted element.

Returns

The stream `s`.

This operator actually does not copy out the data, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

See Msg_ptr.

Definition at line 1130 of file ipc_stream.

17.188.2.9 operator>>() [5/6]

```
template<typename T>
L4::Ipc::Istream & operator>> (
            L4::Ipc::Istream & s,
            L4::Ipc::Str_cp_in< T > const & v)  [inline]
```

Extract a zero-terminated string from the stream.

Parameters

	s	The stream to extract from.
out	*v*	Buffer description to copy the array to (Ipc::Str_cp_out()).

Returns

The stream s.

This operator does a copy out of the data into the given buffer.

Definition at line 1172 of file ipc_stream.

References L4::Ipc::Istream::get().

            L4::Ipc::Istream & s,
            l4_msgtag_t & v)  [inline]
```

Extract the L4 message tag from the stream s.

Parameters

	s	The stream to extract from.
out	*v*	The extracted tag.

Returns

The stream `s`.

Definition at line 1078 of file ipc_stream.

References L4::Ipc::Istream::tag().

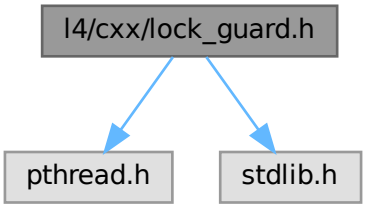
17.197 l4/cxx/lock_guard.h File Reference

Lock guard implementation.

```
#include <pthread.h>
#include <stdlib.h>
```

Include dependency graph for lock_guard.h:



Data Structures

- class L4::Lock_guard

  Basic lock guard implementation that prevents forgotten unlocks on exit paths from a method or a block of code.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.197.1 Detailed Description

Lock guard implementation.

Definition in file lock_guard.h.

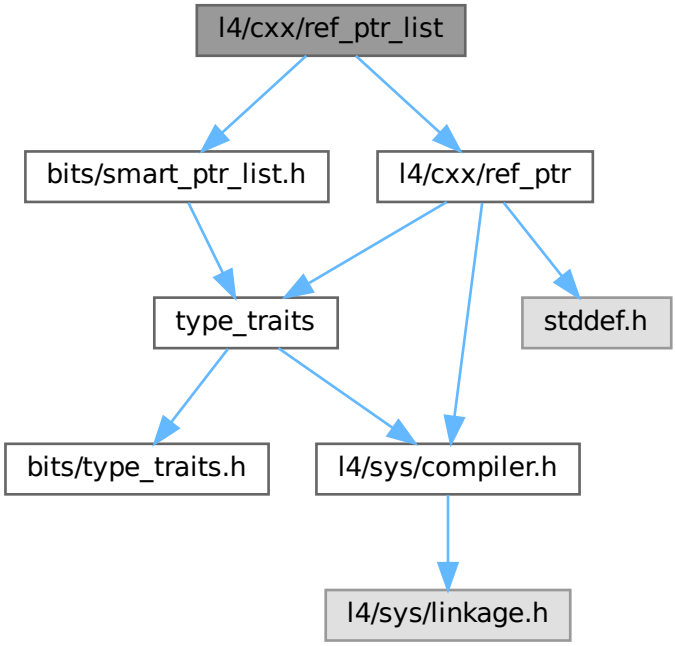
17.207 l4/cxx/ref_ptr_list File Reference

Implementation of a list of ref-ptr-managed objects.

```
#include <l4/cxx/ref_ptr>
#include "bits/smart_ptr_list.h"
```

Include dependency graph for ref_ptr_list:



Data Structures

- struct cxx::Ref_obj_list_item< T >

  Item for list linked via cxx::Ref_ptr with default refence counting.

Namespaces

- namespace cxx

  Our C++ library.

Typedefs

- template<typename T>
  using **cxx::Ref_ptr_list_item** = Bits::Smart_ptr_list_item<T, cxx::Ref_ptr<T> >

  Item for list linked with cxx::Ref_ptr.
- template<typename T>
  using **cxx::Ref_ptr_list** = Bits::Smart_ptr_list<Ref_ptr_list_item<T> >

  Single-linked list where elements are connected via a cxx::Ref_ptr.

17.207.1 Detailed Description

Implementation of a list of ref-ptr-managed objects.

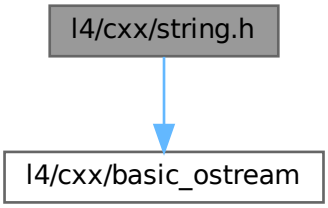
17.216 l4/cxx/string.h File Reference

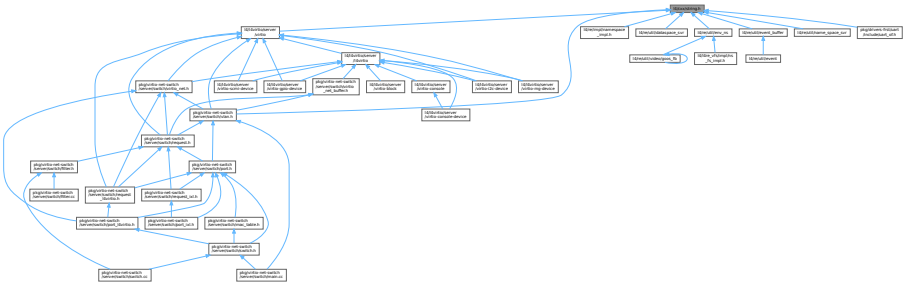
String.

```
#include <l4/cxx/basic_ostream>
```

Include dependency graph for string.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::String

  A null-terminated string container class.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.216.1 Detailed Description

String.

Definition in file string.h.

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
```

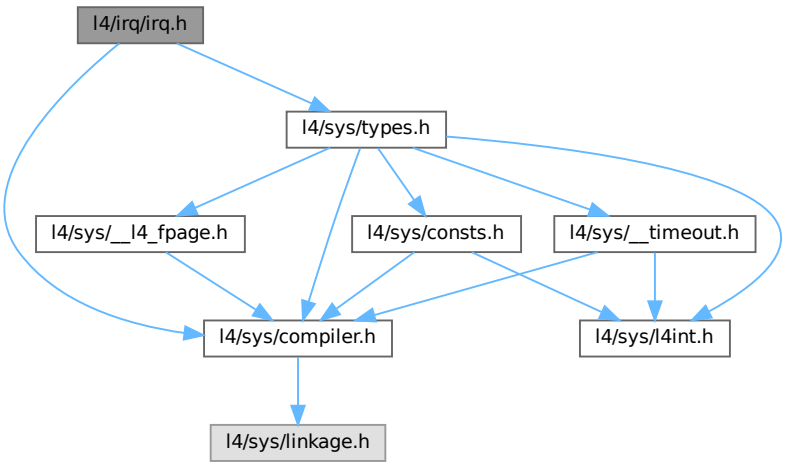
Include dependency graph for irq.h:



Functions

- l4irq_t * l4irq_attach (int irqnum)

Attach/connect to IRQ.

- l4irq_t * l4irq_attach_ft (int irqnum, unsigned mode)

  Attach/connect to IRQ using given type.
- l4irq_t * l4irq_attach_thread (int irqnum, l4_cap_idx_t to_thread)

  Attach/connect to IRQ.
- l4irq_t * l4irq_attach_thread_ft (int irqnum, l4_cap_idx_t to_thread, unsigned mode)

  Attach/connect to IRQ using given type.
- long l4irq_wait (l4irq_t *irq)

  Wait for specified IRQ.
- long l4irq_unmask_and_wait_any (l4irq_t *unmask_irq, l4irq_t **ret_irq)

  Unmask a specific IRQ and wait for any attached IRQ.
- long l4irq_wait_any (l4irq_t **irq)

  Wait for any attached IRQ.
- long l4irq_unmask (l4irq_t *irq)

  Unmask a specific IRQ.
- long l4irq_detach (l4irq_t *irq)

  Detach from IRQ.
- l4irq_t * l4irq_request (int irqnum, void(*isr_handler)(void *), void *isr_data, int irq_thread_prio, unsigned mode)

  Attach asychronous ISR handler to IRQ.
- long l4irq_release (l4irq_t *irq)

  Release asynchronous ISR handler and free resources.
- l4irq_t * l4irq_attach_cap (l4_cap_idx_t irqcap)

  Attach/connect to IRQ.
- l4irq_t * l4irq_attach_cap_ft (l4_cap_idx_t irqcap, unsigned mode)

  Attach/connect to IRQ using given type.
- l4irq_t * l4irq_attach_thread_cap (l4_cap_idx_t irqcap, l4_cap_idx_t to_thread)

  Attach/connect to IRQ.
- l4irq_t * l4irq_attach_thread_cap_ft (l4_cap_idx_t irqcap, l4_cap_idx_t to_thread, unsigned mode)

  Attach/connect to IRQ using given type.
- l4irq_t * l4irq_request_cap (l4_cap_idx_t irqcap, void(*isr_handler)(void *), void *isr_data, int irq_thread_↩ prio, unsigned mode)

  Attach asychronous ISR handler to IRQ.

17.229.1 Detailed Description

IRQ handling routines.

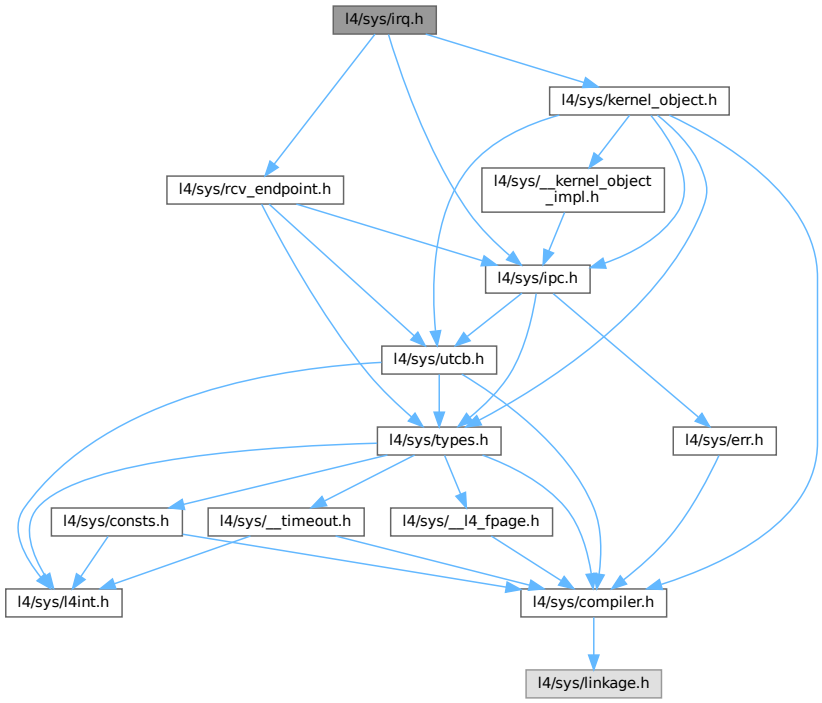
17.231 l4/sys/irq.h File Reference

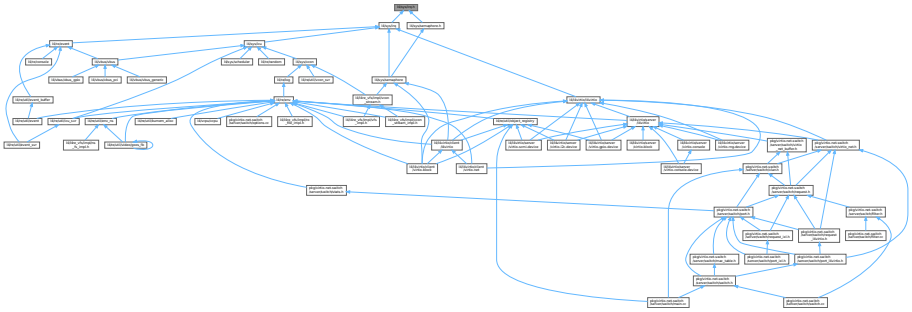
C Irq interface.

```
#include <l4/sys/kernel_object.h>
#include <l4/sys/ipc.h>
#include <l4/sys/rcv_endpoint.h>
```

Include dependency graph for irq.h:



This graph shows which files directly or indirectly include this file:



Functions

- l4_msgtag_t l4_irq_detach (l4_cap_idx_t irq) L4_NOTHROW

  Detach from an interrupt source.
- l4_msgtag_t l4_irq_detach_u (l4_cap_idx_t irq, l4_utcb_t *utcb) L4_NOTHROW

  Detach from this interrupt.
- l4_msgtag_t l4_irq_bind_vcpu (l4_cap_idx_t irq, l4_cap_idx_t thread, l4_umword_t cfg) L4_NOTHROW

  Bind a thread to this Irq for vCPU interrupt forwarding.

- l4_msgtag_t l4_irq_bind_vcpu_u (l4_cap_idx_t irq, l4_cap_idx_t thread, l4_umword_t cfg, l4_utcb_t *utcb) L4_NOTHROW

  Bind a thread to this Irq for vCPU interrupt forwarding.
- l4_msgtag_t l4_irq_trigger (l4_cap_idx_t irq) L4_NOTHROW

  Trigger an IRQ.
- l4_msgtag_t l4_irq_trigger_u (l4_cap_idx_t irq, l4_utcb_t *utcb) L4_NOTHROW

  Trigger the object.
- l4_msgtag_t l4_irq_receive (l4_cap_idx_t irq, l4_timeout_t to) L4_NOTHROW

  Unmask and wait for specified IRQ.
- l4_msgtag_t l4_irq_receive_u (l4_cap_idx_t irq, l4_timeout_t timeout, l4_utcb_t *utcb) L4_NOTHROW

  Unmask and wait for this IRQ.
- l4_msgtag_t l4_irq_wait (l4_cap_idx_t irq, l4_umword_t *label, l4_timeout_t to) L4_NOTHROW

  Unmask IRQ and wait for any message.
- l4_msgtag_t l4_irq_wait_u (l4_cap_idx_t irq, l4_umword_t *label, l4_timeout_t timeout, l4_utcb_t *utcb) L4_NOTHROW

  Unmask IRQ and (open) wait for any message.
- l4_msgtag_t l4_irq_unmask (l4_cap_idx_t irq) L4_NOTHROW

  Unmask IRQ.
- l4_msgtag_t l4_irq_unmask_u (l4_cap_idx_t irq, l4_utcb_t *utcb) L4_NOTHROW

  Unmask this IRQ.

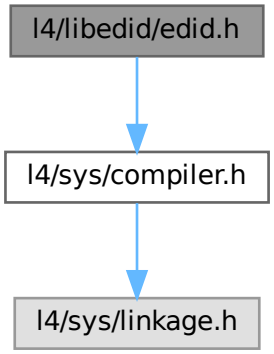
17.264 l4/libedid/edid.h File Reference

`#include <l4/sys/compiler.h>`
Include dependency graph for edid.h:



Enumerations

- enum Libedid_consts { Libedid_block_size = 128 }
  EDID constants.

Functions

- int libedid_check_header (const unsigned char *edid)
  Check for valid EDID header.
- int libedid_checksum (const unsigned char *edid)
  Calculates the EDID checksum.
- unsigned libedid_version (const unsigned char *edid)
  Returns the EDID version number.
- unsigned libedid_revision (const unsigned char *edid)
  Returns the EDID revision number.
- void libedid_pnp_id (const unsigned char *edid, unsigned char *id)

Extracts the display's PnP ID.

- void libedid_prefered_resolution (const unsigned char ∗edid, unsigned ∗w, unsigned ∗h)

  Extract the display's prefered mode.

- unsigned libedid_num_ext_blocks (const unsigned char ∗edid)

  Get the number of EDID extension blocks.

- unsigned libedid_dump_standard_timings (const unsigned char ∗edid)

  Dump the standard timings to stdout.

- void libedid_dump (const unsigned char ∗edid)

  Dump raw EDID data to stdout.

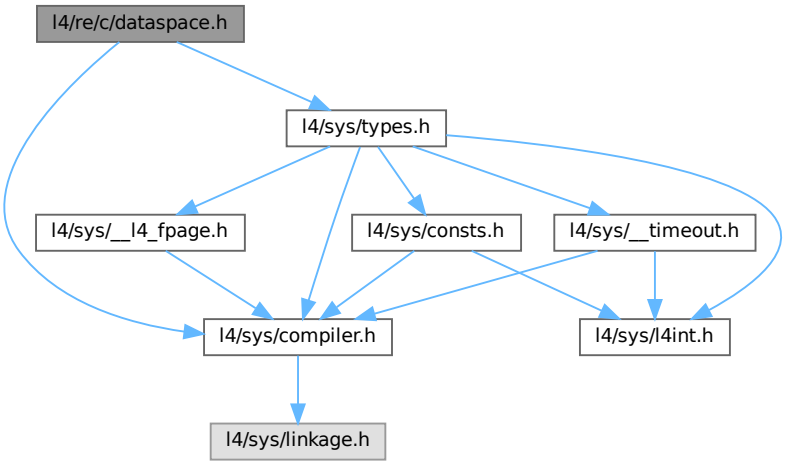
17.266 l4/re/c/dataspace.h File Reference

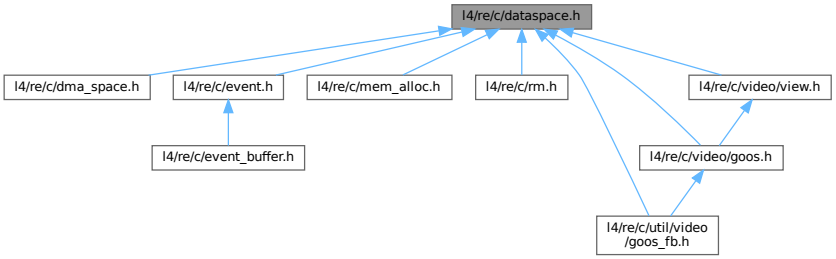
Data space C interface.

```
#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
```

Include dependency graph for dataspace.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4re_ds_stats_t

  Information about the data space.

Enumerations

- enum l4re_ds_map_flags { }

  Flags to specify the memory mapping type of a request.

Functions

- long l4re_ds_clear (l4re_ds_t ds, l4re_ds_offset_t offset, l4re_ds_size_t size) L4_NOTHROW

  Clear parts of a dataspace.
- long l4re_ds_allocate (l4re_ds_t ds, l4re_ds_offset_t offset, l4re_ds_size_t size) L4_NOTHROW

Allocate a range in the dataspace.

- int l4re_ds_copy_in (l4re_ds_t ds, l4re_ds_offset_t dst_offs, l4re_ds_t src, l4re_ds_offset_t src_offs, l4re_↩ ds_size_t size) L4_NOTHROW

  Copy contents from another dataspace.

- l4re_ds_size_t l4re_ds_size (l4re_ds_t ds) L4_NOTHROW

  Get size of a dataspace.

- l4re_ds_flags_t l4re_ds_flags (l4re_ds_t ds) L4_NOTHROW

  Get flags of the dataspace.

- int l4re_ds_info (l4re_ds_t ds, l4re_ds_stats_t *stats) L4_NOTHROW

  Get information on the dataspace.

- int l4re_ds_map_info (l4re_ds_t ds, l4_addr_t *start_addr, l4_addr_t *end_addr) L4_NOTHROW

  Get mapping range of dataspace.

Variables

- L4_BEGIN_DECLS typedef l4_cap_idx_t **l4re_ds_t**

  Dataspace type.

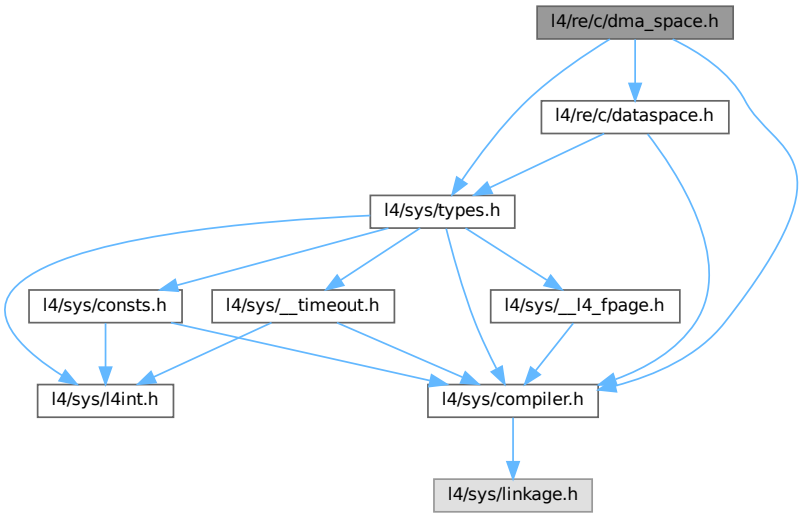
17.268 l4/re/c/dma_space.h File Reference

DMA space C interface.

```
#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/re/c/dataspace.h>
```

Include dependency graph for dma_space.h:



Typedefs

- typedef l4_cap_idx_t l4re_dma_space_t

  DMA space capability type.
- typedef l4_uint64_t **l4re_dma_space_dma_addr_t**

  Data type for DMA addresses.

Enumerations

- enum l4re_dma_space_direction { L4RE_DMA_SPACE_BIDIRECTIONAL , L4RE_DMA_SPACE_TO_DEVICE , L4RE_DMA_SPACE_FROM_DEVICE , L4RE_DMA_SPACE_NONE }

  Direction of the DMA transfers.
- enum l4re_dma_space_space_attribs { L4RE_DMA_SPACE_COHERENT = 1 << 0 , L4RE_DMA_SPACE_PHYS_SPACE = 1 << 1 }

  Attributes assigned to the DMA space when associated with a specific device.

Functions

- long l4re_dma_space_map (l4re_dma_space_t dma, l4re_ds_t src, l4re_ds_offset_t offset, l4_size_t *size, unsigned long attrs, enum l4re_dma_space_direction dir, l4re_dma_space_dma_addr_t *dma_↩ addr) L4_NOTHROW

  Map the given part of this data space into the DMA address space.
- long l4re_dma_space_unmap (l4re_dma_space_t dma, l4re_dma_space_dma_addr_t dma_addr, l4_size_t size, unsigned long attrs, enum l4re_dma_space_direction dir) L4_NOTHROW

  Unmap the given part of this data space from the DMA address space.
- long l4re_dma_space_associate (l4re_dma_space_t dma, l4_cap_idx_t dma_task, unsigned long attr) L4_NOTHROW

  Associate a (kernel) DMA space for a device to this Dma_space.
- long l4re_dma_space_disassociate (l4re_dma_space_t dma)

  Disassociate the (kernel) DMA space from this Dma_space.

17.268.1 Detailed Description

DMA space C interface.

Definition in file dma_space.h.

17.268.2 Enumeration Type Documentation

17.268.2.1 l4re_dma_space_direction

enum l4re_dma_space_direction

Direction of the DMA transfers.

Enumerator

L4RE_DMA_SPACE_BIDIRECTIONAL	device reads and writes to the memory
L4RE_DMA_SPACE_TO_DEVICE	device reads the memory
L4RE_DMA_SPACE_FROM_DEVICE	device writes to the memory
L4RE_DMA_SPACE_NONE	device is coherently connected

Definition at line 27 of file dma_space.h.

17.268.2.2 l4re_dma_space_space_attribs

enum l4re_dma_space_space_attribs

Attributes assigned to the DMA space when associated with a specific device.

See also

Space_attribs

Enumerator

L4RE_DMA_SPACE_COHERENT	The device is connected coherently with the cache. This means that the map() and unmap() do not need to sync CPU caches before and after DMA.
L4RE_DMA_SPACE_PHYS_SPACE	The DMA space has no DMA task assigned and uses the CPUs physical memory.

Definition at line 38 of file dma_space.h.

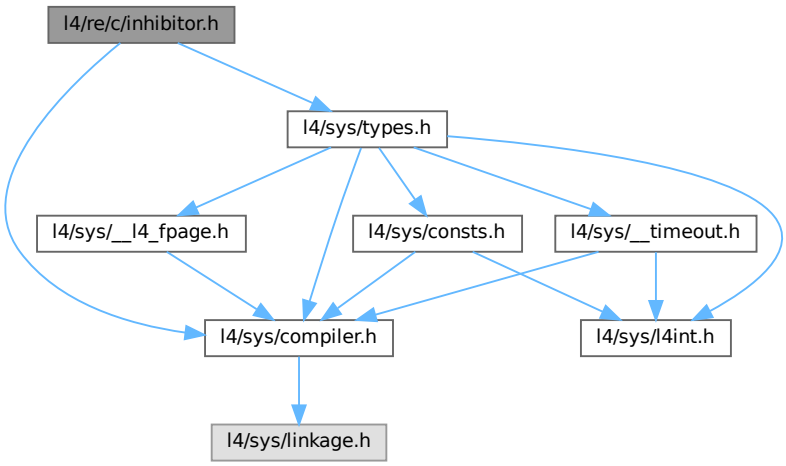
17.275 l4/re/c/inhibitor.h File Reference

Inhibitor C interface.

```
#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
```

Include dependency graph for inhibitor.h:



Functions

- L4_BEGIN_DECLS long l4re_inhibitor_acquire (l4_cap_idx_t cap, l4_umword_t id, char const ∗reason)
  Acquire an inhibitor lock.
- long l4re_inhibitor_release (l4_cap_idx_t cap, l4_umword_t id)
  Release an inhibitor lock.
- long l4re_inhibitor_next_lock_info (l4_cap_idx_t cap, char ∗name, unsigned len, l4_mword_t current_id)
  Get information for the next available inhibitor lock.

17.275.1 Detailed Description

Inhibitor C interface.

Definition in file inhibitor.h.

17.275.2 Function Documentation

17.275.2.1 l4re_inhibitor_acquire()

```
L4_BEGIN_DECLS long l4re_inhibitor_acquire (
             l4_cap_idx_t cap,
             l4_umword_t id,
             char const * reason)
```

Acquire an inhibitor lock.

Parameters

cap	Capability for the Inhibitor object (see L4Re::Inhibitor)
id	ID of the inhibitor lock that shall be acquired.
reason	Reason why the inhibitor lock is acquired. (Used for informing the user or debugging.)

Returns

0 for success, <0 on error.

See also

L4Re::Inhibitor::acquire().

References L4_CV, and L4_EXPORT.

17.275.2.2 l4re_inhibitor_next_lock_info()

```
long l4re_inhibitor_next_lock_info (
             l4_cap_idx_t cap,
             char * name,
             unsigned len,
             l4_mword_t current_id)
```

Get information for the next available inhibitor lock.

Parameters

cap	Capability to the Inhibitor object (see L4Re::Inhibitor)
name	A pointer to a buffer for the name of the lock.
len	The length of the available buffer (usually L4Re::Inhibitor::Name_max is used).
current_id	The ID of the last available lock, use -1 to get the first lock.

Return values

>0	The ID of the next available lock if there is one (in this case name shall contain the name of the inhibitor lock).
-L4_ENODEV	if there are no more locks.
<0	Any other negative failure value.

See also

L4Re::Inhibitor::next_lock_info().

References L4_END_DECLS.

17.275.2.3 l4re_inhibitor_release()

```
long l4re_inhibitor_release (
              l4_cap_idx_t cap,
              l4_umword_t id)
```

Release an inhibitor lock.

Parameters

cap	Capability for the Inhibitor object (see L4Re::Inhibitor).
id	ID of inhibitor that shall be released.

Returns

0 for success, <0 on error.

See also

L4Re::Inhibitor::release().

References L4_CV, and L4_EXPORT.

Functions

- L4_BEGIN_DECLS long l4re_parent_signal (l4_cap_idx_t parent, unsigned long sig, unsigned long val)
  Send a signal using the parent protocol.

17.283.1 Detailed Description

Parent C interface.

Definition in file parent.h.

17.283.2 Function Documentation

17.283.2.1 l4re_parent_signal()

```
L4_BEGIN_DECLS long l4re_parent_signal (
            l4_cap_idx_t parent,
            unsigned long sig,
            unsigned long val)
```

Send a signal using the parent protocol.

Parameters

parent	Capability index of parent to send signal to.
sig	Signal to send
val	Value of the signal

Return values

0	Success
<0	IPC error

See also

L4Re::Parent::signal

  Flags for region operations.

Functions

- int l4re_rm_reserve_area (l4_addr_t *start, unsigned long size, l4re_rm_flags_t flags, unsigned char align) L4_NOTHROW

  Reserve the given area in the region map.
- int l4re_rm_free_area (l4_addr_t addr) L4_NOTHROW

  Free an area from the region map.
- int l4re_rm_attach (void **start, unsigned long size, l4re_rm_flags_t flags, l4re_ds_t mem, l4re_rm_offset_t offs, unsigned char align) L4_NOTHROW

  Attach a data space to a region.
- int l4re_rm_detach (void *addr) L4_NOTHROW

  Detach and unmap a region from the address space in the current task.
- int l4re_rm_detach_ds (void *addr, l4re_ds_t *ds) L4_NOTHROW

  Detach and unmap a region and return affected dataspace in the current task.
- int l4re_rm_detach_unmap (l4_addr_t addr, l4_cap_idx_t task) L4_NOTHROW

  Detach and unmap in specified task.
- int l4re_rm_detach_ds_unmap (void *addr, l4re_ds_t *ds, l4_cap_idx_t task) L4_NOTHROW

  Detach and unmap in specified task.

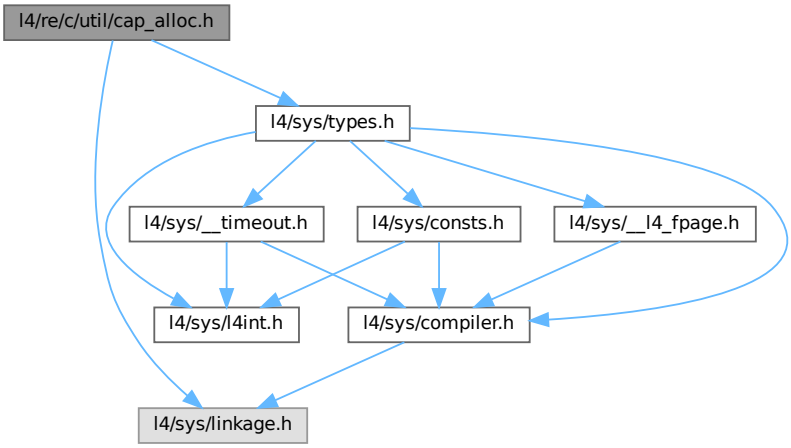
#include <l4/sys/types.h>
#include <l4/sys/linkage.h>
```

Include dependency graph for cap_alloc.h:



Functions

- L4_BEGIN_DECLS l4_cap_idx_t **l4re_util_cap_alloc** (void) L4_NOTHROW

  Get free capability index at capability allocator.
- void **l4re_util_cap_free** (l4_cap_idx_t cap) L4_NOTHROW

  Return capability index to capability allocator.
- void **l4re_util_cap_free_um** (l4_cap_idx_t cap) L4_NOTHROW

  Return capability index to capability allocator, and unmaps the object.
- long l4re_util_cap_last (void) L4_NOTHROW

  Return last capability index the allocator can return.

17.287.1 Detailed Description

Capability allocator C interface.

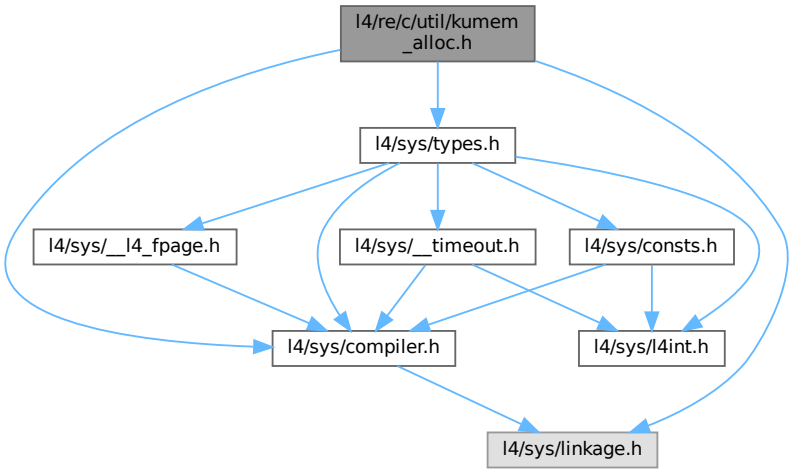
17.289 l4/re/c/util/kumem_alloc.h File Reference

Kumem allocator utility C interface.

```
#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/linkage.h>
```

Include dependency graph for kumem_alloc.h:



Functions

- L4_BEGIN_DECLS int l4re_util_kumem_alloc (l4_addr_t *mem, unsigned pages_order, l4_cap_idx_t task, l4_cap_idx_t rm) L4_NOTHROW

  Allocate state area.

17.289.1 Detailed Description

Kumem allocator utility C interface.

Definition in file kumem_alloc.h.

17.289.2 Function Documentation

17.289.2.1 l4re_util_kumem_alloc()

```
L4_BEGIN_DECLS int l4re_util_kumem_alloc (
             l4_addr_t * mem,
             unsigned pages_order,
             l4_cap_idx_t task,
             l4_cap_idx_t rm)
```

Allocate state area.

Parameters

out	*mem*	Pointer to memory that has been allocated.
	pages_order	Size to allocate, in log2 pages.
	task	Task to use for allocation.
	rm	Region manager to use for allocation.

Return values

0	for success
<0	error code on failure

Note

The amount of kernel-user memory that can be allocated at once is limited by the used kernel implementation. The minimum allocatable amount is one page. A portable implementation should not depend on allocations greater than 16KiB to succeed.

Examples

examples/sys/aliens/main.c, and examples/sys/utcb-ipc/main.c.

References L4_END_DECLS, and L4_NOTHROW.

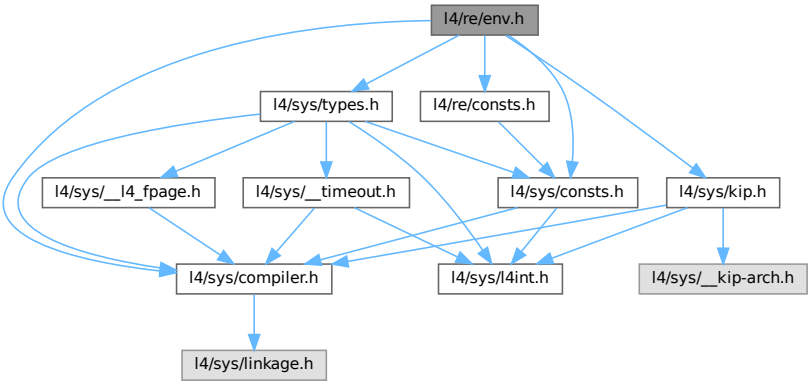
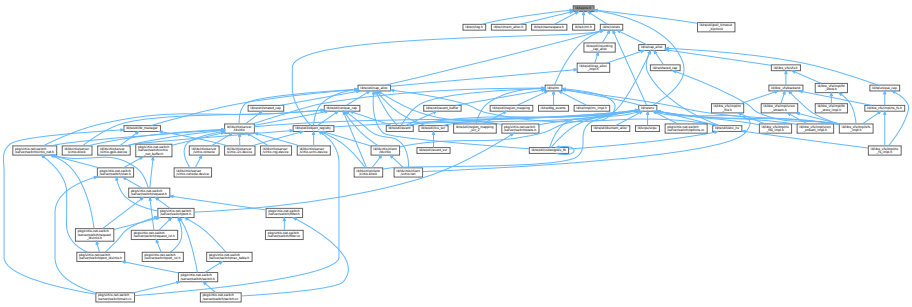
Include dependency graph for env.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4re_env_cap_entry_t

  Entry in the L4Re environment array for the named initial objects.
- struct l4re_env_t

  Initial environment data structure.

Typedefs

- typedef struct l4re_env_cap_entry_t **l4re_env_cap_entry_t**

  Entry in the L4Re environment array for the named initial objects.
- typedef struct l4re_env_t l4re_env_t

  Initial environment data structure.

Functions

- l4re_env_t * l4re_env (void) L4_NOTHROW

  Get L4Re initial environment.
- l4_kernel_info_t const * l4re_kip (void) L4_NOTHROW

  Get Kernel Info Page.
- l4_cap_idx_t l4re_env_get_cap (char const *name) L4_NOTHROW

  Get the capability selector for the object named name.
- l4_cap_idx_t l4re_env_get_cap_e (char const *name, l4re_env_t const *e) L4_NOTHROW

  Get the capability selector for the object named name.
- l4re_env_cap_entry_t const * l4re_env_get_cap_l (char const *name, unsigned l, l4re_env_t const *e) L4_NOTHROW

  Get the full l4re_env_cap_entry_t for the object named name.

  Helper for Ref_cap and Ref_del_cap.
- struct L4Re::Util::Ref_cap< T >

  Automatic capability that implements automatic free and unmap of the capability selector.
- struct L4Re::Util::Ref_del_cap< T >

  Automatic capability that implements automatic free and unmap+delete of the capability selector.

Namespaces

- namespace L4Re

- namespace L4Re::Util

  Documentation of the L4 Runtime Environment utility functionality in C++.

Functions

- template<typename T>
  Ref_cap< T >::Cap L4Re::Util::make_ref_cap ()

  Allocate a capability slot and wrap it in a Ref_cap.
- template<typename T>
  Ref_del_cap< T >::Cap L4Re::Util::make_ref_del_cap ()

  Allocate a capability slot and wrap it in a Ref_del_cap.

Variables

- _Cap_alloc & L4Re::Util::cap_alloc

  Capability allocator.

17.364.1 Detailed Description

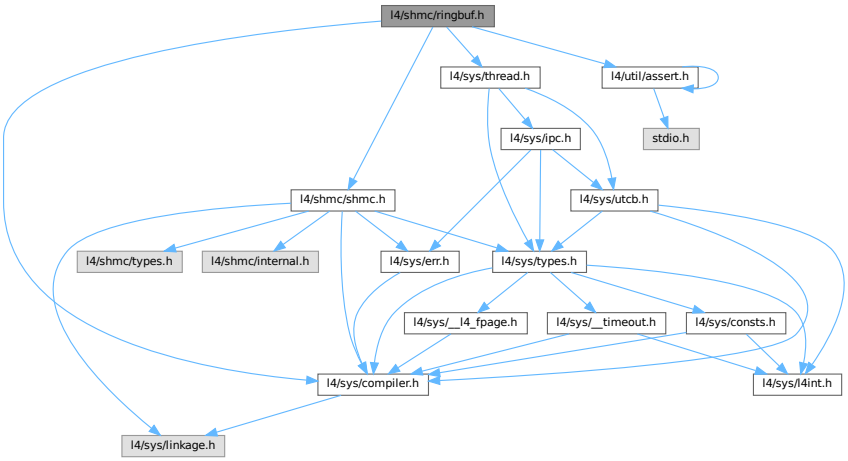
Include dependency graph for ringbuf.h:



Data Structures

- struct l4shmc_ringbuf_head_t

  Head field of a ring buffer.
- struct l4shmc_ringbuf_t

  Ring buffer.

Macros

- #define L4SHMC_RINGBUF_HEAD(ringbuf)

  Get ring buffer head pointer.
- #define L4SHMC_RINGBUF_DATA(ringbuf)

  Get ring buffer data pointer.
- #define L4SHMC_RINGBUF_DATA_SIZE(ringbuf)

  Get size of data area.

Functions

- int l4shmc_rb_init_buffer (l4shmc_ringbuf_t *buf, l4shmc_area_t *area, char const *chunk_name, char const *signal_name, unsigned size)

  Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.
- void l4shmc_rb_deinit_buffer (l4shmc_ringbuf_t *buf)

  De-init a ring buffer.
- int l4shmc_rb_attach_sender (l4shmc_ringbuf_t *buf, char const *signal_name, l4_cap_idx_t owner)

  Attach to sender signal of a ring buffer.
- char * l4shmc_rb_sender_alloc_packet (l4shmc_ringbuf_head_t *head, unsigned psize)

  Allocate a packet of a given size within the ring buffer.
- void l4shmc_rb_sender_put_data (l4shmc_ringbuf_t *buf, char *addr, char *data, unsigned dsize)

  Copy data into a previously allocated packet.
- int l4shmc_rb_sender_next_copy_in (l4shmc_ringbuf_t *buf, char *data, unsigned size, int block_if_necessary)

Copy in packet from an external data source.

- void l4shmc_rb_sender_commit_packet (l4shmc_ringbuf_t *buf)

  Tell the consumer that new data is available.

- int l4shmc_rb_init_receiver (l4shmc_ringbuf_t *buf, l4shmc_area_t *area, char const *chunk_name, char const *signal_name)

  Initialize receive buffer.

- void l4shmc_rb_attach_receiver (l4shmc_ringbuf_t *buf, l4_cap_idx_t owner)

  Attach to receiver signal of a ring buffer.

- int l4shmc_rb_receiver_wait_for_data (l4shmc_ringbuf_t *buf, int blocking)

  Check if (and optionally block until) new data is ready.

- int l4shmc_rb_receiver_copy_out (l4shmc_ringbuf_head_t *head, char *target, unsigned *tsize)

  Copy data out of the buffer.

- void l4shmc_rb_receiver_notify_done (l4shmc_ringbuf_t *buf)

  Notify producer that space is available.

- int l4shmc_rb_receiver_read_next_size (l4shmc_ringbuf_head_t *head)

  Have a look at the ring buffer and see which size the next packet to be read has.

17.407.1 Function Documentation

17.407.1.1 l4shmc_rb_attach_receiver()

```
void l4shmc_rb_attach_receiver (
             l4shmc_ringbuf_t * buf,
             l4_cap_idx_t owner)
```

Attach to receiver signal of a ring buffer.

Attach owner to the receiver-side signal of a ring buffer, which is triggered whenever new data has been produced.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

Parameters

buf	pointer to ring buffer struct
owner	owner thread

References L4_CV.

17.407.1.2 l4shmc_rb_attach_sender()

```
int l4shmc_rb_attach_sender (
             l4shmc_ringbuf_t * buf,
             char const * signal_name,
             l4_cap_idx_t owner)
```

Attach to sender signal of a ring buffer.

Attach owner to the sender-side signal of a ring buffer, which is triggered whenever new space has been freed in the buffer for the sender to write to.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

Parameters

buf	pointer to ring buffer struct
signal_name	signal base name
owner	owner thread

Returns

0 on success, error otherwise

References L4_CV.

17.407.1.3 l4shmc_rb_deinit_buffer()

```
void l4shmc_rb_deinit_buffer (
              l4shmc_ringbuf_t * buf)
```

De-init a ring buffer.

Parameters

buf	pointer to ring buffer struct

References L4_CV.

17.407.1.4 l4shmc_rb_init_buffer()

```
int l4shmc_rb_init_buffer (
              l4shmc_ringbuf_t * buf,
              l4shmc_area_t * area,
              char const * chunk_name,
              char const * signal_name,
              unsigned size)
```

Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.

This needs to be done by one of the participating parties when setting up communication channel.

Precondition

area has been attached using l4shmc_attach().

Parameters

buf	pointer to ring buffer struct
area	pointer to SHMC area
chunk_name	name of SHMC chunk to create in area

signal_name	base name for SHMC signals to create
size	chunk size

Returns

0 on success, error otherwise

References L4_CV.

17.407.1.5 l4shmc_rb_init_receiver()

```
int l4shmc_rb_init_receiver (
              l4shmc_ringbuf_t * buf,
              l4shmc_area_t * area,
              char const * chunk_name,
              char const * signal_name)
```

Initialize receive buffer.

Initialize the receiver-side of a ring buffer. This requires the underlying SHMC chunk and the corresponding signals to be valid already (read: to be initialized by the sender).

Precondition

chunk & signals have been created and initialized by the sender side

Parameters

buf	pointer to ring buffer struct
area	pointer to SHMC area
chunk_name	name of SHMC chunk to create in area
signal_name	base name for SHMC signals to create

Returns

0 on success, error otherwise

References L4_CV.

17.407.1.6 l4shmc_rb_receiver_copy_out()

```
int l4shmc_rb_receiver_copy_out (
              l4shmc_ringbuf_head_t * head,
              char * target,
              unsigned * tsize)
```

Copy data out of the buffer.

Parameters

	head	ring buffer head pointer
	target	valid target buffer
in,out	*tsize*	size of target buffer (must be >= packet size!); contains the real data size

Returns

0 on success, negative error otherwise

References L4_CV.

17.407.1.7 l4shmc_rb_receiver_notify_done()

```
void l4shmc_rb_receiver_notify_done (
             l4shmc_ringbuf_t * buf)
```

Notify producer that space is available.

Parameters

buf	pointer to ring buffer struct

References L4_CV.

17.407.1.8 l4shmc_rb_receiver_read_next_size()

```
int l4shmc_rb_receiver_read_next_size (
             l4shmc_ringbuf_head_t * head)
```

Have a look at the ring buffer and see which size the next packet to be read has.

Does not modify anything.

Returns

size of next buffer or -1 if no data available

References L4_CV, and L4_END_DECLS.

17.407.1.9 l4shmc_rb_receiver_wait_for_data()

```
int l4shmc_rb_receiver_wait_for_data (
             l4shmc_ringbuf_t * buf,
             int blocking)
```

Check if (and optionally block until) new data is ready.

Parameters

buf	pointer to ring buffer struct
blocking	block if data is not available immediately

Returns immediately, if data is available.

Returns

0 success, data available, != 0 otherwise

References L4_CV.

17.407.1.10 l4shmc_rb_sender_alloc_packet()

```
char * l4shmc_rb_sender_alloc_packet (
            l4shmc_ringbuf_head_t * head,
            unsigned psize)
```

Allocate a packet of a given size within the ring buffer.

This packet may wrap around at the end of the buffer. Users need to be aware of that.

Parameters

head	ring buffer head pointer
psize	packet size

Returns

valid address on success

Return values

NULL	if not enough space available

References L4_CV.

17.407.1.11 l4shmc_rb_sender_commit_packet()

```
void l4shmc_rb_sender_commit_packet (
            l4shmc_ringbuf_t * buf)
```

Tell the consumer that new data is available.

Parameters

buf	pointer to ring buffer struct

References L4_CV.

17.407.1.12 l4shmc_rb_sender_next_copy_in()

```
int l4shmc_rb_sender_next_copy_in (
              l4shmc_ringbuf_t * buf,
              char * data,
              unsigned size,
              int block_if_necessary)
```

Copy in packet from an external data source.

This is the function you'll want to use. Just pass it a buffer pointer and let the lib do the work.

Parameters

buf	pointer to ring buffer struct
data	valid buffer
size	data size
block_if_necessary	bool: block if buffer currently full

Return values

0	on success
-L4_ENOMEM	if block == false and no space available

References L4_CV.

17.407.1.13 l4shmc_rb_sender_put_data()

```
void l4shmc_rb_sender_put_data (
              l4shmc_ringbuf_t * buf,
              char * addr,
              char * data,
              unsigned dsize)
```

Copy data into a previously allocated packet.

This function is wrap-around aware.

Parameters

buf	pointer to ring buffer struct

addr	valid destination (allocate with alloc_packet())
data	data source
dsize	data size

References L4_CV.

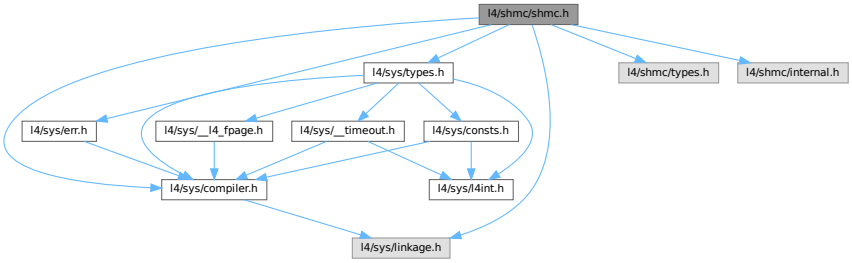
17.409 l4/shmc/shmc.h File Reference

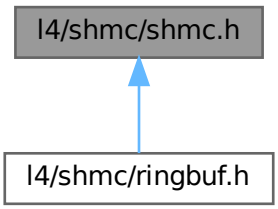
Shared memory library header file.

```
#include <l4/sys/compiler.h>
#include <l4/sys/linkage.h>
#include <l4/sys/types.h>
#include <l4/sys/err.h>
#include <l4/shmc/types.h>
#include <l4/shmc/internal.h>
```

Include dependency graph for shmc.h:



This graph shows which files directly or indirectly include this file:



Functions

- L4_BEGIN_DECLS long l4shmc_create (char const *shmc_name)

  Create a shared memory area.
- long l4shmc_attach (char const *shmc_name, l4shmc_area_t *shmarea)

  Attach to a shared memory area.
- long l4shmc_get_client_nr (l4shmc_area_t const *shmarea)

Determine the client number of the shared memory region.

- long l4shmc_mark_client_initialized (l4shmc_area_t *shmarea)

  Mark this shared memory client as 'initialized'.
- long l4shmc_get_initialized_clients (l4shmc_area_t *shmarea, l4_umword_t *bitmask)

  Fetch the `_clients_init_done` bitmask of the shared memory area.
- long l4shmc_add_chunk (l4shmc_area_t *shmarea, char const *chunk_name, l4_umword_t chunk_capacity, l4shmc_chunk_t *chunk)

  Add a chunk in the shared memory area.
- long l4shmc_add_signal (l4shmc_area_t *shmarea, char const *signal_name, l4shmc_signal_t *signal)

  Add a signal for the shared memory area.
- long l4shmc_trigger (l4shmc_signal_t *signal)

  Trigger a signal.
- long l4shmc_chunk_try_to_take (l4shmc_chunk_t *chunk)

  Try to mark chunk busy.
- long l4shmc_chunk_try_to_take_for_writing (l4shmc_chunk_t *chunk)

  Try to mark chunk busy writing.
- long l4shmc_chunk_try_to_take_for_overwriting (l4shmc_chunk_t *chunk)

  Try to mark the chunk busy writing after it was ready for reading.
- long l4shmc_chunk_try_to_take_for_reading (l4shmc_chunk_t *chunk)

  Try to mark chunk busy reading.
- long l4shmc_chunk_ready (l4shmc_chunk_t *chunk, l4_umword_t size)

  Mark chunk as filled (ready).
- long l4shmc_chunk_ready_sig (l4shmc_chunk_t *chunk, l4_umword_t size)

  Mark chunk as filled (ready) and signal consumer.
- long l4shmc_get_chunk (l4shmc_area_t *shmarea, char const *chunk_name, l4shmc_chunk_t *chunk)

  Get chunk out of shared memory area.
- long l4shmc_get_chunk_to (l4shmc_area_t *shmarea, char const *chunk_name, l4_umword_t timeout_ms, l4shmc_chunk_t *chunk)

  Get chunk out of shared memory area, with timeout.
- long l4shmc_iterate_chunk (l4shmc_area_t const *shmarea, char const **chunk_name, long offs)

  Iterate over names of all existing chunks.
- long l4shmc_attach_signal (l4shmc_area_t *shmarea, char const *signal_name, l4_cap_idx_t thread, l4shmc_signal_t *signal)

  Attach to signal.
- long l4shmc_get_signal (l4shmc_area_t *shmarea, char const *signal_name, l4shmc_signal_t *signal)

  Get signal object from the shared memory area.
- long l4shmc_enable_signal (l4shmc_signal_t *signal)

  Enable a signal.
- long l4shmc_enable_chunk (l4shmc_chunk_t *chunk)

  Enable a signal connected with a chunk.
- long l4shmc_wait_any (l4shmc_signal_t **retsignal)

  Wait on any signal.
- long l4shmc_wait_any_try (l4shmc_signal_t **retsignal)

  Check whether any waited signal has an event pending.
- long l4shmc_wait_any_to (l4_timeout_t timeout, l4shmc_signal_t **retsignal)

  Wait for any signal with timeout.
- long l4shmc_wait_signal (l4shmc_signal_t *signal)

  Wait on a specific signal.
- long l4shmc_wait_signal_to (l4shmc_signal_t *signal, l4_timeout_t timeout)

  Wait on a specific signal, with timeout.
- long l4shmc_wait_signal_try (l4shmc_signal_t *signal)

Check whether a specific signal has an event pending.

- long l4shmc_wait_chunk (l4shmc_chunk_t *chunk)

  Wait on a specific chunk.
- long l4shmc_wait_chunk_to (l4shmc_chunk_t *chunk, l4_timeout_t timeout)

  Check whether a specific chunk has an event pending, with timeout.
- long l4shmc_wait_chunk_try (l4shmc_chunk_t *chunk)

  Check whether a specific chunk has an event pending.
- long l4shmc_chunk_consumed (l4shmc_chunk_t *chunk)

  Mark a chunk as free.
- long l4shmc_connect_chunk_signal (l4shmc_chunk_t *chunk, l4shmc_signal_t *signal)

  Connect a signal with a chunk.
- long l4shmc_is_chunk_ready (l4shmc_chunk_t const *chunk)

  Check whether data is available.
- long l4shmc_is_chunk_clear (l4shmc_chunk_t const *chunk)

  Check whether chunk is free.
- void * l4shmc_chunk_ptr (l4shmc_chunk_t const *chunk)

  Get data pointer to chunk.
- long l4shmc_chunk_size (l4shmc_chunk_t const *chunk)

  Get current size of a chunk.
- long l4shmc_chunk_capacity (l4shmc_chunk_t const *chunk)

  Get capacity of a chunk.
- l4shmc_signal_t * l4shmc_chunk_signal (l4shmc_chunk_t const *chunk)

  Get the registered signal of a chunk.
- l4_cap_idx_t l4shmc_signal_cap (l4shmc_signal_t const *signal)

  Get the signal capability of a signal.
- long l4shmc_check_magic (l4shmc_chunk_t const *chunk)

  Check magic value of a chunk.
- long l4shmc_area_size (l4shmc_area_t const *shmarea)

  Get size of shared memory area.
- long l4shmc_area_size_free (l4shmc_area_t const *shmarea)

  Get free size of shared memory area.
- long l4shmc_area_overhead (void)

  Get memory overhead per area that is not available for chunks.
- long l4shmc_chunk_overhead (void)

  Get memory overhead required in addition to the chunk capacity for adding one chunk.

17.409.1 Detailed Description

Shared memory library header file.

Definition in file shmc.h.

  Request mask.
- #define **SIGMA0_REQ_ID_MASK** 0xF0

  ID mask.
- #define **SIGMA0_REQ_ID_FPAGE_RAM** 0x60

  RAM.
- #define **SIGMA0_REQ_ID_FPAGE_IOMEM** 0x70

  I/O memory.
- #define **SIGMA0_REQ_ID_FPAGE_IOMEM_CACHED** 0x80

  Cached I/O memory.
- #define **SIGMA0_REQ_ID_FPAGE_ANY** 0x90

  Any.
- #define **SIGMA0_REQ_ID_KIP** 0xA0

  KIP.
- #define **SIGMA0_REQ_ID_DEBUG_DUMP** 0xC0

  Debug dump.
- #define **SIGMA0_IS_MAGIC_REQ**(d1)

  Check if magic.
- #define **SIGMA0_REQ**(x)

  Construct.
- #define **SIGMA0_REQ_FPAGE_RAM** (SIGMA0_REQ(FPAGE_RAM))

  RAM.

- #define **SIGMA0_REQ_FPAGE_IOMEM** (SIGMA0_REQ(FPAGE_IOMEM))

  I/O memory.
- #define **SIGMA0_REQ_FPAGE_IOMEM_CACHED** (SIGMA0_REQ(FPAGE_IOMEM_CACHED))

  Cache I/O memory.
- #define **SIGMA0_REQ_FPAGE_ANY** (SIGMA0_REQ(FPAGE_ANY))

  Any.
- #define **SIGMA0_REQ_KIP** (SIGMA0_REQ(KIP))

  KIP.
- #define **SIGMA0_REQ_DEBUG_DUMP** (SIGMA0_REQ(DEBUG_DUMP))

  Debug dump.

Enumerations

- enum l4sigma0_return_flags_t {
  L4SIGMA0_OK , L4SIGMA0_NOTALIGNED , L4SIGMA0_IPCERROR , L4SIGMA0_NOFPAGE ,
  L4SIGMA0_4 , **L4SIGMA0_5** , L4SIGMA0_SMALLERFPAGE }

  Return flags of libsigma0 functions.

Functions

- L4_BEGIN_DECLS l4_kernel_info_t ∗ l4sigma0_map_kip (l4_cap_idx_t sigma0, void ∗addr, unsigned log2↩
  _size)

  Map the kernel info page from sigma0 to addr.
- int l4sigma0_map_mem (l4_cap_idx_t sigma0, l4_addr_t phys, l4_addr_t virt, l4_addr_t size)

  Request a memory mapping from sigma0.
- int l4sigma0_map_iomem (l4_cap_idx_t sigma0, l4_addr_t phys, l4_addr_t virt, l4_addr_t size, int cached)

  Request IO memory from sigma0.
- int l4sigma0_map_anypage (l4_cap_idx_t sigma0, l4_addr_t map_area, unsigned log2_map_size, l4_addr_t ∗base, unsigned sz)

  Request an arbitrary free page of RAM.
- void l4sigma0_debug_dump (l4_cap_idx_t sigma0)

  Request sigma0 to dump internal debug information.
- char const ∗ l4sigma0_map_errstr (int err)

  Get user readable error messages for the return codes.

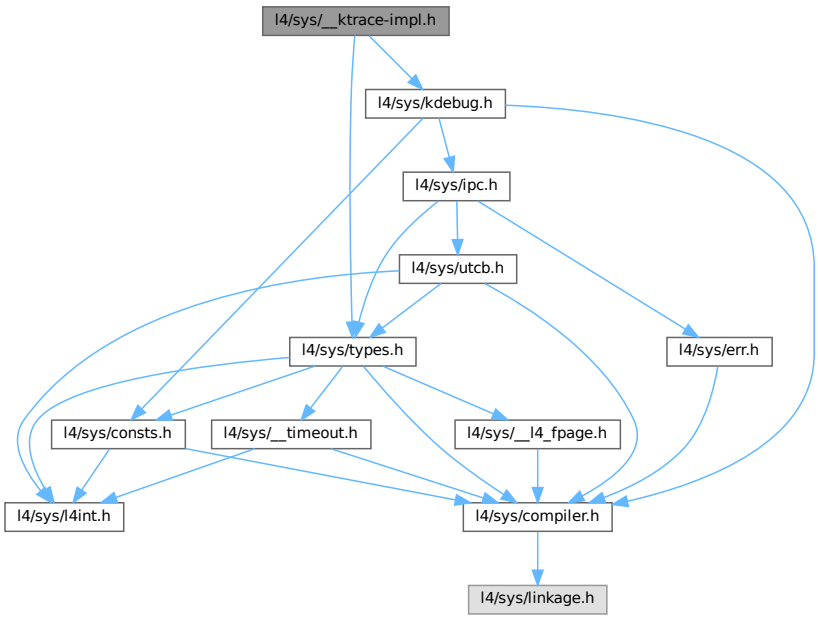
17.414 l4/sys/__ktrace-impl.h File Reference

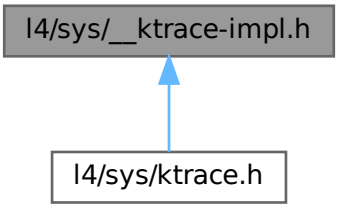
L4 kernel event tracing.

```
#include <l4/sys/types.h>
#include <l4/sys/kdebug.h>
```

Include dependency graph for __ktrace-impl.h:



This graph shows which files directly or indirectly include this file:



Functions

- l4_umword_t fiasco_tbuf_log (const char *text)

  Create new trace-buffer entry with describing <text>.
- l4_umword_t fiasco_tbuf_log_3val (const char *text, l4_umword_t v1, l4_umword_t v2, l4_umword_t v3)

  Create new trace-buffer entry with describing <text> and three additional values.
- void **fiasco_tbuf_clear** (void)

  Clear trace-buffer.
- void **fiasco_tbuf_dump** (void)

  Dump trace-buffer to kernel console.
- l4_umword_t fiasco_tbuf_log_binary (const unsigned char *data)

  Create new trace-buffer entry with binary data.

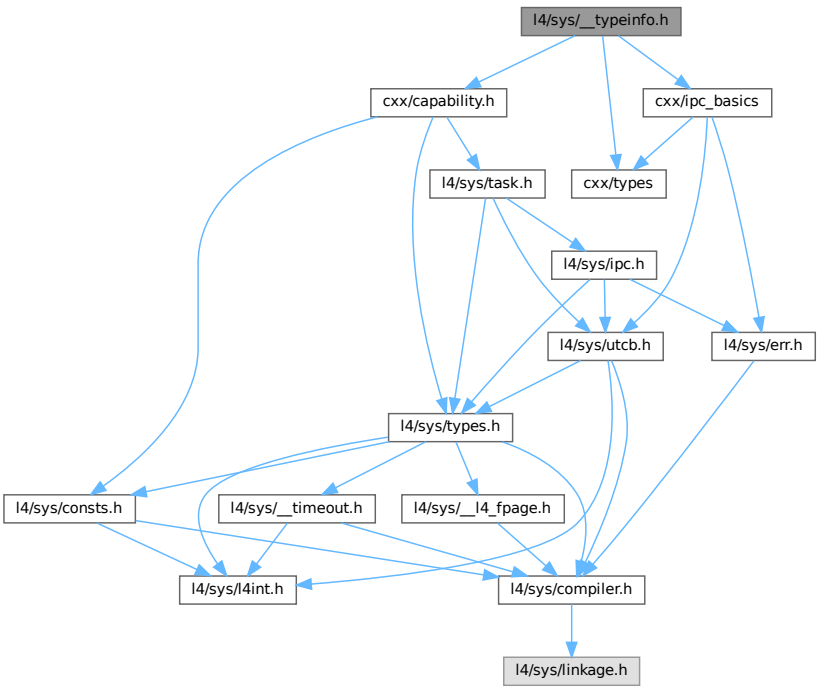
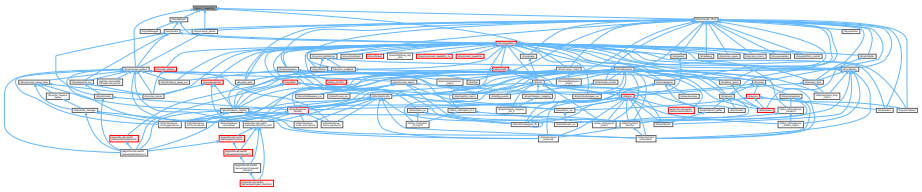
Include dependency graph for __typeinfo.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct L4::Typeid::P_dispatch< LIST >

  Use for protocol based dispatch stage.
- struct L4::Typeid::Detail::Rpcs_end

  Internal end-of-list marker.
- struct L4::Typeid::Detail::_Rpcs< OPCODE, O, X >

  Empty list of RPCs.
- struct L4::Typeid::Detail::_Rpcs< OPCODE, O, R, X... >

  Non-empty list of RPCs.
- struct L4::Typeid::Detail::_Rpcs< OPCODE, O, R, X... >::Rpc< Y >

  Find the given RPC in the list.
- struct L4::Typeid::Detail::_Rpcs< OPCODE, O, Default_op< R > >::Rpc< Y >

  Find the given RPC in the list.
- struct L4::Typeid::Raw_ipc< CLASS >

  RPCs list for passing raw incoming IPC to the server object.
- struct L4::Typeid::Rpcs< RPCS >

  Standard list of RPCs of an interface.
- struct L4::Typeid::Rpcs_code< OPCODE_TYPE >

  List of RPCs of an interface using a special opcode type.
- struct L4::Typeid::Rpcs_code< OPCODE_TYPE >::F< RPCS >
- struct L4::Typeid::Rpc_nocode< OPERATION >

  List of RPCs of an interface using a single operation without an opcode.
- struct L4::Typeid::Rpcs_sys< ARG >

  List of RPCs typically used for kernel interfaces.
- struct L4::Type_info

  Dynamic Type Information for L4Re Interfaces.
- class L4::Type_info::Demand

  Data type for expressing the needed receive buffers at the server-side of an interface.
- struct L4::Type_info::Demand_t< CAPS, FLAGS, MEM, PORTS >

  Template type statically describing demand of receive buffers.
- struct L4::Type_info::Demand_union_t< D1, D2 >

  Template type statically describing the combination of two Demand object.
- struct L4::Kobject_typeid< T >

  Meta object for handling access to type information of Kobjects.
- struct L4::Kobject_typeid< void >

  Minimalistic ID for `void` interface.
- class L4::Kobject_t< Derived, Base, PROTO, S_DEMAND >

  Helper class to create an L4Re interface class that is derived from a single base class.
- class L4::Kobject_2t< Derived, Base1, Base2, PROTO, S_DEMAND >

  Helper class to create an L4Re interface class that is derived from two base classes (see `L4::Kobject_t`).
- struct L4::Kobject_3t< Derived, Base1, Base2, Base3, PROTO, S_DEMAND >

  Helper class to create an L4Re interface class that is derived from three base classes (see `L4::Kobject_t`).
- struct L4::Proto_t< P >

  Data type for defining protocol numbers.

Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Typeid

  Definition of interface data-type helpers.

Typedefs

- typedef int **L4::Opcode**

  Data type for RPC opcodes.

Enumerations

- enum { L4::PROTO_ANY = 0 , L4::PROTO_EMPTY = -19 }

Functions

- template<typename T>
  Type_info const * L4::kobject_typeid () noexcept

  Get the L4::Type_info for the L4Re interface given in `T`.

  C interface for calling the ARM secure monitor, see L4::Arm_smccc::call() for the C++ interface.

17.429.1 Detailed Description

ARM secure monitor call functions.

Definition in file arm_smccc.h.

17.429.2 Function Documentation

17.429.2.1 l4_arm_smccc_call()

```
l4_msgtag_t l4_arm_smccc_call (
             l4_cap_idx_t pfc,
             l4_umword_t func,
             l4_umword_t in0,
             l4_umword_t in1,
             l4_umword_t in2,
             l4_umword_t in3,
             l4_umword_t in4,
             l4_umword_t in5,
             l4_umword_t * out0,
             l4_umword_t * out1,
             l4_umword_t * out2,
             l4_umword_t * out3,
             l4_umword_t client_id)  [inline]
```

C interface for calling the ARM secure monitor, see L4::Arm_smccc::call() for the C++ interface.

Parameters

	pfc	Capability of the SMC kernel object. The input parameters consist of a function identifier, 6 arguments and a client id. Results are returned in 4 output parameters.
	func	Function identifier. • Bit 31 has to be set: This marks the call as *Fast Call*. *Yielding Calls* (bit 31 unset) are rejected by the kernel. • Bit 30 defines the calling convention: • Bit 30 == 1: 64-bit calling convention. • Bit 30 == 0: 32-bit calling convention. • Bits 24..29 determine the service call ID. The permitted IDs are set in the kernel configuration. By default only service IDs >= 0x30000000 (*Trusted Application Calls* and *Trusted OS Calls*) are allowed.

in	*in0*	First input parameter.
in	*in1*	Second input parameter.
in	*in2*	Third input parameter.
in	*in3*	Fourth input parameter.
in	*in4*	Fifth input parameter.
in	*in5*	Sixth input parameter.
out	*out0*	First output parameter.
out	*out1*	Second output parameter.
out	*out2*	Third output parameter.
out	*out3*	Fourth output parameter.
in	*client_id*	Client ID. According to the specification, this value might be ignored by certain functions.

Return values

-L4_ENOSYS	Either bit 31 of the function call not set or service ID outside the range permitted by kernel configuration.
-L4_EINVAL	Invalid number of parameters.
<0	Other L4 error.
0	Success.

Definition at line 42 of file arm_smccc.h.

17.431 amd64/l4/sys/cache.h File Reference

Cache functions.

Functions

- int l4_cache_clean_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache clean a range in D-cache; writes back to PoC.

- int l4_cache_flush_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache flush a range; writes back to PoC.

- int l4_cache_inv_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache invalidate a range; might write back to PoC.
- int l4_cache_coherent (unsigned long start, unsigned long end) L4_NOTHROW

  Make memory coherent between I-cache and D-cache; writes back to PoU.
- int l4_cache_dma_coherent (unsigned long start, unsigned long end) L4_NOTHROW

  Make memory coherent for use with external memory; writes back to PoC.
- int **l4_cache_dma_coherent_full** (void) L4_NOTHROW

  Make memory coherent for use with external memory; writes back to PoC.

Cache functions.

```
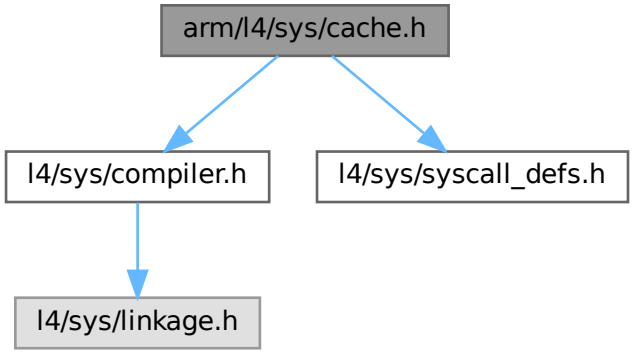
#include <l4/sys/compiler.h>
#include <l4/sys/syscall_defs.h>
```

Include dependency graph for cache.h:



Functions

- int l4_cache_clean_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache clean a range in D-cache; writes back to PoC.
- int l4_cache_flush_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache flush a range; writes back to PoC.
- int l4_cache_inv_data (unsigned long start, unsigned long end) L4_NOTHROW

  Cache invalidate a range; might write back to PoC.
- int l4_cache_coherent (unsigned long start, unsigned long end) L4_NOTHROW

  Make memory coherent between I-cache and D-cache; writes back to PoU.
- int l4_cache_dma_coherent (unsigned long start, unsigned long end) L4_NOTHROW

  Make memory coherent for use with external memory; writes back to PoC.
- int **l4_cache_dma_coherent_full** (void) L4_NOTHROW

  Make memory coherent for use with external memory; writes back to PoC.

#define L4_DISABLE_COPY(
              _class)
```

Value:

```
public:                                          \
  _class(_class const &) = delete;               \
  _class operator = (_class const &) = delete; \
private:
```

Disable copy of a class.

Parameters

_class	Name of the class that shall not have value copy semantics.

The typical use of this is:

```
class Non_value
{
  L4_DISABLE_COPY(Non_value)

  ...
}
```

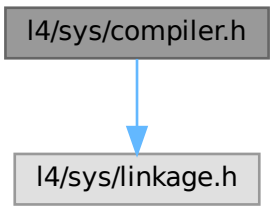
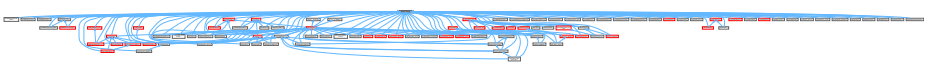
17.443 l4/sys/compiler.h File Reference

L4 compiler related defines.

`#include <l4/sys/linkage.h>`
Include dependency graph for compiler.h:



This graph shows which files directly or indirectly include this file:



Macros

- #define **L4_INLINE**

L4 Inline function attribute.

- #define **L4_ALWAYS_INLINE**

  Always inline a function.
- #define L4_NOTHROW

  Mark a function declaration and definition as never throwing an exception.
- #define **L4_BEGIN_DECLS**

  Start section with C types and functions.
- #define **L4_END_DECLS**

  End section with C types and functions.
- #define **L4_CONSTEXPR**

  Constexpr function attribute.
- #define **L4_NORETURN**

  Noreturn function attribute.
- #define **L4_NOINSTRUMENT**

  No instrumentation function attribute.
- #define L4_HIDDEN

  Attribute to mark functions, variables, and data types as being explicitly hidden from users of a library.
- #define L4_EXPORT

  Attribute to mark functions, variables, and data types as being exported from a library.
- #define **L4_LIKELY**(x)

  Expression is likely to execute.
- #define **L4_UNLIKELY**(x)

  Expression is unlikely to execute.
- #define **L4_STICKY**(x)

  Mark symbol sticky (even not there).
- #define **L4_DEPRECATED**(s)

  Mark symbol deprecated.
- #define **L4_stringify_helper**(x)

  stringify helper.
- #define **L4_stringify**(x)

  stringify.

Functions

- unsigned long l4_align_stack_for_direct_fncall (unsigned long stack)

  Specify the desired alignment of the stack pointer.
- void **l4_barrier** (void)

  Memory barrier.
- void **l4_mb** (void)

  Memory barrier.
- void **l4_wmb** (void)

  Write memory barrier.
- L4_NORETURN void l4_infinite_loop (void)

  Infinite loop.

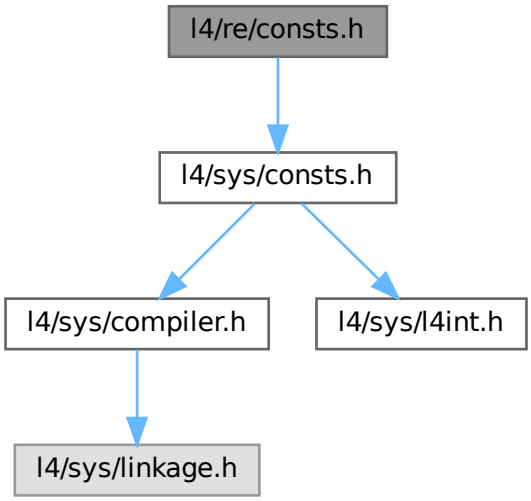
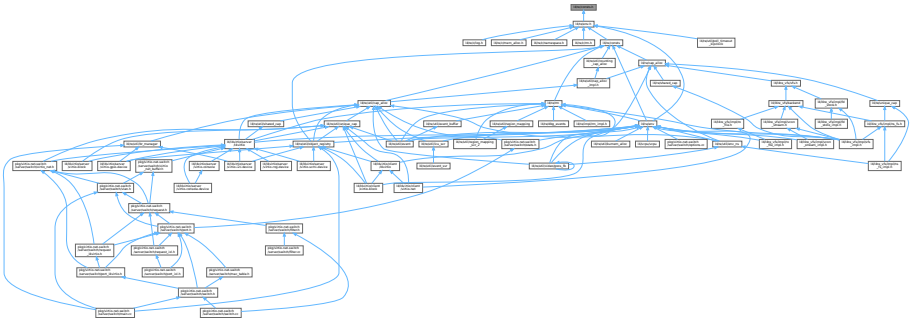
`#include <l4/sys/consts.h>`
Include dependency graph for consts.h:



This graph shows which files directly or indirectly include this file:



Enumerations

- enum

  Defaults for local thread priorities.

17.451.1 Detailed Description

Constants.

Definition in file consts.h.

17.451.2 Enumeration Type Documentation

17.451.2.1 anonymous enum

`anonymous enum`

Defaults for local thread priorities.

Priorities are to be seen as local. These are used by the loader and libpthread. The are to be understood as 'local', which means the actual priority of the thread (as seen by the kernel) is the base priority as defined by the scheduler plus the local priority.

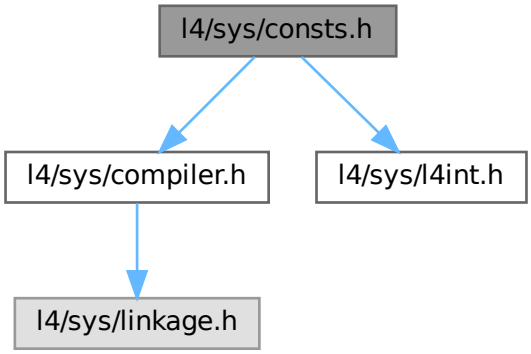
17.453 l4/sys/consts.h File Reference

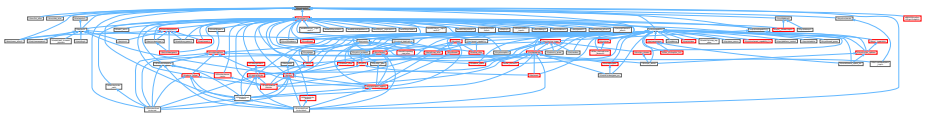
Common constants.

```
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
```

Include dependency graph for consts.h:



This graph shows which files directly or indirectly include this file:



Macros

- #define **L4_PAGESIZE**

  Minimal page size (in bytes).
- #define L4_PAGEMASK

  Mask for the page number.
- #define L4_LOG2_PAGESIZE

  Number of bits used for page offset.
- #define L4_SUPERPAGESIZE

  Size of a large page.
- #define L4_SUPERPAGEMASK

  Mask for the number of a large page.
- #define L4_LOG2_SUPERPAGESIZE

  Number of bits used as offset for a large page.
- #define **L4_INVALID_PTR** ((void *)L4_INVALID_ADDR)

  Invalid address as pointer type.

Enumerations

- enum l4_syscall_flags_t {
  L4_SYSF_NONE , L4_SYSF_SEND , L4_SYSF_RECV , L4_SYSF_OPEN_WAIT ,
  L4_SYSF_REPLY , L4_SYSF_CALL , L4_SYSF_WAIT , L4_SYSF_SEND_AND_WAIT ,
  L4_SYSF_REPLY_AND_WAIT }

  Capability selector flags.
- enum l4_cap_consts_t {
  L4_CAP_SHIFT , L4_CAP_SIZE = 1UL << L4_CAP_SHIFT , L4_CAP_OFFSET , L4_CAP_MASK ,
  L4_INVALID_CAP , **L4_INVALID_CAP_BIT** = 1UL << (L4_CAP_SHIFT - 1) }

  Constants related to capability selectors.
- enum l4_unmap_flags_t { L4_FP_ALL_SPACES , L4_FP_DELETE_OBJ , L4_FP_OTHER_SPACES }

  Flags for the unmap operation.
- enum l4_msg_item_consts_t {
  L4_ITEM_MAP = 8 , L4_ITEM_CONT = 1 , L4_MAP_ITEM_GRANT = 2 , L4_MAP_ITEM_MAP = 0 ,
  L4_RCV_ITEM_FORWARD_MAPPINGS = 1 , L4_RCV_ITEM_SINGLE_CAP = L4_ITEM_MAP | 2 ,
  L4_RCV_ITEM_LOCAL_ID = 4 }

  Constants for message items.
- enum l4_buffer_desc_consts_t { L4_BDR_MEM_SHIFT = 0 , L4_BDR_IO_SHIFT = 5 , L4_BDR_OBJ_SHIFT
  = 10 , **L4_BDR_OFFSET_MASK** = (1UL << 20) - 1 }

  Constants for buffer descriptors.
- enum l4_default_caps_t {
  L4_BASE_TASK_CAP , L4_BASE_FACTORY_CAP , L4_BASE_THREAD_CAP , L4_BASE_PAGER_CAP ,
  L4_BASE_LOG_CAP , L4_BASE_ICU_CAP , L4_BASE_SCHEDULER_CAP , L4_BASE_IOMMU_CAP ,
  L4_BASE_DEBUGGER_CAP , L4_BASE_ARM_SMCCC_CAP , **L4_BASE_CAPS_LAST_P1** , L4_BASE_CAPS_LAST
  = L4_BASE_CAPS_LAST_P1 - 1 }

  Default capabilities setup for the initial tasks.
- enum l4_addr_consts_t { L4_INVALID_ADDR = ~0UL }

  Address related constants.

Functions

- l4_addr_t l4_trunc_page (l4_addr_t address) L4_NOTHROW

  Round an address down to the next lower page boundary.
- l4_addr_t l4_trunc_size (l4_addr_t address, unsigned char bits) L4_NOTHROW

  Round an address down to the next lower flexpage with size bits.
- l4_addr_t l4_round_page (l4_addr_t address) L4_NOTHROW

  Round address up to the next page.
- l4_addr_t l4_round_size (l4_addr_t value, unsigned char bits) L4_NOTHROW

  Round value up to the next alignment with bits size.
- unsigned l4_bytes_to_mwords (unsigned size) L4_NOTHROW

  Determine how many machine words (l4_umword_t) are required to store a buffer of 'size' bytes.

```

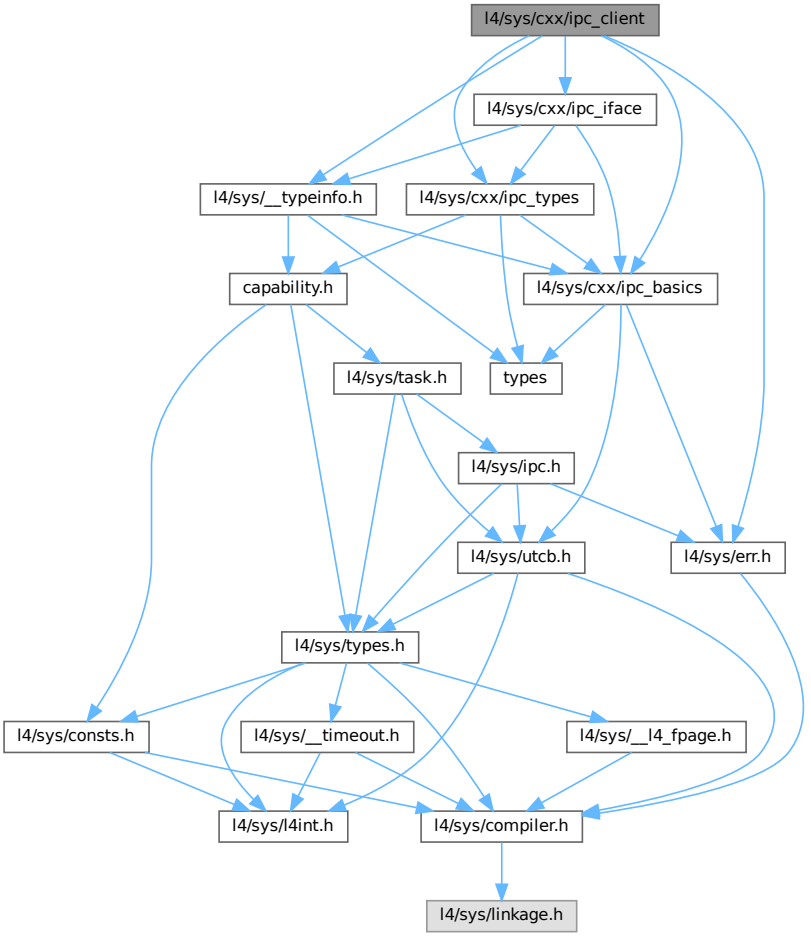
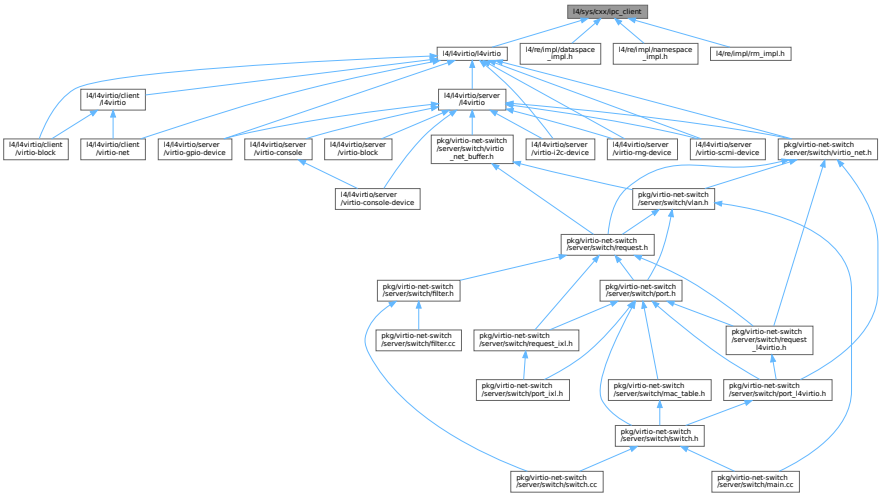
Include dependency graph for ipc_client:



This graph shows which files directly or indirectly include this file:



Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Ipc

  IPC related functionality.
- namespace L4::Ipc::Msg

  IPC Message related functionality.

Macros

- #define L4_RPC_DEF(name)

  Generate the definition of an RPC stub.

17.463.1 Macro Definition Documentation

17.463.1.1 L4_RPC_DEF

```
#define L4_RPC_DEF(
                name)
```

Value:

```
  template struct  L4::Ipc::Msg::Rpc_call \
    <name##_t, name##_t::class_type, name##_t::ipc_type, name##_t::flags_type>
```

Generate the definition of an RPC stub.

Parameters

name	The fully qualified method name to be implemented, this means `class::method`.

This macro generates the definition (implementation) for the given RPC interface method.

Definition at line 32 of file ipc_client.

17.464 ipc_client

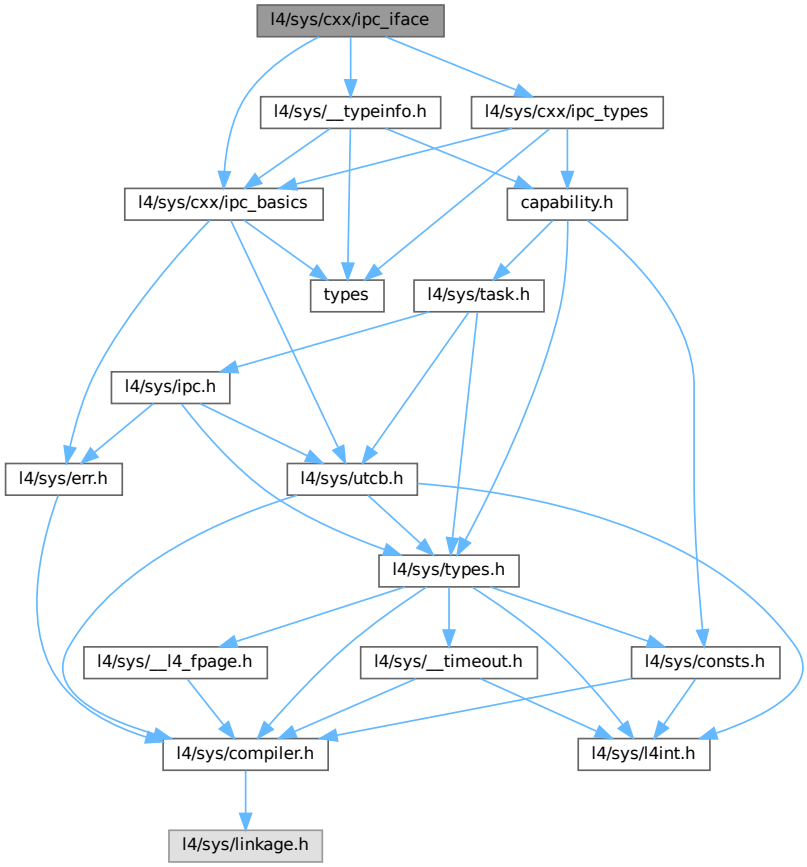
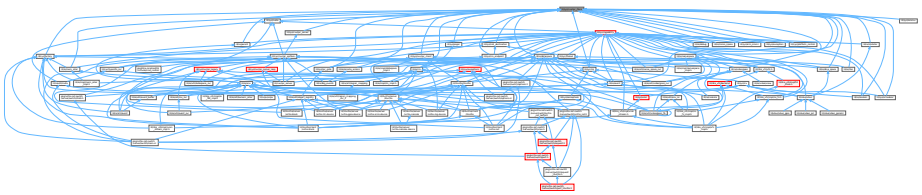
Include dependency graph for ipc_iface:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct L4::Ipc::Call

RPC attribute for a standard RPC call.

- struct L4::Ipc::Call_zero_send_timeout

  RPC attribute for an RPC call, with zero send timeout.
- struct L4::Ipc::Call_t< RIGHTS >

  RPC attribute for an RPC call with required rights.
- struct L4::Ipc::Send_only

  RPC attribute for a send-only RPC.

Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Ipc

  IPC related functionality.
- namespace L4::Ipc::Msg

  IPC Message related functionality.

Macros

- #define L4_INLINE_RPC_NF(res, name, args...)

  Define an inline RPC call type (the type only, no callable).
- #define L4_INLINE_RPC_NF_OP(op, res, name, args...)

  Define an inline RPC call type with specific opcode (the type only, no callable).
- #define L4_INLINE_RPC(res, name, args, attr...)

  Define an inline RPC call (type and callable).
- #define L4_INLINE_RPC_OP(op, res, name, args, attr...)

  Define an inline RPC call with specific opcode (type and callable).
- #define L4_RPC_NF(res, name, args...)

  Define an RPC call type (the type only, no callable).
- #define L4_RPC_NF_OP(op, res, name, args...)

  Define an RPC call type with specific opcode (the type only, no callable).
- #define L4_RPC(res, name, args, attr...)

  Define an RPC call (type and callable).
- #define L4_RPC_OP(op, res, name, args, attr...)

  Define an RPC call with specific opcode (type and callable).

17.466.2 Macro Definition Documentation

17.466.2.1 L4_INLINE_RPC

```
#define L4_INLINE_RPC(
              res,
              name,
              args,
              attr...)
```

Value:

```
res name args
```

Define an inline RPC call (type and callable).

Parameters

res	The result type of the RPC call
name	The name of the function (name_t is used for the type.)
args	The argument list of the RPC function.
attr	Optional RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Examples

examples/clntsrv/src/shared.h.

Definition at line 482 of file ipc_iface.

Referenced by L4Re::Mem_alloc::info().

17.466.2.2 L4_INLINE_RPC_NF

```
#define L4_INLINE_RPC_NF(
              res,
              name,
              args...)
```

Value:

```
  struct name##_t : L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> \
  {                                                                           \
    typedef L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> type;    \
    L4_INLINE_RPC_SRV_FORWARD(name);                                          \
  }
```

Define an inline RPC call type (the type only, no callable).

Parameters

res	The result type of the RPC call
name	The name of the function (name_t is used for the type.)
args	The argument list of the RPC function, and RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 453 of file ipc_iface.

17.466.2.3 L4_INLINE_RPC_NF_OP

```
#define L4_INLINE_RPC_NF_OP(
              op,
              res,
              name,
              args...)
```

Value:

```
  struct name##_t : L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> \
  {                                                                           \
    typedef L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> type;    \
    enum { Opcode = (op) };                                                   \
    L4_INLINE_RPC_SRV_FORWARD(name);                                          \
  }
```

Define an inline RPC call type with specific opcode (the type only, no callable).

Parameters

op	The opcode number for this function
res	The result type of the RPC call
name	The name of the function (`name_t` is used for the type.)
args	The argument list of the RPC function, and RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 466 of file ipc_iface.

17.466.2.4 L4_INLINE_RPC_OP

```
#define L4_INLINE_RPC_OP(
              op,
              res,
              name,
              args,
              attr...)
```

Value:

```
res name args
```

Define an inline RPC call with specific opcode (type and callable).

Parameters

op	The opcode number for this function
res	The result type of the RPC call
name	The name of the function (`name_t` is used for the type.)
args	The argument list of the RPC function.
attr	Optional RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Definition at line 497 of file ipc_iface.

17.466.2.5 L4_RPC

```
#define L4_RPC(
               res,
               name,
               args,
               attr...)
```

Value:

```
res name args
```

Define an RPC call (type and callable).

Parameters

res	The result type of the RPC call
name	The name of the function (name_t is used for the type.)
args	The argument list of the RPC function.
attr	Optional RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Definition at line 541 of file ipc_iface.

Referenced by L4Re::Dataspace::info().

17.466.2.6 L4_RPC_NF

```
#define L4_RPC_NF(
               res,
               name,
               args...)
```

Value:

```
  struct name##_t : L4::Ipc::Msg::Rpc_call<name##_t, Class, res args>        \
  {                                                                          \
    typedef L4::Ipc::Msg::Rpc_call<name##_t, Class, res args> type;          \
    L4_INLINE_RPC_SRV_FORWARD(name);                                         \
  }
```

Define an RPC call type (the type only, no callable).

Parameters

res	The result type of the RPC call
name	The name of the function (name_t is used for the type.)
args	The argument list of the RPC function, and RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Definition at line 510 of file ipc_iface.

Referenced by L4Re::Dataspace::info().

17.466.2.7 L4_RPC_NF_OP

```
#define L4_RPC_NF_OP(
               op,
               res,
               name,
               args...)
```

Value:

```
  struct name##_t : L4::Ipc::Msg::Rpc_call<name##_t, Class, res args>        \
  {                                                                          \
    typedef L4::Ipc::Msg::Rpc_call<name##_t, Class, res args> type;          \
    enum { Opcode = (op) };                                                  \
    L4_INLINE_RPC_SRV_FORWARD(name);                                         \
  }
```

Define an RPC call type with specific opcode (the type only, no callable).

Parameters

op	The opcode number for this function
res	The result type of the RPC call
name	The name of the function (`name_t` is used for the type.)
args	The argument list of the RPC function, and RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

Definition at line 525 of file ipc_iface.

17.466.2.8 L4_RPC_OP

```
#define L4_RPC_OP(
               op,
               res,
               name,
               args,
               attr...)
```

Value:

```
res name args
```

Define an RPC call with specific opcode (type and callable).

Parameters

op	The opcode number for this function
res	The result type of the RPC call
name	The name of the function (`name_t` is used for the type.)
args	The argument list of the RPC function.
attr	Optional RPC attributes (L4::Ipc::Call, L4::Ipc::Call_t etc.).

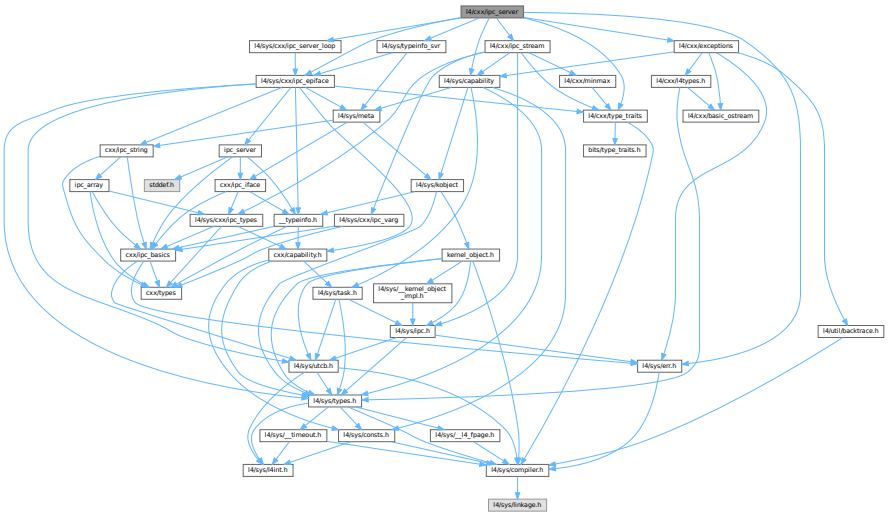
#include <l4/cxx/exceptions>
```

Include dependency graph for ipc_server:



Data Structures

- class L4::Server_object

  Abstract server object to be used with L4::Server and L4::Basic_registry.
- struct L4::Server_object_t< IFACE, BASE >

  Base class (template) for server implementing server objects.
- struct L4::Server_object_x< Derived, IFACE, BASE >

  Helper class to implement p_dispatch based server objects.
- struct L4::Irq_handler_object

  Server object base class for handling IRQ messages.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.470.1 Detailed Description

IPC server loop.

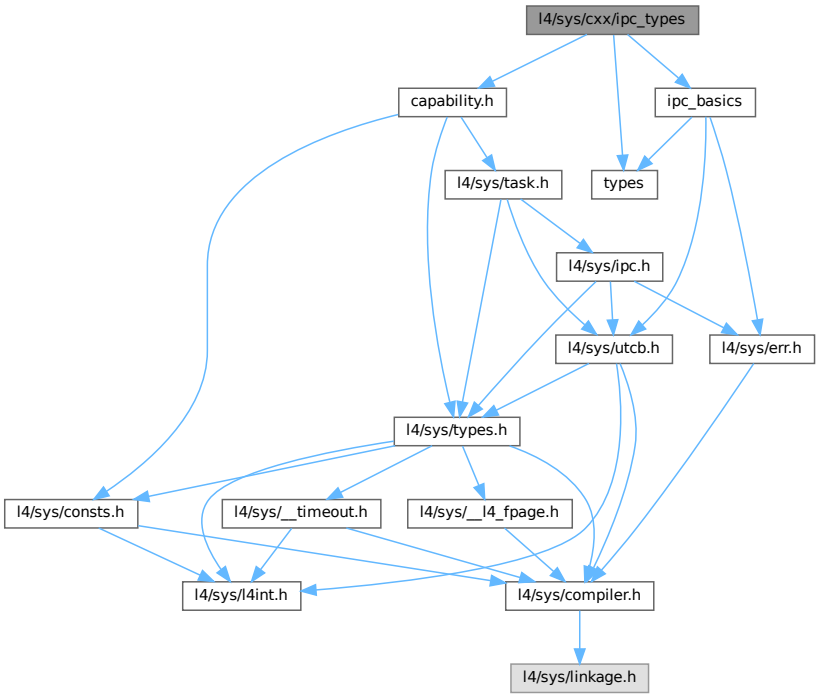
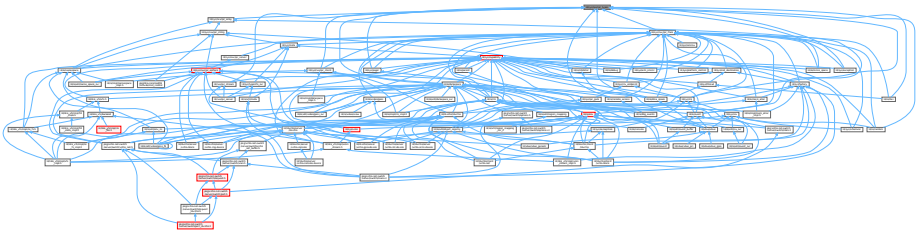
17.475 l4/sys/cxx/ipc_types File Reference

```
#include "capability.h"
#include "types"
#include "ipc_basics"
```

Include dependency graph for ipc_types:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct L4::Ipc::In_out< T >

  Mark an argument as in-out argument.
- struct L4::Ipc::As_value< T >

  Pass the argument as plain data value.
- struct L4::Ipc::Opt< T >

  Attribute for defining an optional RPC argument.

- class L4::Ipc::Small_buf

  A receive item for receiving a single object capability.
- class L4::Ipc::Gen_fpage

  Generic RPC base for typed message items.
- class L4::Ipc::Snd_fpage

  Send item or return item.
- class L4::Ipc::Rcv_fpage

  Non-small receive item.
- class L4::Ipc::Cap< T >

  Capability type for RPC interfaces (see `L4::Cap<T>`).

Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Ipc

  IPC related functionality.
- namespace L4::Ipc::Msg

  IPC Message related functionality.

Functions

- template<typename T>
  Cap< T > L4::Ipc::make_cap (L4::Cap< T > cap, unsigned rights) noexcept

  Make an L4::Ipc::Cap<T> for the given capability and rights.
- template<typename T>
  Cap< T > L4::Ipc::make_cap_rw (L4::Cap< T > cap) noexcept

  Make an L4::Ipc::Cap<T> for the given capability with L4_CAP_FPAGE_RW rights.
- template<typename T>
  Cap< T > L4::Ipc::make_cap_rws (L4::Cap< T > cap) noexcept

  Make an L4::Ipc::Cap<T> for the given capability with L4_CAP_FPAGE_RWS rights.
- template<typename T>
  Cap< T > L4::Ipc::make_cap_full (L4::Cap< T > cap) noexcept

  Make an L4::IPC::Cap<T> for the given capability with full fpage and object-specific rights.

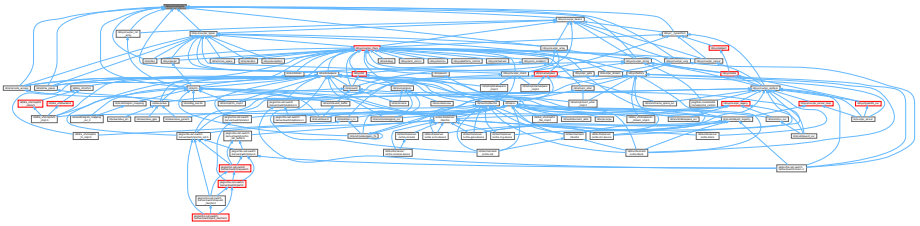
17.480 l4/sys/cxx/types File Reference

This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::Types::Flags< BITS_ENUM, UNDERLYING >

  Template for defining typical Flags bitmaps.
- struct L4::Types::Int_for_type< T >

  Metafunction to get an integral type of the same size as `T`.
- struct L4::Types::Flags_ops_t< DT >

  Mixin class to define a set of friend bitwise operators on `DT`.
- struct L4::Types::Flags_t< DT, T >

  Template type to define a flags type with bitwise operations.
- struct L4::Types::Bool< V >

  Boolean meta type.
- struct L4::Types::False

  False meta value.
- struct L4::Types::True

  True meta value.
- struct L4::Types::Same< A, B >

  Compare two data types for equality.

Namespaces

- namespace L4

  L4 low-level kernel interface.
- namespace L4::Types

  L4 basic type helpers for C++.

Macros

- #define L4_TYPES_FLAGS_OPS_DEF(T)

  Helper macro to define a set of bitwise operators on an enum type.

17.480.1 Macro Definition Documentation

17.480.1.1 L4_TYPES_FLAGS_OPS_DEF

```
#define L4_TYPES_FLAGS_OPS_DEF(
              T)
```

Value:

```
    friend constexpr T operator ~ (T f)                                          \
    {                                                                            \
      return T(~static_cast<typename L4::Types::Int_for_type<T>::type>(f));      \
    }                                                                            \
                                                                                 \
    friend constexpr T operator | (T l, T r)                                     \
    {                                                                            \
      return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)         \
               | static_cast<typename L4::Types::Int_for_type<T>::type>(r));     \
    }                                                                            \
                                                                                 \
    friend constexpr T operator & (T l, T r)                                     \
    {                                                                            \
      return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)         \
               & static_cast<typename L4::Types::Int_for_type<T>::type>(r));     \
    }
```

Helper macro to define a set of bitwise operators on an enum type.

This allows to use the enum type as bitmask type with '&', '|', and '∼' operators that keep the enum type as result.

```

```
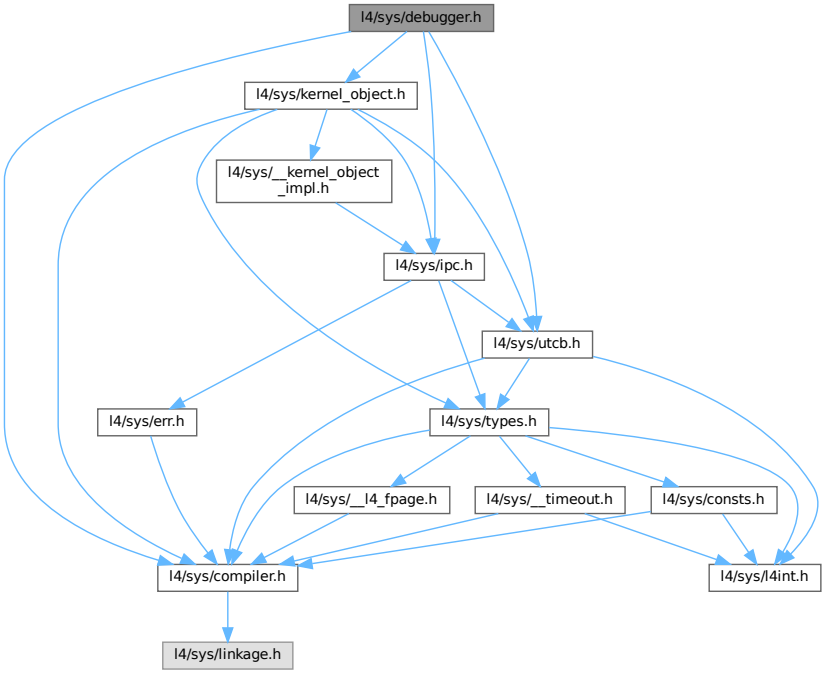
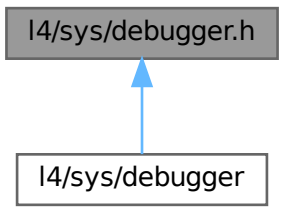
#include <l4/sys/kernel_object.h>
```

Include dependency graph for debugger.h:



This graph shows which files directly or indirectly include this file:



Functions

- l4_msgtag_t l4_debugger_set_object_name (l4_cap_idx_t cap, const char *name) L4_NOTHROW

  Set the name of a kernel object.

- l4_msgtag_t l4_debugger_get_object_name (l4_cap_idx_t cap, unsigned id, char *name, unsigned size) L4_NOTHROW

  Get name of the kernel object with Id `id`.

- unsigned long l4_debugger_global_id (l4_cap_idx_t cap) L4_NOTHROW

  Get the globally unique ID of the object behind a capability.

- unsigned long l4_debugger_kobj_to_id (l4_cap_idx_t cap, l4_addr_t kobjp) L4_NOTHROW

  Get the globally unique ID of the object behind the kobject pointer.
- long l4_debugger_query_log_typeid (l4_cap_idx_t cap, const char *name, unsigned idx) L4_NOTHROW

  Query the log-id for a log type.
- long l4_debugger_query_log_name (l4_cap_idx_t cap, unsigned idx, char *name, unsigned namelen, char *shortname, unsigned shortnamelen) L4_NOTHROW

  Query the name of a log type given the ID.
- l4_msgtag_t l4_debugger_switch_log (l4_cap_idx_t cap, const char *name, int on_off) L4_NOTHROW

  Set or unset log.
- l4_msgtag_t l4_debugger_add_image_info (l4_cap_idx_t cap, l4_addr_t base, const char *name) L4_NOTHROW

  Add loaded image information for a task.

Functions

- l4_msgtag_t l4_factory_create_task (l4_cap_idx_t factory, l4_cap_idx_t target_cap, l4_fpage_t *utcb_area) L4_NOTHROW

  Create a new task.
- l4_msgtag_t l4_factory_create_thread (l4_cap_idx_t factory, l4_cap_idx_t target_cap) L4_NOTHROW

  Create a new thread.
- l4_msgtag_t l4_factory_create_factory (l4_cap_idx_t factory, l4_cap_idx_t target_cap, unsigned long limit) L4_NOTHROW

  Create a new factory.
- l4_msgtag_t l4_factory_create_gate (l4_cap_idx_t factory, l4_cap_idx_t target_cap, l4_cap_idx_t snd_dst_↩ cap, l4_umword_t label) L4_NOTHROW

  Create a new IPC gate, optionally bound to a send destination (a thread or thread group).
- l4_msgtag_t l4_factory_create_irq (l4_cap_idx_t factory, l4_cap_idx_t target_cap) L4_NOTHROW

  Create a new IRQ sender.
- l4_msgtag_t l4_factory_create_vm (l4_cap_idx_t factory, l4_cap_idx_t target_cap) L4_NOTHROW

  Create a new virtual machine.
- l4_msgtag_t l4_factory_create_vcpu_context (l4_cap_idx_t factory, l4_cap_idx_t target_cap) L4_NOTHROW

  Create a new vCPU context.
- l4_msgtag_t l4_factory_create_thread_group (l4_cap_idx_t factory, l4_cap_idx_t target_cap, unsigned policy) L4_NOTHROW

  Create a new thread group.
- l4_msgtag_t l4_factory_create (l4_cap_idx_t factory, long obj, l4_cap_idx_t target) L4_NOTHROW

  Create a new object.

Data Structures

- struct l4_icu_info_t

  Info structure for an ICU.
- struct l4_icu_msi_info_t

  Info to use for a specific MSI.

Typedefs

- typedef struct l4_icu_info_t l4_icu_info_t

  Info structure for an ICU.
- typedef struct l4_icu_msi_info_t **l4_icu_msi_info_t**

  Info to use for a specific MSI.

Enumerations

- enum L4_icu_flags { L4_ICU_FLAG_MSI }

  Flags for IRQ numbers used for the ICU.
- enum L4_irq_mode {
  L4_IRQ_F_NONE = 0 , L4_IRQ_F_SET_MODE = 0x1 , L4_IRQ_F_LEVEL = 0x2 , L4_IRQ_F_EDGE = 0x0 ,
  L4_IRQ_F_POS = 0x0 , L4_IRQ_F_NEG = 0x4 , L4_IRQ_F_BOTH = 0x8 , L4_IRQ_F_LEVEL_HIGH =
  L4_IRQ_F_SET_MODE | L4_IRQ_F_LEVEL | L4_IRQ_F_POS ,

  L4_IRQ_F_EDGE | L4_IRQ_F_BOTH ,
  L4_IRQ_F_MASK = 0xf , L4_IRQ_F_SET_WAKEUP = 0x10 , L4_IRQ_F_CLEAR_WAKEUP = 0x20 }

  Interrupt attributes.
- enum L4_icu_opcode {
  L4_ICU_OP_BIND , L4_ICU_OP_UNBIND , L4_ICU_OP_INFO , L4_ICU_OP_MSI_INFO ,
  L4_ICU_OP_UNMASK , L4_ICU_OP_MASK , L4_ICU_OP_SET_MODE }

  Opcodes to the ICU interface.

Functions

- l4_msgtag_t l4_icu_bind (l4_cap_idx_t icu, unsigned irqnum, l4_cap_idx_t irq) L4_NOTHROW

  Bind an interrupt line of an interrupt controller to an interrupt object.
- l4_msgtag_t l4_icu_bind_u (l4_cap_idx_t icu, unsigned irqnum, l4_cap_idx_t irq, l4_utcb_t *utcb) L4_NOTHROW

  Bind an interrupt line of an interrupt controller to an interrupt object.
- l4_msgtag_t l4_icu_unbind (l4_cap_idx_t icu, unsigned irqnum, l4_cap_idx_t irq) L4_NOTHROW

  Remove binding of an interrupt line from the interrupt controller object.
- l4_msgtag_t l4_icu_unbind_u (l4_cap_idx_t icu, unsigned irqnum, l4_cap_idx_t irq, l4_utcb_t *utcb) L4_NOTHROW

  Remove binding of an interrupt line from the interrupt controller object.
- l4_msgtag_t l4_icu_set_mode (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t mode) L4_NOTHROW

  Set interrupt mode.
- l4_msgtag_t l4_icu_set_mode_u (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb) L4_NOTHROW

  Set interrupt mode.
- l4_msgtag_t l4_icu_info (l4_cap_idx_t icu, l4_icu_info_t *info) L4_NOTHROW

  Get information about the ICU features.
- l4_msgtag_t l4_icu_info_u (l4_cap_idx_t icu, l4_icu_info_t *info, l4_utcb_t *utcb) L4_NOTHROW

  Get information about the ICU features.
- l4_msgtag_t l4_icu_msi_info (l4_cap_idx_t icu, unsigned irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info) L4_NOTHROW

  Get MSI info about IRQ.
- l4_msgtag_t l4_icu_msi_info_u (l4_cap_idx_t icu, unsigned irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info, l4_utcb_t *utcb) L4_NOTHROW

  Get MSI info about IRQ.
- l4_msgtag_t l4_icu_unmask (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t *label, l4_timeout_t to) L4_NOTHROW

  Unmask an IRQ line.
- l4_msgtag_t l4_icu_unmask_u (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t *label, l4_timeout_t to, l4_utcb_t *utcb) L4_NOTHROW

  Unmask the given interrupt line.
- l4_msgtag_t l4_icu_mask (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t *label, l4_timeout_t to) L4_NOTHROW

  Mask an IRQ line.
- l4_msgtag_t l4_icu_mask_u (l4_cap_idx_t icu, unsigned irqnum, l4_umword_t *label, l4_timeout_t to, l4_utcb_t *utcb) L4_NOTHROW

  Mask an IRQ line.

  Error codes in the error TCR.

Functions

- l4_umword_t l4_ipc_error (l4_msgtag_t tag, l4_utcb_t *utcb) L4_NOTHROW

  Get the IPC error code for an IPC operation.
- long l4_error (l4_msgtag_t tag) L4_NOTHROW

  Get IPC error code if any or message tag label otherwise for an IPC call.
- int l4_ipc_is_snd_error (l4_utcb_t *utcb) L4_NOTHROW

  Returns whether an error occurred in send phase of an invocation.
- int l4_ipc_is_rcv_error (l4_utcb_t *utcb) L4_NOTHROW

Returns whether an error occurred in receive phase of an invocation.

- int l4_ipc_error_code (l4_utcb_t *utcb) L4_NOTHROW

  Get the error condition of the last invocation from the TCR.
- long l4_ipc_to_errno (unsigned long ipc_error_code) L4_NOTHROW

  Get a negative error code for the given IPC error code.
- l4_msgtag_t l4_ipc_send (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW

  *Send a message to an object (do **not** wait for a reply).*
- l4_msgtag_t l4_ipc_wait (l4_utcb_t *utcb, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW

  Wait for an incoming message from any possible sender.
- l4_msgtag_t l4_ipc_receive (l4_cap_idx_t object, l4_utcb_t *utcb, l4_timeout_t timeout) L4_NOTHROW

  Wait for a message from a specific source.
- l4_msgtag_t l4_ipc_call (l4_cap_idx_t object, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW

  Object call (usual invocation).
- l4_msgtag_t l4_ipc_reply_and_wait (l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW

  Reply and wait operation (uses the reply capability).
- l4_msgtag_t l4_ipc_send_and_wait (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW

  Send a message and do an open wait.
- l4_msgtag_t l4_ipc (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_umword_t flags, l4_umword_t slabel, l4_msgtag_t tag, l4_umword_t *rlabel, l4_timeout_t timeout) L4_NOTHROW

  Generic L4 object invocation.
- l4_msgtag_t l4_ipc_sleep (l4_timeout_t timeout) L4_NOTHROW

  Sleep for an amount of time.
- l4_msgtag_t l4_ipc_sleep_ms (l4_uint32_t ms) L4_NOTHROW

  Sleep for a certain amount of milliseconds.
- l4_msgtag_t l4_ipc_sleep_us (l4_uint64_t us) L4_NOTHROW

  Sleep for a certain amount of microseconds.
- int l4_sndfpage_add (l4_fpage_t const snd_fpage, unsigned long snd_base, l4_msgtag_t *tag) L4_NOTHROW

  Add a flexpage to be sent to the UTCB.

17.502.1 Detailed Description

Common IPC interface.

Definition in file ipc.h.

17.502.2 Function Documentation

17.502.2.1 l4_ipc_to_errno()

```
long l4_ipc_to_errno (
            unsigned long ipc_error_code)  [inline]
```

Get a negative error code for the given IPC error code.

Parameters

ipc_error_code	IPC error code as delivered by the kernel. (or returned by the l4_ipc_error_code() function).

Returns

negative error code in the range of L4_EIPC_LO to L4_EIPC_HI.

Definition at line 561 of file ipc.h.

References L4_EIPC_LO, L4_INLINE, and L4_NOTHROW.

17.508.1 Detailed Description

The C IPC gate interface, see L4::Ipc_gate for the C++ interface.

IPC gates are used to create secure communication channels between protection domains. An IPC gate can be created using the Factory interface.

Depending on the permissions of the capability used, an IPC gate forwards IPC to the Thread the IPC gate is *bound* to (cf. l4_rcv_ep_bind_thread() and l4_rcv_ep_bind_snd_destination()). If the capability has the L4_FPAGE_C_IPCGATE_SVR permission, only IPC using a protocol different from the L4_PROTO_KOBJECT protocol is forwarded. Without the L4_FPAGE_C_IPCGATE_SVR permission, all IPC is forwarded. The latter is the usual case for a client in a client/server scenario. When not bound to a thread or thread group yet, the forwarded IPC blocks until the IPC gate is bound to a thread or thread group, or the IPC times out.

Forwarded IPC is always forwarded to the userland of the thread the IPC gate is bound to, either directly or indirectly using a thread group. That means, the Thread interface of that thread is not accessible via an IPC gate. The IPC-Gate API of an IPC gate is only accessible if the capability used has the L4_FPAGE_C_IPCGATE_SVR permission (cf. previous paragraph). Conversely that means, if the capability used lacks the L4_FPAGE_C_IPCGATE_SVR permission, IPC-Gate API calls are forwarded to the thread or thread group the IPC gate is bound to instead of being processed by the IPC gate itself. In a client/server scenario, a client should only get IPC gate capabilities without L4_FPAGE_C_IPCGATE_SVR permission so the client cannot tamper with the IPC gate.

When binding an IPC gate to a thread or thread group, a user-defined, kernel protected, machine-word sized payload called the IPC gate's *label* is assigned to the IPC gate (note that the two least significant bits of the label must be zero; cf. l4_rcv_ep_bind_thread() and l4_rcv_ep_bind_snd_destination()). When a send-only IPC or call IPC is forwarded via an IPC gate, the label provided by the sender is ignored and replaced by the IPC gate's label where the two least significant bits are set to the L4_CAP_FPAGE_S and L4_CAP_FPAGE_W permissions of the capability used. The replaced label is only visible to the thread the IPC gate is bound to upon receive (or to the selected thread from the thread group the IPC gate is bound to). However, the configured label of an IPC gate can also be queried via l4_ipc_gate_get_infos() if the capability used has the L4_FPAGE_C_IPCGATE_SVR permission.

When deleting an IPC gate or when unbinding it from a thread or thread group, the label of IPC already in flight won't be changed. To ensure that no IPC from this IPC gate is received by a thread with an unexpected label, l4_thread_modify_sender_start() shall be used to change the labels of every pending IPC to that gate. This is also required if the label of an already bound IPC gate is changed. It is not necessary after binding the IPC gate to a thread or thread group for the first time.

When binding a currently bound IPC gate to a new thread or thread group, the same label should be used that was used with the old thread. Otherwise the old and the new thread need to synchronize to avoid IPC messages with unexpected labels.

Include File

```
#include <l4/sys/ipc_gate.h>
```

For the C++ interface refer to the L4::Ipc_gate documentation.

```

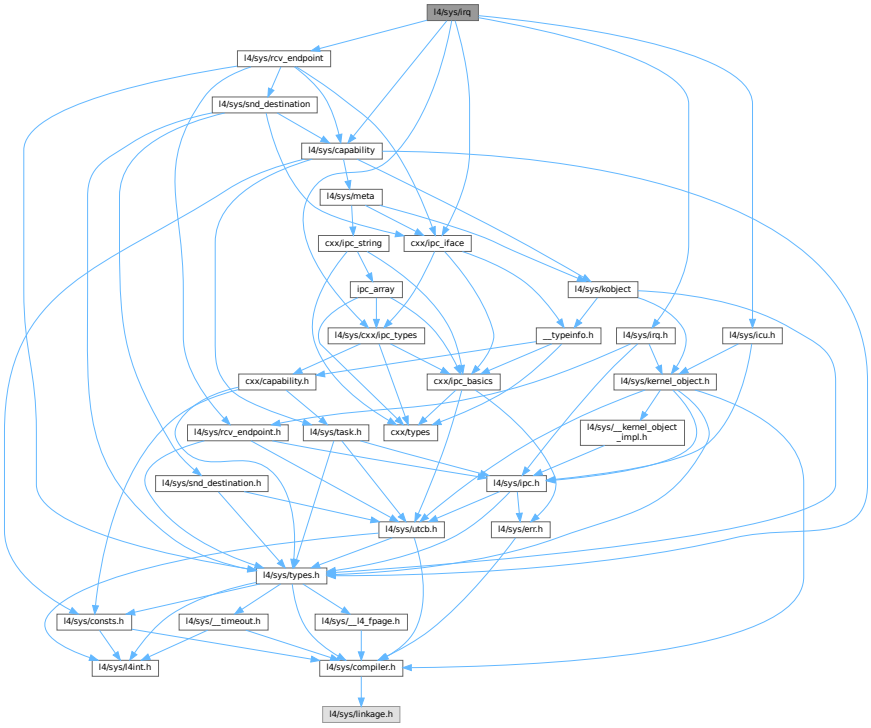
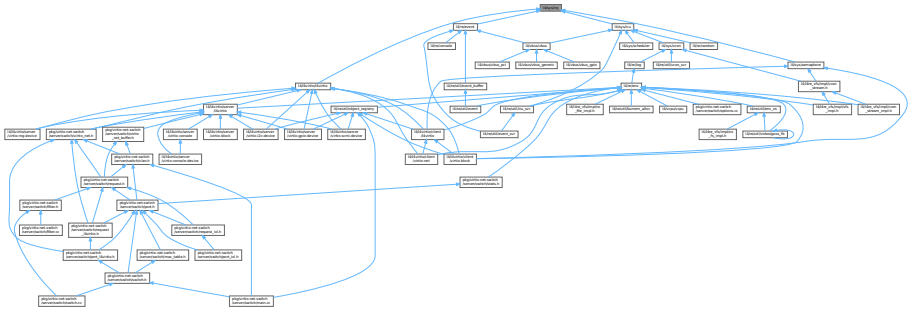
Include dependency graph for irq:



This graph shows which files directly or indirectly include this file:



Data Structures

- class L4::Irq_eoi

  Interface for sending an unmask message to an object.
- struct L4::Triggerable

  Interface that allows an object to be triggered by some source.
- class L4::Irq

  C++ Irq interface, see IRQs for the C interface.
- class L4::Icu

  C++ Icu interface, see Interrupt controller for the C interface.
- class L4::Icu::Info

  This class encapsulates information about an ICU.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.510.1 Detailed Description

C++ Irq interface.

Definition in file irq.

17.511 irq

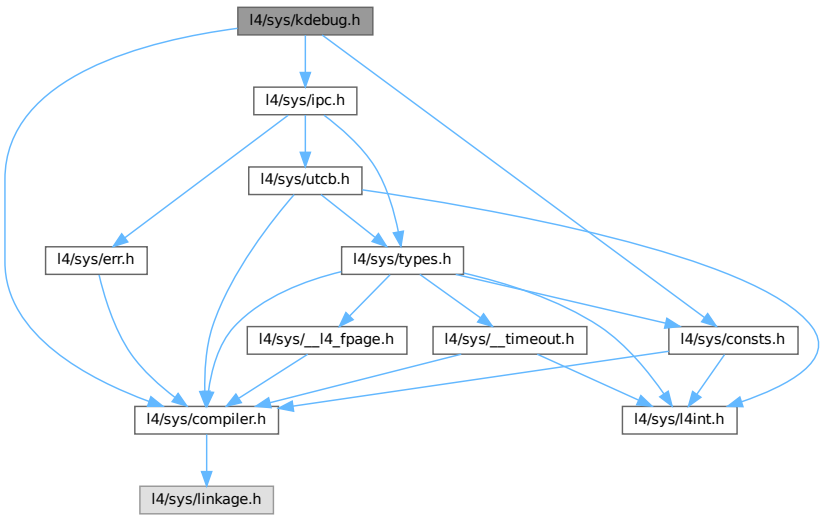
17.512 l4/sys/kdebug.h File Reference

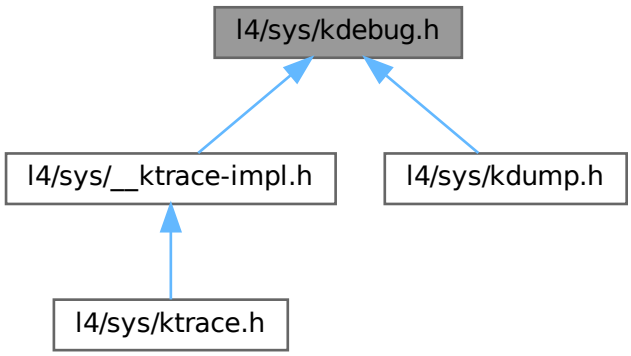
Functionality for invoking the kernel debugger.

```
#include <l4/sys/compiler.h>
#include <l4/sys/consts.h>
#include <l4/sys/ipc.h>
```

Include dependency graph for kdebug.h:



This graph shows which files directly or indirectly include this file:



Enumerations

- enum l4_kdebug_group_t

  Opcode groups for operations that can be invoked on the base debugger capability.
- enum l4_kdebug_ops_t

  Op-codes for operations that can be invoked on the base debugger capability.

Functions

- void enter_kdebug (char const *text) L4_NOTHROW

  Enter the kernel debugger.
- l4_msgtag_t __kdebug_op (unsigned op) L4_NOTHROW

  Invoke a nullary operation on the base debugger capability.
- l4_msgtag_t __kdebug_text (unsigned op, char const *text, unsigned len) L4_NOTHROW

  Invoke a text output operation on the base debugger capability.
- l4_msgtag_t __kdebug_3_text (unsigned op, char const *text, unsigned len, l4_umword_t v1, l4_umword_t v2, l4_umword_t v3) L4_NOTHROW

  Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.
- l4_msgtag_t __kdebug_op_1 (unsigned op, l4_mword_t val) L4_NOTHROW

  Invoke an unary operation on the base debugger capability.
- void outnstring (char const *text, unsigned len)

  Output a fixed-length string via the kernel debugger.
- void outstring (char const *text)

  Output a string via the kernel debugger.
- void outchar (char c)

  Output a single character via the kernel debugger.
- void outumword (l4_umword_t number)

  Output a hexadecimal unsigned machine word via the kernel debugger.
- void outhex64 (l4_uint64_t number)

  Output a 64-bit unsigned hexadecimal number via the kernel debugger.
- void outhex32 (l4_uint32_t number)

Output a 32-bit unsigned hexadecimal number via the kernel debugger.

- void outhex20 (l4_uint32_t number)

  Output a 20-bit unsigned hexadecimal number via the kernel debugger.
- void outhex16 (l4_uint16_t number)

  Output a 16-bit unsigned hexadecimal number via the kernel debugger.
- void outhex12 (l4_uint16_t number)

  Output a 12-bit unsigned hexadecimal number via the kernel debugger.
- void outhex8 (l4_uint8_t number)

  Output an 8-bit unsigned hexadecimal number via the kernel debugger.
- void outdec (l4_mword_t number)

  Output a decimal unsigned machine word via the kernel debugger.

17.512.1 Detailed Description

Functionality for invoking the kernel debugger.

Definition in file kdebug.h.

17.512.2 Enumeration Type Documentation

17.512.2.1 l4_kdebug_ops_t

```
enum l4_kdebug_ops_t
```

Op-codes for operations that can be invoked on the base debugger capability.

See also __ktrace-impl.h for additional op-codes.

Definition at line 44 of file kdebug.h.

17.512.3 Function Documentation

17.512.3.1 __kdebug_3_text()

```
l4_msgtag_t __kdebug_3_text (
            unsigned op,
            char const * text,
            unsigned len,
            l4_umword_t v1,
            l4_umword_t v2,
            l4_umword_t v3)  [inline]
```

Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.

Parameters

op	Text output operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h).
text	Output string.
len	Length of the output string. The maximum length is limited to L4_UTCB_GENERIC_DATA_SIZE - 5 machine words. Output strings longer than this limit will be cropped.
v1	First machine word argument.
v2	Second machine word argument.
v3	Third machine word argument.

Return values

Message	tag returned from the IPC on the base debugger capability.

Definition at line 139 of file kdebug.h.

References L4_BASE_DEBUGGER_CAP, l4_bytes_to_mwords(), l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_NOTHROW, L4_PROTO_DEBUGGER, l4_utcb(), and l4_msg_regs_t::mr.

17.512.3.2 __kdebug_op()

```
l4_msgtag_t __kdebug_op (
             unsigned op)  [inline]
```

Invoke a nullary operation on the base debugger capability.

Parameters

op	Nullary operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h).

Return values

Message	tag returned from the IPC on the base debugger capability.

Definition at line 68 of file kdebug.h.

References L4_BASE_DEBUGGER_CAP, l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_NOTHROW, L4_PROTO_DEBUGGER, l4_utcb(), and l4_msg_regs_t::mr.

```
l4_msgtag_t __kdebug_op_1 (
             unsigned op,
             l4_mword_t val)  [inline]
```

Invoke an unary operation on the base debugger capability.

Parameters

op	Unary operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h).
val	Machine word argument to the unary operation.

Return values

Message	tag returned from the IPC on the base debugger capability.

Definition at line 176 of file kdebug.h.

References L4_BASE_DEBUGGER_CAP, l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_NOTHROW, L4_PROTO_DEBUGGER, l4_utcb(), and l4_msg_regs_t::mr.

             unsigned op,
             char const * text,
             unsigned len)  [inline]
```

Invoke a text output operation on the base debugger capability.

Parameters

op	Text output operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h).
text	Output string.
len	Length of the output string. The maximum length is limited to L4_UTCB_GENERIC_DATA_SIZE - 2 machine words. Output strings longer than this limit will be cropped.

Return values

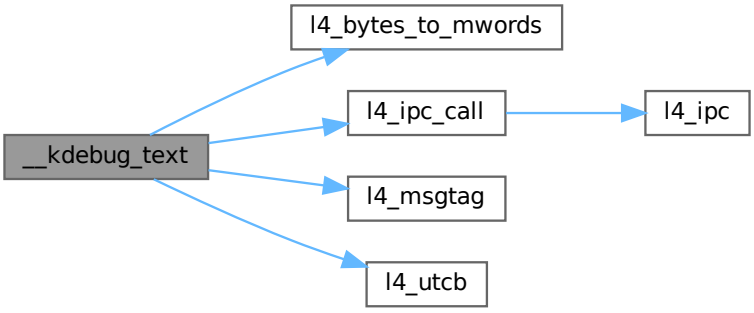
Message	tag returned from the IPC on the base debugger capability.

Definition at line 98 of file kdebug.h.

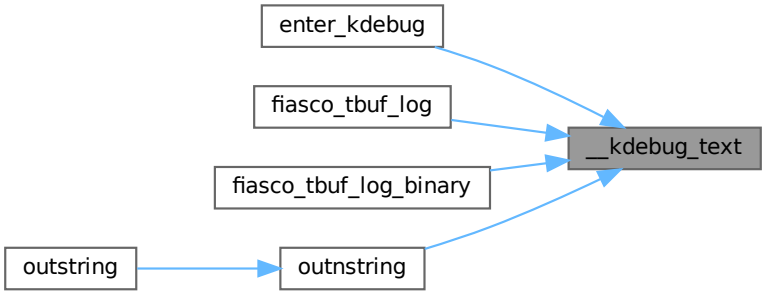
References L4_BASE_DEBUGGER_CAP, l4_bytes_to_mwords(), l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_NOTHROW, L4_PROTO_DEBUGGER, l4_utcb(), and l4_msg_regs_t::mr.

Referenced by enter_kdebug(), fiasco_tbuf_log(), fiasco_tbuf_log_binary(), and outnstring().

Here is the call graph for this function:



Here is the caller graph for this function:



17.512.3.5 enter_kdebug()

```
void enter_kdebug (
            char const * text)  [inline]
```

Enter the kernel debugger.

Parameters

text	Optional message displayed by the kernel debugger when entered.

Enter the kernel debugger, if configured. An optional message can be passed to the kernel debugger which is printed upon the entering of the debugger.

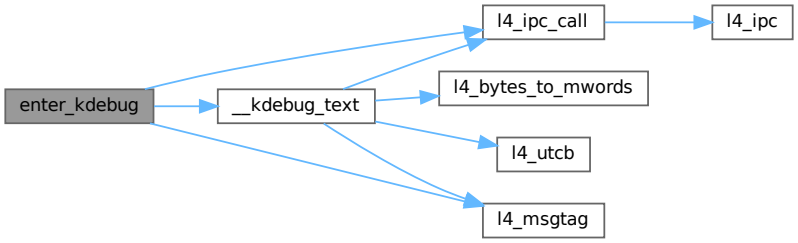
Examples

examples/sys/singlestep/main.c.

Definition at line 204 of file kdebug.h.

References __kdebug_text(), L4_BASE_DEBUGGER_CAP, L4_INLINE, l4_ipc_call(), L4_IPC_NEVER, l4_msgtag(), L4_NOTHROW, and L4_PROTO_DEBUGGER.

Here is the call graph for this function:



17.512.3.6 outchar()

```
void outchar (
             char c)  [inline]
```

Output a single character via the kernel debugger.

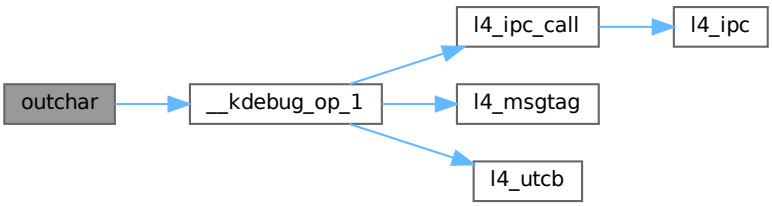
Parameters

c	Output character.

Definition at line 245 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.7 outdec()

```
void outdec (
             l4_mword_t number)  [inline]
```

Output a decimal unsigned machine word via the kernel debugger.

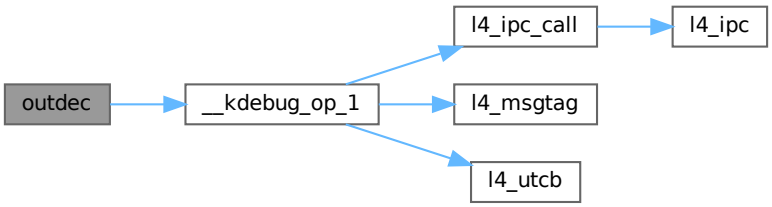
Parameters

number	Output machine word.

Definition at line 334 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.8 outhex12()

```
void outhex12 (
            l4_uint16_t number)  [inline]
```

Output a 12-bit unsigned hexadecimal number via the kernel debugger.

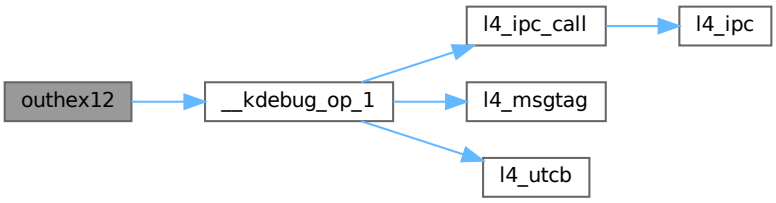
Parameters

number	Output 12-bit number. Only the 12 LSB bits are used.

Definition at line 314 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.9 outhex16()

```
void outhex16 (
            l4_uint16_t number)  [inline]
```

Output a 16-bit unsigned hexadecimal number via the kernel debugger.

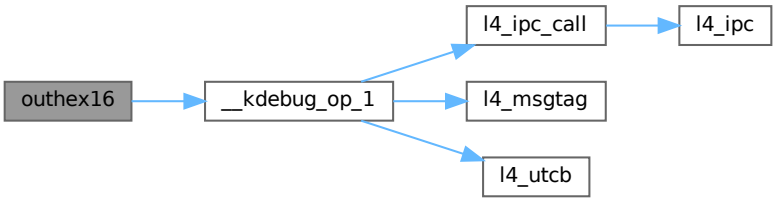
Parameters

number	Output 16-bit number.

Definition at line 304 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.10 outhex20()

```
void outhex20 (
            l4_uint32_t number)  [inline]
```

Output a 20-bit unsigned hexadecimal number via the kernel debugger.

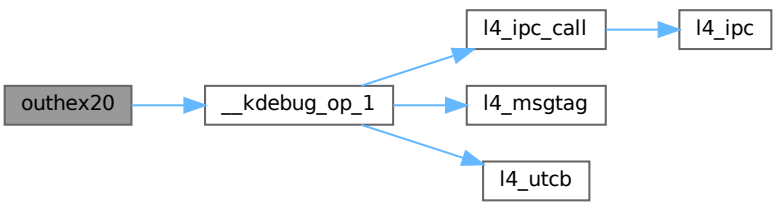
Parameters

number	Output 20-bit number. Only the 20 LSB bits are used.

Definition at line 294 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.11 outhex32()

```
void outhex32 (
             l4_uint32_t number)  [inline]
```

Output a 32-bit unsigned hexadecimal number via the kernel debugger.

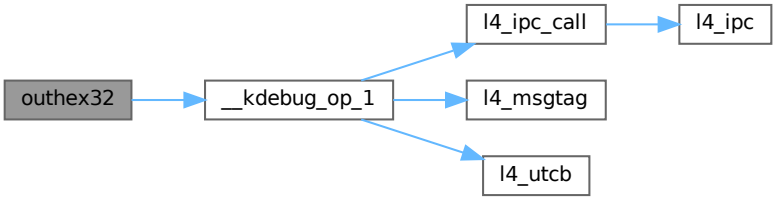
Parameters

number	Output 32-bit number.

Definition at line 284 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.12 outhex64()

```
void outhex64 (
            l4_uint64_t number)  [inline]
```

Output a 64-bit unsigned hexadecimal number via the kernel debugger.

Parameters

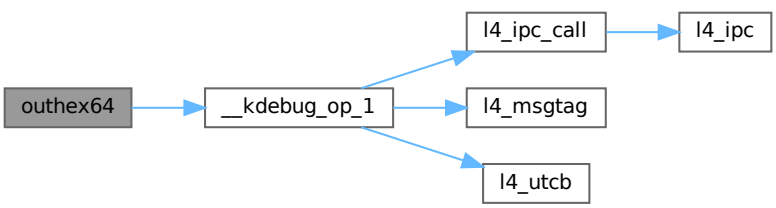
number	Output 64-bit number.

The two 32-bit halves are printed non-atomically.

Definition at line 273 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.13 outhex8()

```
void outhex8 (
             l4_uint8_t number)  [inline]
```

Output an 8-bit unsigned hexadecimal number via the kernel debugger.

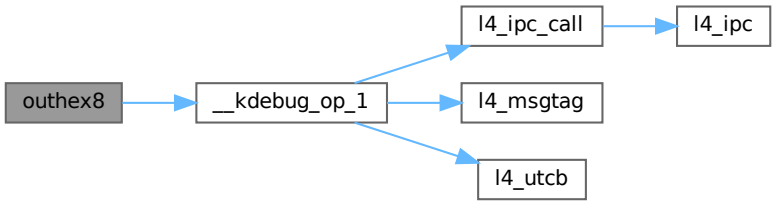
Parameters

number	Output 8-bit number.

Definition at line 324 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.512.3.14 outnstring()

```
void outnstring (
             char const * text,
             unsigned len)  [inline]
```

Output a fixed-length string via the kernel debugger.

Parameters

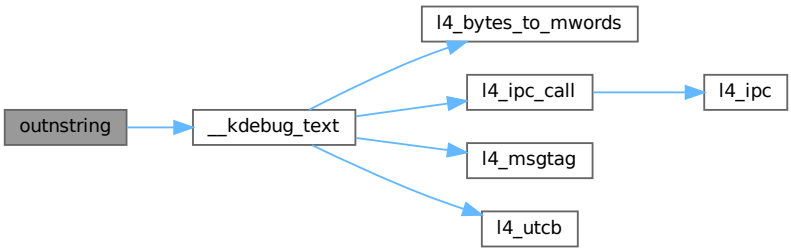
text	Beginning of the output string.
len	Length of the output string. The maximum length is limited to L4_UTCB_GENERIC_DATA_SIZE - 2 machine words. Output strings longer than this limit will be cropped.

Definition at line 226 of file kdebug.h.

References __kdebug_text(), and L4_INLINE.

Referenced by outstring().

Here is the call graph for this function:



Here is the caller graph for this function:

17.512.3.15 outstring()

```
void outstring (
            char const * text)  [inline]
```

Output a string via the kernel debugger.

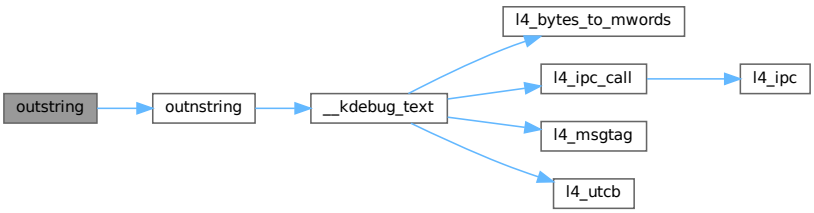
Parameters

text	Beginning of the output string. The maximum length of the output string is limited to L4_UTCB_GENERIC_DATA_SIZE - 2 machine words. Output strings longer than this limit will be cropped.

Definition at line 237 of file kdebug.h.

References L4_INLINE, and outnstring().

Here is the call graph for this function:



17.512.3.16 outumword()

```
void outumword (
             l4_umword_t number)  [inline]
```

Output a hexadecimal unsigned machine word via the kernel debugger.

Parameters

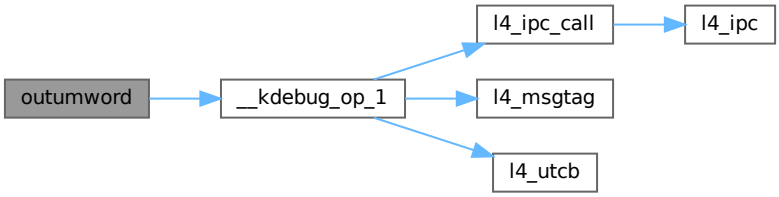
number	Output machine word.

If the machine word is 64 bits long, it is printed non-atomically as two 32-bit numbers.

Definition at line 258 of file kdebug.h.

References __kdebug_op_1(), and L4_INLINE.

Here is the call graph for this function:



17.513 kdebug.h

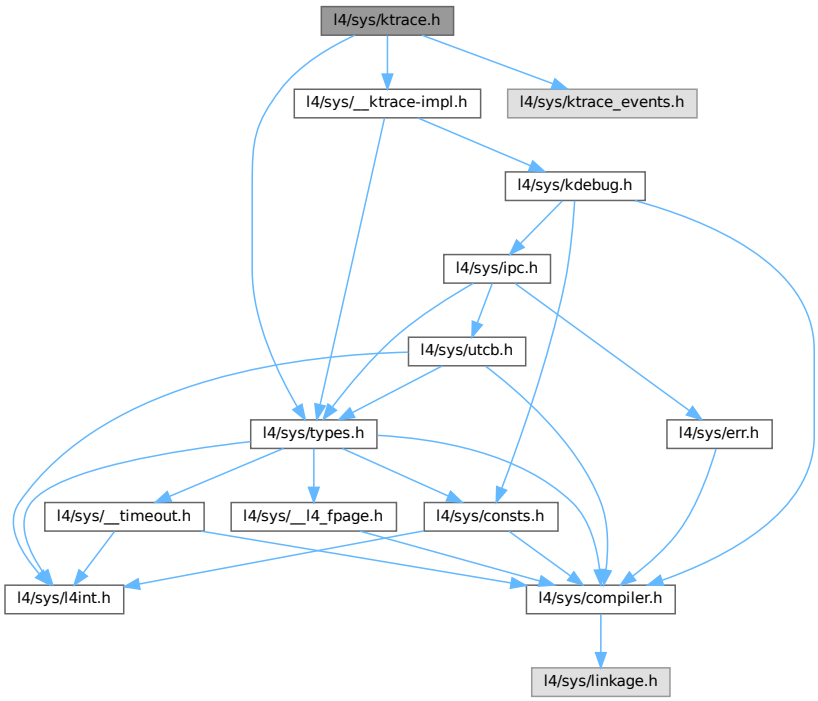
17.521 l4/sys/ktrace.h File Reference

L4 kernel event tracing.

```
#include <l4/sys/types.h>
#include <l4/sys/ktrace_events.h>
#include <l4/sys/__ktrace-impl.h>
```

Include dependency graph for ktrace.h:



Functions

- l4_umword_t fiasco_tbuf_log (const char *text)

  Create new trace-buffer entry with describing <text>.
- l4_umword_t fiasco_tbuf_log_3val (const char *text, l4_umword_t v1, l4_umword_t v2, l4_umword_t v3)

  Create new trace-buffer entry with describing <text> and three additional values.
- l4_umword_t fiasco_tbuf_log_binary (const unsigned char *data)

Create new trace-buffer entry with binary data.

- void **fiasco_tbuf_clear** (void)

  Clear trace-buffer.

- void **fiasco_tbuf_dump** (void)

  Dump trace-buffer to kernel console.

- struct l4_kernel_info_mem_desc_t

  Memory descriptor data structure.

Typedefs

- typedef struct l4_kernel_info_mem_desc_t l4_kernel_info_mem_desc_t

  Memory descriptor data structure.

Enumerations

- enum l4_mem_type_t {
  l4_mem_type_undefined = 0x0 , l4_mem_type_conventional = 0x1 , l4_mem_type_reserved = 0x2 , l4_mem_type_dedicated = 0x3 ,
  l4_mem_type_shared = 0x4 , l4_mem_type_info = 0xd , l4_mem_type_bootloader = 0xe , l4_mem_type_archspecific = 0xf }

  Type of a memory descriptor.
- enum l4_mem_info_sub_type_t { l4_mem_info_acpi_rsdp = 0 }

  Memory sub types for l4_mem_type_info descriptors.
- enum l4_mem_archspecific_sub_type_common_t { l4_mem_archspecific_acpi_tables = 3 , l4_mem_archspecific_acpi_nvs = 4 }

  Memory sub types for l4_mem_type_archspecific descriptors.

Functions

- l4_kernel_info_mem_desc_t * **l4_kernel_info_get_mem_descs** (l4_kernel_info_t *kip) L4_NOTHROW

  Get pointer to memory descriptors from KIP.
- unsigned l4_kernel_info_get_num_mem_descs (l4_kernel_info_t *kip) L4_NOTHROW

  Get number of memory descriptors in KIP.
- void l4_kernel_info_set_mem_desc (l4_kernel_info_mem_desc_t *md, l4_addr_t start, l4_addr_t end, unsigned type, unsigned virt, unsigned sub_type) L4_NOTHROW

  Populate a memory descriptor.
- l4_umword_t l4_kernel_info_get_mem_desc_start (l4_kernel_info_mem_desc_t *md) L4_NOTHROW

  Get start address of the region described by the memory descriptor.
- l4_umword_t l4_kernel_info_get_mem_desc_end (l4_kernel_info_mem_desc_t *md) L4_NOTHROW

  Get end address of the region described by the memory descriptor.
- l4_umword_t l4_kernel_info_get_mem_desc_type (l4_kernel_info_mem_desc_t *md) L4_NOTHROW

  Get type of the memory region.
- l4_umword_t l4_kernel_info_get_mem_desc_subtype (l4_kernel_info_mem_desc_t *md) L4_NOTHROW

  Get sub-type of memory region.
- l4_umword_t l4_kernel_info_get_mem_desc_is_virtual (l4_kernel_info_mem_desc_t *md) L4_NOTHROW

  Get virtual flag of the memory descriptor.

17.533.1 Detailed Description

Memory description functions.

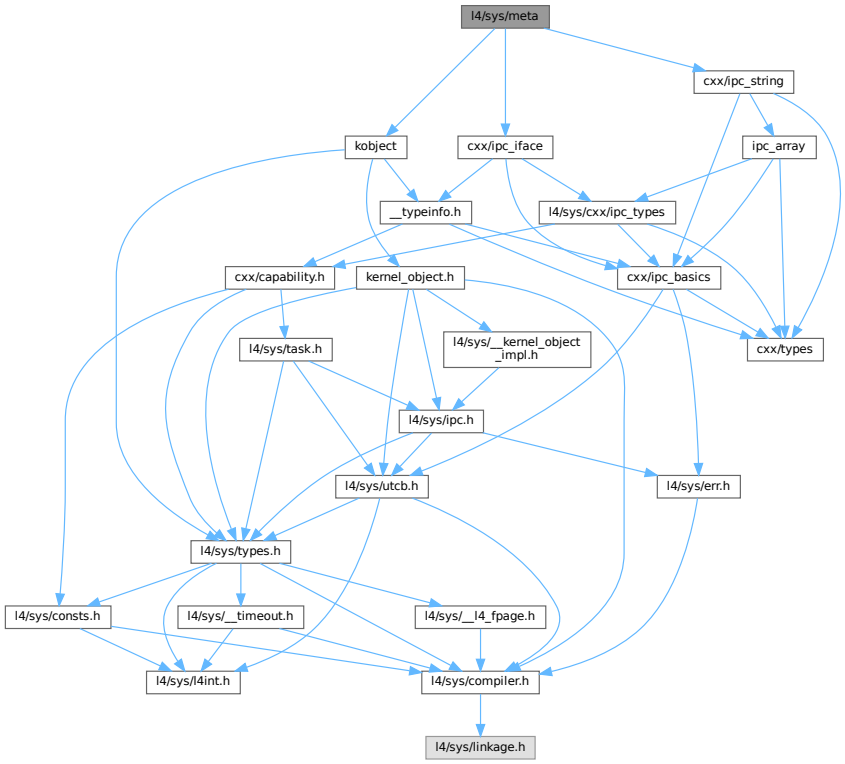
#include "cxx/ipc_string"
```

Include dependency graph for meta:



This graph shows which files directly or indirectly include this file:

Data Structures

- class L4::Meta

  Meta interface that shall be implemented by each L4Re object and gives access to the dynamic type information for L4Re objects.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.536.1 Detailed Description

Meta interface for getting dynamic type information about objects behind capabilities.

17.538.2 Function Documentation

17.538.2.1 l4_debugger_query_obj_infos()

```
l4_msgtag_t l4_debugger_query_obj_infos (
             l4_cap_idx_t cap,
             l4_addr_t ku_mem_addr,
             l4_size_t ku_mem_size,
             l4_umword_t skip,
             l4_umword_t * result_cnt,
             l4_umword_t * result_all)  [inline]
```

Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.

Parameters

	cap	Capability of the debugger object.
	ku_mem_addr	Address of the KU memory for writing the information.
	ku_mem_size	Size of the KU memory to writing the information.
	skip	Number of objects to skip.
out	*result_cnt*	Number of objects in the mapping database.
out	*result_all*	Number of objects written to the KU memory.

Note

The kernel will only write a number of object information which fits to the passed KU memory. To retrieve missing object information, repeat the call and adapt the `skip` parameter accordingly.

If this system call is performed several times, the number of kernel objects might have changed in the meantime.

Definition at line 176 of file obj_info.h.

Platform control object.

```
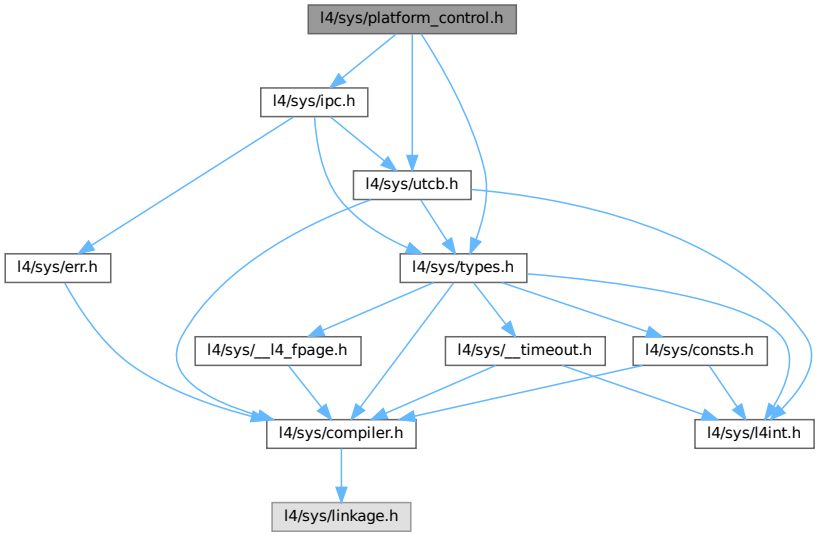
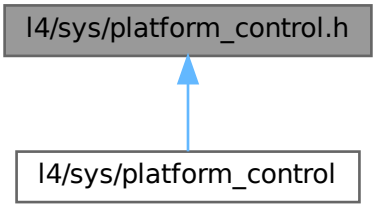
#include <l4/sys/types.h>
#include <l4/sys/utcb.h>
#include <l4/sys/ipc.h>
```

Include dependency graph for platform_control.h:



This graph shows which files directly or indirectly include this file:



Enumerations

- enum L4_platform_ctl_ops {
  L4_PLATFORM_CTL_SYS_SUSPEND_OP = 0UL , L4_PLATFORM_CTL_SYS_SHUTDOWN_OP = 1UL ,
  L4_PLATFORM_CTL_CPU_ALLOW_SHUTDOWN_OP = 2UL , L4_PLATFORM_CTL_CPU_ENABLE_OP = 3UL ,
  L4_PLATFORM_CTL_CPU_DISABLE_OP = 4UL , L4_PLATFORM_CTL_SET_TASK_ASID_OP = 0x10UL }

  Operations on platform-control objects.
- enum L4_platform_ctl_proto { L4_PROTO_PLATFORM_CTL = 0 }

  Predefined protocol type for messages to platform-control objects.

Functions

- l4_msgtag_t l4_platform_ctl_system_suspend (l4_cap_idx_t pfc, l4_umword_t extras) L4_NOTHROW

  Enter suspend to RAM.
- l4_msgtag_t l4_platform_ctl_system_shutdown (l4_cap_idx_t pfc, l4_umword_t reboot) L4_NOTHROW

  Shutdown or reboot the system.
- l4_msgtag_t l4_platform_ctl_cpu_allow_shutdown (l4_cap_idx_t pfc, l4_umword_t phys_id, l4_umword_t enable) L4_NOTHROW

  Allow a CPU to be shut down.
- l4_msgtag_t l4_platform_ctl_cpu_enable (l4_cap_idx_t pfc, l4_umword_t phys_id) L4_NOTHROW

  Enable an offline CPU.
- l4_msgtag_t l4_platform_ctl_cpu_disable (l4_cap_idx_t pfc, l4_umword_t phys_id) L4_NOTHROW

  Disable an online CPU.

Enumerations

- enum L4_task_ops {
  L4_TASK_MAP_OP = 0UL , L4_TASK_UNMAP_OP = 1UL , L4_TASK_CAP_INFO_OP = 2UL , L4_TASK_ADD_KU_MEM_OP = 3UL ,
  L4_TASK_LDT_SET_X86_OP = 0x11UL , L4_TASK_MAP_VGICC_ARM_OP = 0x12UL }

  Operations on task objects.

Functions

- l4_msgtag_t l4_task_map (l4_cap_idx_t dst_task, l4_cap_idx_t src_task, l4_fpage_t snd_fpage, l4_umword_t snd_base) L4_NOTHROW

  Map resources available in the source task to a destination task.
- l4_msgtag_t l4_task_unmap (l4_cap_idx_t task, l4_fpage_t fpage, l4_umword_t map_mask) L4_NOTHROW

  Revoke rights from the task.
- l4_msgtag_t l4_task_unmap_batch (l4_cap_idx_t task, l4_fpage_t const *fpages, unsigned num_fpages, l4_umword_t map_mask) L4_NOTHROW

  Revoke rights from a task.
- l4_msgtag_t l4_task_delete_obj (l4_cap_idx_t task, l4_cap_idx_t obj) L4_NOTHROW

  Release capability and delete object.
- l4_msgtag_t l4_task_release_cap (l4_cap_idx_t task, l4_cap_idx_t cap) L4_NOTHROW

  Release object capability.
- l4_msgtag_t l4_task_cap_valid (l4_cap_idx_t task, l4_cap_idx_t cap) L4_NOTHROW

  Check whether a capability is present (refers to an object).
- l4_msgtag_t l4_task_cap_equal (l4_cap_idx_t task, l4_cap_idx_t cap_a, l4_cap_idx_t cap_b) L4_NOTHROW

  Test whether two capabilities point to the same object with the same permissions (only considering selected permissions).
- l4_msgtag_t l4_task_add_ku_mem (l4_cap_idx_t task, l4_fpage_t *ku_mem) L4_NOTHROW

  Add kernel-user memory.

Message tag for IPC operations.

- enum L4_msgtag_flags { L4_MSGTAG_ERROR , L4_MSGTAG_TRANSFER_FPU , L4_MSGTAG_SCHEDULE , **L4_MSGTAG_PROPAGATE** = 0x4000 , L4_MSGTAG_FLAGS }

  Flags for message tags.

Functions

- l4_msgtag_t l4_msgtag (long label, unsigned words, unsigned items, unsigned flags) L4_NOTHROW

  Create a message tag from the specified values.
- long l4_msgtag_label (l4_msgtag_t t) L4_NOTHROW

  Get the protocol of tag.
- unsigned l4_msgtag_words (l4_msgtag_t t) L4_NOTHROW

  Get the number of untyped words.
- unsigned l4_msgtag_items (l4_msgtag_t t) L4_NOTHROW

  Get the number of typed items.
- unsigned l4_msgtag_flags (l4_msgtag_t t) L4_NOTHROW

  Get the flags.
- unsigned l4_msgtag_has_error (l4_msgtag_t t) L4_NOTHROW

  Test for error indicator flag.
- unsigned l4_msgtag_is_page_fault (l4_msgtag_t t) L4_NOTHROW

  Test for page-fault protocol.
- unsigned l4_msgtag_is_exception (l4_msgtag_t t) L4_NOTHROW

  Test for exception protocol.
- unsigned l4_msgtag_is_sigma0 (l4_msgtag_t t) L4_NOTHROW

  Test for sigma0 protocol.
- unsigned l4_msgtag_is_io_page_fault (l4_msgtag_t t) L4_NOTHROW

  Test for IO-page-fault protocol.
- unsigned l4_is_invalid_cap (l4_cap_idx_t c) L4_NOTHROW

  Test if a capability selector is the invalid capability.
- unsigned l4_is_valid_cap (l4_cap_idx_t c) L4_NOTHROW

  Test if a capability selector is a valid selector.
- unsigned l4_capability_equal (l4_cap_idx_t c1, l4_cap_idx_t c2) L4_NOTHROW

  Test if the capability indices of two capability selectors are equal.
- l4_cap_idx_t l4_capability_next (l4_cap_idx_t c) L4_NOTHROW

  Get the next capability selector after `c`.

17.583.1 Detailed Description

Common L4 ABI Data Types.

Definition in file types.h.

17.583.2 Function Documentation

17.583.2.1 l4_capability_next()

```
l4_cap_idx_t l4_capability_next (
            l4_cap_idx_t c)  [inline]
```

Get the next capability selector after `c`.

Parameters

c	The capability selector for which the next selector shall be computed.

Returns

The next capability selector after c.

Definition at line 457 of file types.h.

References L4_CAP_OFFSET, L4_INLINE, and L4_NOTHROW.

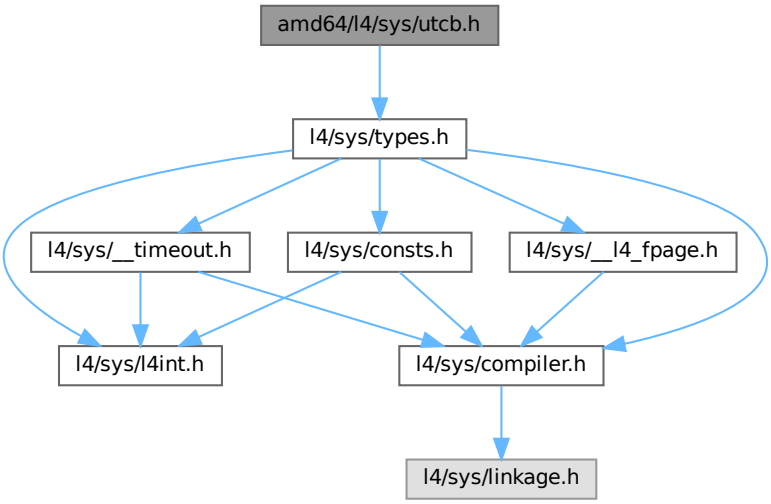
17.585 amd64/l4/sys/utcb.h File Reference

UTCB definitions for AMD64.

```
#include <l4/sys/types.h>
```

Include dependency graph for utcb.h:



Data Structures

- struct l4_exc_regs_t

  UTCB structure for exceptions.

Typedefs

- typedef struct l4_exc_regs_t **l4_exc_regs_t**

  UTCB structure for exceptions.

Enumerations

- enum L4_utcb_consts_amd64

  UTCB constants for AMD64.

Functions

- l4_umword_t l4_utcb_exc_pc (l4_exc_regs_t const *u) L4_NOTHROW

  Access function to get the program counter of the exception state.
- void l4_utcb_exc_pc_set (l4_exc_regs_t *u, l4_addr_t pc) L4_NOTHROW

  Set the program counter register in the exception state.
- l4_umword_t **l4_utcb_exc_typeval** (l4_exc_regs_t const *u) L4_NOTHROW

  Get the value out of an exception UTCB that describes the type of exception.
- int l4_utcb_exc_is_pf (l4_exc_regs_t const *u) L4_NOTHROW

  Check whether an exception IPC is a page fault.
- l4_addr_t **l4_utcb_exc_pfa** (l4_exc_regs_t const *u) L4_NOTHROW

  Function to get the L4 style page fault address out of an exception.
- int l4_utcb_exc_is_ex_regs_exception (l4_exc_regs_t const *u) L4_NOTHROW

  Check whether an exception IPC was triggered via l4_thread_ex_regs().

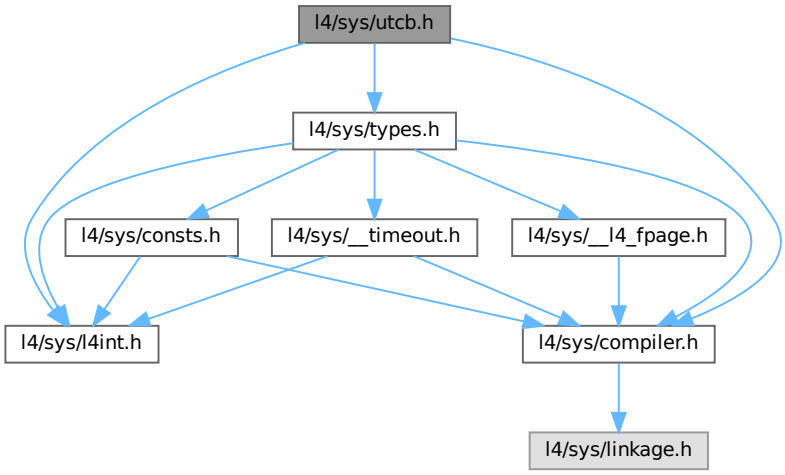
17.591 l4/sys/utcb.h File Reference

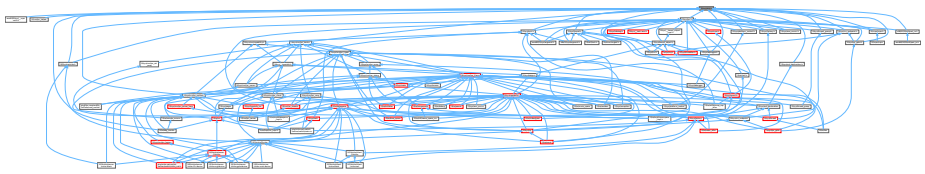
UTCB definitions.

```
#include <l4/sys/types.h>
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
```

Include dependency graph for utcb.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- union l4_msg_regs_t

  Encapsulation of the message-register block in the UTCB.
- struct l4_buf_regs_t

  Encapsulation of the buffer-registers block in the UTCB.
- struct l4_thread_regs_t

  Encapsulation of the thread-control-register block of the UTCB.

Typedefs

- typedef struct l4_utcb_t l4_utcb_t

  Opaque type for the UTCB.
- typedef union l4_msg_regs_t **l4_msg_regs_t**

  Encapsulation of the message-register block in the UTCB.
- typedef struct l4_buf_regs_t **l4_buf_regs_t**

  Encapsulation of the buffer-registers block in the UTCB.
- typedef struct l4_thread_regs_t **l4_thread_regs_t**

  Encapsulation of the thread-control-register block of the UTCB.

Functions

- l4_utcb_t * **l4_utcb** (void) L4_NOTHROW L4_PURE

  Get the UTCB address.
- l4_msg_regs_t * l4_utcb_mr (void) L4_NOTHROW L4_PURE

  Get the message-register block of a UTCB.
- l4_buf_regs_t * l4_utcb_br (void) L4_NOTHROW L4_PURE

  Get the buffer-register block of a UTCB.
- l4_thread_regs_t * l4_utcb_tcr (void) L4_NOTHROW L4_PURE

  Get the thread-control-register block of a UTCB.
- l4_exc_regs_t * l4_utcb_exc (void) L4_NOTHROW L4_PURE

  Get the message-register block of a UTCB (for an exception IPC).
- l4_umword_t l4_utcb_exc_pc (l4_exc_regs_t const *u) L4_NOTHROW L4_PURE

  Access function to get the program counter of the exception state.
- void l4_utcb_exc_pc_set (l4_exc_regs_t *u, l4_addr_t pc) L4_NOTHROW

  Set the program counter register in the exception state.
- unsigned long **l4_utcb_exc_typeval** (l4_exc_regs_t const *u) L4_NOTHROW L4_PURE

  Get the value out of an exception UTCB that describes the type of exception.
- int l4_utcb_exc_is_pf (l4_exc_regs_t const *u) L4_NOTHROW L4_PURE

  Check whether an exception IPC is a page fault.
- l4_addr_t **l4_utcb_exc_pfa** (l4_exc_regs_t const *u) L4_NOTHROW L4_PURE

  Function to get the L4 style page fault address out of an exception.
- int l4_utcb_exc_is_ex_regs_exception (l4_exc_regs_t const *u) L4_NOTHROW L4_PURE

  Check whether an exception IPC was triggered via l4_thread_ex_regs().
- void **l4_utcb_inherit_fpu** (int switch_on) L4_NOTHROW

  Enable or disable inheritance of FPU state to receiver.
- l4_timeout_s l4_timeout_abs (l4_kernel_clock_t pint, int br) L4_NOTHROW

  Set an absolute timeout.
- unsigned l4_utcb_mr64_idx (unsigned idx) L4_NOTHROW

  Get index into 64bit message registers alias from native-sized index.

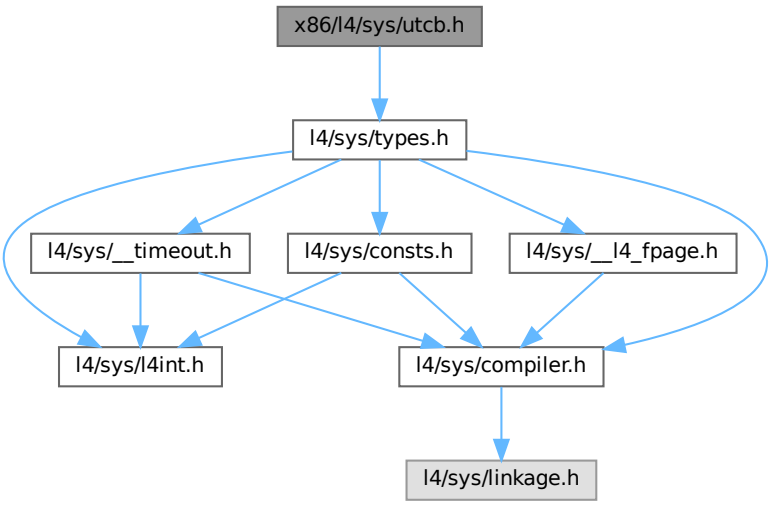
17.593 x86/l4/sys/utcb.h File Reference

UTCB definitions for x86.

```
#include <l4/sys/types.h>
```

Include dependency graph for utcb.h:



Data Structures

- struct l4_exc_regs_t

  UTCB structure for exceptions.

Typedefs

- typedef struct l4_exc_regs_t **l4_exc_regs_t**

  UTCB structure for exceptions.

Enumerations

- enum L4_utcb_consts_x86 {
  L4_UTCB_EXCEPTION_REGS_SIZE = 19 , L4_UTCB_GENERIC_DATA_SIZE = 63 , L4_UTCB_GENERIC_BUFFERS_SIZE = 58 , L4_UTCB_MSG_REGS_OFFSET = 0 ,
  L4_UTCB_BUF_REGS_OFFSET = 64 * sizeof(l4_umword_t) , L4_UTCB_THREAD_REGS_OFFSET = 123 * sizeof(l4_umword_t) , L4_UTCB_INHERIT_FPU = 1UL << 24 , L4_UTCB_OFFSET = 512 }

  UTCB constants for x86.

Functions

- l4_umword_t l4_utcb_exc_pc (l4_exc_regs_t const *u) L4_NOTHROW

  Access function to get the program counter of the exception state.
- void l4_utcb_exc_pc_set (l4_exc_regs_t *u, l4_addr_t pc) L4_NOTHROW

  Set the program counter register in the exception state.
- l4_umword_t **l4_utcb_exc_typeval** (l4_exc_regs_t const *u) L4_NOTHROW

Get the value out of an exception UTCB that describes the type of exception.

- int l4_utcb_exc_is_pf (l4_exc_regs_t const *u) L4_NOTHROW

  Check whether an exception IPC is a page fault.

- l4_addr_t **l4_utcb_exc_pfa** (l4_exc_regs_t const *u) L4_NOTHROW

  Function to get the L4 style page fault address out of an exception.

- int l4_utcb_exc_is_ex_regs_exception (l4_exc_regs_t const *u) L4_NOTHROW

  Check whether an exception IPC was triggered via l4_thread_ex_regs().

Data Structures

- class L4::Vcon

  C++ L4 Vcon interface, see Virtual Console for the C interface.

Namespaces

- namespace L4

  L4 low-level kernel interface.

17.595.1 Detailed Description

C++ Virtual console interface.

Definition in file vcon.

17.596 vcon

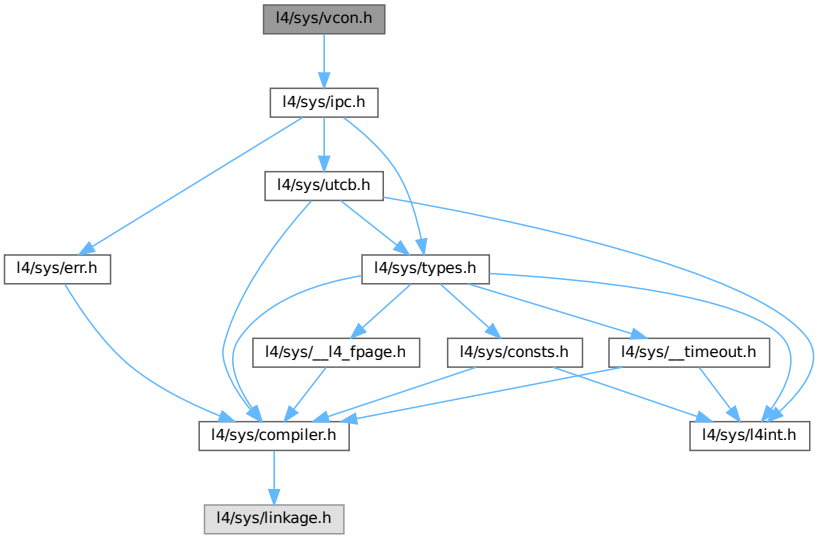
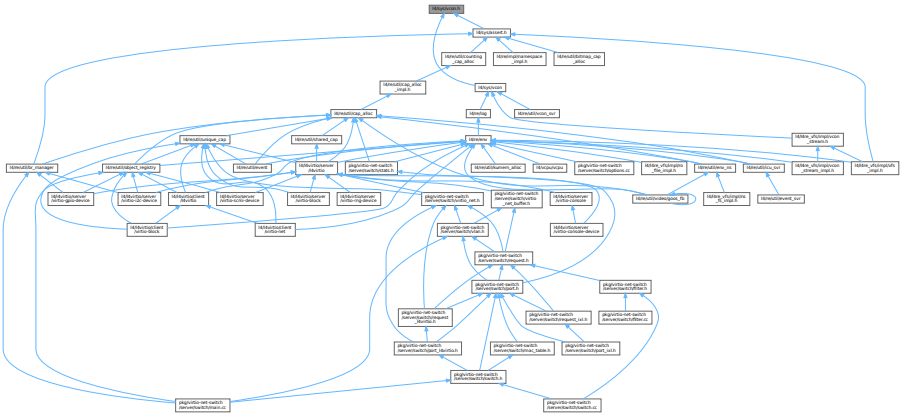
#include <l4/sys/ipc.h>
```

Include dependency graph for vcon.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4_vcon_attr_t

  Vcon attribute structure.

Typedefs

- typedef struct l4_vcon_attr_t l4_vcon_attr_t

  Vcon attribute structure.

Enumerations

- enum L4_vcon_size_consts { L4_VCON_WRITE_SIZE = (L4_UTCB_GENERIC_DATA_SIZE - 2) * sizeof(l4_umword_t) , L4_VCON_READ_SIZE = (L4_UTCB_GENERIC_DATA_SIZE - 1) * sizeof(l4_↩ umword_t) }

  Size constants.
- enum L4_vcon_read_flags { L4_VCON_READ_SIZE_MASK = 0x3fffffff , L4_VCON_READ_STAT_BREAK = 1 << 30 , L4_VCON_READ_STAT_DONE = 1 << 31 }

  Vcon read flags.
- enum L4_vcon_i_flags { L4_VCON_INLCR = 000100 , L4_VCON_IGNCR = 000200 , L4_VCON_ICRNL = 000400 }

  Input flags.
- enum L4_vcon_o_flags { L4_VCON_ONLCR = 000004 , L4_VCON_OCRNL = 000010 , L4_VCON_ONLRET = 000040 }

  Output flags.
- enum L4_vcon_l_flags { L4_VCON_ICANON = 000002 , L4_VCON_ECHO = 000010 }

  Local flags.
- enum L4_vcon_ops { L4_VCON_WRITE_OP = 0UL , L4_VCON_READ_OP = 1UL , L4_VCON_SET_ATTR_OP = 2UL , L4_VCON_GET_ATTR_OP = 3UL }

  Operations on vcon objects.

Functions

- l4_msgtag_t l4_vcon_send (l4_cap_idx_t vcon, char const *buf, unsigned size) L4_NOTHROW

  Send data to virtual console.
- l4_msgtag_t l4_vcon_send_u (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb) L4_NOTHROW

  Send data to `this` virtual console.
- long l4_vcon_write (l4_cap_idx_t vcon, char const *buf, unsigned size) L4_NOTHROW

  Write data to virtual console.
- long l4_vcon_write_u (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb) L4_NOTHROW

  Write data to `this` virtual console.
- int l4_vcon_read (l4_cap_idx_t vcon, char *buf, unsigned size) L4_NOTHROW

  Read data from virtual console.
- int l4_vcon_read_u (l4_cap_idx_t vcon, char *buf, unsigned size, l4_utcb_t *utcb) L4_NOTHROW

  Read data from `this` virtual console.
- int l4_vcon_read_with_flags (l4_cap_idx_t vcon, char *buf, unsigned size) L4_NOTHROW

  Read data from virtual console, extended version including flags.
- l4_msgtag_t l4_vcon_set_attr (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr) L4_NOTHROW

  Set attributes of a Vcon.
- l4_msgtag_t l4_vcon_set_attr_u (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr, l4_utcb_t *utcb) L4_NOTHROW

  Set the attributes of `this` virtual console.
- l4_msgtag_t l4_vcon_get_attr (l4_cap_idx_t vcon, l4_vcon_attr_t *attr) L4_NOTHROW

  Get attributes of a Vcon.
- l4_msgtag_t l4_vcon_get_attr_u (l4_cap_idx_t vcon, l4_vcon_attr_t *attr, l4_utcb_t *utcb) L4_NOTHROW

  Get attributes of `this` virtual console.
- void l4_vcon_set_attr_raw (l4_vcon_attr_t *attr) L4_NOTHROW

  Set terminal attributes to disable all special processing.

17.597.1 Detailed Description

Virtual console interface.

Definition in file vcon.h.

17.597.2 Enumeration Type Documentation

17.597.2.1 L4_vcon_read_flags

```
enum L4_vcon_read_flags
```

Vcon read flags.

Enumerator

L4_VCON_READ_SIZE_MASK	Size mask.
L4_VCON_READ_STAT_BREAK	Break condition flag.
L4_VCON_READ_STAT_DONE	Done condition flag.

Definition at line 170 of file vcon.h.

Macros

- #define l4_assert(expr)

  Low-level assert.

17.606.1 Detailed Description

Low-level assert implementation.

Definition in file assert.h.

17.606.2 Macro Definition Documentation

17.606.2.1 l4_assert

```
#define l4_assert(
              expr)
```

Value:

```
  l4_assert_fn(!!(expr), __FILE__ ":" L4_stringify(__LINE__) ": Assertion \"" \
                         L4_stringify(expr) "\" failed.\n")
```

Low-level assert.

Parameters

expr	Expression to be evaluate for the assertion.

This assertion is a low-level implementation that directly uses kernel primitives. Only use l4_assert() when the standard assert() functionality is not available.

Definition at line 32 of file assert.h.

Referenced by L4Re::Util::Cap_alloc_base::free(), L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::free(), L4Re::Util::Counting_cap_alloc< COUNTERTYPE, Dbg >::release(), and L4Re::Util::Br_manager::set_rcv_cap_flags().

- l4_uint32_t l4util_dec32_res (volatile l4_uint32_t *dest)

17.613.1 Detailed Description

atomic operations header and generic implementations

Date

10/20/2000

Author

Lars Reuther reuther@os.inf.tu-dresden.de, Jork Loeser jork@os.inf.tu-dresden.de

Definition in file atomic.h.

17.614 atomic.h

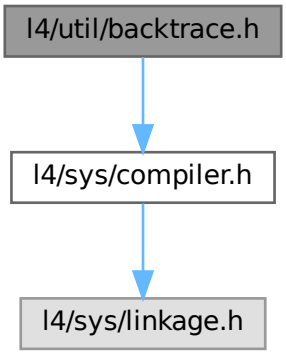
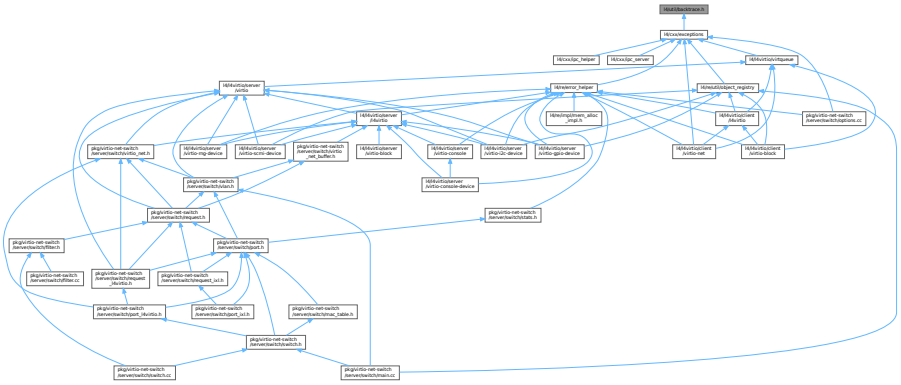
17.615 l4/util/backtrace.h File Reference

Backtrace.

`#include <l4/sys/compiler.h>`
Include dependency graph for backtrace.h:



This graph shows which files directly or indirectly include this file:



Functions

- L4_BEGIN_DECLS int l4util_backtrace (void **pc_array, int max_len)

  Fill backtrace structure.

17.615.1 Detailed Description

Backtrace.

Definition in file backtrace.h.

17.615.2 Function Documentation

17.615.2.1 l4util_backtrace()

```
L4_BEGIN_DECLS int l4util_backtrace (
              void ** pc_array,
              int max_len)
```

Fill backtrace structure.

Parameters

pc_array	Array of instruction pointers.
max_len	Length of array.

Returns

Number of entries

References L4_END_DECLS.

Referenced by L4::Exception_tracer::Exception_tracer().

Here is the caller graph for this function:

Kernel Info Page access functions.

```
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
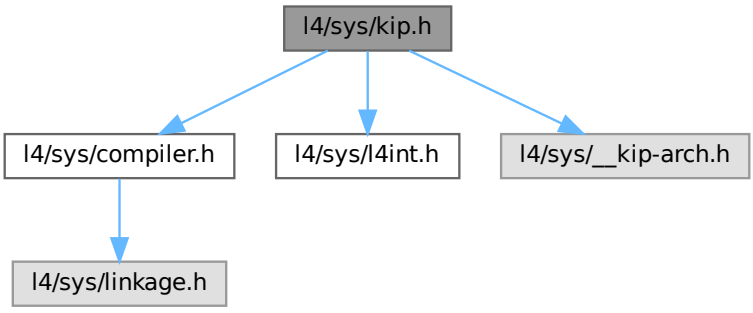
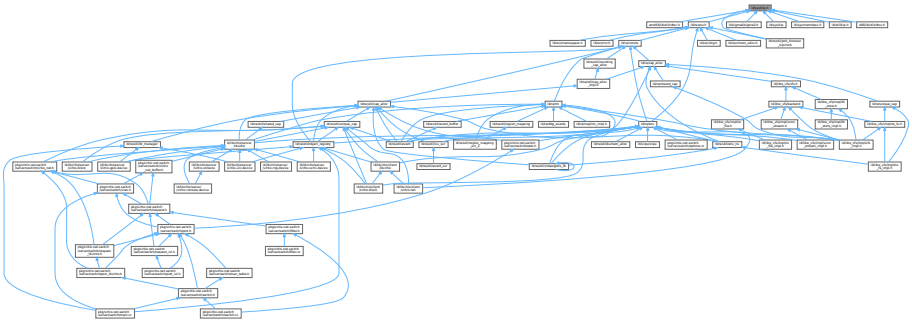
#include <l4/sys/__kip-arch.h>
```

Include dependency graph for kip.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4_kernel_info_t

  L4 Kernel Interface Page.

Macros

- #define **L4_KERNEL_INFO_MAGIC** (0x4BE6344CL) /* "L4µK" */

  Kernel Info Page identifier ("L4µK").
- #define l4_kip_for_each_feature(s)

  Cycle through kernel features given in the KIP.

Typedefs

- typedef struct l4_kernel_info_t l4_kernel_info_t

  L4 Kernel Interface Page.

Enumerations

- enum { L4_KIP_OFFS_READ_US = 0x900 , L4_KIP_OFFS_READ_NS = 0x980 }

Functions

- l4_kernel_info_t const * l4_kip (void) L4_NOTHROW

  Get Kernel Info Page.
- l4_umword_t l4_kip_version (l4_kernel_info_t const *kip) L4_NOTHROW

  Get the kernel version.
- const char * l4_kip_version_string (l4_kernel_info_t const *kip) L4_NOTHROW

  Get the kernel version string.
- int l4_kernel_info_version_offset (l4_kernel_info_t const *kip) L4_NOTHROW

  Return offset in bytes of version_strings relative to the KIP base.
- l4_cpu_time_t l4_kip_clock (l4_kernel_info_t const *kip) L4_NOTHROW

  Return clock value from the KIP.
- l4_umword_t l4_kip_clock_lw (l4_kernel_info_t const *kip) L4_NOTHROW

  Return least significant machine word of clock value from the KIP.
- l4_uint64_t l4_kip_clock_ns (l4_kernel_info_t const *kip) L4_NOTHROW

  Return current clock using the KIP in nanoseconds.
- int l4_kip_kernel_has_feature (l4_kernel_info_t const *kip, char const *str)

  Check if kernel supports a feature.

17.627.1 Detailed Description

Kernel Info Page access functions.

Definition in file kip.h.

17.627.2 Macro Definition Documentation

17.627.2.1 l4_kip_for_each_feature

```
#define l4_kip_for_each_feature(
              s)
```

Value:

```
for (s += __builtin_strlen(s) + 1; *s; s += __builtin_strlen(s) + 1)
```

Cycle through kernel features given in the KIP.

Cycles through all KIP kernel feature strings. `s` must be a character pointer (`char const *`) initialized with l4_kip_version_string().

Definition at line 272 of file kip.h.

Referenced by l4_kip_kernel_has_feature().

17.627.3 Function Documentation

17.627.3.1 l4_kip_kernel_has_feature()

```
int l4_kip_kernel_has_feature (
             l4_kernel_info_t const * kip,
             char const * str)  [inline]
```

Check if kernel supports a feature.

Parameters

kip	Pointer to the kernel info page (KIP).
str	Feature name to check.

Returns

1 if the kernel supports the feature, 0 if not.

Checks the feature field in the KIP for the given string.

Definition at line 286 of file kip.h.

References l4_kip_for_each_feature, and l4_kip_version_string().

Here is the call graph for this function:

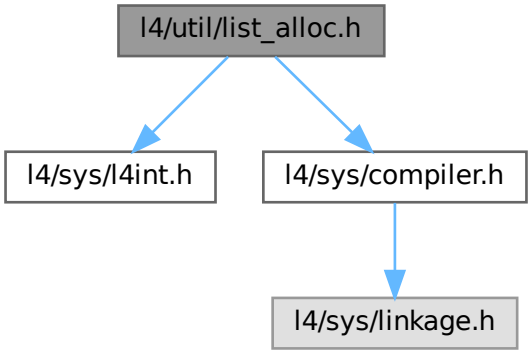
Simple list-based allocator.

```
#include <l4/sys/l4int.h>
#include <l4/sys/compiler.h>
```
Include dependency graph for list_alloc.h:



Functions

- L4_BEGIN_DECLS void l4la_free (l4la_free_t **first, void *block, l4_size_t size)
  Add free memory to memory pool.
- void * l4la_alloc (l4la_free_t **first, l4_size_t size, unsigned align)
  Allocate memory from pool.
- void l4la_dump (l4la_free_t **first)
  Show all list members.
- void l4la_init (l4la_free_t **first)
  Init memory pool.
- l4_size_t l4la_avail (l4la_free_t **first)
  Show available memory in pool.

17.635.1 Detailed Description

Simple list-based allocator.

Taken from the Fiasco kernel.

Date

Alexander Warg <aw11os.inf.tu-dresden.de> Frank Mehnert fm3@os.inf.tu-dresden.de

Definition in file list_alloc.h.

17.635.2 Function Documentation

17.635.2.1 l4la_alloc()

```
void * l4la_alloc (
            l4la_free_t ** first,
            l4_size_t size,
            unsigned align)
```

Allocate memory from pool.

Parameters

first	list identifier
size	length of memory block to allocate
align	alignment

References L4_CV.

17.635.2.2 l4la_avail()

```
l4_size_t l4la_avail (
            l4la_free_t ** first)
```

Show available memory in pool.

Parameters

first	list identifier

References L4_CV, and L4_END_DECLS.

17.635.2.3 l4la_dump()

```
void l4la_dump (
            l4la_free_t ** first)
```

Show all list members.

Parameters

first	list identifier

References L4_CV.

17.635.2.4 l4la_free()

```
L4_BEGIN_DECLS void l4la_free (
            l4la_free_t ** first,
            void * block,
            l4_size_t size)
```

Add free memory to memory pool.

Parameters

first	list identifier
block	address of unused memory block
size	size of memory block

References L4_CV.

17.635.2.5 l4la_init()

```
void l4la_init (
             l4la_free_t ** first)
```

Init memory pool.

Parameters

first	list identifier

References L4_CV.

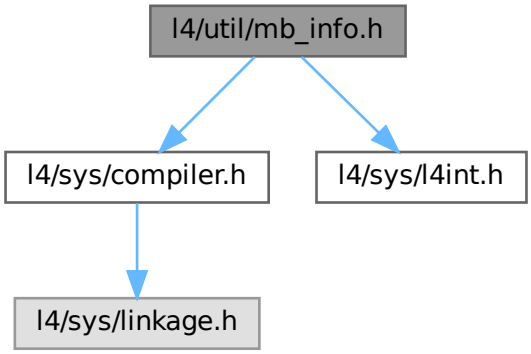
17.639 l4/util/mb_info.h File Reference

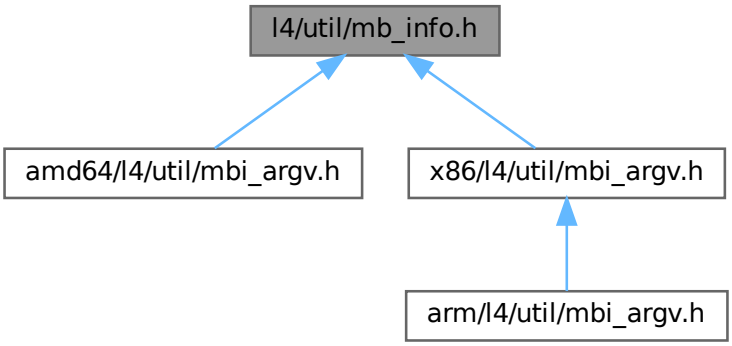
Multiboot info structure as defined by GRUB.

```
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
```

Include dependency graph for mb_info.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4util_mb_mod_t

  The structure type "mod_list" is used by the multiboot_info structure.
- struct l4util_mb_addr_range_t

  INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.
- struct l4util_mb_drive_t

  Drive Info structure.
- struct l4util_mb_apm_t

  APM BIOS info.
- struct l4util_mb_vbe_ctrl_t

VBE controller information.

- struct l4util_mb_vbe_mode_t

  VBE mode information.

- struct l4util_mb_info_t

  MultiBoot Info description.

Macros

- #define **MB_ARD_MEMORY** 1

  usable memory "Type", all others are reserved.

- #define MB_ART_MEMORY 1

  Address Range Types (ART) from "Advanced Configuration and Power Interface Specification" Rev3.0a (p.

- #define **MB_ART_RESERVED** 2

  in use or reserved by system

- #define **MB_ART_ACPI** 3

  ACPI Reclaim Memory (RAM that contains ACPI tables).

- #define **MB_ART_NVS** 4

  ACPI NVS Memory (must not be used by the OS.

- #define **MB_ART_UNUSABLE** 5

  memory in which errors have been detected

- #define l4util_mb_for_each_mmap_entry(i, mbi)

  Iterate over a memory map provided in a Multiboot info.

- #define L4UTIL_MB_MEMORY 0x00000001

  Flags to be set in the 'flags' parameter above.

- #define **L4UTIL_MB_BOOTDEV** 0x00000002

  is there a boot device set?

- #define **L4UTIL_MB_CMDLINE** 0x00000004

  is the command-line defined?

- #define **L4UTIL_MB_MODS** 0x00000008

  are there modules to do something with?

- #define **L4UTIL_MB_AOUT_SYMS** 0x00000010

  is there a symbol table loaded?

- #define **L4UTIL_MB_ELF_SHDR** 0x00000020

  is there an ELF section header table?

- #define **L4UTIL_MB_MEM_MAP** 0x00000040

  is there a full memory map?

- #define **L4UTIL_MB_DRIVE_INFO** 0x00000080

  Is there drive info?

- #define **L4UTIL_MB_CONFIG_TABLE** 0x00000100

  Is there a config table?

- #define **L4UTIL_MB_BOOT_LOADER_NAME** 0x00000200

  Is there a boot loader name?

- #define **L4UTIL_MB_APM_TABLE** 0x00000400

  Is there a APM table?

- #define **L4UTIL_MB_VIDEO_INFO** 0x00000800

  Is there video information?

- #define **L4UTIL_MB_VALID** 0x2BADB002UL

  If we are multiboot-compliant, this value is present in the eax register.

17.639.1 Detailed Description

Multiboot info structure as defined by GRUB.

Definition in file mb_info.h.

17.639.2 Macro Definition Documentation

17.639.2.1 l4util_mb_for_each_mmap_entry

```
#define l4util_mb_for_each_mmap_entry(
               i,
               mbi)
```

Value:

```
  for (i = l4util_mb_first_mmap_entry(mbi);                                    \
       (unsigned long)i < (unsigned long)mbi->mmap_addr + mbi->mmap_length;    \
       i = l4util_mb_next_mmap_entry(i))
```

Iterate over a memory map provided in a Multiboot info.

Parameters

i	Name of a variable of type l4util_mb_addr_range_t * that is consecutively assigned pointers to the entries of the memory map.
mbi	Pointer to the l4util_mb_info_t where the memory map can be found.

Definition at line 332 of file mb_info.h.

17.639.2.2 L4UTIL_MB_MEMORY

```
#define L4UTIL_MB_MEMORY 0x00000001
```

Flags to be set in the 'flags' parameter above.

is there basic lower/upper memory information?

Definition at line 344 of file mb_info.h.

17.639.2.3 MB_ART_MEMORY

```
#define MB_ART_MEMORY 1
```

Address Range Types (ART) from "Advanced Configuration and Power Interface Specification" Rev3.0a (p.

390). Other values are undefined. available, usable RAM

Definition at line 64 of file mb_info.h.

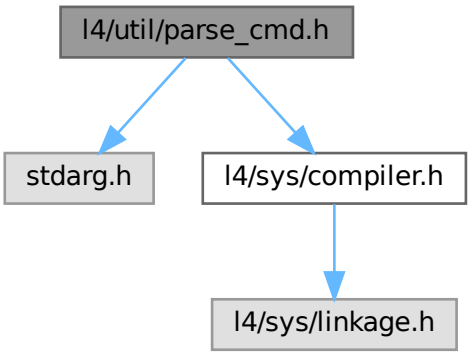
17.641 l4/util/parse_cmd.h File Reference

comfortable command-line parsing

```
#include <stdarg.h>
#include <l4/sys/compiler.h>
```

Include dependency graph for parse_cmd.h:



Typedefs

- typedef void(∗ **parse_cmd_fn_t**) (int)

  Function type for PARSE_CMD_FN.
- typedef void(∗ **parse_cmd_fn_arg_t**) (int, const char ∗, int)

  Function type for PARSE_CMD_FN_ARG.

Enumerations

- enum parse_cmd_type

  Types for parsing.

Functions

- L4_BEGIN_DECLS int parse_cmdline (int *argc, const char ***argv, int arg0,...)

  Parse the command-line for specified arguments and store the values into variables.

17.641.1 Detailed Description

comfortable command-line parsing

Date

2002

  Exchange basic thread registers and return previous values.
- void l4_thread_control_start (void) L4_NOTHROW

  Start a thread control API sequence.
- void l4_thread_control_pager (l4_cap_idx_t pager) L4_NOTHROW

  Set the pager.
- void l4_thread_control_exc_handler (l4_cap_idx_t exc_handler) L4_NOTHROW

  Set the exception handler.
- void l4_thread_control_bind (l4_utcb_t *thread_utcb, l4_cap_idx_t task) L4_NOTHROW

  Bind the thread to a task.
- void l4_thread_control_alien (int on) L4_NOTHROW

  Enable alien mode.
- l4_msgtag_t l4_thread_control_commit (l4_cap_idx_t thread) L4_NOTHROW

  Commit the thread control parameters.
- l4_msgtag_t l4_thread_yield (void) L4_NOTHROW

  Yield current time slice.
- l4_msgtag_t l4_thread_switch (l4_cap_idx_t to_thread) L4_NOTHROW

  Switch to another thread (and donate the remaining time slice).
- l4_msgtag_t l4_thread_stats_time (l4_cap_idx_t thread, l4_kernel_clock_t *us) L4_NOTHROW

  Get consumed time of thread in µs.

- l4_msgtag_t l4_thread_vcpu_resume_start (void) L4_NOTHROW

  vCPU return from event handler.
- l4_msgtag_t l4_thread_vcpu_resume_commit (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW

  Commit vCPU resume.
- l4_msgtag_t l4_thread_vcpu_control (l4_cap_idx_t thread, l4_addr_t vcpu_state) L4_NOTHROW

  Enable the vCPU feature for the thread.
- l4_msgtag_t l4_thread_vcpu_control_u (l4_cap_idx_t thread, l4_addr_t vcpu_state, l4_utcb_t *utcb) L4_NOTHROW

  Enable the vCPU feature for the thread.
- l4_msgtag_t l4_thread_vcpu_control_ext (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state) L4_NOTHROW

  Enable the extended vCPU feature for the thread.
- l4_msgtag_t l4_thread_vcpu_control_ext_u (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state, l4_utcb_t *utcb) L4_NOTHROW

  Enable the extended vCPU feature for the thread.
- l4_msgtag_t l4_thread_register_del_irq (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW

  Register an IRQ that will trigger upon deletion events.
- l4_msgtag_t l4_thread_modify_sender_start (void) L4_NOTHROW

  Start a thread sender modification sequence.
- int l4_thread_modify_sender_add (l4_umword_t match_mask, l4_umword_t match, l4_umword_t del_bits, l4_umword_t add_bits, l4_msgtag_t *tag) L4_NOTHROW

  Add a modification pattern to a sender modification sequence.
- l4_msgtag_t l4_thread_modify_sender_commit (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW

  Apply (commit) a sender modification sequence.
- l4_msgtag_t l4_thread_register_doorbell_irq (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW

  Register an IRQ that will trigger when a forwarded virtual interrupt is pending.

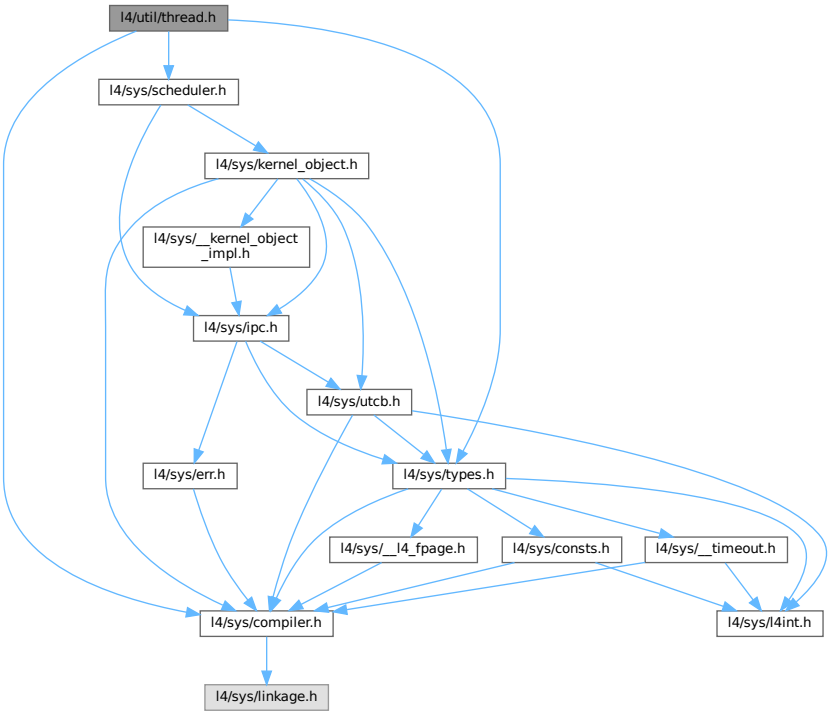
17.654 l4/util/thread.h File Reference

Low-level Thread Functions.

```
#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/scheduler.h>
```

Include dependency graph for thread.h:



Macros

- #define __L4UTIL_THREAD_FUNC(name)

  Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

17.654.1 Detailed Description

Low-level Thread Functions.

Date

1997

Author

Sebastian Schönberg

Definition in file thread.h.

17.654.2 Macro Definition Documentation

17.654.2.1 __L4UTIL_THREAD_FUNC

```
#define __L4UTIL_THREAD_FUNC(
              name)
```

Value:

```
void L4_NORETURN name(void)
```

Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

Use this as a function header when starting a low-level thread where only stack and instruction pointer are in a well-defined state.

Example:

L4UTIL_THREAD_FUNC(helper_thread) { l4_infinite_loop(); }

thread_cap->ex_regs((l4_umword_t)helper_thread, stack_addr);

Definition at line 71 of file thread.h.

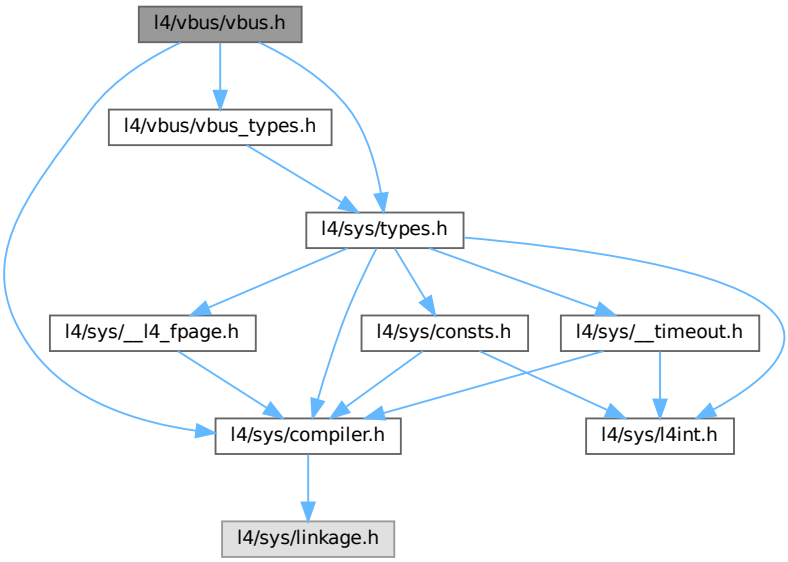
17.658 l4/vbus/vbus.h File Reference

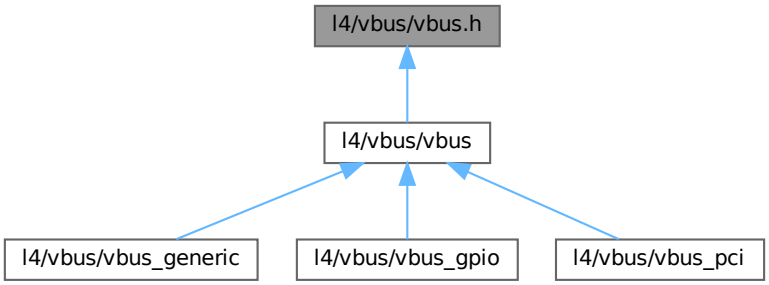
Description of the vbus C API.

```
#include <l4/sys/compiler.h>
#include <l4/vbus/vbus_types.h>
#include <l4/sys/types.h>
```

Include dependency graph for vbus.h:



This graph shows which files directly or indirectly include this file:



Enumerations

- enum { L4VBUS_NULL = -1L , L4VBUS_ROOT_BUS = 0 }

  Constants for device nodes.
- enum l4vbus_icu_src_types { L4VBUS_ICU_SRC_DEV_HANDLE = 1ULL << 63 }

  Flags that can be used with the ICU on a vbus device.
- enum L4vbus_dma_domain_assign_flags { L4VBUS_DMAD_UNBIND = 0 , L4VBUS_DMAD_BIND = 1 , L4VBUS_DMAD_L4RE_DMA_SPACE = 0 , L4VBUS_DMAD_KERNEL_DMA_SPACE = 2 }

  Flags for l4vbus_assign_dma_domain().

Functions

- L4_BEGIN_DECLS int l4vbus_get_device_by_hid (l4_cap_idx_t vbus, l4vbus_device_handle_t parent, l4vbus_device_handle_t *child, char const *hid, int depth, l4vbus_device_t *devinfo)

  Find a device by the hardware interface identifier (HID).
- int l4vbus_get_next_device (l4_cap_idx_t vbus, l4vbus_device_handle_t parent, l4vbus_device_handle_t *child, int depth, l4vbus_device_t *devinfo)

  Find next child following `child`.
- int l4vbus_get_device (l4_cap_idx_t vbus, l4vbus_device_handle_t dev, l4vbus_device_t *devinfo)

  Obtain detailed information about a Vbus device.
- int l4vbus_get_resource (l4_cap_idx_t vbus, l4vbus_device_handle_t dev, unsigned res_idx, l4vbus_resource_t *res)

  Obtain the resource description of an individual device resource.
- int l4vbus_is_compatible (l4_cap_idx_t vbus, l4vbus_device_handle_t dev, char const *cid)

  Check if the given device has a compatibility ID (CID) or HID that matches cid.
- int l4vbus_get_hid (l4_cap_idx_t vbus, l4vbus_device_handle_t dev, char *hid, unsigned long max_len)

  Get the HID (hardware identifier) of a device.
- int l4vbus_get_adr (l4_cap_idx_t vbus, l4vbus_device_handle_t dev, l4_uint32_t *adr)

  Get the bus-specific address of a device.
- int l4vbus_request_ioport (l4_cap_idx_t vbus, l4vbus_resource_t const *res)

  Request an IO port resource.
- int l4vbus_assign_dma_domain (l4_cap_idx_t vbus, unsigned domain_id, unsigned flags, l4_cap_idx_t dma_space)

  Bind or unbind a kernel DMA space or a L4Re::Dma_space to a DMA domain.
- int l4vbus_release_ioport (l4_cap_idx_t vbus, l4vbus_resource_t const *res)

  Release a previously requested IO port resource.
- int l4vbus_vicu_get_cap (l4_cap_idx_t vbus, l4vbus_device_handle_t icu, l4_cap_idx_t cap)

  Get capability of ICU.

17.658.1 Detailed Description

Description of the vbus C API.

Definition in file vbus.h.

17.658.2 Enumeration Type Documentation

17.658.2.1 anonymous enum

```
anonymous enum
```

Constants for device nodes.

Enumerator

L4VBUS_NULL	NULL device.
L4VBUS_ROOT_BUS	Root device on the vbus.

Definition at line 20 of file vbus.h.

17.658.2.2 l4vbus_icu_src_types

```
enum l4vbus_icu_src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

L4VBUS_ICU_SRC_DEV_HANDLE	Flag to denote that the value should be interpreted as a device handle. This flag may be used in the `source` parameter in l4_icu_msi_info() to denote that the ICU should interpret the source ID as a device handle.

Definition at line 26 of file vbus.h.

17.659 vbus.h

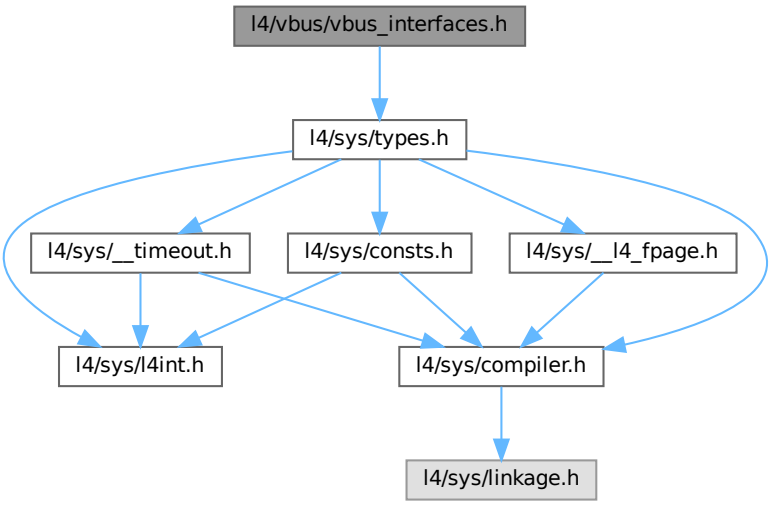
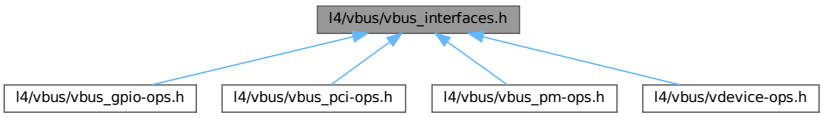
17.666 l4/vbus/vbus_interfaces.h File Reference

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

`#include <l4/sys/types.h>`
Include dependency graph for vbus_interfaces.h:



This graph shows which files directly or indirectly include this file:



Typedefs

- typedef enum l4vbus_iface_type_t l4vbus_iface_type_t
  Different sub-interfaces a vbus device may support.

Enumerations

- enum l4vbus_iface_type_t {
  L4VBUS_INTERFACE_ICU = 0 , L4VBUS_INTERFACE_GPIO , L4VBUS_INTERFACE_PCI , L4VBUS_INTERFACE_PCIDEV
  ,
  L4VBUS_INTERFACE_PM , L4VBUS_INTERFACE_BUS , L4VBUS_INTERFACE_GENERIC = 0x20 }
  Different sub-interfaces a vbus device may support.
- enum { L4VBUS_IFACE_SHIFT = 26 }

Functions

- unsigned **l4vbus_subinterface** (unsigned opcode)
  Return the ID of the vbus sub-interface.
- unsigned **l4vbus_interface_opcode** (unsigned opcode)
  Return the function opcode within the sub-interface of the vbus command.
- int l4vbus_subinterface_supported (l4_uint32_t dev_type, l4vbus_iface_type_t iface_type)
  Check if a vbus device supports a given sub-interface.

17.666.1 Detailed Description

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

Definition in file vbus_interfaces.h.

17.666.2 Typedef Documentation

17.666.2.1 l4vbus_iface_type_t

```
typedef enum l4vbus_iface_type_t l4vbus_iface_type_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see L4VBUS_IFACE_SHIFT). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

17.666.3 Enumeration Type Documentation

17.666.3.1 anonymous enum

```
anonymous enum
```

Enumerator

L4VBUS_IFACE_SHIFT	Sub-interface ID shift. Divides the function opcode sent via IPC into a sub-interface ID and the actual function opcode within the sub-interface.

Definition at line 48 of file vbus_interfaces.h.

17.666.3.2 l4vbus_iface_type_t

```
enum l4vbus_iface_type_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see L4VBUS_IFACE_SHIFT). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

Enumerator

L4VBUS_INTERFACE_ICU	Interrupt Controller.
L4VBUS_INTERFACE_GPIO	GPIO.
L4VBUS_INTERFACE_PCI	PCI.
L4VBUS_INTERFACE_PCIDEV	PCI Device.
L4VBUS_INTERFACE_PM	Power Management.
L4VBUS_INTERFACE_BUS	VBus.
L4VBUS_INTERFACE_GENERIC	No specific sub interface.

Definition at line 29 of file vbus_interfaces.h.

17.666.4 Function Documentation

17.666.4.1 l4vbus_subinterface_supported()

```
int l4vbus_subinterface_supported (
            l4_uint32_t dev_type,
            l4vbus_iface_type_t iface_type)  [inline]
```

Check if a vbus device supports a given sub-interface.

Parameters

dev_type	Device type as reported in l4vbus_device_t.
iface_type	Sub-interface type to check for.

Returns

True if the device supports the sub-interface.

Definition at line 99 of file vbus_interfaces.h.

References L4_INLINE, and L4VBUS_INTERFACE_GENERIC.

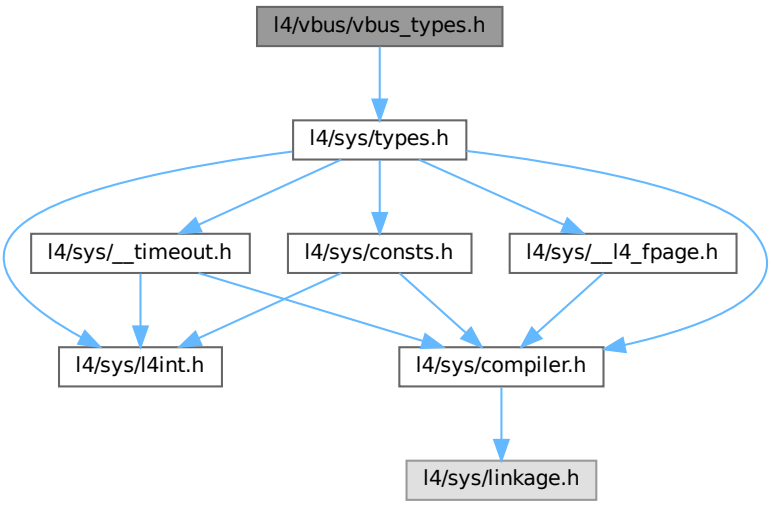
17.674 l4/vbus/vbus_types.h File Reference

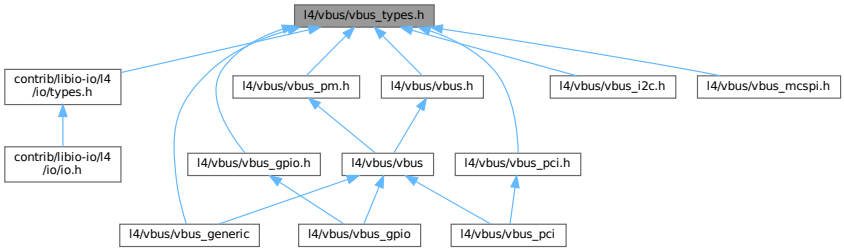
This header file contains descriptions of vbus related data types and constants.

```
#include <l4/sys/types.h>
```

Include dependency graph for vbus_types.h:



This graph shows which files directly or indirectly include this file:



Data Structures

- struct l4vbus_resource_t

  Description of a single vbus resource.
- struct l4vbus_device_t

  Detailed information about a vbus device.

Typedefs

- typedef l4_mword_t **l4vbus_device_handle_t**

  Device handle for a device on the vbus.
- typedef l4_addr_t **l4vbus_paddr_t**

  Address of resources on the vbus.

Enumerations

- enum l4vbus_resource_type_t { L4VBUS_RESOURCE_INVALID = 0 , L4VBUS_RESOURCE_IRQ , L4VBUS_RESOURCE_MEM , L4VBUS_RESOURCE_PORT , L4VBUS_RESOURCE_BUS , L4VBUS_RESOURCE_GPIO , L4VBUS_RESOURCE_DMA_DOMAIN , L4VBUS_RESOURCE_MAX }

  Description of vbus resource types.
- enum l4vbus_resource_flags_t { L4VBUS_RESOURCE_F_MEM_R = 0x1 , L4VBUS_RESOURCE_F_MEM_W = 0x2 , L4VBUS_RESOURCE_F_MEM_PREFE = 0x10 , L4VBUS_RESOURCE_F_MEM_CACHEABLE = 0x20 , L4VBUS_RESOURCE_F_MEM_MMIO_READ = 0x2000 , L4VBUS_RESOURCE_F_MEM_MMIO_WRITE = 0x4000 }

  Description of vbus resource flags.
- enum l4vbus_device_flags_t { L4VBUS_DEVICE_F_CHILDREN = 0x10 }

  Flags describing device properties, see l4vbus_device_t.

17.674.1 Detailed Description

This header file contains descriptions of vbus related data types and constants.

Definition in file vbus_types.h.

17.674.2 Enumeration Type Documentation

17.674.2.1 l4vbus_device_flags_t

```
enum l4vbus_device_flags_t
```

Flags describing device properties, see l4vbus_device_t.

Enumerator

L4VBUS_DEVICE_F_CHILDREN	Device has child devices.

Definition at line 92 of file vbus_types.h.

17.674.2.2 l4vbus_resource_flags_t

```
enum l4vbus_resource_flags_t
```

Description of vbus resource flags.

Enumerator

L4VBUS_RESOURCE_F_MEM_R	Memory resource is readable.

L4VBUS_RESOURCE_F_MEM_W	Memory resource is writeable.
L4VBUS_RESOURCE_F_MEM_PREFETCHABLE	Memory resource is prefetchable. Clients may map it buffered or non-cached.
L4VBUS_RESOURCE_F_MEM_CACHEABLE	Memory resource is cacheable. This implies that the memory resource is prefetchable. If not set, clients must not map it cached. If the resource is neither cacheable nor prefetchable, clients must map it non-cached!
L4VBUS_RESOURCE_F_MEM_MMIO_READ	Reading needs to be performed using the MMIO space protocol.
L4VBUS_RESOURCE_F_MEM_MMIO_WRITE	Writing needs to be performed using the MMIO space protocol.

Definition at line 51 of file vbus_types.h.

17.674.2.3 l4vbus_resource_type_t

```
enum l4vbus_resource_type_t
```

Description of vbus resource types.

Enumerator

L4VBUS_RESOURCE_INVALID	Invalid type.
L4VBUS_RESOURCE_IRQ	Interrupt resource.
L4VBUS_RESOURCE_MEM	I/O memory resource.
L4VBUS_RESOURCE_PORT	I/O port resource (x86 only).
L4VBUS_RESOURCE_BUS	Bus resource.
L4VBUS_RESOURCE_GPIO	Gpio resource.
L4VBUS_RESOURCE_DMA_DOMAIN	DMA domain.
L4VBUS_RESOURCE_MAX	Maximum resource id.

Definition at line 39 of file vbus_types.h.

- enum L4_vcpu_sticky_flags { L4_VCPU_SF_IRQ_PENDING = 0x01 }
  Sticky flags of a vCPU.

Functions

- int l4_vcpu_check_version (l4_vcpu_state_t const *vcpu) L4_NOTHROW
  Check if a vCPU state has the right version.

17.679.1 Detailed Description

vCPU API

Definition in file vcpu.h.

17.679.2 Function Documentation

17.679.2.1 l4_vcpu_check_version()

```
int l4_vcpu_check_version (
             l4_vcpu_state_t const * vcpu)  [inline]
```

Check if a vCPU state has the right version.

Parameters

vcpu	A pointer to an initialized vCPU state.

Return values

1	If the vCPU state has a matching version ID for the current vCPU user-level structures.
0	If the vCPU state has a different (incompatible) version ID than the current vCPU user-level structures.

Definition at line 191 of file vcpu.h.

- void l4vcpu_wait_for_event (l4_vcpu_state_t *vcpu, l4_utcb_t *utcb, l4vcpu_event_hndl_t do_event_work_cb, l4vcpu_setup_ipc_t setup_ipc) L4_NOTHROW

  Wait for event.
- void l4vcpu_print_state (const l4_vcpu_state_t *vcpu, const char *prefix) L4_NOTHROW

  Print the state of a vCPU.
- int l4vcpu_is_irq_entry (l4_vcpu_state_t const *vcpu) L4_NOTHROW

  Return whether the entry reason was an IRQ/IPC message.
- int l4vcpu_is_page_fault_entry (l4_vcpu_state_t const *vcpu) L4_NOTHROW

  Return whether the entry reason was a page fault.
- int l4vcpu_ext_alloc (l4_vcpu_state_t **vcpu, l4_addr_t *ext_state, l4_cap_idx_t task, l4_cap_idx_t regmgr) L4_NOTHROW

  Allocate state area for an extended vCPU.

17.681.1 Detailed Description

vCPU support library (C interface).

Definition in file vcpu.h.

17.682 vcpu.h
